CHAILLEY,** député, etc.

TABLEAU SOMMAIRE DES COURS

Histoire parlementaire et législative de la France de 1789 à 1875.
Histoire constitutionnelle de l'Europe et des Etats-Unis.
Histoire diplomatique de l'Europe, de 1713 à nos jours.
Histoire politique et économique de l'Europe.
Politique coloniale des Etats européens.
L'Amérique contemporaine: Etats-Unis d'Amérique, Canada, Amérique latine.
Questions politiques et économiques dans l'Asie orientale.
Organisation et administration coloniales comparées.
Géographie et organisation militaires.—Géographie des possessions françaises.
Ethnographie de l'Europe.—Géographie commerciale et statistique.
Droit des gens.—Droit international conventionnel.
Organisation et matières administratives en France et à l'étranger.
Questions algériennes et tunisiennes.—Droit musulman.
Législation des chemins de fer.—Les grandes industries modernes.
Economie politique; Economie sociale; Législation ouvrière.
Hygiène publique et grands travaux publics.
Finances françaises et étrangères.
La monnaie, le crédit et le change.—Affaires de banque.
Politique commerciale des grandes puissances.

RENSEIGNEMENTS GÉNÉRAUX

L'enseignement de l'Ecole des Sciences politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du directeur et du Conseil de l'Ecole; ils n'ont à justifier d'aucun grade universitaire.

La durée ordinaire des études est de trois ans, toutefois, on peut la réduire à deux années. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1910-1911.—L'année scolaire commencera le 7 novembre 1910 et finira le 3 juin 1911. On s'inscrira au Secrétariat à partir du 27 octobre 1910. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers).....Par année: **350 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prépare.*

S'adresser à **l'ECOLE, 27, Rue Saint-Guillaume, PARIS (France).**

New York, Tarrytown, Box 760.

Hackley Lower School (Boys 9 to 13)

Situated on an elevation of 500 feet above the Hudson River, twenty-five miles from New York City. Modern facilities for thorough school training with every natural advantage for healthful home life. Prepares for Hackley Upper School. For catalog and illustrations, address

HAROLD F. AVERY, Director.

MR. SARGENT'S TRAVEL SCHOOL FOR BOYS

A combination of school and travel. Individual instruction in preparation for college or business. Seventh year. Illustrated catalog.

Porter E. Sargent, Cambridge, Mass.

THE FISK TEACHERS' AGENCIES.

EVERETT O. FISK & Co., Proprietors.

2 A Park Street, Boston — 1505 Pa. Ave., Washington
156 Fifth Ave., New York — 414 Cen. Bld., Minneapolis
203 Mich. Ave., Chicago — 611 Swetland Bld., Portland

Reference: Rev. W. T. Crocker, Rector of Episcopal Church of Epiphany, New York City. Address MRS. VIRGINIE JOURDAN, Leopoldstr. 9 III, Munich.

WILD OATS

By JAMES OPPENHEIM

The author of "Dr. Rast" has written a bold and powerful novel whose theme is The Great Black Plague, the most glaring—though unrecognized—danger of society. He approaches the subject with necessary frankness yet reverently and delicately. While the novel may become the centre of hot dispute, none will charge the author with a desire to be merely sensational, for the sanction of authority is given in an enthusiastic foreword by Edward Bok of *The Ladies' Home Journal*.

Price $1.20 net.

WILD OATS

B. W. HUEBSCH, Publisher, 225 Fifth avenue, New York

The Nation.

NEW YORK, THURSDAY, JULY 7, 1910.

The Week.

President Taft's order withdrawing 8,500,000 acres of power-site, phosphate, and petroleum lands will be welcomed as proof of his earnest purpose to maintain the policy of conservation. He insisted on the passage of the law expressly conferring upon the President the power to make withdrawals in the public interest, and giving these withdrawals a status that cannot be disturbed except by express action on the part of the President or of Congress. At no time has Mr. Taft indicated any lack of sympathy with the purpose or the general spirit—apart from questions of law—of the policy inaugurated by the preceding Administration in the matter of conservation; but it seems abundantly proved by the testimony in the Ballinger-Pinchot hearings that it would have been much cut into by Mr. Taft's Secretary of the Interior, had it not been for the vigorous protests of Mr. Pinchot. And even after Mr. Ballinger had gone back on his tracks and in substance reestablished the Garfield withdrawals, the danger was by no means over. Indeed, the closing speech of Mr. Ballinger's counsel before the investigating committee was in large part a bitter and sarcastic attack on the conservation policy as understood by Garfield and Pinchot; and it is safe to say that, but for the agitation of the subject that has been kept up for the past twelvemonth there would have been serious backsliding in this whole matter, including the Alaska coal-land question. Mr. Pinchot and Mr. Glavis may justly feel that it was not in vain that they protested and lost their official lives.

The country cannot be blamed for thinking it significant that the Republican insurgents are flocking to Oyster Bay. When Mr. Roosevelt promptly invited Messrs. Pinchot and Garfield to visit him, it might have been thought of merely as a courtesy shown to old friends and former subordinates. But with La Follette and Senator Bristow—who had publicly complained that he was politically ostracised by the President—and Representatives Madison and Murdock and others to follow, the case is plainly different. Whatever Mr. Roosevelt may be thinking of doing with or about the insurgents, it must be conceded that he is showing great activity in getting at their point of view. And it will be noted that neither Cannon nor Aldrich nor Payne nor Tawney has yet called at Sagamore Hill! Possibly, the host there feels that he is already acquainted fully with *their* point of view.

Even Senator Lodge has seen a great light on the tariff. He has ceased to defend the Payne-Aldrich bill except as a measure that was as good as could have been expected from the "crude and unscientific method" under which it was framed. This is a marked change from the Senator's original attitude. When the bill passed, he gave out a jubilant interview congratulating Massachusetts industries on having come off so well—meaning, it was understood at the time, in the matter of the cotton duties which were trickily raised. But now his talk is all about a "bad system," and no tariff being "permanent" and further revision to be made by Republicans as soon as they find out the facts from the Tariff Board. We cannot say how much the special election in the Fourteenth Massachusetts District had to do with this conversion of Senator Lodge, but it is clear that he is afraid that other elections may go the same way, and is prepared to promise as much tariff revision as may seem necessary to prevent such a calamity.

So far as now appears, the fight for primary and election reform which Gov. Hughes has been making for two years, has ended in complete defeat. After all the agitation, after the sudden irruption of Mr. Roosevelt into the field, not one line has been added to the statutes. Even the compromise which the Governor finally agreed to accept as a payment on account, was refused him. Mr. Hughes himself is aware of the conclusive nature of the result, and confesses that he can do nothing more for the cause he has had so much at heart, in the short time that remains to him in the Governorship. Thus, to all appearances, his failure is absolute.

Yet those who believe in the law of the conservation of moral energy will not say that the long struggle has naught availed. The Governor's public and searching exposures of the methods of party management at present in vogue have not been water spilled on the ground. Even his bitterest opponents have had to admit that there was much force in what he said—that "snap" primaries are indefensible; that to party dissidents should be given a chance to vote on equal terms with the regulars in the primary; that the ballot needs to be improved; that delegates should be named by the rank and file of the party, not by the boss in secret; and that many changes should be made in order to render party control more responsive to party wishes. Hence, in sheer consistency, or out of pure shame, the party politicians who have admitted all this are bound to advocate some measure of primary reform. The question will undoubtedly figure in the next Republican platform of this State. And it is certain, too, that the politicians who manage the convention will speak in praise of Gov. Hughes's whole career in office, and will endeavor to make the people of the State believe that they desire his successor to follow in his footsteps. For then they will have arrived at the time when they have to deal with the electorate, not the machine, and will cast about to make up in every way possible for that "strength illimitably needed" which they have lost in the retirement of Gov. Hughes.

Every Southern protest against lynching and mob law counts in the struggle for education in the law-abiding spirit, and should be hailed as a reinforcement. In the Montgomery *Advertiser* we find a vigorous utterance apropos of a recent lynching in Florida. A mob set out to catch a negro charged with assault, found a black man in the woods, shot him to death, and returned "satisfied." But a few hours later the real criminal was discovered and confessed his guilt. Now, it is not merely the fact that the mob lynched the wrong man which rouses the *Advertiser* to righteous indignation. If it had lynched the right man the crime would have been

nearly as great. The terrible thing is the outbreak of mob law in any of its manifestations, and the real cause of alarm is the tolerance of it. It is an old comment, but one that cannot be too often enforced, which the Southern newspaper makes in saying:

> Mob law is a menace to the safety of human life, a threat to property, in any community which tolerates it. When a mob successfully accomplishes its purposes and escapes unpunished, the community which tolerated the crime will sooner or later feel the violence of some new form of lawlessness.

In a recent primary election in Birmingham, Ala., at which the question was submitted, the result was overwhelmingly in favor of the commission plan, the majority for it being, it is stated, the largest ever recorded in the history of Birmingham on any subject. There were 4,962 votes for the plan, and only 693 against it. Even more significant, in view of the size and importance of the city, is the agitation of the subject in Baltimore, although there the matter is as yet only in embryo. The politicians succeeded last winter in defeating in the Maryland Legislature the project of a new charter which offered important changes in the direction of greater centralization of power and responsibility; but, instead of being discouraged, those who are aiming at more efficient city government are now very seriously considering a campaign for the commission idea. The Baltimore *Sun* squarely advocates that plan, and seems to believe that, owing to the enthusiasm which a "clean-cut, thoroughgoing reform" is capable of arousing, it will not be more difficult to get this measure adopted than it would be to force the acceptance of a less radical scheme in the face of the opposition of spoils politicians. Whatever else these and similar developments show, they are certainly convincing evidence that the old-time American contentment with dishonest and inefficient city government is a thing of the past.

A verdict for $8,000 was given to-day by a jury in the Supreme Court of Long Island City to John Kasczak, who sued the Central Railroad of New Jersey to recover damages for the loss of a leg. Kasczak was run over by a train five years ago in a freight yard at Penobscot, Pa. This was the fifth time his suit has been tried.

Five trials, and five years, to determine the liability of a railway company to a man who has been run over by a freight train and had his leg cut off! The thing is monstrous, whatever the explanation. There is something profoundly wrong in a system under which it is possible, not to say frequent. It is in flagrant violation of common sense, as well as of common justice. No system of law administration can prevent the possibility of error; we are not clamoring for infallibility. But any rational system must see to it that decision, and a decision on as satisfactory a basis as can reasonably be demanded, shall be rendered in a reasonable time. So much for common sense; as for common justice, how much does poor John Kasczak get, at the end of five years of litigation, out of the $8,000 adjudged to be rightfully his? And what of the irreparable loss to him involved in the waiting itself?

We may now hope that this country has seen the end of prize-fighting in public. Even Nevada must become ashamed of being the last refuge for such a disgusting exhibition as last Monday's. To the brutality on the spot was added that of race-rioting in various parts of the country. This is the last straw. The Southern newspapers appear to have foreseen and dreaded this sequel, and did not, as a rule, give prominence to the fight. It was left for the leading journals of the educated and law-abiding North to fling about for weeks in advance their inflammable stuff. Those editors who denounced the vulgarity and indecency which their own pages exploited, will surely go a step further next time and refuse to make a display of what they confess to be demoralizing to the public. If for no other reason than the undisguised commercial exploitation of the fight at Reno, it ought to be the last one of its kind in America. It reduced the "manly art" to a scramble for money. If it was necessary in order to give a quietus to a survival of barbarism, we cannot wholly regret the climax of dollar-grabbing and brutal over-matching, miscalled a prize-fight, by which the national holiday was disgraced.

The conditions attending Harvard's third successive rowing victory at New London emphasize the passing of one ancient tradition in the athletic world. It is the tradition of the famous "Yale spirit" of never-say-die as being sufficient to wrest victory from defeat in the face of all circumstances. Yale grit is, indeed, a real and an admirable quality. But on the water, at least, Yale has now demonstrated that the will is not everything, and that not the most unshakable determination to win can bring victory unless the physical basis for it exists. The fact stands out that for three years Harvard has had the better men in her boat and the better system behind them. In 1908 Harvard finished alone, with the Yale crew in a state of collapse at the beginning of the third mile. In 1909 Harvard won by four lengths. Last week she won by five. On form as well as on performance the Cambridge crew has been the perfect machine as opposed to merely good men in a boat such as Yale has put on the water. And not all the physical heartbreak and all the determination in the world will, on the long average, overcome such a handicap. It may be regrettable, perhaps, that the fine individual resourcefulness which is the main justification of sport, should be giving way before drill, method, and strategy; but the fact must be recognized, even as Yale is sure to recognize it before long.

The world's sympathies will go out to the sorely-tried heart of Count Ferdinand Zeppelin. The recent disaster near Osnabrück means something more than a temporary setback. Coming so soon after the wreck of the Zeppelin II, it seriously threatens the entire scheme to which Count Zeppelin has devoted several fortunes and a lifetime. The Deutschland is the third of Zeppelin's great cruisers to meet destruction just when hope in them rose highest. Once more the lesson has been driven in that, while man may have conquered the air, he is not yet master of the tempest. The vast bulk which in the Zeppelin air-ships is intended to constitute an element of safety, has only proved a source of added danger. Where a smaller ship might scurry before the wind or drop to the nearest flat piece of ground, the monster Zeppelins rear and plunge and dash themselves into fragments for lack of adequate landing space. The Zeppelins' greater size only presents a greater surface of attack to the storm, and their rigid framework makes any involuntary earth-contact almost synonymous with destruction. The German

military engineers have always been distrustful of the Zeppelin cruisers. Their own smaller machines of the Gross and Parseval type have made no such long-distance records as the Zeppelins, but neither have they encountered such signal disaster. There will be no talk for some time of airship voyages across the Atlantic. A recent German cartoon showed Count Zeppelin gazing at the wreck of his second cruiser; below was the legend, "*Alter Herr*, what think ye now of the North Pole?" The German cartoons of to-day may be showing the newest Zeppelin wrecked in the same Teutoburg forest where Varus once lost Augustus's legions, and Count Zeppelin enduring something of the famous agony that beset the Roman emperor.

Mr. Lloyd George's second budget is, of course, in no danger of mishandling in the House of Lords; that possibility has been disposed of once for all. Nor is there any considerable opposition to the budget in the Commons, except for Nationalist dissatisfaction with the whiskey duties, which, however, Mr. Redmond is willing to swallow for the sake of harmony. It is the Government itself that will now hold up the budget, using it once more as a weapon in the fight over the veto. There will be a session of Parliament in the autumn, and until that time final action on the finance bill is to be postponed. Meanwhile, the conference between the party leaders is to go on. If the Liberals obtain satisfactory concessions, well and good. If the conference comes to naught, the fight upon the Lords will be reopened at the coming session and once more the Government will be in a position to threaten a refusal of supplies. On their side must be counted one factor which ordinarily receives much more attention in American politics than it does in England, but which must make itself felt there, too. England to-day is prospering. Trade is steadily on the increase, to the discomfiture of the ardent Tariff Reformers; and the automatic increase in the public revenue makes things much easier for Mr. Lloyd George; so much easier that he can afford to say with a fine disdain that he doesn't care a snap for the decline in the liquor revenues. The moral gain implied in a decrease of liquor consumption is sufficient compensation.

At this distance from Paris, it is difficult to see what standing-ground there was for the agitation in favor of a commutation of the sentence of Liabeuf, the "Apache" who killed one policeman and wounded others, and who has been executed, except in the eyes of two classes—opponents of capital punishment and radical Socialists. Of course, if nobody ought to suffer the death-penalty, Liabeuf ought not; and if every crime that can be traced to the imperfections of the existing social organization is a crime of society and not of the individual, Liabeuf was but a specimen of social evil and not a criminal. To be sure, there was more than this in the special case; there was something on which a strong appeal to the emotions might be based, and the Socialists made the most of the opportunity. It is admitted that he had served terms in prison for thefts which he had actually committed, but he was afterwards imprisoned for a disgraceful offence, of which he was innocent, through an error of the police; and ever after was filled with a passionate and uncontrollable wrath against the police in general. But with this as a background, the Socialist orators put forward the standard arraignments of society and their denial of its right to punish those whom it has made criminals. "Society, which did not help Liabeuf to live, has no right to take his life from him," says one; another speaks of "this terrible Paris, where want that toils and want that prostitutes itself go side by side." Very dreadful, no doubt; and perhaps—who knows—a sufficient reason for wiping out the whole system and starting a new world, where we shall all be virtuous and happy. But so long as we keep this present kind of world going, we have got to govern it according to its kind.

The Liabeuf "affair" receives its last appropriate touch in the characteristic declaration by Gustave Hervé. From his cell where he is now under a four years' sentence for inciting the criminal classes to violence against the police, the noted anti-militarist and anarchist has sent forth a trumpet call for some one to assassinate President Fallières. The psychology of the extreme revolutionary and of the French politician are admirably illustrated in the incident. Only a little while ago Hervé's application for clemency was laid before the man whose death he now advocates. It is a seeming inconsistency which the ardent revolutionist has no difficulty in explaining away. All is fair in war, and particularly in that *guerre sociale* of which Hervé is the most conspicuous prophet in France. Make use of the enemy when you can and get him out of the way when you have the opportunity; false pride has no place in war. But if we ask what Gustave Hervé might hope to gain by so senseless and so criminal a declaration, the answer is that he would gain that prestige which in France particularly attaches to any utterly sensational position. The *geste magnifique* wins the crowd, and there is potency still in Danton's famous prescription, *toujours de l'audace*. The fact stands forth that Hervé has been coming steadily nearer to predominant influence among French Socialists and laborists.

The flat denial by the Prince Regent of China of the request of the provincial delegates for the immediate establishment of an Imperial Parliament brings to a head the contest which has for some time been going on. It is partly a contest between centralization and a large provincial autonomy. On the part of the Prince Regent, it required courage, in the face of strong appeals, to postpone the inauguration of the Parliament for nine years. This will test the determination of the delegates who have for some time been agitating in Peking. Several of them have declared that they will commit suicide if their demand is not granted. The next few days will show whether a clash, greater than any that has taken place thus far, shall occur between the central government and the provinces. It should seem that for China, in her purpose to carry out reforms, there is no escape from the alternative of revolution or an Imperial Parliament. There is no way for the central government to increase revenue and the taxation of the provinces without in some way allowing the people of the latter to be represented. Yet without increased revenue, the Imperial Government will be unable to meet its obligations. A stamp tax has been suggested, but has been stoutly opposed. Thus the Government is face to face with the question whether the appeal of the provinces shall be listened to, and, through representation, increased revenue be made possible.

REMAKING THE SUPREME COURT.

The sudden death of Chief Justice Fuller on Monday comes as a fresh reminder to thoughtful people of the critical days which the Supreme Court is facing. One-third of its membership has gone to the Great Assize since Mr. Taft became President, and it is altogether probable that he will have also to fill the vacancy caused by Justice Moody's disability. Indeed, it is virtually certain that the President will have a fifth appointment to the Supreme Court to make before his term expires, so that, by 1912, a majority of the entire court will have been named by Mr. Taft. This fact alone, quite apart from the questions of transcendent legal and political importance shortly to be passed upon by our highest judicial tribunal, would show through what an emergency it is passing.

Judge Fuller could not be called by his record a great Chief Justice, though he had fine abilities and discharged the duties of his position to the entire satisfaction of his colleagues on the bench as well as of the bar and the public. In passing upon the mass of routine motions that came before him he displayed industry and good judgment; while in what he had to do in making up the calendar of the court and setting down cases for argument, his courtesy and sound sense were universally recognized. It is said, too, that in the private consultations of the judges, and in assigning the writing of the opinion of the court, the Chief Justice was never wanting in tact or in a shrewd but kindly estimate of the personal characteristics of his fellows. When it fell to him to prepare the decision of the court, he showed himself master of a lucid style which sometimes had even a literary quality. His service fell in a period when it was customary to speak of the Supreme Court as weak. By this was meant usually that its important decisions were by narrow majorities; and that there appeared to be no powerful and dominating mind in it that could persuade the others to unanimity along a well-marked line of legal interpretation. Yet this may have been, after all, due more to the nature of the cases thrust upon the court than to special weakness in its personnel. At any rate, Judge Fuller was no Marshall or Miller to impose upon his brethren the unifying conclusions of an intellect of greater range and deeper penetration than their own.

It is this fact, however we may account for it, that causes so keen an interest to be taken in the question of the successor of the Chief Justice. There had been from the first news that Gov. Hughes was to go to the Supreme Court, a general feeling that the reversion of the Chief Justiceship would be his in time. It was said, to be sure, that precedent was against making one of the associate justices the Chief Justice. It would look like an invidious choice. This would not necessarily follow. Indeed, we believe it was the wish of the other judges that Miller should be made Chief Justice when President Grant appointed Waite, as it also was that Field should be so honored when Mr. Cleveland named Judge Fuller. But as the situation now shapes itself, the objection, even if valid in ordinary cases, would not lie against making Gov. Hughes Chief Justice. He would not have served at all, though confirmed as associate justice; and the President could re-designate him as Chief Justice without the slightest danger of hurting the feelings of any of the judges now in the Supreme Court. Mr. Taft has, of course, given no sign of his intentions, and probably will not for some time to come; but the high admiration in which he is known to hold Gov. Hughes lends color to the general expectation that he will ask the latter to succeed Chief Justice Fuller.

Should any further break occur in the ranks of the Supreme Court judges, or even if only Justice Moody elects to retire on full pension, as he may by special act of Congress, the numbers of the Court would be so depleted that it would not be in a position to do any work of importance at its sitting in October. On the other hand, President Taft has very properly announced that he will make no interim appointments to the bench. He wishes no judge to sit who has not been confirmed by the Senate. Yet it might be awkward for the Supreme Court, and unfortunate for the great issues set down for reargument before it, if their full strength could not be given to the judges until after Congress meets, in December. A clear way out would be for the President to call the Senate in extra session, say, at some date in October, for the purpose of confirming judicial appointments. Then commissions could be issued and the Supreme Court might be restored to its full working capacity early in November.

Whatever the decision respecting this, or whatever the choice of new judges made by President Taft, no one can be in any doubt concerning the high importance of securing the ablest men attainable for the hearing and decision of the great and crucial cases so soon to come before the Supreme Court. It is a juncture at which the most commanding intellect and the loftiest patriotism might feel irresistible strength in an appeal to go on the bench. If it falls to the lot of Gov. Hughes to sit as Chief Justice when the Tobacco case and the Standard Oil case are reargued, he would not need to think that he had abandoned a worthy ambition. The consequences of the decisions which he and his associate judges are to be called upon to make are so momentous and far-reaching that every patriotic fibre must be stirred in them, at the same time that they feel the immense responsibility and brace themselves to meet it. In a sense, it is new ground which the Supreme Court will have to break in its efforts to apply old legal principles successfully to the virtually new problems of modern industrialism. And the law governing in that field, which will in effect have to be remade, will be so, it is now clear, by a Supreme Court itself virtually remade.

RATES AND THE COMMISSION.

Close on the heels of the Interstate Commerce Commission's decisions reducing rates to points in the Far West, comes the announcement by the same body that it will stand by the official classification of freights announced some time ago, affecting all that part of the country north of the Potomac and the Ohio, and east of the Mississippi. Against this change of classification, it had received an overwhelming number of protests from shippers; but, after careful consideration, it has decided that there is no reason for changing its original conclusion. If the decisions cutting down rates to certain Rocky Mountain and Pacific Coast points was regarded as a move actuated by hostility or want of fairness to the railways, one may hope that the action of the

Commission in the matter of classification will help to reassure those so minded.

But in point of fact there was nothing about the decisions in the Western freight-rate cases to give any ground for believing that the Commission was inclined to act otherwise than with perfect fairness. It had considered with great care an extremely complex state of facts, and had come to a conclusion after endeavoring to give its due and proper weight to every element involved. That there is no definite rule to which the settlement of such questions can be referred is unfortunately true; all that the Commission can do is to take into account the various considerations which enter into the case, and arrive at a result which shall do as little wrong as possible to any legitimate interest involved. But no legitimate interest need feel alarmed so long as this process is carried out, in good faith and with singleness of purpose, by competent men. As for the great flurry in Wall Street, ostensibly attributed to the Western freight-rate decisions, it went obviously far beyond anything that could logically be justified. Here was no general scaling down of freight rates, nor anything indicating an intention to enter upon such a policy; not even anything to show that the Commission would not be perfectly open-minded upon proposals to increase rates, backed by reasonable grounds; what it did was simply to decide that certain arrangements of freight-rates, highly distinctive and based upon special conditions affecting the points in question, were unreasonable and that in a number of those instances heavy reductions would have to be made.

Among the elements which entered into the decisions of the Commission in the Western rate cases was, of course, the earning capacity of the railways; and, by way of precaution, it has ordered, in many cases, that the new rates shall not go into effect for three months, during which time an accurate account will be kept of the revenue arising out of the particular items in question, so that a more trustworthy estimate may be made of the effect which the reductions would have upon the finances of the companies. Equally of course, the question of a higher rate for carriage from the East to an intermediate point than is charged for through carriage all the way to the Pacific Coast was a leading feature of the cases; and it is impossible to set down any principle upon which this question can be decided in every individual instance. For through rates the necessity of meeting water competition must be taken into account; and it would be impossible for the railways to make through rates which would give them an adequate share of that business, if those rates were made absolutely regulative of the business to inland points also. Just what compromise should be adopted is a question on which there is room for great difference of opinion; but the Commission finds, in the instances in which it has ordered reductions, that the railways have gone beyond reasonable limits in the exercise of their discretion. It decides on neither of these points taken by itself; but it puts this and that together as best it can. In the case of Spokane, for example, it finds, first, that the earnings of the Northern Pacific and the Great Northern for ten years preceding 1908 "might fairly be termed excessive"; but it goes on to say:

> Having determined that question we did not make reductions in rates to Spokane for the reason that these revenues were excessive, and for the purpose of reducing these revenues. The rates to Spokane were held to be unreasonable, and other rates were established as reasonable, upon entirely different consideration.

Now, this sort of thing is not perfection, and there are many trials before us in its application to the vast and complicated problems of railway administration in the United States. But we believe that it not only is, but is pretty generally recognized to be, the best thing that is practically open to us for the present, and for a long time to come. It stands between the two other possibilities, either of which is superior to it in point of consistency, and, if you please, logicalness, but both of which are open to absolutely insuperable practical objections. The country will never go back to a régime in which rates are fixed arbitrarily by the railways themselves. That régime, dependent for its justification on the idea of competition, was undermined long ago, when the impossibility of anything like adequate competition became manifest to everybody; it was utterly doomed when the process of consolidation had reached the point at which half-a-dozen men virtually controlled the entire railway system of the country. On the other hand, the country is far from ready to take possession of the railways, and make both the management of the railways and the determination of rates a purely governmental function. European precedent does not furnish even a faint approximation to the immense responsibilities and difficulties that would attend such an undertaking. Debarred, then, both from leaving the matter to take care of itself and from taking hold of it in a root-and-branch way, there is no alternative but that of working our way along, from day to day, from year to year, securing as near as may be equity and stability for shippers, for localities, and for railway companies. That the Commission is doing this work with a very fair measure of success, and that the new law will greatly increase its usefulness, is, we believe, the opinion not only of the country at large but of the most representative and weighty of the railway men themselves.

EUROPEAN ANTI-CLERICALISM.

If Gambetta could return to the earth to-day he would be surprised to discover in how many countries of Europe his old cry about clericalism being "the enemy" is reëchoed. He would find in France that the campaign against the Church had gone beyond anything dreamed of in his time; in Italy he would see a rising anti-clerical tide with which the Government and all men in public life are having to reckon; while even in Spain, which so long has been "most Catholic," he would note the astonishing political developments since the execution of Ferrer, culminating in a Radical Ministry which makes a leading feature of its programme a revision of the Concordat and the severe repression of ecclesiastical pretensions. Indeed, taking the past year as a whole, the Vatican has had so many worries and complications that it might well say with the Psalmist, "Lord, how are they increased that trouble me!"

Attention is just now centred upon the aspects of the controversy in Spain. The attitude of the new Canalejas Government has provoked bitter discussion which is already having its customary accompaniment of rioting, whether by supporters or opponents of the Ministry. As usual in Spain, we witness two violent and contradictory extremes of opinion in this matter. In a large ele-

ment of the population there is a spirit of the most unbounded devotion to the Church, and of absolutely unquestioning obedience to the ecclesiastical authorities. It is the kind of extravagant zeal which was exemplified at Barcelona last Eastern when several hundred ladies joined in a public protest to the Captain-General against the fearful decay of morals which would be involved in permitting carriages on the street during Holy Week. At the other end of the line we have the great numbers of Spaniards who denounce and attack the Church in unmeasured terms, who demand the clipping of the privileges of the priests in every way possible, and who so easily break out in anti-clerical demonstrations. There must be an intermediate body of more sober sentiment in Spain, but it finds little expression in the debates in the press and in the Cortes, and is certainly hardly mentioned in the dispatches to foreign newspapers.

Just what the Spanish Government proposes has not been clearly understood abroad. In his efforts to promote religious liberty, it has been said in the telegrams that the Prime Minister induced the King to sign a decree changing the Constitution. But even in Spain they take their Constitution more seriously than that would imply. What happened was that a change was made in the official interpretation of the eleventh article of the Constitution. Under it, in 1876, when Cánovas was Prime Minister, a royal decree had denied nearly every public religious right to non-Catholics. Their meetings were held unlawful; their schools were under the ban; they were allowed to live but could not have a public burial; and, finally, they were not permitted to indicate in any way on any building of theirs that religious services were there maintained. Now, every clause of this former decree except the last one had already been abrogated; and all that Canalejas has done is to complete the process and by royal ordinance to make it lawful for a Protestant church or a Jewish synagogue so to declare itself upon its walls. It is this final step in carrying out the guarantees of entire freedom of worship in Spain that has led to the present agitation and to the crisis in the relations of the Spanish Government and the Holy See. Negotiations for a friendly recasting of the Concordat had already been begun, but no sooner had this modification of the old decree been made than the *Osservatore Romano* bitterly complained that it was an insult to the Vatican, which was very likely intended to bring about, and certainly would lead to, a rupture of diplomatic relations. Something very like that has since occurred; though in view of the firm attitude of the Spanish Government, it is probable that the Vatican will find a way to swallow its pride, just as it did in its recent mortifying experience with Germany, when it both offered an apology and withdrew an encyclical. It is plain that to adopt an uncompromising attitude with Spain would be a mistake, since not only has Canalejas an assured majority at his back, for the present at least, but even the Conservatives, as their leader, Maura, recently made clear in a speech, are convinced that the Concordat ought to be thoroughly revised.

In Italy, there have been several Parliamentary sessions taken up with the clerical question. What is chiefly agitated by the Italian anti-clericals just now is a firmer control of the religious orders and of the seminaries, together with an extension of the system of popular education, which the Church opposes. The anti-clerical demonstration in Rome a few days ago was not an imposing affair, but it is at least significant that it should even have been undertaken within sight of the dome of St. Peter's. And it is clear from the declarations of the Government that the Vatican has serious political problems on its hands without going outside of Italy.

Papal diplomacy in recent years has been compared unfavorably with what it was under Leo XIII. That Pope had certainly a wider European outlook than Pius X, and was able to manage the foreign relations of the Vatican with greater skill—or at least greater success. Changed political conditions may partly account for the difference, as may partly the coming in of a papal secretary of State, Merry del Val, who appears to be a thorough reactionary. But whatever the explanation, the fact must be admitted that the anti-clerical movement in Europe is taking on forms and a force that must give the Vatican deep concern.

RUSSIA AND THE ORIENT.

Those who out of Japan's victory over Russia and the prospect of a regenerated China have conjured up the spectre of Europe buried under an Asiatic avalanche, will find their speculations disturbed by the announcement that the population of the Russian Empire has risen to 160,000,000. This is 31,000,000 more than it had according to the census of 1897. The increase in the number of the Czar's subjects is so rapid that, by the time China is fully awakened, her nearest Christian neighbor will muster a population not so much inferior to her own. There is evidently to be no such thing as Asia overwhelming Europe by mere force of numbers. By the middle of the century, Russia, if the present rate of increase continues—and there is nothing in sight to check it, there being abundance of fertile land—will contain 300,000,000 inhabitants. Even those who have shown themselves obsessed by the "yellow peril" do not aver that China will be sufficiently awakened by 1950, or transformed by Japan's military art, to be eager to gird herself for the destruction of Christendom.

The fact is that these prophets of evil have been reckoning without their host. Frightened by the contemplation of Asiatic swarms, they have neglected to inquire what European nations are capable of accomplishing in the way of numerical expansion. Before 1950 the German Empire, which now has 64,000,000 inhabitants, will have within its present limits a population of 100,000,000. Yet even if the peoples of the white race have collectively nothing to fear from those of the yellow race on the score of numbers, there is no denying the fact that the yellow peril, so far as it affects the largest European nation, is a reality. It is evident that Russia will have to stand as in days of yore between Europe and Asia. Japan and China will be a perpetual menace to her. Not that there will ever be any danger that the Russian people may be submerged by the yellow race. A Russia of two or three hundred millions is not going to succumb to twice that number of Chinese and Japanese separated by several thousand miles from the heart of Muscovy. But the integrity of the Russian Empire may be permanently imperilled. It will be no easy matter to hold Siberia when Japan and China

awake to the necessity of breaking the bounds within which their teeming millions are confined. This is the penalty that the Muscovite will have to pay for stretching eastward under the delusion that the potential opposing forces did not need to be reckoned with. Now he realizes his weakness, and henceforth will turn his gaze toward the rising sun in an entirely different spirit from what was his wont before that terrible awakening of 1904 and 1905.

How is this going to affect the attitude of Russia with respect to her schemes of aggrandizement in the direction of the Mediterranean? Having been balked in the Far East, will she be driven to recoup herself by renewing her advance toward a fancied goal in the South? The dream conceived in the days of Catherine of Russia's mission as the deliverer of the Greek Christians who were bowed under the Turkish yoke has been realized in great measure, but coupled with this dream was the expectation that the White Czar would be enthroned on the shores of the Golden Horn. From this objective Russia seems to be further removed than ever. The carrying out of the altruistic part of her programme has only had the effect of making Constantinople slip further from her. The changes that have taken place in the Balkan Peninsula since Russia undertook her successful campaign of deliverance a generation ago have been such as almost to deprive her of any possible pretext for a fresh inroad in the direction of the Bosphorus. The states that were principalities have become kingdoms. The fetters that were supposed to bind Bulgaria to the Sublime Porte—the obligation to pay tribute—have been severed. Bosnia and Herzegovina have ceased to have even a nominal connection with the Ottoman realm. In Macedonia alone, on the European side of the straits, has the Turk any longer the power to oppress the Greek Christian, and there is to be no meddling in Macedonia without a European concert. Europe is inclined to give the Young Turks a chance, and meanwhile the years are slipping by, so that to the new generation in Russia the rôle of the Romanoffs as the destroyers of Turkey is gradually receding into the distant past.

Since Peter the Great, at the close of the seventeenth century, inaugurated the warfare of Russia against Turkey by launching his tiny fleet on the Black Sea and capturing Azov, no such long interval as the present—thirty-two years—has elapsed without a Russian attack upon the Ottoman realm. After the humiliating Peace of Paris, which closed the Crimean War, Russia took only twenty-one years to gather strength for a fresh invasion, which carried her armies to the gates of Constantinople. The Crimean war came only twenty-four years after the advance of Diebitsch across the Balkans to Adrianople, which consummated the great act of the deliverance of Greece. So it has been going on for two hundred years, but now the Russian Panslavist himself can hardly fail to realize that the dream of the White Czar seated on the throne of Mohammed II is likely to remain a dream. The "sick man" has been allowed another lease of life, and who knows what fresh vigor may yet be infused into his system through Young Turkish blood? Another crossing of the Balkans by a Gurko or a Skobeleff may be something that the future has in store, but it would seem to be a distant future. In the meanwhile Russia has not moved her frontier forward in this direction for about a hundred years. In 1812, the year of Napoleon's invasion, it was advanced to the Pruth, and it is still the River Pruth that bounds the realm of the Czars. If ever again the Russian hosts should march toward the Bosphorus, it is not unlikely that the advance will be made from the side of Asia Minor. Russia may be biding her time. She will have to wait till Europe sees what a rejuvenated Turkey can accomplish—and that is a long way off.

SCANDINAVIAN BOOKS.

BERGEN, Norway, June 21.

It is becoming more and more customary in the Scandinavian countries to bring out neat and inexpensive editions of books in a series. The well-known house of Gyldendal, in Copenhagen, recently started a new series called Ugens Billigste Bog (The Cheapest Book of the Week), which includes many good works, some by standard authors. These are printed on excellent paper and in clear type and are offered at an extremely low price. Series of this kind are highly appreciated by the public. Another Danish firm lately started the publication of a series called Mennesker i Litteraturens, Kunstens, Politikens og Videnskabens Tjeneste (Men in the Service of Literature, Art, Politics, and Science), which so far includes three volumes, dealing with the life and work of Holger Drachmann, Henrik Ibsen, and Viggo Hörup. The biography of Drachmann is written by the eminent Danish literary critic, Valdemar Vedel, and gives, in the space of a little more than 100 pages, a striking picture of the happy singer who never lost his enthusiasm and joy of life and who did not even with his gray hairs grow old in spirit. The Norwegian critic, Just Bing, has attempted to write the biography of Henrik Ibsen, the grand and dominating figure in our literary history, but without remarkable success. It is impossible in less than 100 pages to give a full and clear idea of the famous Norwegian poet, and in spite of many good characterizations and the author's indisputable critical ability Mr. Bing's book suffers from the lack of space to explain and develop. The third volume of the series is devoted to a sketch of the great Danish editor and politician, Viggo Hörup. It is written by Erik Henrichsen and is correct and trustworthy, but the style is rather dry and academical. Still the work attracts our interest, chiefly, perhaps, because of the interest of the subject. Hörup, who died eight years ago, was the foremost newspaper man in Denmark, owing to his brilliant linguistic and polemical faculties. But he was also one of the foremost of politicians, a member of Parliament, and one of the leaders of the Radical party. His ability to think in a logical manner, to express clearly and in a convincing way what he thought, his sharp tongue, his sneering and slashing witticisms, his courage and endurance—all contributed to make him appreciated by his adherents and feared but respected by his opponents. Hörup, so to speak, remade the Danish Radical party, and shortly before his death was chosen a member of the first Liberal Cabinet in Denmark. Among other biographies which the series is about to bring forth may be mentioned Björnstjerne Björnson, Edvard Grieg, Ludvig Holberg, Sven Hedin, and Sören Kierkegaard. The price is only kr. 1.50 a volume (about 40 cents), and the series seems already to have attracted considerable popular interest.

In the beginning of May, Mr. Roosevelt delivered his Nobel-lecture at Christiania on the peace-movement, and naturally since that time the subject has been taken up by the people of Norway with even greater interest than before. That is probably the main reason why the book by Thomas Thrap, called "Krigen's logik" ("The Logic of Warfare"), has attracted so much attention. It has been widely read and was reviewed in the principal journals by noted men, among them the ex-foreign minister of Norway, J. Lövland. The book is written in a clear style and is remarkable

for its conciseness of thought and its original ideas. The author does not believe very strongly in the measures so far adopted to put an end to the possibility of war between nations; he takes a skeptical view of peace-conferences, treaties of arbitration, diplomats' manœuvres, and the like. He does uphold as being of the highest importance the provision of some kind of international code of laws for the settlement of international disagreements. But he argues that this alone would not be sufficient; there would be needed a "court of police," a power with authority and respect, that could enforce the code's regulations. (The same idea that Mr. Roosevelt mentioned in his Nobel-lecture).

The noted Danish literary critic, Vilhelm Andersen, published recently a collection of posthumous papers of Holger Drachmann, called "Vagabundus." They make an interesting book, consisting of fragments, sketches, and rough draughts, many of which possess to the full the best qualities of Drachmann's more finished writings. The tone of the book is well characterized by a reviewer in the Norwegian *Morgenbladet:*

> Sadness is the keynote of "Vagabundus," sadness concerning things done which were better left undone and concerning things neglected which were better attended to, sadness for all the evil and pain in the world, sadness because there are so many things among men which ought to be otherwise. But in spite of the sadness that fills the lines we seem to catch a glimpse of the consolation which the poet finds in his belief that he after all is worth more than those who are so ready to condemn him.

It is a book full of subtle poetry and sad reflection, a book which will win new friends for Drachmann's inspiring art.

About two months ago, there was published in Copenhagen an anonymous book under the title of "Kvindehjarter" ("The Hearts of Women"). It attracted wide comment, and has so far appeared in no less than eight editions. The papers busied themselves trying to guess who was the author of the work, and finally came to the conclusion that it was written by a noted Danish actress and a Danish lady as joint authors. "Kvindehjarter" is the correspondence between two women who fill their letters with confidential communications concerning love and men, and, especially, with outpourings of their own sexual impulses and wants. It would be a gross injustice to maintain that the letter-writers are typical examples of present-day womanhood, for the words with which one of them characterizes herself will undoubtedly seem true to every sound reader of the book: "I am so poisoned and infected that I ought to be thrown on the nearest dunghill." But it certainly is no good sign that a sensational work like this—which is even written in a tedious and superficial manner—should find eager readers in all the Scandinavian countries and be published in so many editions. It seems to indicate that the taste of readers in the North is coming under the influence of the French decadent novelists.

Following the death of the great Norwegian poet and patriot, Björnstjerne Björnson, the publication of a so-called *mindeutgave* (memorial edition) of his collected works was started. It will appear in sixty-six parts, and the price will be only thirty öre (about eight cents) a part. Thousands of subscribers have already sent in their names, and the number is growing every day. No man was more loved in Norway than Björnson, and no books are read with more interest and greater delight than his. He was so typically Norwegian and his countrymen understood him so well that "to mention his name was like unfurling the Norwegian flag."

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

In the June *Atlantic Monthly*, Mr. Buxton Forman has an article on the "Pleasures of a Book-Man," and tells of some of his "finds" as a book-collector. Among other books he describes his copy of the "Divine Poems" of Edmund Waller, London, 1685, "of which," he says, "I know no extant copy save that in my own library." The book is rare, but three copies, at least, are in the United States. There is a copy (formerly Almon W. Griswold's) in the Hoe library, another (formerly Marshall C. Leffert's) is in the library of John H. Wrenn of Chicago, and a third is owned by Beverly Chew, long a student and collector of Waller's writings. Thomas J. Wise, the English collector, has a copy, thus making five altogether.

At Sotheby's sale of June 28, of the library of Thomas Grey, £195 was paid for the copy of the little tract in verse by Benjamin Thompson: "New England's Crisis; or a Brief Narrative of New England's Lamentable Estate at present, compar'd with the former (but few) Years of Prosperity, occasioned by many unheard of Crueltys practised upon the Persons and Estates of its United Colonyes, without respect to Sex, Age or Quality of Persons by the Barbarous Heathen thereof; Poetically described by a Well-wisher to his Country. Boston, printed and sold by John Foster over against the Signe of the Dove, 1676." As the only copy previously known lacks the title-page, we have transcribed it in full as given in the catalogue. The poem was reprinted from the imperfect copy in the Boston Athenæum by the Club of Odd Volumes in 1894.

A small quarto volume containing five pamphlets: Higginson's "New England's Plantation, or a Short and True Description of the Commodities and Discommodities of that Countrey," London, 1630 (the first of three editions); Vincent's "True Relation of the Late Battell fought in New England betwen the English and the Salvages," London, 1637 (the first of three editions); John Eliot's "Late and Further Manifestation of the Progress of the Gospel amongst the Indians in New England," 1655; Eliot's "Brief Narrative of the Progress of the Gospel Amongst the Indians in New England," 1671; and Lederer's "Discoveries in Three Several Marches from Virginia to the West of Carolina," 1672, with the leaf of License, brought £510.

"The Most Excellent Treatise of the Three Kynges of Cologne," printed by Wynken de Worde, but without date, brought £110 at the same sale.

The collection of Dutch manuscripts relating to New Netherlands, which was described at length in the *Nation* for June 9 as to be sold at auction on June 16 and 17 by Frederick Muller of Amsterdam, brought 5,100 guilders (about $2,040). The collection, the auctioneers state, was purchased by an American who is unwilling that his name should be made public.

On July 11 Sotheby, Wilkinson & Hodge sell the libraries of Col. Hargreaves and Sir Daniel Cooper. Included are complete sets of the *Sporting Magazine, Annals of Sporting, Racing Calendar, Sporting Review*, etc.; also first editions of Thackeray and Dickens and a collection of scientific books from the library of C. Ditter of Frankfort-on-Main. The H. S. Buckley copy of the First Folio Shakespeare appears once more in this sale. This copy, which is a very good one, measuring thirteen by eight and one-eighth inches, has all the leaves genuine. The verses by Ben Jonson, preceding title, are remargined, and the portrait on title has been repaired, but other imperfections are trifling. It is in an old straight-grained red morocco binding, ascribed to Roger Payne. When sold at Sotheby's on May 31, 1907 it brought £2,400.

Correspondence.

"WICKET" IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: Our American historians and antiquarians have paid too little attention to the secular amusements, recreations, and sports of our colonial forefathers. It is true that the theatre, the opera, and the celebration of Pope Day (November 5) have attracted students; but with those exceptions, there has apparently been little systematic effort made to trace the history of secular amusements in this country. Thus, one looks in vain in the three most elaborate city histories yet published—the "Memorial History of Boston," the "Memorial History of the City of New York," and Scharf and Westcott's "History of Philadelphia"—for adequate information about baseball, cricket, or horse-racing. Yet as early as 1726 "wicket" was played on Boston Common; the "customs" at Harvard College in 1735 declared that "Freshmen are to find the rest of the scholars with bats, balls, and footballs"; on April 29, 1751, an international —if one may be allowed that adjective—cricket match "was play'd according to the London Method" in New York between New Yorkers and Londoners; horse races were by no means uncommon still earlier; and in the seventeenth century football, stool ball, and other games were practised. In addition, festivities were held on the anniversaries of royal marriages, of the birthday, accession, and coronation of the

King, etc. In short, life in the colonies was not—even in New England—all fasts, thanksgivings, and church-going.

May I call attention through your columns to an interesting paper on "The Old-Time Game of Wicket and Some Old-Time Wicket Players," read by Mr. George Dudley Seymour of New Haven before the Connecticut Society of Colonial Wars, and reprinted from the second volume of its Proceedings? In an article on "Pallone, the National Game of Italy," in the *Century* for August, 1907, Dr. F. J. Mather, jr., said that "the pallone looks like a huge baseball," and stated that he had "seen its like in Columbia County, N. Y., where, twenty years ago, the old Dutch game of wicket was still played." Why Dr. Mather regarded the game as Dutch does not appear, and Mr. Seymour has no difficulty in showing that it is of English origin, indeed "is essentially the noble old English game of cricket." The first glimpse we get, under the guidance of Mr. Seymour, of wicket in this country brings before us a vivid picture of a celebrated figure in Massachusetts history. In 1726 Sam Hirst—then not quite three years out of Harvard—was living with his grandfather, Chief Justice Samuel Sewall. On March 15 Sam "got up betimes," "before anybody was up," "left the door open," "came not to prayer," and "went into the Comon to play at Wicket." Whereat the good judge "was much displeased"; and when Sam repeated the offence two days later, the judge "told him he could not lodge here practising thus. So he lodged elsewhere." Cotton Mather perhaps regarded Sam's early death (in 1727) as a judgment on the "wicket" game in which he indulged.

Speaking of the match game between the New Yorkers and Londoners in 1751, Mr. Seymour says that cricket "apparently gained no foothold in New York." This would seem to be a mistake, for in an advertisement headed "To the Cricket Clubs" printed in the New York *Independent Journal* of April 19, 1786, James Rivington stated that he had "batts and balls to sell"; and in an advertisement headed "Cricket Club" in the New York *Daily Gazette* of April 20, 1789, it was announced that "the first Meeting for the present Season will be at the Old Grounds on Thursday, the 7th of May next."

Mr. Seymour has succeeded in collecting a surprising amount of information about a game now nearly obsolete, and the reminiscences he gives of old wicketers are of great interest. The most famous contest in the annals of the game took place at Bristol, Conn., in 1859, which was attended by more than 4,000 people. It is to be hoped that Mr. Seymour's admirable paper will encourage other students to give us the history of other games.

ALBERT MATTHEWS.

Boston, June 24.

AN ANNUAL LURE.

To the Editor of The Nation:

Sir: Towards the close of each scholastic year the notice of the dwindling number of aspirants to the academic career is directed by authority to a much coveted bounty, termed "Teaching Fellowships." The treble opportunity afforded by these stipends for the prosecution of advanced study and acquisition of pedagogical experience, together with a substantial contribution towards the material support, would be wholly creditable to the generous spirit which, on the whole, characterizes the higher educational policies of this country, were it not for two questionable uses to which, more and more, this form of academic bounty is put. In the first place, the teaching fellowships serve to force up, by a species of bribe, the graduate attendance at certain universities so ill equipped for graduate work that their very participation in it must tend to dilute and vitiate the quality as well as reputation of American scholarship. Worse than this, in some institutions the teaching fellows are utilized to furnish to undergraduates elementary, intermediate, and even advanced instruction at a price cheap beyond the dreams of administrative avarice.

It will hardly do to ward off the charge by any reference to the student's freedom of choosing his own university. Under the dragnet system of competition for students, the small fry will naturally be hauled in the finer-meshed web. Also, even the little fishes prefer to bite the hook that is baited. Unfortunately, the mischief done *to* the teaching fellow as student is but half the story. The other half is the mischief done *by* him in his capacity of teacher. By the system of teaching fellowships at certain Western and Southern institutions, the high-school graduate is delivered from the hands of skilled and experienced teachers to the tender mercies of juvenile pedagogical experimenters, who are compensated for their educational exertions at a rate fairly proportioned, hour for hour, to the pay of a bricklayer or stone-mason.

In substantiation of my contention that a surrogate graduate school may be built up to the presumable detriment of both graduate and undergraduate students, I quote from the special announcement of one of our minor universities, widely circulated each year among prospective college graduates:

> The —— University offers graduate courses leading to the degrees of doctor of philosophy, master of arts, master of science, etc. Graduates of approved colleges may take any of these, upon payment of laboratory fees and a matriculation fee of $10. The university offers for the coming year, in the graduate department:
>
> (a.) Six teaching fellowships, worth $250, with free tuition, one each in Greek, Latin, history, physics, German, and mathematics.
>
> (b.) The alumni fellowship, worth $250, with free tuition, available in any department.
>
> (c.) The —— fellowship in economics, worth $175 [!], with free tuition.
>
> (d.) —— scholarships, two in number, open to graduate students, worth, each, $89.90 [marked down from $90?], with free tuition.
>
> These fellowships, except the alumni fellowship, are not open to women. Holders of fellowships may be required to teach as much as four hours weekly; not more.

It may be inferred, from the circular, that at the university in question freshmen and sophomores may, by a combination of circumstances, take eight courses of instruction, the total cost of which, to the university, shall amount to less than two thousand dollars in salaries.

OTTO HELLER.

Washington University, St. Louis, June 22.

WHISTLER'S LITTLE WHITE GIRL.

To the Editor of The Nation:

Sir: In view of the recent controversy, in which Mr. Pennell took a conspicuous part, some misapprehension may arise by the loan of my picture by Whistler (Symphony in White No. II, The Little White Girl) to an exhibition, of which the catalogue recognizes the authorization of Mr. and Mrs. Pennell's biography.

I write to explain that the picture was lent in ignorance of the contents of the catalogue.

ARTHUR STUDD.

London, June 20.

ANGLING VERSUS FISHING.

To the Editor of The Nation:

Sir: Your editorial of June 23, on the two classes of fishermen, suggested the following:

He who upon the water casts his fly
With four-ounce rod, and takes no trout thereby,
He—fine, exalted mortal!—is an angler.
Who uses hempen cord and heavy tackle,
And baits his hook with squirming garden hackle,
Is lost to reason—just a low-down mangler.
Thus Simple Simon, fishing in a tub,
Judged from his catch, an angler was and true,
But stern tradition says (and there's the rub),
He always used a heavy line and grub!
So which was he? I put the choice to you.

TEACHING SHAKESPEARE.

To the Editor of The Nation:

Sir: The notions concerning high school teaching obtained from my own college courses in pedagogy have been wholly replaced by a few that are the results of experience, however heterodox they may be. Thus, in teaching Shakespeare's plays to class sections that average thirty students, I have found that some definite requirement was necessary for each recitation. When the naturally indolent student understood that he should be called on daily for some definite points, he soon began to study methodically. It is this class of students—and where the percentage of boys is high it is a large group—that will make no preparation if the class hour is taken up largely with general discussion and oral reading. For their benefit lessons should be assigned carefully, and all should be required to study daily the important points of textual criticism. Although little can be done on it in the classroom, the memorizing of well-known passages should form a large part of the required work of the term.

It proved profitable at the opening of each class hour to require some student to outline extemporaneously the action of the scene assigned for the day's reading. When this plan is followed, the entire class is ready to make minor corrections, so that as a result each one gets a clear notion of the entire action. The same course can be followed with reference to the characters presented in the scene. Here an opportunity is given for the better student to show originality, while there is enough fact demanded to keep the attention of the less interested. This will hold true as well in the written character sketches and in the other written work required throughout the year. The latter part of the hour was usually given to the textual criticism and

to occasional oral reading of the conversational passages.

The amount of oral reading and of general discussion advisable seems to depend largely upon the size and temper of the particular class group. The decision regarding this must lie in the discretion of the teacher, provided first that the routine requirements for preparation are strong enough to enforce interest from the less responsible students. It is true that many will be eager to discuss the questions of characterization and of the proper presentation of various parts on the stage, questions that are of greater interest to the teacher personally. But when these discussions will not hold the poorer students the routine requirements must be at hand in order to bring their interest back to Shakespeare from the interesting diversions open to students in any classroom. Their behavior depends upon their interest, and their interest in turn depends upon a knowledge of what is going on about them. For this reason I believe that the more intellectual criticism must always be subordinated in high-school work to routine requirements that tend to develop self-control of mind and of body. If high-school courses are to prepare for life rather than for college, here is where the emphasis must be placed in order to do the greater service.

AMERICAN MISSIONS IN TURKEY.

Fifty Years in Constantinople, and Recollections of Robert College. By George Washburn, D.D. Boston. Houghton Mifflin Co. $3 net.

Fifty-three Years in Syria. By Henry H. Jessup. Two volumes. New York: Fleming H. Revell Co. $5 net.

Among the influences which have led to the awakening of Turkey one of the most potent has been the work of the American missions and, especially, the American educational missions. At the outset mission boards frowned upon educational work other than Sunday-schools and Bible classes. A resolution passed at the annual meeting of the American Board of Commissioners of Foreign Missions in 1856, declared that the only work of the missionary was "the oral utterance of the Gospel in public or private." Robert College was a protest, originating with the missionaries, against this narrow conception. Two young men, James and William Dwight, graduates of Yale College, the second generation of a family renowned in the annals of American missions in Turkey, devised a scheme for "founding a school at Constantinople, not in any way connected with the Mission and tolerant of the religious prejudice of the natives." In 1857, they laid their plan before Christopher R. Robert, a New York merchant. Mr. Robert was treasurer of the American Home Missionary Society, an organization which, in connection with its work in the newer States of the West, had been led to realize the need of providing or helping to provide schools for the children of the settlers. He had visited Constantinople during the Crimean war, and made there the acquaintance of Dr. Cyrus Hamlin, a man of striking force and originality, part of whose missionary activity had taken the practical form of furnishing the British hospitals and soldiers with bread, thus incidentally teaching Constantinople how to make real bread, and raising to that extent its material standard of civilization. Dr. Hamlin regarded the anti-educational policy of the American board as suicidal, but, on the other hand, he objected strongly to the idea of a school without religion, as "an inexplicable anomaly in Constantinople" which "would be regarded as a trap to cheat the devil."

Mr. Robert was interested in the plan for a school proposed by the Dwights, but agreed with Dr. Hamlin rather than with them as to the character it should assume; and when, two years later, they abandoned their plan, he called on Dr. Hamlin to join with him in "founding a Christian college in Constantinople." To these two men, to the quiet, relatively little known merchant of New York, who out of his not great means, with steadfast faith and much personal sacrifice, financed the enterprise almost alone, until the day of his death, and to the fervid missionary from Maine, odd mixture of eccentricity and practical sense, who worked for years with brain and hand, circumventing French opposition and Turkish obstructiveness to obtain the necessary permit, building and showing workmen how to build, and last, but not least inspiring young Orientals with character—to these two men, Robert College of Constantinople owes its origin, as an incorporation of the State of New York (1864) and part of the University of that State.

Under the title "Fifty Years in Constantinople," Dr. Hamlin's son-in-law, Dr. Washburn, second president of the college, has told the really wonderful story of this institution in the form of personal recollections. From the outset Robert College met with bitter opposition, first from the French combined with the Papal authorities, because it was Protestant and by its use of the English language fostered English influence in Turkey; then, when French influence waned, from Russia; and when German influence superseded Russia at the Sublime Porte, from Germany, whose Emperor consistently gave his support to the corrupt camarilla of Abdul Hamid; sometimes from the Greek and Armenian hierarchies, and at all times, until the revolution of 1908, from the Turkish Government. That the college secured a charter at all was due in part to a chance visit of Admiral Farragut on a ship of war. One of the immediate results of its establishment was the erection, under French influence, of a grand *Lycée* by the Turkish Government; and, indeed, one of the most important effects of its influence has been the compulsion it has put upon the natives, Turks, Greeks, and Armenians, to establish or improve their own educational institutions. Neither Turks, Greeks, nor Armenians could prohibit the attendance of their young men in such institutions as Robert College, unless they were ready themselves to provide some sort of education which could be regarded as an equivalent. These numerous schools, maintained at a relatively high grade, did much to bring about that enlightenment, the effects of which were seen in the revolution of 1908.

Almost from the start, through the influence of one of its early professors, Dr. Albert L. Long, who had been a missionary in Bulgaria, Robert College attracted Bulgarian students; and their education enabled them to found an independent state and set that example of self-government which has exerted so marked an influence on the Turkish Empire. To-day the college is best known in the East for its relation to Bulgarian education and Bulgarian independence. Magnificently situated on the Bosphorus, it is often pointed out to visitors as the institution which made Bulgaria free. It is a commentary on the provincialism of Americans and the American Government that, in spite of the great work accomplished by Robert College and the great influence exerted by it in the East, it was a few years ago almost unknown in America outside of missionary circles, even a Secretary of State so progressive and so broad-minded as Mr. Bayard being unaware of its existence and its history. Naturally, under such conditions, the American Government did not always give it that diplomatic support which is so necessary in a country like Turkey; and, had it not been for the keen interest of England, it might have fared ill at times with Robert College. This obligation does not prevent Dr. Washburn from telling frankly the truth with regard to Oriental politics, even where that truth reflects heavily on England, as it often does.

The book is extremely interesting and valuable to the student of European politics, as well as to the student of education, on account of the part which Robert College, as well as its president, Dr. Washburn, played in Turkey during the difficult period of the Bulgarian and Armenian massacres, the Russian-Turkish War, and, in general, through the whole troubled reign of Abdul-Hamid, of whose problems and policies he presents in the introduction a fair and discriminating study.

Dr. Jessup's story of missions in Syria is of quite a different character. Dr.

Washburn represents the statesmanlike, scholarly aspect of missions. Dr. Jessup is the fervent evangelist, full of zeal for the conversion of souls, often narrow in his point of view, but withal a singularly capable, well rounded man, as the successful missionary must needs be. The two men commenced their missionary careers at about the same time, and they represent, in more ways than one, the two great centres of American missionary effort in the Turkish Empire, Constantinople and Beirut, the former the headquarters for the Turkish-speaking portions of the empire, the other for the Arabic. Originally both centres were under the American Board of Commissioners of Foreign Missions, in which were combined Congregationalists, New School Presbyterians, and Dutch Reformed. But in 1870, the New School and Old School Presbyterians, having formed a union, decided to establish their own mission work, and, accordingly, the work of the A. B. C. F. M. in Turkey was divided, that part lying in the Turkish-speaking portions of the empire being retained by the Congregationalists, that part lying in Arabic-speaking Syria being handed over to the Presbyterians. Later the Dutch Reformed also started their own mission in Arabia.

Dr. Jessup's book is a work of extraordinary interest. He belonged to the second generation of American missionaries in Turkey. With Dr. Bliss, afterward president of the Syrian-Protestant College of Beirut, and others, he sailed from this country to Smyrna in a sailing bark which carried a cargo of New England rum—missionaries and liquor being the two contributions which America appeared ready to make to the East. Dr. James S. Dennis, himself formerly a missionary in Beirut and author of "The History of Missions," has furnished an introduction to this book, which, if we might quote it in full, would be the best summary of its contents. It contains "annals of church growth and organization in Syria, and the touching and often deeply stirring accounts of the experiences of individual converts, some of whom were martyrs, and all of whom passed through spiritual struggles, or endured cruel mockings and harassing persecutions, lend a living interest to the record." There is an abundance of "anecdote and incident" to enliven the story. These incidents, be it said, are sometimes sad "chronicles of persecution, spoliation, civil war, and massacre." The most tragic episode of the book is the massacre of the Christians in the Lebanon and Damascus in 1860. Dr. Jessup lays the burden of original responsibility for the disturbances resulting in those massacres on the Maronite hierarchy. According to him, it was they who provoked the outbreak by first attacking the Druses. It was rather the Turks than the Druses who were responsible for the massacres and plundering which ensued, especially in Damascus. Throughout the book, he displays distinct antagonism to the Maronites, and his picture of the conditions of the northern Lebanon, where the Maronite priesthood seems to exert complete control at the present time, is anything but pleasant.

Dr. Jessup is at times very sharp in his criticism of missionary methods and the obstructiveness and lack of faith of home boards. Little by little the stipends of the missionaries in Syria seem, from his account, to have been reduced, while the price of living has gone up, until at the present time it would be impossible for the missionaries to live in ordinary decency if they did not have means of their own. He criticises severely the self-seeking policy of the foreign Powers, especially England, which have fostered for their own advantage evil conditions in the Turkish Empire; yet he holds that empire itself to be a curse in the East. So, referring to the expulsion of Ibrahim Pasha from Syria and Palestine and the restoration of those regions to Turkish rule (Vol. I, p. 60), he says:

> But for the interference of England, the Egyptian dynasty would have subdued the whole Turkish empire. While Ibrahim Pasha was in Syria there was universal security, and a better government than had been known for centuries. On his departure, things returned to their old course. Again, in the Crimean War, England saved the Turkish empire from destruction. It did the same at the close of the Bulgarian war, after the treaty at St. Stephano. And it may be said that in 1861, by insisting on the evacuation of Syria by the French army of occupation, it again saved Syria to the Turk. And yet the Turks do not love the English!

Dr. Jessup was a most important power in the missionary work in Syria. He was, too, a man of affairs, of many interests, sometimes in somewhat unexpected directions, as, for instance, the geology of the country. The book itself is in part a diary, in part it consists of the histories of the different missionaries who have labored in the Syrian field from the beginning down to the present time. It is full of narratives, often strange and even romantic, of individual converts and non-converts, who have come under his observation, and of discussions of all sorts of themes of interest from the educational or missionary, or even political, standpoint. The second volume closes with tabulated statements, constituting a history of the Syrian mission in all its ramifications, a wonderful exhibit of progress.

This book proved to be Dr. Jessup's last work and his last word. Shortly after its publication the cable brought news of his death at the age of seventy-eight in Syria, where he had labored for fifty-three years, refusing various offers of what would be commonly regarded as more important, and certainly more comfortable, positions in his native land, a typical foreign missionary.

CURRENT FICTION.

Bianca's Daughter. By Justus Miles Forman. New York: Harper & Bros.

If the author's idea of supreme beauty is at all like the illustrator's, he speaks something too much of the amazing personal charms of Bianca's daughter. But we do not take it there has been collusion between scribbler and draughtsman; anything of the sort would be quite out of order in this day. On second thought, one fancies the picture as slyly expressing the artist's revulsion against the author's raptures. The most beautiful woman that ever lived can hardly be born too often, but it is hard to credit her reincarnations on the strength of hearsay. The mother, Bianca, was a lovely Italian who had married a harsh and mean-hearted Englishman. Presently a man comes into her life with whom she might have experienced the fierce happiness for which her nature cries out. A blameless intimacy springs up, which is shattered by the husband's suspicion and anger. To punish her, he takes away her six-months-old child. This is too much: she flies to her lover, and with him passes one heart-brokenly happy year before she dies. These are the antecedents of Vittoria Fleming's own romance. Her father brings her up in the strictest seclusion, but, with the fatuity of such fathers, allows her a coming-out in New York—at the very moment, of course, when she is ripe for romantic adventure. Here, in due time, she meets Richard Blake. They at once show an interest in each other which is a shock to all observers, for Richard is the son of the man who had been her mother's lover. Hence the complications which ensue. The young pair are ignorant of the facts until enlightened by the injured and infuriated Fleming. In the first shock of discovery Vittoria promises her father that she will never marry Blake. She has already, in a moment of pique, engaged herself to a middle-aged author; so that she is doubly withheld from young Blake. But such difficulties are nothing to your novelist—except as they offer material for his adroitness. Matters are adjusted after some more or less conventional pother, in the course of which the tyrant Fleming turns out to be a feeble monster, and the elder Blake, the ex-lover of Bianca, has the last word. Something is intimated as to a New York and Connecticut setting, but the words London and ———shire may be substituted at will. Hardly in English fiction, however, would the main proposition be tolerated—that "what God denied for those two, long ago, he was storing up for the younger

generation—for her daughter and for his son." It is idle to try to build a pretty little romance upon such a situation.

Country Neighbors. By Alice Brown. Boston: Houghton Mifflin Co.

Miss Brown's wine needs no bush: here she has drawn from an older and riper vintage than has been her habit of late. These tales, as the title of the group suggests, have to do with those New England rural types and motives of which she long ago proved herself the interpreter. We use the definite article advisedly. Miss Brown's plane is her own—quite distinct from that inhabited by the fancy of Miss Jewett or Miss Wilkins. No one has a more minute knowledge of the New England dialect and habit of mind; but the merit of Miss Brown's work does not consist in its realism. On the contrary, she is essentially romantic, and her charm lies in her ability to discern and to convey the romance which underlies the stern New England temperament and the superficially dull village life. Read together, there is a quaint monotony in these stories. The prevailing theme is the romance of middle age. The lone spinster and the lone bachelor or widower, neighboring innocently through long years, and at last awaking to belated recognition of their mutual need; the man who has left the countryside in youth, and returns to mate with the faded woman with whom, long ago, he has kept company; the husband who, on the edge of old age, is brought to the realization that his wife means more to his heart of hearts than the drudge his will has made her: such are the simple and familiar themes of these tales. "A Flower of April," to be sure, is a study of that strange, austere romance of a spinsterhood which is born to lavish itself upon flowers and domestic animals; and "Gardener Jim" is the story of a reunion of two maiden sisters who have lived side by side without "speaking" for thirty years—that odd form of feud with which the New England conscience is still able to reconcile itself.

Whatever her theme, Miss Brown is able to invest it with a gentle and unstrained sentiment for which the reader of the "up-to-date" and the morbid must be unflaggingly grateful.

The Gold Trail. By Harold Bindloss. New York: Frederick A. Stokes Co.

The story of a young Englishman, Weston by name, who quarrelled with his family and went to Canada to make his fortune. He was a long time doing it. In fact, his progress was not material until his employer, Stirling, a railway contractor, became interested in him. This interest grew out of the fact that Weston, while acting as packer on a camping trip, fell in love with Stirling's daughter. Stirling had such confidence in his daughter's judgment that he accepted her partiality to Weston as a guarantee of the young man's worth. After a while the latter found a gold mine, and succeeded, after many troubles, in developing it, though not without Stirling's assistance. By that time Weston and the girl had arranged matters satisfactorily to all concerned.

The story wanders from one end of Canada to the other and even makes an excursion to England, but in spite of the changes of scene it is remarkably uneventful. There are two or three ordinary camping trips, some in British Columbia, others in the eastern bush. During one of the first, there is a mountain-climbing adventure of a pale and artificial sort, in which Weston does some heroic scrambling, but it leaves us unmoved. On another he shoots some rapids with Miss Stirling, and the description of this makes us curious as to how much white-water Mr. Bindloss has been through, otherwise than as a passenger. Between these camping trips Weston works at track-grading and gold-hunting. But he always comes back to her. Now and then, under the stimulus of her presence, he becomes poetic. He speaks, for instance, of "the sound of running water in the honey-scented shade"; and in the next line says to her, "You have seen the big white peaks gleam against the creeping night." Yet there is no record of his having read Kipling to any extent.

The Life of Me. By Ethel Shackelford. New York: Dodge Publishing Co.

"Me" is a baby. Among many infaut biographies, we do not recall one which comes so close as this to the pulse of that extraordinary machine, the wondering, logical, clinging, merciless, ungrateful, adorable heart of a baby. This particular baby had its particular mission in life, which was to convince his mother that he was worth while. She was a very modern mother who had given up things for the baby, things like piano-playing and singing. Her nerves were modern, too, but fortunately she had an unescapable human nature, and a conscience. An unflinching doctor helped her with her nerves, and the baby continued her education. We leave her doing very well, though not yet an ideal mother. Meantime the baby has treated us to a survey of the relations between "small helpless persons" and "un-playing up-growns," as searching as it is amusing.

The book is padded out into a story by sundry episodes that sit with varying degrees of success upon the main discourse. The chapter about the lovely actress lady is wholly insipid and irrelevant. The affair of Cousin Martha's second marriage has at least a hyphenated connection with the main narrative and is in parts diverting. But where the book, like the baby, is thoroughly worth while is in its far from superficial suggestion, and in the history of the baby's relations with the universe: relations simple and direct with his father as becomes man and man; with his nurse more complex, being in the nature of co-conspirator where he is necessarily and complacently a silent partner. Toward jam, he is frankly acquisitive. With toys, especially their eyes, analytic. With dogs and their dinners, democratic. With his mother, he is the man-baby, a cuddler, a tyrant, an educator, a knight.

THE FLEET AT QUEBEC.

The Logs of the Conquest of Canada. Edited, with an Introduction, by Lieut.-Col. William Wood, Toronto: The Champlain Society.

When Dr. Arthur Doughty, the present Dominion Archivist, published his monumental "Siege of Quebec" in 1901-2, it was felt that the last word had been said on this epoch. So far as the land forces were concerned, this is no doubt still true. But there remained to be told the full story of the part taken by the fleet in the memorable conflict, and that story we now owe to Col. William Wood. From more than one point of view his book is a remarkable achievement. It was to be expected that the author of "The Fight for Canada" could weave the incidents of the naval side of the British conquest of Canada into a narrative at once scholarly and intensely interesting; but the task Col. Wood set himself was much more difficult. It was to edit the logs of the ships engaged in the three campaigns of Louisburg (1758), Quebec (1759), and Montreal (1760); and, as he says in his preface, "nothing is drier than a ship's log, not even Statutes at Large or the Anglo-Saxon Chronicle." Even the one redeeming feature, the log of some great sea fight, was missing in this case, as no naval battles formed part of the conflict for Canada. Yet Col. Wood has apparently achieved the impossible; or, let us say, he has proved that even a ship's log must respond to the touch of a master hand. There was a time when the Battle of the Plains was believed to be a victory for Wolfe and his army, and for them alone. Later there was a more or less reluctant admission that some credit must be allowed to the supporting fleet. Now Col. Wood gives us a new point of view. He establishes, beyond dispute, the fact that Admiral Saunders, "whose great fleet was working out one phase of a world-wide amphibious war, was supported by Wolfe, whose small army was used as a local landing party at Quebec." There is nothing in this to detract from the glory of the great general. The final victory must still be ascribed to the

genius of Wolfe; but it was founded upon the perfect coöperation of the army and the navy; and the preponderating factor in the united service was the navy, not the army. Without Wolfe and his men, the conquest of Canada would have been delayed. Without the fleet, Wolfe must have failed.

Valuable as the logs are intrinsically, Col. Wood's introduction is perhaps of even greater importance. He divides it into five chapters, and in them discusses every aspect of his subject. "The British Empire," he says, "is mainly the result of the Great Imperial War, that is, of the long series of wars between 1688 and 1815, in which France was the main opponent and sea-power the main determinant. The most imperial of all these wars was the Seven Years' War. The most important British part of the Seven Years' War was rightly called the Maritime War. The most important event in the Maritime War was the conquest of Canada. And the most important factor in the conquest of Canada was the British navy." Upon this solid foundation Col. Wood builds his argument, bringing to bear an immense amount of material on the relations of the navy to the Empire, and the imperial forces as a whole, as well as to the navies of other countries. He sketches its history and development, its equipment, its points of superiority and inferiority to the French and other navies, its personnel, the character of the men and their officers, of the great sea captains who shared in the victories of Louisburg and Quebec, and, above all, of the master mind which planned the conquest of Canada. "Wolfe was the point, Saunders the blade of the Empire's sword on the Plains of Abraham: but the hilt and hand were Pitt." His characterization of Pitt is worth quoting for its own sake:

> He had his faults as a statesman; but they were very few, and his mistakes were never irreparable. He was a little theatrical in manner and rather vindictive towards the Bourbons. But he knew how to exert British amphibious power in every direction and combination where it could be decisive. He rose above all pettiness when the occasion demanded it; and his virtues far surpassed those of any other statesman of the empire. He roused England to the highest patriotism; he touched the heart and imagination of the Celts and oversea British as they never had been touched from London before, or have been since; he understood, as no one else ever had, what a British commonwealth of empire ought to be; he knew all the relations between the civil and military resources of the people he led to victory, all the importance of sea-power, all the combined force of a United Service, all the true functions of the army; and—his crowning virtue as a minister of war—he knew and practised the supreme art of controlling operations without interfering with their execution.

Following the initial chapter on the Maritime War, Col. Wood devotes the remainder of his introduction to a discussion of the successive phases of the campaign in Canada, Louisburg, the St. Lawrence, Quebec, Montreal. The remainder of the volume is given to the logs, or, to be more explicit, to selections from the logs. "Only the most important days of the most important ships are selected; but these have been carefully chosen to corroborate and supplement each other, so as to illustrate the history of the conquest from the naval point of view." Additional equipment is provided, in the shape of a bibliography and cartography.

A History of Secondary Education in Scotland. By John Strong, M.A., F.R.S.E. New York: Henry Frowde. $2.50.

The annals of secondary education in Scotland are long and to trace the story through a dozen centuries requires a groundwork of thorough study. Professor Strong has the necessary equipment, as is indicated by the numerous references that enable the student of education to work still deeper in any phase of the subject, by the appropriate selection of original sources interwoven into the narrative, and by the thoroughness with which he has delved into public and private source-material in order to illuminate each topic of investigation with the proper light of history.

From the point of view of secondary school history, the monograph is a valuable addition to the limited literature of that field. The starting-point is the year 563 A. D., when Columba founded the monastery at Iona, which, as a centre of ecclesiasticism, exercised an influence second only to its influence as an educational centre. Hither came the young from Scotland, England, and Ireland, and even from Scandinavia, to acquire the learning and study the discipline of the Columban church. Education in Scotland, as elsewhere in Europe, was for centuries closely associated with the church, and the central aim of the schools was the dissemination of church teaching and dogma. During the period of Catholic supremacy three factors—the parish, the monastery, and the diocese—helped to establish schools that are represented by the various types of secondary schools found in Scotland in the later part of her educational history. The place of the parish and the burgh, or grammar, schools in the evolution of the Scottish system is set forth clearly in separate chapters by the author. One's sympathy goes out to the parish schoolmasters of the eighteenth century, when one learns that they seldom received above £16 yearly, all told, many, in fact, no more than £8. Interest, too, is awakened by the picture of the Scotch lad stopping on his way to school to collect his proportion of peats to heat the little school-house; but the influence of parish masters and schools was healthful in stimulating manhood, for "the best and greatest men whom Scotland produced during the century received their education at parish schools."

The distinctive features of Scottish education as seen in its history and present condition are an intimate connection between its elementary and secondary grades (seen in that eminently Scottish institution, the parish school), the easy accessibility of its higher institutions to the people of the land, the national character of its schools and universities, and the communal control of education in the burghs. The secondary school of Scotland entered upon a new lease of life near the beginning of the nineteenth century, when the curriculum was modified and extended, new schools were erected all over the country, and old ones were rebuilt. But the real renaissance dates back only two decades. Twenty years ago state aid was extended to the schools, with the result that remarkable expansion and development have ensued. With state assistance has come state supervision, which, in recent years, has extended over virtually the whole of secondary education in Scotland, and state supervision should mean further development of an educational system that, in the past, has outranked the other educational systems of Great Britain.

My Friend the Indian. By James McLaughlin. Boston: Houghton Mifflin Co. $2.50 net.

The Seminoles of Florida. By Minnie Moore-Willson. New York: Moffat, Yard & Co. $1.25 net.

As might be guessed from its title, "My Friend the Indian" is a narrative of personal observation and adventure rather than a discussion of the Indian question on historical or philosophical lines. As a panoramic sketch of the conditions with which white civilization has had to contend in its conquest of the red man's country, it has all the charm to be expected of the reminiscences of a man who penetrated the wild Northwest with the troops in 1871, and almost ever since has represented the government among the Indians as agent, inspector, or negotiator. Naturally, the aboriginal type that figures in these pages is the Northern Indian, for Mr. McLaughlin's official labors have been chiefly among the Sioux, the Cheyennes, the Chippewas, the Crows, and the Piegans. Of the domestic life of these tribesmen, their manner of meeting certain exigencies, and their attitude toward death, we are treated to some excellent word-pictures.

Three chapters are devoted to the Indian version of Custer's last campaign in the valley of the Little Big Horn: for two, the author has drawn upon the

recollections of several warriors who took part in the fighting, while the third records an interview with Mrs. Spotted Horn Bull regarding the incidents of the tragic week as witnessed from the camps of the women and children. For the disaster which overcame Custer and his immediate following, Mr. McLaughlin lays the larger share of the blame at the door of Reno. He takes pains, however, to impress the fact that Custer fell in a battle, not a massacre. He makes it plain, also, that the Indian allies were assembled in the valley originally for no warlike purpose, and that their inspiration to fight the whites came from the hostile movements of the whites and was kept at fever heat by the "medicine" which Sitting Bull was making at a safe distance from the scene of trouble.

Interesting sidelights are thrown upon the case of Capt. Jack and his Modocs, the wonderful march of Chief Joseph in 1877, and the killing of Sitting Bull. For typical scenes, true to life and full of color, it would be hard to improve upon the descriptions of the last great buffalo hunt at Standing Rock and the ride-amuck of the Cheyenne murderers. Indeed, Mr. McLaughlin has distinct gifts as a story-teller, appreciating with equal keenness the picturesque and the humorous aspects of his subjects; his worst faults in this field are a tendency to digress on the verge of his climax and a habit of repeating himself for the sake of intensifying some feature of his background. Both defects are chargeable, doubtless, to his literary inexperience, but their avoidance would have saved his book a quarter of its present length without impairing its more admirable qualities.

Like Mr. McLaughlin, Mrs. Willson approached the preparation of her book with a sense that duty demanded it. She had learned to esteem her neighbors, the Florida Seminoles, and believed that some one who knew them ought to tell the world their story; hence this volume grew out of notes made by the author and her husband during a long period of personal contact and acquaintance with the fragment of Osceola's band who remained behind when the larger part of the tribe were removed to the Indian Territory. Mrs. Willson does not write, however, with the care or the assurance of Mr. McLaughlin. There is no method in the arrangement of her material, which appears to have been thrown together rather than deliberately composed. This fault, emphasized by the lack of a topical index and some heedless proofreading, detracts from the pleasure of the student who searches the book for special data in which his interest centres.

If one is content to read the entire text and do his own winnowing, one can find in it a good deal that is pleasing in its way, even if little that is new. The feature of most permanent value is a phonetic vocabulary of the Seminole language, or, strictly speaking, of the dialect used by the Florida remnant, for that used by their Oklahoma kinsmen differs in those particulars in which dissimilar experiences and environment have called new descriptive terms into being. Mrs. Willson tells us that the Seminoles in Florida number six hundred, and this estimate is probably as well entitled to acceptance as the two, three, or four hundred guessed by various other writers. Owing to the difficulties of travel in the Everglades, the furtive habits of the Indians, their repugnance for everything governmental, and their suspicious attitude toward all white men, no official census of the tribe has ever been worth the paper it was written on.

Ancient Ceylon: An account of the Aborigines and of Part of the Early Civilization. By H. Parker, late of the Irrigation Department, Ceylon. With illustrations by the author. London: Luzac & Co.

The modest title of this book tempts the reviewer to say at once that Mr. Parker has hidden more than might have been expected under the phrase "Part of the early civilization." In fact, whether art, architecture, weapons, games (ancient and modern), coins, or symbols be his fad (or profession), the reader will find in "Ancient Ceylon" much to attract him. Still more milk will he extract from the cocoanut if he be specially interested in the history of Ceylon or the general history of religions. Mr. Parker was in the Irrigation Department for above twenty years, and his interests have been very catholic. Thus, while he is especially concerned with the earliest irrigation works, he has an eye to all else that makes for civilization. Even in irrigation, one may find something to admire. Such for example, is the fact that "Sinhalese engineers were the first inventors of the valve-pit, more than 2,000 years ago," a device to regulate the outward flow of the water from a reservoir.

The general reader, however, will doubtless pay more attention to Mr. Parker's painstaking description of games, tools, weapons, and coins. As here depicted our "jackstraws," or spelicans, are so like the game in Ceylon that it is not unreasonable to believe with the author that this game came originally from the East Indies. In chess, there are some local variations peculiar enough to note: the king may not castle, but he is permitted to jump like a knight till checked. The pawns are exchangeable, on the last row, only for the pieces on whose row they stand.

The discussion of the svastika or "fylfot" (cross) in its Sinhalese form is in itself excellent, but here the author is tempted to roam abroad, and perhaps falls a victim to the baleful influence which always seems to affect those who have much to do with this sign of superstition. In the "Trojan svastikas," to which the author appeals in evidence for his own ingenious interpretation, there is not so much confidence to-day as there used to be. Moreover the Vedic passages adduced in favor of this interpretation really have no connection with the svastika, which is a symbol utterly unknown in early Vedic times. Mr. Parker is quite right in refusing to see a phallic sign in the svastika, and when he says also that a circle and not a cross is the natural symbol of the sun we gladly assent. Nevertheless, we can not agree with him that one arm of the cross was meant to represent a river and the other the obstruction over which one is carried to safety (*ergo* the cross as symbol of good luck).

But a fresh guess at the meaning of the svastika may be permitted as a pastime to any Orientalist and yet not impugn his historical or critical ability. And on the matter of the original inhabitants, Mr. Parker has much to say that is radical and for the most part convincing. The people concerned are of course, the Vaeddas, who have often been exploited as being so primitive that counting is unknown to them. Now comes Mr. Parker, who has worked and hunted with them; has heard them repeat tales implying the knowledge of numbers and the ability to add and subtract; and has come to the opinion that the Vaeddas are rather a type of debasement than of primitiveness. Let Andrew Lang rejoice! This, of course, refers, however, to the Forest Vaeddas.

The Vaeddas are, in fact, degenerates in that they used to be a race of great importance in the island, numbering among themselves chieftains and kings whose record still stands in the annals of pre-Christian ages. To-day, they are a merry, gentle people, delighting in song and dance and games, riddles, and hunting. Some of their customs are noteworthy. The Vaedda will not receive a gift, unless it be of such form that his wife can share it with him. The forest Vaeddas appear to have the sense of direction developed to such an extent that they actually cannot lose themselves in the jungle. Mr. Parker tells of one of them who expressed surprise at this idea, and finally exclaimed petulantly, "How *can* a man get lost?"

The religious traits of the aborigines may be summed up briefly, as there is no space here to enter into the long discussion of this subject to be found in Mr. Parker's pages. The original cult appears to have been the worship of a hill god as a beneficent deity. He sent rain, checked disease, and was opposed by twelve devils who caused the ills

that afflicted the people. The worship of ancestral spirits is not assured, but is probable. The Vaeddas seem to be connected religiously with no aborigines other than those of Southern India. Mr. Parker believes that the Nāgas of Northern Ceylon were an offshoot from the Nayars of Southern India. The Vaeddas themselves distinguish Ceylon ("Sihala," the country of the Sinhalese), from their own lands in the island. The Sinhalese name of the island is Lanka. The word Vaedda, with its old intermediate form vaeddhan, evidently reverts to Sanskrit *vādha*, "hunter" The illustrations, made by the author, are rude but helpful, especially in understanding the chapters on coins and buildings. The author gives full credit to previous writers, but his own book will be indispensable to future workers in this field.

Yet Again. By Max Beerbohm. New York: John Lane Co. $1.50 net.

This is a gleaning from the carefully wrought journalism of which Max Beerbohm has almost a monopoly in England. We mean in the sense that he never derogates, but in the occasional essay for Fleet Street uses maintains his own quality unimpaired. What this quality is the analyst finds his ordinary processes too crude to demonstrate. Evidently, sheer mental agility, a sort of pranksomeness of the mind, is the chief ingredient. But how delicately it is employed, how neatly brought to the brink of waggishness and there shunted off upon some unexpected evasion! To the discreet roguishness of the manner, an underlying common sense lends a dignity that we hardly find in Mr. Beerbohm's competitors in mere wit. The fact that, however brief, he is never hurried is again a distinction quite his own. He does not seem to invent quips; they come to him as to their master.

Inevitably, one cites Lamb when celebrating Mr. Beerbohm, but the parallel is at once injurious and misleading. In the love of the precious, recondite, teasing word there is a real affinity between the two essayists; beyond this it hardly extends. Mr. Beerbohm is more detached; one barely sets him in the London that affectionately calls him Max. Who his associates are and what his actual tastes, one merely guesses. Lamb, with all his subtlety, was in a robuster tradition, gave himself with a kind of royal sentimentality. Mr. Beerbohm has something of the Parnassian aloofness, gives chiefly his wit, pays less with his person, is in some fashion tidier and more civilized. One characteristic he shares with Lamb: his quality is pervasive, and not to be fully sensed in extracts. "There are so many queer things in the world that we have no time to wonder at the queerness of the things we see habitualy" sounds truistic, but leads one admirably into a discussion of the mystery of fire. Again the parenthesis, "I have no doubt that the custom of wearing hats in the House originated in the members' unwillingness to let strangers spy down on the shapes of their heads," gains its effect from a preceding delicious parody of the House of Commons manner. Our favorite pretences, journalistic and political, the etiquette of our grand aunts (whose graces he cordially praises), mere happenings (the return of a nostalgic Australian to find that his guiding star, his London club, is being demolished), the tragic effacement of the labels on a much-travelled hat-box by a too zealous repairer, the vision of the past evoked by a Morris dance—in such trifles Mr. Beerbohm finds his themes, and his art makes them important. This art will mean little to a world that wants reading for the train. To the few who still care for quality in letters it is a rare delight.

Mr. Beerbohm's sheer ingenuity is perhaps best enjoyed in the handful of notes called "Words for Pictures." We quote—being after all driven to plum-picking—a few lines on a drawing of Ho-tei, the Japanese god of prosperity, by Hokusai. Mr. Beerbohm, the accomplished caricaturist, has naturally warmed to the theme. Ho-tei possesses the beauty of real fatness—

> That fatness that comes from within and reacts on the soul that made it, until soul and body are one deep harmony of fat; that fatness which gave us the geniality of Silenus, of the late Major O'Gorman; which soothes all nerves in its owner, and creates the earthy truistic wisdom of Sancho Panza, of Francisque Sarcey; which makes a man selfish because there is so much of him, and venerable because he seems to be a knoll of the very globe we live on, and lazy inasmuch as the form of government under which he lives is an absolute gastrocracy—the belly tyrannizing over the members whom it used to serve, and wielding its power as unscrupulously as none but a promoted slave could. Such is the true fatness.

Notes.

A new book of John Burroughs, "In the Catskills," is in the hands of Houghton Mifflin Co.

The Putnams will issue in the autumn "Mazzini and Other Essays," by Henry Demarest Lloyd.

The Macmillan Company announces for publication next autumn "Twenty Years at Hull House," by Miss Jane Addams.

Henry Frowde announces that in the series of Church Art Handbooks a second volume, entitled "Woodcarvings in English Churches," by Francis Bond, is nearly ready.

An interesting account of privateering is promised by E. P. Dutton & Co. in "The Buccaneers in the West Indies in the Seventeenth Century," by C. H. Haring. It is to be published in the autumn.

A telegram from A. H. Yoder, Superintendent, informs us that the high-school stadium of Tacoma, Wash., is entirely under the control of the Board of Education, and that no offer was made to hold the Jeffries-Johnson prize fight in it. We regret that credit was given, in our editorial note of June 23, to a specious newspaper report.

The "Dictionary of National Biography" is to receive the addition of a second supplement, which will include biographies of notable persons who have died during the years 1901-10. The work, of which Mr. Sidney Lee is to be the editor, will it is believed, be ready early in the year 1912. It will be published in this country by the Macmillan Co.

In "Landmarks of Russian Literature" (Macmillan), the Hon. Maurice Baring publishes a series of disconnected essays, far from profound, but entertaining and sympathetic. The opening chapter, on "Russian Characteristics," which is drawn mainly from the author's own impressions as a newspaper correspondent, is decidedly the best in the book. The treatment of Tolstoy is slight and unsatisfactory, nor is that of Turgenieff at all adequate, though it may serve a purpose by stating the attitude of the present Russian generation towards that novelist. On Gogol and Chekhov, authors comparatively little known in this country, Mr. Baring touches with genuine appreciation; of Dostoevsky, despite an ardor that often becomes extravagant, he gives an account that seems to us the best accessible in English. The book, as a whole, by its tone of warm personal enthusiasm, should do good service by attracting new readers to the great writers of Russia.

John Galsworthy belongs in a way with Max Beerbohm and one or two others in that second stratum of British cleverness just below the level of the great panjandrums of wit, Messrs. Shaw, Chesterton, and Wells. His latest publication, "A Motley" (Scribner), is a rather loosely made parcel of journalistic sketches and impressions. They are all featly turned, though in some cases they barely avoid the pitfall of forced wit and false brevity always lying in wait for writers of his kind. Mr. Galsworthy has one peculiar merit: he can portray with sympathy the waifs and failures of the underworld, without losing his interest in the other and on the whole for the artist saner aspects of life. It would not be easy to say which character sketch is the better done, that of the poor abandoned flower girl, or that of the wealthy gentleman of the old school.

"The 'All Red' British Empire Series," issued in this country by Little, Brown & Co., Boston, promises well. The bright scarlet in which the books are dressed has a militant suggestion of Britain against the world, but the pages speak only peacefully. Not long since we noticed at length B. R. Wise's "Commonwealth of Australia." We have now at hand "The Dominion of New Zealand," by Sir Arthur P. Douglas (1909), a writer, like Mr. Wise, well qualified through long residence and high official station to tell the story. New Zealand is considered in all its aspects, and an excellent hand-book is furnished, interesting alike to the man of science, the economist, politician, and man of affairs. We suppose volumes will follow treating

of the other divisions of the British Empire, in which case we shall have a library of information of the highest value.

"Walks and People in Tuscany," by Sir Francis Vane, Bt. (John Lane Co.), is one of those simple, friendly books which, though they deserve little praise, one is loath to condemn. The author has ventured afoot or on wheel in remote Tuscany. He knows the mountain passes from Vallombrosa to San Marino, has wandered among the Chianti Hills, has trodden the Appenine trails above Pistoia and Lucca, and has sought the rarely visited summits of the Apuan Alps, with their high villages. Everywhere, despite a rather casual knowledge of Italian, he made friends, even improvised speeches at patriotic feasts and acquired some proficiency at bowls. Children were his favorite tramping companions, and he makes them more vivid than the grownups. In the mountains above Lucca he happened upon a local Saracen play, originating, he thinks, from the village of Sant' Anna. Of it one would like to hear more. Occasionally, he reports rather vaguely works of art that have escaped the makers of inventories. What ails the book is a kind of all-overishness. One realizes the feelings of an amiable traveller, but attains no satisfying picture of the things he mentions. We may note the opinion that the society of Florence would be ideal were there a centralizing personality—some sociable despot whose establishment might serve as clearing house and court. It is to be feared that upon such a salon the burden of the merely prosperous might be excessive. The book is tastefully made, and the pen sketches with which it is adorned have an incisiveness that is denied to the text.

In his "Story of the Negro," Dr. Booker T. Washington has brought out in book form papers contributed to a magazine, as well as much interesting material which he has given to the public at one time or another in his platform addresses. This is no attempt at a scientific, historical relation of that remarkable rise of the American negro in the forty years since emancipation which so eminent a Southerner as Henry Watterson has declared to be without parallel in the world's history. Instead, we have an easily flowing, loose-jointed, but readable narrative, bristling with interesting anecdotes and incidents in men's lives and interspersed with useful statistics on nearly all the phases of the negro's life and labor in this country.

As was to be expected, Dr. Washington all but ignores the question of disfranchisement and other political issues. Those of his race who would find in these volumes any outspoken denunciations of injustice or race discrimination, or indeed any stirring note of leadership, must look elsewhere. Dr. Washington is not an agitator. His happy optimism, his cheerful confidence that by building upon the foundation of industry and social usefulness the negro will eventually come into his own, find here ready expression. Truly, no one can contemplate the achievements of the negro since emancipation without certain confidence that, however discouraging the problem may be at times, however disheartening the present reaction, North as well as South, against the negro, in the years to come the negroes are bound to make greater and greater contributions to the industrial and intellectual progress of the nation. No other conclusion is possible after reading Dr. Washington's pages. We wish his work might find the widest circulation, despite certain defects of style and construction, for it presents in an attractive form facts which everybody ought to know. Particularly is this true of the introductory part of the first volume in which the author sets forth something of the past and present conditions in Africa. One of the fundamental difficulties of the negro problem is the cock-sureness with which many persons assert that all African negroes are, and have been, on the lowest level of intelligence and civilization; that there never was any civilization or progress among them. Few know that according to undoubted scientific authority the average primitive negro community in the darkest continent is "a model of thrift and industry." Unfortunately, Dr. Washington often weakens his presentation of such important facts by interjecting rather irrelevant observations on some phase of the Southern problem of to-day. The book bears, too, marks of hasty construction. There are numerous errors of typography and editing. Thus in volume one, page 25, Major R. R. Moton becomes Moten; on page 217 it is James A. Smith; on the next page the same person becomes Samuel A. Smith. On page 266 we learn that a church was built in 1972; on page 323 Gov. Andrew becomes Gov. Andrews. In volume two Brig.-Gen. A. S. Daggett appears as A. D. Daggett, etc., etc. Careful revision would have avoided much repetition and rendered the argument more effective.

Fifty-three new volumes have been added to Everyman's Library (E. P. Dutton & Co.), the titles of which keep well up to the level of selection which the previous four hundred had set. These little books, issued at a low price (35 cents net), present a readable page of fair type and paper, and there must be few who cannot find some wished-for work in the series to put upon their shelves. Moreover, the names of the editors and commentators are proof of excellence in the handling of the texts, and the short introductions by these scholars offer, for the most part, an engaging bit of new material for each volume.

Among the new volumes are some in each of the twelve general divisions into which Everyman's Library is classified. The largest share is given to fiction. Four books make complete the set of Dickens's works; Mr. Chesterton writes characteristically, urging the greatness of Dickens's simple characters over the subtle ones with which the present-day novelist seeks to eke out a book. "We have seen Mrs. Lirriper in France," he says, "and we can imagine her in Mesopotamia or in heaven. But the subtle character of the modern novel we cannot really imagine anywhere except in the suburbs or in hell." Dickens, he observes elsewhere, "was meant by heaven to be the great melodramatist, so that even his literary end was melodramatic," in leaving "Edwin Drood" unfinished. Walter Jerrold contributes the introduction to "Pendennis" (in two volumes), and May Sinclair to Charlotte Brontë's "The Professor." In the introduction to "Castle Rackrent" and "The Absentee" (one vol.), Prof. Brander Matthews remarks that in measuring the range and depth of the influence which one author has exerted over later writers—"excepting only the great masters of fiction, with which Miss Edgeworth need not be classed—few can stand the test as triumphantly as she does." Other volumes are the entertaining "Anna's of a Parish," by John Galt; "The Marble Faun"; "Geoffrey Hamlyn," by Henry Kingsley, and "The Tower of London," by William Harrison Ainsworth. There are six books of translated fiction.

A pleasing edition of Florio's Montaigne is offered in three volumes, under the division of Essays and Belles Lettres, with a short introductory note by A. R. Waller. Hazlitt's "Lectures on the Comic Writers, and Miscellaneous Essays," fill one volume. Here, too, we would call attention to the excellent practice of the editors, in prefixing to each book a chronological list of the author's writings, and the generally adequate indexes. The selection of Macaulay's essays and the "Lays of Ancient Rome" (one vol.) completes the seven volumes of his works in Everyman's Library. "Prue and I" and "Lotus Eating" (one vol.), by George W. Curtis, is another book under this heading. In Romance, we have "Gil Blas," in two volumes, with a critical introduction by Anatole le Braz, who styles Lesage "the most natural and most fascinating of French story-tellers," and Dr. Sebastian Evans's translation of "The High History of the Holy Graal," from the first volume of "Perceval le Gallois ou le conte du Graal." Mr. Rhys prefixes an appreciation of Dr. Evans's work, and a short bibliography of recent literature of the Graal. Under Poetry and the Drama, there is the "Faerie Queene" (two volumes) in admirable type, and "Poems and Plays of Oliver Goldsmith." To both of these there are somewhat longer introductory essays, by Prof. John W. Hales and Austin Dobson, respectively.

Of the five new books of history, four are of Rome. Merivale, and the first three of six volumes of Gibbon, all edited by Oliphant Smeaton, furnish a continuous conspectus of Roman history, as the last twelve chapters of Merivale have been left out, to dovetail with the Gibbon. Apparently there will be only one general index to Gibbon's work: none is given in the volumes now at hand. Count Lützow's "History of Bohemia" is also one of the new works. Rawlinson's Herodotus, in two volumes, heads the list, under Classical; the editor, E. H. Blankeny, has cut down the original introduction and notes so as to make possible the printing in so small a space. Plutarch, Dryden's translation revised and edited by Arthur Hugh Clough, is in three volumes, and Elizabeth Carter's translation of Epictetus in one.

To "The Wealth of Nations," Prof. E. R. A. Seligman contributes an admirable introduction discussing Adam Smith's relation to present-day economic thought and problems, and outlining the fundamental principles of that work. This is the only new publication under "Science," but two interesting works, under "Travel and Topography" are "Franklin's Journey to the Polar Sea," the absorbing narrative of a trip in the first quarter of the nineteenth century, and Henry Walter Bates's "A Naturalist on the Amazon." As an intro-

duction to Bates's book, the editor reprints the appreciative review written by Darwin in 1863.

The eight remaining volumes are divided, two under Biography, two under Philosophy and Theology, three under Books for Young People, and one under Reference. Pat on the heels of the five-foot shelf comes John Woolman's "Journal and Other Papers"; the second work of Biography is "Hodson of Hodson's Horse," by Capt. Lionel J. Trotter, a book of the Indian Mutiny. Two rather unusual volumes for libraries of this sort are "The First and Second Prayer Books of King Edward VI," and the metrical translation of the "Ramayana" and the "Mahabharata," by the late Romesh Dutt. The books for children are all illustrated: Harriet Martineau's "Feats on the Fjord," by Arthur Rackam, and "The Swiss Family Robinson," by Charles Folkard. "Heidi," a tale of child life in the Alps, is by Johanna Spyri, the Swiss authoress. The one book of reference is a "Short Biographical Dictionary of English Literature," compiled by John Cousin, which contains more than sixteen hundred names and is a handy companion volume to other works of the library. This completes the fifty-three new volumes; the editors, in their announcement, promise attractive selections in the near future, to make up the five hundred which will comprise half of Everyman's Library as eventually planned.

From the *Torch Press* has come an imposing imperial octavo volume of 1,800 pages and of great value, entitled, "A Compendium of the War of the Rebellion," by Frederick H. Dyer. It has been compiled and arranged from official records of the Confederate army and other official documents and sources of the Federal Government and the various States. Mr. Dyer, who is said to have spent forty years at this task, and is himself a veteran of the civil war, has included in his records every regiment, battalion, battery, and independent company organized by the States and Territories, also those of the Regular Army, the colored and Indian troops, etc., etc. The book gives a list of 900 regiments that lost fifty or more killed or mortally wounded. There is a statistical exhibit of deaths in the United States army during the war and other extremely interesting compilations in the first portion of this volume, in which is also included a list of the departments and the armies. Part ii contains a chronological record of the campaigns, battles, skirmishes, etc., and part iii contains the regimental histories. There are special indexes to part ii and part iii, and the book is carefully indexed throughout. The regimental histories are given in short, compact form and wind up with the losses by death in battle or through disease. It seems a pity, however, when so much labor was put into this volume that a list of the colonels of each regiment was not also given, and other information as to the composition of the organizations. To the deaths, for instance, there should have been added the total number of men enlisted, the number of men wounded in action, deserted, etc. Much of this matter is now available in the growing lists of regimental histories and all in the War Department's records. A particularly interesting feature is the grouping of battles and campaigns according to States. Even the skirmishes in California, about which so little is known, are here set forth. The list of commanders of the different departments and armies, corps, divisions, and brigades will be of special value to students of history or writers upon any phase of the civil war struggle. So far as the accuracy of the work is concerned we note on a list just received from the publishers twenty-nine errors and misprints found since publication, not an overwhelming number in so large a volume. Its real accuracy could scarcely be tested without much labor in the actual records. The work, therefore, is likely to stand as a most useful compendium, sure to find its place in the libraries of the country, because of the growing demand for just such a volume. The typography is by no means beyond criticism.

The value and interest of *Petermann's Mitteilungen*, as well as its breadth of scope, are continually increasing. The April number opens with a lucid statement by the famous traveller, Sven Hedin, of what he regards as the far-reaching consequences of the recent flight of the Dalai Lama to India. He confidently believes that the special privileges of the Tibetans will be taken from them and their country will become a Chinese province under the supreme rule of the amban, and he adds that his sympathies are entirely with the Chinese. A military supplement contains suggestive articles by two generals, one on the significance of military geography and the movement of troops, the other on the strategic value to Russia's position in the far East of the proposed Amur railway, the route of which is described in detail, with an admirable map published in the previous number. With the cartographic supplement there is a large map in eleven sections, giving the position on the earth, the extent and character, as topical, geological, physical, or statistical, of all the maps noticed in the first three numbers of the year. It is a most helpful, practical index, giving at a glance the desired information.

The death of Frederick James Furnivall on Saturday, at the age of eighty-five, comes home to many a scholar, American as well as English, with unusual poignancy. For Dr. Furnivall represented the highest type of humane scholar, and many a disciple will not readily forget the encouragement which he received from this picturesque figure over a cup of tea and an English muffin at the A. B. C., just across the street from the British Museum. Dr. Furnivall was a very many-sided man, and, although scholarship to him was absorbing, he found time and enthusiasm for athletics, rowing being his favorite exercise, and for social reform. But he will be remembered chiefly for his whole-hearted devotion to Browning, Shakespeare, and Chaucer. And, whatever his actual literary achievement may be, he has impressed young men with an enthusiasm for learning that was hearty and rare. He was editor of many publications, a member of several learned societies, chief among them being the Chaucer Society, contributed occasional articles, and wrote introductions to such works as the Leopold and Royal editions of Shakespeare.

On June 22 occurred at Bath, England, the death of the Rev. H. Grattan Guinness, who had for years been prominently engaged in the promotion of home and foreign missions. He founded in 1872, and directed, the Regions Beyond Missionary Union, which supports a large number of missionaries in the Congo, in India, and in South America. His publications include "The Approaching End of the Age," "Light of the Last Days," "Romanism and the Reformation," "History Unveiling Prophecy."

Eugène Corneille, the last male descendant of Pierre Corneille, died about a fortnight ago at Bernay at the age of forty-seven. He was on the staff of the *Indépendant* of the town where he died, and continued, in his devotion to literary activity, the long-standing traditions of his family.

Dr. Volbert Heinrich Sauerland, who died recently at Rome, is known to the world to-day chiefly as an historian. Like many a predecessor, he retired from the priesthood of the Roman Catholic Church owing to quarrels in that body, and devoted his life to scholarship. He studied history at Göttingen, and for the past fifteen years had worked in the Vatican archives for the Gesellschaft für Rheinische Geschichte and the Gesellschaft für Lothringische Geschichte. For students of papal history, his works are invaluable. He was seventy-one years of age.

Science.

Life of William Thomson, Baron Kelvin of Largs. By Silvanus P. Thompson. 2 vols. New York: The Macmillan Co. $7.50 net.

Reviews of several books of reminiscences of Lord Kelvin have already appeared in these columns, but in the present work, we have for the first time, a full and authoritative account of his life and work. This biography was begun during the life of Lord Kelvin, and, in fact, had his coöperation; after his death, the original sketch was greatly extended by the materials furnished from his letters, diaries, and other documents put at the biographer's disposal. In addition to the abundant record thus available, Professor Thompson had the high privilege of being a personal friend of the great physicist. The result is a book which will appeal strongly not only to men of science, who have been eagerly awaiting it, but also to all those who have an interest in the thought of the nineteenth century.

The life of a man who published 661 scientific papers, more than a score of books, and innumerable addresses, must be largely a record of work done, an analysis of thought, rather than a chronicle of action. Yet Professor Thompson has also been able to present a real picture of the man and to arouse personal interest in his character, besides giving full discussion of his scientific work.

The main facts of Lord Kelvin's life can be told in a brief space. After his early education in Glasgow and a brilliant studentship in Cambridge, where he began his long work as a profound and

original thinker, he spent some months in Paris, studying, making acquaintance with noted men, and assisting Regnault in the laboratory. On his return to Cambridge, he was elected a fellow of St. Peter's College, but soon left to become, at the age of twenty-two, professor of natural philosophy in the University of Glasgow. This was the chair which Lord Kelvin was to hold and to make celebrated for half a century. His first achievement, undoubtedly inspired by his experience with Regnault, was to establish a laboratory, in which the students might work, the first connected with any university in Great Britain; and, although not himself primarily an experimenter, he gathered about him a number of men qualified to put his ideas to the test and to make the long series of instruments which brought fame and wealth. The first ten years in Glasgow were a period of unceasing toil and incessant writing. The most notable results of these years were the papers on thermodynamics and electricity, which, with the classic experiments performed with Joule, revolutionized these subjects.

In 1856, when Lord Kelvin began his investigations in connection with the new Atlantic cable, he was called to a more public and active life, and it would not be too much to say that his splendid work in designing and laying the first cables and inventing instruments for recording messages turned failure into success. The reward of this achievement was first knighthood, and, later, a peerage.

But, even these exacting and vexatious labors could not keep his mind from problems in pure science. Besides a continuous production of papers of the highest order, he began with Professor Tait a comprehensive and epoch-making "Treatise on Natural Philosophy," which unfortunately never progressed beyond the subject of mechanics. When the Atlantic cable demonstrated its practicability, he returned with renewed zeal to his special work. Honors were showered on him, and at least three attempts were made to induce him to move to Cambridge. The first call came when he was afflicted by the recent death of his first wife; when a more tempting offer was made to become director of the Cavendish Laboratory, recently endowed, ties too strong to be broken had been formed in Glasgow. On rejecting the offer, Lord Kelvin made overtures to Von Helmholtz, but this great scholar had just begun his career in Berlin and so the honor fell to Maxwell. The later years of Lord Kelvin's life, after his second marriage, were divided between his yacht and his house at Largs; but wherever he was his incessant industry continued to the end.

In a certain sense, Lord Kelvin epitomized the physical sciences of the nineteenth century, and formed the connecting link between the mathematical physicists of the type of Lagrange and Laplace and the leaders of the present-day movement. He was the foremost in a splendid band of men who attempted to make a mechanical theory of natural phenomena, founded on the assumption of concrete atoms and æthers. As was natural, he could not entirely change his point of view so as to support the more metaphysical conceptions of the modern school which has exalted the intangible concept, electricity, into an entity and has rejected, or at least altered, the ideas of Newton concerning matter and mass.

The most striking impressions gained from an examination of Lord Kelvin's work are the extraordinary fertility of his ideas and the enormous activity he was able to maintain. There is no branch of physics which he did not master and enrich with numerous contributions of prime importance; even the most casual interest in a subject aroused him to new problems and wide excursions into allied fields. In fact, the intellectual impatience of his mind often prevented him from pursuing a subject to completion, and we find no such consistent and finished productions as those of Faraday or Maxwell. His greatest influence was perhaps as a pioneer, opening new fields of thought and inspiring other men to carry out and complete the hints scattered in his writings. Combined with this impatience we also find an intense love of the concrete and a rooted suspicion against metaphysics. As he himself said, he could not satisfy this mind until a mechanical model of an abstraction had been constructed.

Of the intellectual activity of Lord Kelvin there are many records. When confined to his bed for weeks after the accident which left him lame, he "began to use the famous green-backed note-books which ever afterwards he carried about with him. In these, in all odd moments, when travelling or waiting for a train, he would jot down as they occurred to him suggestions for experiments, calculations, diagrams, draft paragraphs of scientific papers, all dated punctiliously, and often cross-referenced. His *green-book* became his inseparable companion, and the series now preserved of over one hundred volumes is a witness of the extraordinary fertility and bewildering variety of his genius." He even took them to bed with him and made notes before rising in the morning. Helmholtz, himself a man of immense energy, gives us a glimpse of his astonishment while yachting with Lord Kelvin. In a letter he says:

W. Thomson presumed so far on the freedom of his surroundings that he always carried his mathematical note-book about with him, and as soon as anything occurred to him, in the midst of the company, he would begin to calculate, which was treated with a certain awe by the party. How would it be if I accustomed the Berliners to the same proceedings? But the greatest naïveté of all was when on the Friday he had invited all the party to the yacht, and then as soon as the ship was on her way, and every one was settled on deck as securely as might be in view of the rolling, he vanished into the cabin to make calculations there, while the company were left to entertain each other so long as they were in the vein; naturally they were not exactly very lively.

In closing this review no better appreciation can be given of the man who now lies in Westminster Abbey among the immortal dead, than that by Sir William Tilden, Dean of the Faculty of Science, University of London:

My Lord the Chancellor, I present to you William Thomson, Baron Kelvin of Largs, for the degree of Doctor of Science, *honoris causa*. The illustrious son of a family famous for mathematical talent, for more than half a century Lord Kelvin filled the office of Professor of Natural Philosophy in the ancient University of Glasgow. Two generations have passed since he entered on his professorship, and the advances in physical science which have distinguished the nineteenth century from all preceding epochs have been largely due to the influence of Lord Kelvin in promoting true ideas concerning the conservation of energy, the laws of thermodynamics, and their application to the mechanics and physics of the universe. His untiring intellectual activity has led him also to inquire into problems interesting to the chemist and geologist, as well as those which are important to the physicist and engineer. He has calculated the probable size of atoms; he has studied the structure of crystals; he has estimated the age of the earth. But the world knows him best as the man who has shown how practically to measure electric and magnetic quantities, and has made it possible to link together distant continents by the electric telegraph. It is he who has shown how to neutralize the effects of iron on the compasses of ships and how to predict the tides, and who has thus taught the mariner to steer safely over the surface of the ocean, and to sound, as he goes, its depths and shallows. A greater philosopher than Democritus, in him are united the qualities of Archimedes and Aristotle. Regarded with affectionate reverence by his contemporaries, it cannot be doubted that his name will shine brightly through long future generations. In offering a place of honor to such a man the University confers lustre on itself.

The little book by Anne Moore, bearing the title "Physiology of Man and Other Animals" (Holt), is an interesting attempt to present the essential facts of physiology in an elementary fashion. In carrying out this plan the author dwells upon the larger and more obvious activities of the body, such as circulation, respiration, digestion, and movement, and mentions but briefly the more complex functions of the nervous system. So far is this carried that the existence of a retina is just barely noted, and the ear is not described at all. The second half of the book contains a sketchy outline of the structure and activities

of the chief groups of animals, an outline which a good teacher may make very valuable. Much to be regretted is the evident willingness of Miss Moore, despite her training in a good school, to take many of her facts and illustrations from sources of secondary value, instead of going always to the fountain head for her supplies. A book that is modern enough to contain "lipase" is too modern to perpetuate the antiquated use of "hydrocarbon" for fat.

The alliterative "Conquest of Consumption" (Houghton Mifflin), from the fluent pen of Dr. Woods Hutchinson, is a brief but breezy encouragement of the victim of tuberculosis to give himself full benefit of the treatment by fresh air and abundant food. Those who like to see these questions dealt with in a slap-dash piquant method will find it here at its best. Dr. Hutchinson seeks to arouse and stimulate, and a mild exaggeration here and there, or an occasional disregard of the facts, disturbs him little. Such a presentation of the case will doubtless help many hesitating persons, much as many used to be helped by Gough and Moody, with whose form of appeal that of Dr. Hutchinson has much in common. Our only serious criticism of the book would be that perhaps too little stress is laid upon the fact that, although fresh air and feeding are all important, there are limitations to their usefulness which the zealous patient can hardly be trusted to recognize and appreciate without the aid of a physician.

Prof. Giovanni Virginio Schiaparelli, the astronomer, died on Monday at Milan. He was born, the son of a teacher, at Savigliano, in Piedmont, in the year 1835. After studying at Berlin and Pulkowa, he became in 1862 the director of the Milan Observatory, a position which he held until he retired in 1900. His investigations, which were numerous, were directed by that desirable complement of scientific scholarship, a far-ranging imagination, and on some occasions assumed lines that were revolutionary. His most notable discovery was that of the so-called canals of Mars, which he announced in 1877. His belief that Mars is inhabited by beings in many ways akin to ourselves started a controversy which has, of course, not even yet been settled. He wrote significant books on comets and falling stars, in 1873 "The Precursors of Copernicus in Antiquity," and in the next thirteen years two works, one on the rotation, and the other on the topography, of Mars.

Drama and Music.

THE NEW DRAMA AND THE OLD.

It is no secret that Mr. Charles Frohman's repertory season of "advanced" drama at the Duke of York's Theatre in London has been a failure. Nor have sincere friends of the theatre shed too many tears over the fact. Those sincere friends of the drama who are also intelligent friends of the drama have been aware for some time that what was only a few years ago commendably "new" and "advanced" has now become freakish and a fad. Mr. A. B. Walkley, the London *Times's* dramatic critic, recently uttered some very plain truths on the subject:

> What the drama of the future was going to be neither they nor he could say: but he thought he could safely prophesy what it would not be. It would not be a rambling conversation on the model of those recent plays of Mr. Shaw and Mr. Barker which had so brief a career. He referred to these without apology, because they had been put forward by one at least of their own parents as the new dramatic model. He submitted it was a model of what to avoid. If the drama was to develop, it would have to develop along dramatic lines, shaping itself, like every other art, in conformity with its peculiar medium of expression. It must obey the law of economy in art; not run to waste by aiming at effect which could just as easily be produced without the apparatus of a theatre and the aid of a company of actors. And a play must always, in the future as in the past, be something organic and whole, or it would not hold the spectator's attention.

In these few sentences Mr. Walkley has summed up the rise and progress and decline of the intellectual English drama during the half-dozen eventful years that have elapsed since Mr. Arnold Daly produced "Candida" in New York and gave George Bernard Shaw to what has been since that event a breathless, admiring, and puzzled world.

In Shaw's hands the play has become a magnificent and popular embodiment of the art of conversation. The old dramatic requirements of plot, situation, and character have been thrown overboard. Two volumes of Shaw's plays were in print for years before they found a hearing on the stage. They were in nearly every sense that extremely old-fashioned thing, "closet-drama." But Mr. Shaw's talk was so brilliant, his humor so high above the ordinary, and the whimsical play of ideas so pleasantly irritating, that people discovered with some astonishment that a play might have neither plot nor situation in the traditional sense, and yet be a capital night's entertainment. There is no need here to expatiate on the rise and apotheosis of Shaw. It is only necessary to point out that Mr. Shaw was not slow to take advantage of his sudden vogue. He worked his vein hard. There had been in "Candida" and "You Never Can Tell" the remnants of plot. There had been in "Man and Superman" some trace of situation. He proceeded to eliminate these from his subsequent plays. "John Bull's Other Island" was more talkative than "Man and Superman." And "Major Barbara" was about as garrulous. And "The Doctor's Dilemma," and "Getting Married," and "Press Cuttings" have grown steadily worse. Whether emanating from Shaw's dramatic theories or from Shaw's dramatic personality, the attempt to write talk instead of drama was deliberate and openly avowed.

Shaw thus became the founder of a school of discursive drama. His followers, of whom Granville Barker and John Galsworthy are the best known, could not approach the master's brilliancy of talk, but they could surpss him in seriousness and sincerity; and they did. Shaw dwells, as a rule, in the field of abstract ideas; when he deals with such specific subjects as Mrs. Warren's profession, the Irish question, the Salvation Army, or Irish politics, the interest is seldom in the main story and nearly always in the jest or the suggestion of the moment. His followers have chosen their topics more carefully and gone to work with fine single-mindedness, keeping their eyes always on the thesis; producing, in other words, a serious "problem" play. But it was a play in which the Shavian disdain of plot and action was observed. The thesis was not acted out, but talked out. Mr. Galsworthy has been less the sinner in this respect than Mr. Granville Barker; Mr. Barker has shown the way to a crop of newer dramatists who have talked from the stage about things they knew or believed in; things deserving to be known, but nevertheless talked about instead of acted out. Of "Chains," a play of lower middle-class life by Elizabeth Baker, a girl stenographer of little literary training, one critic—we believe it was Mr. Archer—remarked that the entire plot consisted in this: a London clerk thought of emigrating to America and didn't. Mr. Archer was under the necessity of saying that, while the play had no plot in the traditional sense, it had that higher form of plot which is of life itself. Which is all very fine and very little to the point.

For the essense of the matter is this: the laws of dramatic writing, built up in the course of twenty-five hundred years, cannot be dismissed with a wave of the hand. Now and then an exceptional individual may arise who, for a time, may find it possible to dispense with those laws. Above all laws of the theatre there is one supreme law which decrees that the spectator must not be bored. If Bernard Shaw's brilliant talk can hold an audience for three hours, well and good. If Mr. Barker and the newer school can keep us interested while they discourse about the poor law or police court administration, we ask nothing more. Only it cannot be emphasized too strongly that the experience of twenty-five centuries holds out the solemn warning that such audacious experiments must come to grief in the long run. Not every dramatist can write as well as Bernard Shaw. And Bernard Shaw himself has shown of late that he cannot write well enough to keep his audience from yawning with alarming frequency.

The man of original tastes may live exclusively on olives and weak tea; most of us need a more substantial and more conservative diet. The original dramatist may refuse to play by the rules of the game; his would-be imitators are

bound to come to grief. What those men fail to recognize is the fact that the laws which they scoff at are really intended for their own salvation. The trained acrobat may play Liszt's Hungarian Rhapsody on the piano with his toes, but for the average musician it is safest to play with his hands. And for his comfort, the average man may recall that the very greatest musicians prefer to play with their hands, instead of their toes.

Sir Charles Stanford has brought out a new Irish song cycle. It was sung for the first time in London by Plunket-Greene.

One of Rossini's earliest operas, "Tancred," is to be revived in Berlin next season. He was only twenty-one when he wrote it.

"Quo Vadis," the French opera by Jean Nouguès, which Mr. Gatti-Casazza has procured for the next Metropolitan season, seems to be popular. After its Parisian success, it was acclaimed in a Bohemian version at Prague, and is now being translated into German for the Volksoper in Vienna. In the same city a company is organizing to take it on the road, presenting it in cities which have opera houses but not funds enough to pay for the sumptuous scenery the opera calls for.

Mendelssohn's violin concerto, which has been for decades one of the most popular of all concert pieces, had to wait eighteen years after it was composed before it was printed. Berlioz's Fantastic Symphony remained in MS. fifteen years, Schumann's first symphony twelve years. Schubert's orchestral and chamber works not only were not printed during his lifetime, but there were few among them that he had ever had a chance to hear. His ninth symphony was twenty-two years old when it was put into type; the immortal "Unfinished" had to wait forty-four years, and the great octet nearly thirty years. A number of interesting facts like these are given by Theodor Müller-Reuter in his "Lexicon der deutschen Konzertliteratur," the first volume of which has just been published, in Leipzig, by C. F. Kahnt. The dates of first performances of important pieces are given with much other information, obtained, in the case of the works of contemporary masters, from the composers themselves. Conductors, players, and singers will find this volume of great use. Their attention is called particularly to the fact that the author takes pains to point out the beauties of pieces that are played too seldom; *e. g.*, Schubert's Fantasia for violin and piano (op. 159), and his sonata in A, opus 162, for the same instruments.

Russia has lost another of her most prominent composers, Mili Alexejewitch Balakireff. Like several of his best-known colleagues, he was a man of science (biologist and mathematician) before he became a pianist and composer. He lived seventy-four years, and is looked on as having been, after Glinka, the leader of the Russian "national" school. His best-known works are a symphony, the music to "King Lear," the symphonic poem, "Damara," the Oriental piano-fantasy, "Slamey," and a collection of Russian folk songs. He devoted much time to making his country's music known elsewhere, by giving concerts in various foreign cities. Once he conducted, at Prague, a cycle of Glinka's operas.

Art.

MUSEUM DIRECTORS.

Of the multitude that annually visits the Metropolitan Museum, an elect minority, the students, will learn with especial regret of the retirement of the director. The state of Sir Purdon Clarke's health did not permit him to take that aggressive part in remodelling the Museum that was hoped for, but he did quietly effect an important and radical change: he improved the moral climate of the place. Where students had been regarded as intruders and foreign experts had been denied access to the cases, he introduced an atmosphere of positive courtesy and helpfulness, thus confirming a beneficent policy begun in the interregnum of Acting-Director Storey. In a considerable degree Sir Purdon sacrificed himself to the social duties of his position, was absolutely accessible and untiringly serviceable even to casual inquirers. Possibly this was an excess of amiability, but it doubtless did much to create good will for the Museum. To the work of recruiting an expert staff and overhauling the collections he set himself with a scholar's sympathy.

His activities at the Metropolitan may suggest some thoughts about the profession he followed. It is rather a new profession. Until recently even in Europe heads of art museums were chosen from among painters of repute. Gradually, experts in some single branch have replaced these amateurs. As museums have grown and their funds have increased, it has become plain that neither the artist nor the scholarly expert is likely to do well in a post involving difficult duties of administration. The profession of museum director has emerged as a separate calling, requiring especial capacities and training. Under much the same conditions the profession of college or university president has detached itself from that of teaching or investigation. Something of the same efficiency, encyclopædic information, and universal sympathy is required in either case. In America such chiefs must also be public characters. Their allegiance is not impersonal, to a remote Ministry or municipal council, but personal, to trustees who share intimately in the work of administration. Moreover, most of our museums are in large part dependent on public subscription, and in virtually all cases grow chiefly through private gifts. All this imposes upon an American director a tact and diplomacy that, if useful, are not indispensable in similar positions abroad.

According to the main types of art museum among us, two sorts of directors are developing. The average museum devotes itself mainly to collecting and exhibiting modern art, to which it often adds practical instruction in painting and sculpture. The head of such an institution needs chiefly taste, energy, and administrative tact; his work does not require much scholarship, but rather a discursive curiosity and enthusiasm. The late Director Kurtz of the Albright Gallery, Buffalo, was an admirable example of this sort of executive. It is a type that our conditions are likely to produce in sufficient numbers. When a museum, like those of New York, Boston, Chicago, and Worcester, devotes itself to the whole field of art—hence for the most part to that of the past—the problem of finding the right chief becomes more difficult. Indeed, if there were many full-fledged art museums our supply of native directors would soon run short, just as for a time the supply of eligible college presidents did. But museums do not multiply after the fashion of colleges, and will presumably rear directors as fast as they are wanted. Sir Purdon Clarke worked up from the lower grades to the head of the South Kensington Museum, and Mr. Robinson, who is now acting director, having already for a considerable time carried forward efficiently the work of the Museum, had been curator and director at Boston before coming to us.

As to the training that best equips a director, clearly no dogmatic opinion can be held. But it may be said that no man who has not won his spurs as a specialist is likely to be an acceptable captain for a staff of experts. Yet the specialist, like the proverbial Scotchman, must be caught early if much is to be made of him. He needs a kind of ability that is not to be got from books and concerning which ancient inscriptions and statues, old paintings and carvings, are silent. Keeping the sympathy and insight of the scholar intact, he must add to them the keenness of the all-round executive. It is probable that few museum curators will be drawn into the work of general administration, just as, after all, it is an exceptional type of professor that has responded to the new and exacting demands made upon the office of college president.

It lightens the labors of a reviewer to find a title page that is also a table of contents. Such is the case with Richard G. Hatton's "The Craftsman's Plant-Book or Figures of Old Plants Selected from the Herbals of the Sixteenth Century, and exhibiting the finest examples of plant-drawing found in these rare works, whether executed in wood-cuts or in copper-plate engravings; arranged for the use of the decorator with supplementary illustrations and some remarks on the use of plant-form design" (E. P. Dutton & Co.,

$7.50 net). It remains only to add that the author has made a very complete anthology of old cuts, which, made for scientific purposes, are frequently models of clever design, and that his prefatory remarks are sensible. Their tone may be gathered from the advice, "Let the designer recognize at the beginning that he is not obliged to use plants at all, that it may be his lot in life not to use plants, and that beautiful objects can be produced without the use of them. And, indeed, until the designer adopts that attitude, he will misuse his plants. Until he can do without them he cannot properly introduce them." The arrangement is not bibliographical but botanical, a convenience for the worker who wishes simply to find a given type of plant; and except for a certain blunting and disintegration of the old cuts caused inevitably by process reproduction the collection comprised in this large quarto is a model of its kind.

Myron, Phidias, Polyclitus, Praxiteles, Scopas, and Lysippus are the "Six Greek Sculptors" briefly treated by Ernest A. Gardner for Duckworth's red covered series. (Scribner importation). There is also a preliminary chapter on archaic sculpture, and a final chapter on the Hellenistic period. Professor Gardner's method is characteristically sober and scholarly. He takes into account the latest discussions and discoveries, which in the case of Lysippus, for example, are quite revolutionary. Particularly valuable, though naturally the conclusions are tentative, is the essay on the style of Scopas, the initiator of the pathetic tendency. These studies of style make for a more discriminating appreciation of the qualities of Greek art. It is not so long ago that seven centuries were rolled together under the vague denomination of "the antique." Since then we have learned to distinguish the Greco-Roman, and to scorn, surely too much, the Hellenistic. Now we are beginning to distinguish personalities with some accuracy. This tends to take the subject out of the realm of superstition and ideology and bring it within that of criticism proper. The marginal uncertainty is still considerable, but such books as this help toward clearer admirations. One or two slips or omissions may be noted. No indication is given as to the whereabouts of the Myronic Hercules reproduced in plate XV. The condition of the Castel Porziano Discobolus at the Terme Museum is inaccurately described (p. 64, note), and its importance slurred. A statue the legs of which are broken a little above the ankle cannot be called a "torso." This version has also the great merit of giving the correct position of the left hand. A more unaccountable omission is that of the Niobid of the Banca Romana. The date of this fine marble is disputable, we feel it may be of Roman workmanship, but in quality and sheer passion it must count among the most important works of classical antiquity. One would welcome, also, a discussion of the lovely Temple Ministrant of Anzio, at the Terme, a much-discussed masterpiece, with apparent relations to the art of Lysippus. It seems possible, in view of these shortcomings, that the manuscript was completed a matter of three years ago, and not subsequently revised. Naturally, the pendant to the Ludovisi throne recently acquired by the Boston Museum was not available for this publication.

Finance.

CROPS AND MONEY.

The present financial situation in the United States is wholly logical. Given the facts of the last three years, the consequences could not be other than are now observed. The thing that impressed itself most deeply on certain minds after the strenuous times of 1907 was that a readjustment in the cost of living was a prerequisite to a return to what we are in the habit of calling normal conditions. The readjustment did not occur. It failed to manifest itself in 1908, and it put in no genuine appearance in 1909, although there was a temporary cut in the steel and iron industry, followed by such an avalanche of orders as completely to falsify any expectations which may have been entertained of an effective cheapening in this line of products. Nineteen hundred and ten, in a word, found the cost of living higher than ever. The assumption in the early part of 1908 that a decline in general prices must ensue was based on the fact that the underlying conditions did not warrant the prices then quoted. Yet the cost of living has increased since that time, while the working capital of the United States is not now so large. The result is that for every one person in 1908 who was looking for a readjustment in general prices, there are to-day a dozen persons who declare that the purchasing power of the dollar must be enlarged.

The dollar has been overworked of late years. It has had too many tasks assigned to it, and it is now proving to the people of this country that it cannot attend to them all. Billion-dollar Congresses, magnificent State and municipal expenditures, 15-cent cotton, wheat at non-exporting prices, and a land boom involving tremendously enhanced quotations (to go no farther) are too much for it; it is not able to get around quick enough for all purposes.

The dollar's severest taskmaster in the past year has been the farmer. The farmer has not been merciful to his beast; he has forgotten that the money market has its limitations. The farmer has been in a position to dictate to the rest of us, and the money market has been his agent. He has advanced the prices of his products, and has told us that we could take them or leave them. Ten years ago that would not have been so easy: his own capital was not so large as it is now, and his borrowing capacity was less ample. To-day local elevators preclude the necessity of his rushing his wheat to market, provided his bank will supply the funds to hold the marketing of the crop in abeyance. What has been the case with his wheat has been equally the case with his cotton, his livestock, and most of his other products. He has perfected his facilities for holding his wares from market until he can get his price; his *sine qua non* to-day is ample banking accommodation.

The attitude of the banks to the farmers is the question of chief interest at this period. A new harvest is at hand, and an immense volume of bank loans is necessary in order to reduce it to cash. But the fact cannot be ignored that in the past year the farmers have locked up an exceptionally large proportion of the nation's working capital. At a time when they should be flush, the local banks in the great agricultural regions are quite the reverse of flush. The banks in the central reserve cities of the United States have for some months foreseen just such a situation as the one which now confronts us. They have strengthened their own reserves as much as possible, knowing well that the task of financing the crop movement must fall on them in much larger measure than usual this autumn. This has reacted powerfully on Wall Street, and on the general industry of the country. Stocks have fallen heavily, and the commitments of money for mercantile purposes have been curtailed.

The unusually large amounts borrowed in the name of agriculture in the past year have been obtained in two principal ways. The farmers have borrowed from their local banks on their general credit, and in addition to these sums a great aggregate of farm mortgages has been placed with insurance companies and similar institutions. Neither class of loans can be liquidated with wholly painless results. It is quite conceivable that the greatly enhanced prices which have been paid during the land speculation will in the long run be amply justified by the added productiveness of the country, but pending that time really productive industries will have been deprived of the use of a very considerable amount of working capital. Some unproductive industries of an important character seem to be experiencing that ef-

Financial.

No. 59 Wall Street, New York

fect to-day. It is more than probable that the stagnation in the bond market for so many months past has been due to the fact that financial institutions that are usually large buyers of bonds have been devoting themselves assiduously to farm mortgages.

Last Saturday's New York bank statement is significant. The large increase in loans and the heavy decrease in the reserve, from whatever cause they may specifically have sprung, point to the fact that, unaided by foreign loans and by liquidation on the part of the agricultural interests in this country, the banks are not going to have plain sailing in financing this year's crops. Proximate causes of various descriptions are, of course, easily found for the current happenings of the financial situation, but below them all lies one predominating cause—an over large absorption of the nation's working capital by the producers of raw materials, including the land speculators in that category. The question of reducing the amount of this locked-up capital by a very considerable figure is the important question of the hour. Pending its solution, nothing definite can be asserted with reference to the financial outlook, except that, once a more even distribution of "money market money," as Bagehot used to call it is effected among the various industries of the nation, the industrial affairs of the United States will have acquired a better status than has been theirs for a good many years.

FROM JANUARY 1, 1910, TO JUNE 30, 1910
APPEARED IN
THE NATION OF LAST WEEK

The Nation.

NEW YORK, THURSDAY, JULY 14, 1910.

The Week.

Dispatches from Beverly report that the close friends of the President are entirely in the dark as to what "Roosevelt will do." What this chiefly refers to is the question whether and how far the Colonel will "endorse" the Administration. No one dreams that he will openly attack it, but the fear is that he may conclude to damn it with faint praise. But this is surely to overlook the fact that such a course would be fully as awkward for Roosevelt as for Taft. It must not be forgotten that the Colonel has his reputation to sustain, not only as a politician but as a prophet. He confidently and repeatedly predicted that Mr. Taft would make one of the best Presidents the country had ever had. After the election of 1908, he issued a special bulletin to the nation congratulating it on the supreme wisdom it had shown in accepting the man he had recommended. That work is too recent to be incontinently undone now. And there is another reason why we may expect that Mr. Roosevelt, after he has succeeded, with his accustomed deliberation and painstaking inquiry, in putting himself in possession of the facts, will come out with the heartiest approval of the Administration. He cannot wish to give color to the malicious characterization of him as a man who throws over his friends when they cease to be useful to him or actually get in his way.

The President's order of a few days ago withdrawing 8,500,000 acres of water-power, phosphate, and petroleum lands is now followed by one affecting a still greater area. The new withdrawal covers no less than 35,000,000 acres of coal lands in North and South Dakota, Washington, Utah, Colorado, and Arizona; but in this area is included 14,000,000 acres comprised in withdrawals previously made during the past four years. These latter withdrawals cannot now be disturbed except by express action on the part of the President or of Congress; whereas in former times a mere order by the Secretary of the Interior, which might attract no special attention, was sufficient to undo the act of withdrawal. President Taft's insistence on the passage of the bill which established this condition of things is thus again shown to have been of signal importance.

Senator Bristow appears to have made a happy choice in fixing upon the increase in the duty on manufactures of rubber as an object-lesson in the ways of Aldrich tariff-making. The duty on these manufactures was raised from 30 to 35 per cent., (Mr. Bristow said 25 to 30), while crude rubber was left on the free list. The House had made no change, but Mr. Aldrich's Senate committee put the duty up a notch. It doesn't seem like a very great matter, this change from 30 to 35 per cent., but 5 per cent. may mean a vast amount to the profits of a Rubber Trust, and it is difficult to imagine any other motive for the change than that of increasing those profits. Our imports of manufactured rubber goods were insignificant, even under the old rate, and have fallen still lower under the new, so that revenue could not have been the object; and the claims of anything like legitimate protection must have been satisfied by the old rate, since importation was almost non-existent. The size of the interest involved may be inferred from the fact that the crude rubber imported amounts to more than a hundred million dollars' worth annually.

What Mr. Bristow says about the directorate of the Rubber Trust makes interesting reading. A consolidation of two of the three great rubber companies became effective November 1, 1909, with the following board of directors:

E. B. Aldrich, Nelson W. Aldrich, Herman B. Baruch, Henry A. Bingham, Daniel Guggenheim, S. R. Guggenheim, Paul Morton, Allen A. Ryan, William Sproule.

And on December 6 the third of the companies was absorbed, the board of directors remaining as above, and E. B. Aldrich, son of Senator Aldrich, being elected vice-president and executive head of the corporation. Evidently, the insurrection against the Payne-Aldrich tariff is by no means over. No amount of statistical demonstration that the tariff has been revised downward will avail against particular instances of deliberate outrage, such as those contained in the changes of the cotton schedule and in the retention of the intolerable woollen schedule of the Dingley act. This rubber business is not so serious as those, from the point of view of the burden it places on the people; but it brings up sharply the connection between protection and monopoly, and the connection between tariff extortion and high Republican politics.

Direct-primary advocates have always contended that the existence of the system would often have the effect of frightening a discredited machine so that it would not dare attempt to force on the party an unacceptable candidate. It looks as though the force of this argument were about to be demonstrated in New Hampshire. Winston Churchill has been waging unceasing war on the Boston and Maine Gallinger machine in season and out for the past five years. Twice he has sought the nomination for Governor, but, despite the fact that he has both times had more delegates pledged to him than any other single candidate, the machine leaders have effected combinations that have defeated him. But they could not prevent him from talking, nor could they prevent a loyal and energetic group of men who believed as he did from making their influence felt throughout the State. Finally, last year, after being thrice beaten by the machine, they succeeded in getting a State-wide direct primary law on the statute books. It is to be tried for the first time on September 6. Mr. Churchill is not a candidate this year, but one of his associates is, who has been a progressive or "insurgent" from the beginning of the fight against the machine domination. He stands out now as the "Churchill candidate," seeking the endorsement of his party under the new primary law. And lo! what is happening? The machine leaders are one after the other throwing up their hands and declaring for him, until now it looks as though he would have little if any serious opposition in his own party. All of which must be rather pleasing to Mr. Churchill, who more than any one else has made such an outcome possible.

Emil Seidel, the Socialist Mayor of Milwaukee, is like Mr. Gaynor of New

York in one respect: scarcely a day passes that he does not do some sensible thing in a simple way that no one had thought of before. He has been in office only a little more than two months, yet the Republicans and Democrats who prophesied dire things as a result of his election are joining in his praise. He does not act as they thought a Socialist Mayor would act. He seems to have a high regard for his oath of office, and a wholesome respect for the laws and ordinances of the city, that his Democratic predecessor, David Rose, never even pretended to have. As a German and a Socialist, he was expected to interpret the laws "liberally." Yet under his control the total number of saloons has been cut down considerably by the refusal of licenses to a long list of places which have been notoriously allowed to break in the past the excise regulations with impunity. Last week a hundred of these "protected" places closed their doors in despair. Mayor Seidel is enforcing the liquor laws in the restricted districts—a feat which was supposed to be impossible. He has just now made it clear that the Johnson-Jeffries fight-pictures will not be tolerated in Milwaukee. In many ways, he has bettered conditions in his city. Yet his methods are far from militant. "I don't like to issue orders," he declares. "I prefer to ask for coöperation. And I think that will generally accomplish the desired results." If this be Socialism, make the most of it!

In offering to President Hadley of Yale the chairmanship of the commission created by the new interstate commerce act to investigate the stock and bond issues of railways, President Taft has made a choice of the highest excellence. It is to be hoped that Dr. Hadley will find it possible to accept the offer. Such an inquiry as is proposed for the commission depends for its usefulness on a combination of unquestioned impartiality with high special ability such as it is difficult to obtain. In Dr. Hadley, these requirements are fully met. He has made a lifelong study of railway questions, and is an acknowledged authority upon them; and his broad knowledge of economics in general would be of the utmost value in giving direction to the investigation. That the President's choice should have fallen on such a man is another instance of the immeasurable advance we have made in our standards of appointment.

Promotion of common interests in transportation and commerce, and preservation of good relations between all the countries concerned by adherence to the principle of arbitration, are, of course, the burden of Secretary Knox's instructions to our delegates to the Pan-American Conference. In making particular mention of Nicaragua, he is formally justified by the circumstance that there has been a discontinuance of diplomatic relations between the United States and that country, but, of course, Mr. Knox's real object is to present the grounds on which our recent policy toward Nicaragua has been based, and to invite the sympathy of the other Pan-American delegates for our present attitude in the premises. He sets up a contrast between the situation in Nicaragua and that existing in "the progressive American republics, with stable governments and high ideals for such governments," and expresses entire confidence that these republics have not misconstrued our position. Explicitly the subject can hardly come up at the conference, since it is not included in the programme, and would require a two-thirds vote to be introduced. Moreover, the invitation extended to Mr. Henry White, chairman of our delegation, to make the response on behalf of Pan-America to the opening address by the Argentine Minister of Foreign Affairs, is hardly consistent with the possibility of any widespread desire to challenge the position of the United States.

An Irish Mayor calling upon the fastidious Puritans of Boston to clean up their city physically, and pointing out that their growing habit of throwing litter and refuse into the streets is giving the New England metropolis a bad name for its dirty appearance, is a spectacle not without its humorous aspects. The thing he strikes at is, however, serious enough; and it is not the withers of Boston alone that are wrung. Public untidiness is a national fault. It is more noticeable in cities, by its massing there, than elsewhere, but even the roadsides in the "sweet, pure country" are often terribly unkempt and have the air of being made a convenient dumping-ground. Mr. H. G. Wells, when in this country, was much struck in his railway journeys by the slovenly look of village streets and by the appalling amount of waste matter everywhere flung about. We have so long been used to having all out-doors in which to throw things that we are in danger of forgetting how much like the neighborhood of a Zulu kraal we often make our outlying regions appear.

Gov. Harmon, in his energetic proceeding in the Newark lynching case, is making use of the law which holds local authorities responsible for such outbreaks as recently took place in that city. The Ohio statutes provide the Governor with all the power he needs. Already he has suspended the Mayor of Newark under authority of a law which has been on the statute books for a decade but has never before been enforced. He is proceeding against the sheriff of Licking County under another statute (the Eubanks act) which was passed only a year ago and applies specifically to failure to protect prisoners from lynchers. This law is explicit and mandatory in its provisions. Under it the Governor must suspend a sheriff from whose custody a prisoner is taken and lynched. The author of the law, a negro member of the Legislature from Cleveland, drew it to fit such cases of negro lynching as took place a year or so ago at Springfield. But it is now to be first enforced in connection with the lynching of a white man. It is conceivable that the Eubanks law, like that providing for the suspension of mayors, might have been evaded or ignored. But Gov. Harmon is meeting the situation squarely, and will give a wholesome demonstration in Ohio of the responsibility of local authorities for the enforcement of law and the preservation of order. There is another law, seldom invoked, which is to be vitalized for this occasion. This is the mob-violence law, by which Licking County becomes liable in the sum of $5,000 for the death of the lynched man. The rigid enforcement of these laws ought to have a salutary effect, and Gov. Harmon will deserve the thanks of law-abiding people everywhere for showing how the law can really be made a terror to evil-doers.

The National Education Association, for the first time in its forty-eight years of existence, has elected a woman as its president. The event is the more notable

from the nature of the claim on which the choice of Mrs. Ella Flagg Young by the delegates was based—the extraordinary distinction of having been chosen as superintendent of public schools in the second greatest of American cities, and the efficiency she has shown in the conduct of that office. If more points were needed to emphasize the character of the event, two might be mentioned, to show how far we are from the days—not long back by the ordinary count of time—when the idea of a woman accomplishing great practical results was still strange in most people's minds. One is that Mrs. Young obtained a university training in middle life, getting the degree of Ph.D. at the University of Chicago at the age of fifty-five; the other is that, while she has been placed at the head of the educational system of Chicago in recognition of exceptional qualifications, the foremost figure in the work of social improvement in the same city is also a woman. And Jane Addams, even more distinctly than Mrs. Young, opened for herself the path to extraordinary usefulness.

The death of Dr. William James Rolfe, even though not unexpected, considering his advanced age, will come as a shock to students of English literature both here and abroad. For the position which Dr. Rolfe occupied was much the same as that held by the late Dr. Furnivall. Both were scholars of untiring activity and enthusiasm, although the positive achievement of neither was of the sort which is termed brilliant. Both, too, did a vast amount to make the pursuit of letters seem worthy and attractive to younger men, and left a heritage of loving devotion to scholarly interests which will not soon be forgotten. It is doubtless as an editor of Shakespeare that Dr. Rolfe is best known, his little brick-colored volumes being as familiar to students throughout the country to-day as, or rather more familiar than, the family Bible. As a scholar, he ranged widely over English literature, editing many of the poets besides Shakespeare. He contributed frequently to newspapers and magazines, and the *Nation* particularly was glad to profit from his minute knowledge of books. His letter "Lest We Forget," published in the *Nation* only two weeks ago, is typical of his habitual method of exacting search for the truth.

The *World* of New York has printed a clear and circumstantial statement, by Representative Martin of Colorado, of the charges relating to the sales of friar lands in the Philippines. It was Mr. Martin whose agitation of the subject brought about the appointment of a Congressional committee to investigate the whole subject; and his statement in the *World* will impress any one who reads it with the necessity of such investigation. Whether the charges he makes will be substantiated upon inquiry remains to be seen; but it cannot be denied that they are clear, straightforward, and specific. That the provision of the organic law of the Philippines forbidding the disposal of more than 2,500 acres of the public domain to any corporation was interpreted by Secretary Wickersham as inapplicable to the friar lands, though there seems to be no sound reason why it should be so inapplicable; that this was to the benefit of the Sugar Trust; that the character of the sale of 55,000 acres of the friar land in the San José estate was concealed through the use of a dummy as purchaser; that, after inquiry began, resort was had to various shifts of evasion and denial; that even if Mr. Wickersham's opinion was correct, another provision of the organic law forbids the *holding* of more than 2,500 acres of land by any agricultural corporation; that this provision is evaded by the land being in the names of individuals connected with the Sugar Trust—these and other charges are set forth in Mr. Martin's statement.

One of the greatest difficulties standing in the way of a peaceful compromise on the House of Lords is the lack of a definite scheme for modifying the composition or organization of that House. Hence, a suggestion on this point made editorially by the London *Economist* is decidedly interesting. Under the plan it brings forward, the membership of the House would be left undisturbed; the double object of correcting its party one-sidedness and of improving its working quality would be accomplished by a delegation of the powers of the House to a legislative committee of 100 or 150 members. Even the "wild Peers" would not be excluded from the right of speaking upon any question on which they might wish to be heard; but the anomaly would be avoided of a host of members who are habitually absent from the House, and who have given no serious attention to public questions, rushing in to vote on grand occasions and overwhelming the body by their numbers. The method of choice of this committee—which would completely take the place of the entire House so far as action is concerned—would be designed both to put the two great parties on an equal footing and to secure a high order of ability, the plan being that each party should elect one-half of the committee, while the Government of the day would have power to "add slightly to its members."

The campaign against depopulation is almost as old in France as the fact of depopulation itself. Its results have not been encouraging. Till within a year or two ago, there was a trifling margin of births over deaths; this has now disappeared, and France faces actual, as well as comparative, retrogression. Nevertheless, the agitation for larger families goes on. A bill just introduced in the Senate, and supported by men like Léon Bourgeois, Alexandre Ribot, Richard Waddington, Alfred Mézières, and Francis Charmes, sought to combine the various schemes that have been suggested for dealing with the problem. The underlying principle is to combat depopulation through the state's employees, who constitute so large a part of the population. The bill provides that no employee of the state over the age of twenty-five shall be retained in the service if unmarried. If a government employee is the father of at least three living children, he shall have preference in promotion and receive an annual bounty of 200 francs for every child after the third and under the age of fifteen. Civil service pensions will provide a bounty of 100 francs annually for every child after the third. It is furthermore provided that every Frenchman who is unmarried at the age of twenty-nine shall be called upon to render extra military service for a long term of years. The laws regulating the distribution of personal estates at death will be repealed. Here is a comprehensive programme which, in spite of the seriousness of the situation that has called it forth, stands little chance of enactment. Its drastic thoroughness is almost as characteristically national as the fact of depopulation itself.

LOOKING FOR ABLE MEN.

In several States just now there is a sort of Diogenes search not for merely honest but for able men in public life. Massachusetts is said to have gone so sterile in statesmen that there is no one to stand against Senator Lodge except Butler Ames. In Pennsylvania the rival nominees for the Governorship are scarcely known outside their own counties, and are without much honor there; while in Ohio the Republicans are sore put to it to find a man to run against Gov. Harmon who shall not appear ridiculous by comparison. The straits to which New York is reduced need only be mentioned. For months the anxiety of politicians has been to discover a successor to Gov. Hughes who should not provoke all over the State Hamlet's indignant question, "What judgment would step from this to this?"

Now, from all this seeming dearth of men capable of leading, at the very time when they are said to be most in demand, it would be rash to conclude that they do not exist. Ability is one thing, and the emergence of able men in public life is quite another. The latter is more a matter of chance or doubt than the former. The conditions temporarily affecting government service may so discourage citizens with high talent for it that they do not come forward—are perhaps not allowed to come forward. Complaints that we were without a supply of vigorous and compelling statesmen have often been heard in this country; sometimes, just on the eve of a new flowering of political genius. In 1888, Lowell delivered his lecture on "The Independent in Politics," in which he referred to the "growing doubt" whether we were not losing the power to produce men of real initiative and practical sagacity in the science of government. His conclusion was, however: "I believe that there is as much of the raw material of statesmanship among us as there ever was, but the duties levied by the local rings of majority-manufacturers are so high as to prohibit its entrance into competition with the protected article." Similarly to-day no competent observer really questions the existence of political talent; the main difficulty is to render the career for it open.

Without falling back upon the comfortable but fallacious assurances that the hour always produces the man, the crisis the hero, we may yet gain a certain confidence from noting that we do now and then find hid treasure in unexpected places; that men whose fame becomes nation-wide start up suddenly out of obscurity. The country is just now called upon to mourn a Chief Justice who had been for twenty-two years at least a capable head of our highest court. Yet when he was appointed the scornful cry was pretty general in the press: "Who is this man Fuller?" Before, when President Grant named a Chief Justice, it had been: "Who is this man Waite?" The two cases show that we have undeveloped resources of ability as well as minerals. Take the instance of Hughes himself. Ten years ago he was absolutely unknown, except to a small circle of friends who were aware of his extraordinary powers. But that they should ever be put at the service of the public appeared then wholly improbable; and that they really came to be must be regarded as in the nature of a political accident. Yet it is entirely credible that ability like his exists in many a law-office, or in some study or counting-room, which we could draft for government work if we only knew how to find it and set it free.

True genius is said infallibly to fight its way to the front, in politics as everywhere else. This, of course, is merely to confuse genius with success; yet we are bound to take knowledge of the fact that able men with honorable political ambition have the struggle made easier for them by examples of success—or of failure. The trail which Hughes has blazed is so plain that even a wayfaring New York politician cannot err therein. Any man in the State who aspires to rise to anything like the popularity and the power that Gov. Hughes has conquered, cannot fail to see along just what road opportunity beckons. And, conversely, in Massachusetts, the present intense dislike of Lodge and the search for a real Senator to displace him indicate the things that must be avoided if a secure place in the honor and affection of that State is to be won. Should the coming contest result in the election of a Senator as little in the public eye now as Sumner was when first chosen, he would know, from the unpopularity of Mr. Lodge, that Massachusetts desired a representative in the United States Senate who would treat his work there with less of the air of a literary trifler, and who would not wreak so much of his strength upon the creation of a personal machine that he had little left for the drudgery of legislation.

Among the circumstances that help to bring forward extraordinary men is dissatisfaction with the commonplace type. Discontent is often, even in politics, a condition of achievement. And it is evident that there never was a time when the people were more out of humor with the ordinary run of politicians than they are to-day. The very fact that the electors are so generally looking for public servants who shall tower like Saul from the shoulders and upwards above the hacks and the time-servers, is a ground for hope that such exceptional men will be found. Certainly, the appeal and the rewards were never greater in our public life. This being so, we may reasonably expect that here and there throughout the country men of unusual ability will grasp the skirts of circumstance and show to their grateful fellow-citizens that there is a sure reserve among us of courage and force to apply to our governmental problems.

RUSSIA AND JAPAN IN MANCHURIA

Behind the Russo-Japanese convention which was signed at St. Petersburg on Monday of last week, rumor persists in scenting a treaty of alliance between the two nations. It is not necessary to accept such an hypothesis as a fact in order to recognize that harmonious relations between the two late antagonists in the Far East are now clearly reëstablished. Against the probability of a Russo-Japanese defensive and offensive alliance are the two reasons that such an arrangement is neither necessary, nor, at such a short remove from the Treaty of Portsmouth, conceivable. Alliances are not cemented as rapidly as the political wiseacres would have us believe. It is one thing for a defeated nation to accept the results of war as a *fait accompli*. It is another thing for two combatants to execute a complete about-face and join hands for war against those who are now their friends. For that is what an alliance necessarily means. It must be an alliance against somebody, whether that somebody be nominated in the bond or left to be unmistakably understood. But, in spite of all that has been said about the cooling friendship between Japan and Great

Britain, it is unimaginable that the latter should be the Power Japan aims at. For one thing, Russia would be a broken reed to Japan in a contest with England. For another thing, Russia and Great Britain are now on the most amicable terms.

It is safest, therefore, to take the latest convention between Japan and Russia for just what it purports to be—an agreement for friendly coöperation in Manchuria, where the two Powers hold so predominant a position. The compact is the latest step in a series of agreements following upon the Treaty of Portsmouth. That instrument left important commercial and other economic questions for later settlement. Among these was the Pacific fisheries question, which was disposed of in the convention of July 30, 1907, the terms of which are now explicitly reaffirmed. The complexities of the Far Eastern situation require that, in any formal agreement between two Powers, the basic principles of China's territorial integrity and of equal opportunity for all nations shall be reiterated. This was done in 1907, and is done again to-day. It is a formula; but in the absence of specific evidence of an intention on the part of the contracting parties to violate its terms, the formula must be accepted as sufficient. It is a formula that we meet in all diplomatic arrangements regarding China. It occurs in the 1907 agreement between Japan and France and in the exchange of notes between this country and Japan in November, 1908. Following upon Japan's arrangements with France and the United States, this new agreement with Russia comes, evidently not as a menace to the peace of the world, but as the latest link in a chain of international *ententes* that are working decidedly for peace.

The Russo-Japanese agreement of July 30, 1907, left the Manchurian railways question undisposed of. With this subject the present convention deals. If the anxious gaze of a critic discerns therein only another "of a series of documents by which the two Powers seek to apportion Manchuria for exploitation by themselves to the exclusion of other nations," proof of this must be directed toward specific acts and policies. The fact remains that Russia and Japan are contiguous railway owners in Manchuria, and that the formulation of an harmonious railway policy between the two is a very natural procedure. True, there is a clause in the agreement which to the suspicious eye might suggest something like an alliance. It is provided that "in case events occur of such a nature as to menace the *status quo*, the contracting Powers will enter into communication, with the object of agreeing on measures for the maintenance of the *status quo*." But it is necessary only to turn to the Takahira agreement between this country and Japan to find analogous proof of a Japanese-American alliance: "Should any event occur threatening the *status* as above described, or the principle of equal opportunity as above defined, it remains for the two governments to communicate with each other in order to arrive at an understanding as to what measures they may consider it as useful to take." Reading between the lines, it is one of those commendable arguments that work both ways.

As between the interests of the peace of the world and the interests of American trade in Manchuria, it is no treason to assert that the former are the more important. For that reason the steady improvement in Russo-Japanese relations can cause only the widest satisfaction. That the two nations mean to discriminate against American enterprise in Manchuria has yet to be proved. That the two nations have turned their backs on all wild talk of a resumption of hostilities in the Far East is pretty definitely established. The Russian jingo may continue to threaten a war of *revanche*, and the Japanese fire-eater may clamor for new victories in Manchuria. The two Governments have recognized that peace is what they both need. Russia dare not go to war again, at the risk of stirring up anew the fires of revolution. Japan needs time to assimilate what she has already won. There is significance, for instance, in the fact that the conclusion of an agreement with Russia should come almost simultaneously with the complete assumption by Japan of the task of preserving order in Korea. The latter step has been regarded as tantamount, or at least as preliminary, to annexation. That Russia, far from protesting, should be engaged in treaty-making with the master of Korea, shows how completely the Czar's Government has accepted the result of the late war.

THE FIGHT ON THE COLLEGES.

"There is no spectacle in American life to-day more pitiful than the contrast between what the college advertises to do and what it performs." "The teaching by our college professors is the poorest in the country." "The average third-year boy in the high school is more able to think, discuss, and express an idea than the average college student two years older." "The young man learns in college that he need not work, he comes to regard his college as a social and sporting club." "Colleges with their narrow and false ideals of culture, . . . their domination has reached a degree of intolerable impertinence." "The high schools in desperation have been drawing a line of cleavage between those fitting for college and those who are not. This is unnecessary, unfitting, and undemocratic."

These are not extracts from an article in a muckraking magazine; they are taken from two addresses delivered last week at the meeting in Boston of the department of secondary education of the National Education Association; one by the principal of a New York high school, the other by the State superintendent of public schools in Wisconsin. What was in view in the last of the above quotations may be judged from a resolution, almost unanimously adopted at the meeting, declaring in favor of the recognition as electives in college-entrance requirements "of all subjects well taught in the high schools"; some of the subjects especially mentioned in the preamble being manual training, "commercial branches," and agriculture, and the requirement of two languages other than English being expressly objected to. And the situation presented both by the addresses from which we have quoted, and by the resolutions adopted with virtually no dissenting vote, is one with which our college presidents, and all persons interested in college education, will do well to reckon promptly and seriously.

For that situation represents the culmination of a wave of criticism and restlessness which in large measure owes its strength and volume to what we cannot but feel has been a want of perception, on the part of many of our leading college presidents especially. To be conscious of deficiencies, ready to admit them and anxious to remedy them, is one thing; it is quite another thing to assume a position of apologetic defence,

to talk as though the faults of the college were all there was in the institution, to declare that the college is useless unless it devotes itself to a task quite other than that for which it has stood in the past. Yet this is essentially the attitude in which a number of our leading college presidents have allowed themselves to be placed. They should have known—we hardly think they can have actually realized it—that such talk as this means not the improvement of the college, but its abolition; not greater efficiency in attaining the aims to which it has historically been devoted, but the abandonment of those aims. School superintendents and high-school principals who regard the ideals of culture nourished at our colleges as "narrow and false," may perhaps be right; they at least have the courage of their convictions when they say so. But what is quite certain is that the time has come when college presidents and others who are not prepared to accept this doctrine should look the question in the face and show the courage of *their* convictions also.

Now, in simple truth, a great deal of the talk about colleges by such persons as those from whom we have quoted is merely rubbish. There are, of course, young men who go to college and don't work, but to talk as though this were true of all of them, or of a majority of them, is to fly in the face of the simplest observation. The greater part of the young men in our colleges work as hard at their studies as can reasonably be expected. As for the superiority of the third-year high-school boy to the college youth two years older, this is, of course, a mere *ex parte* assertion. And the terrible hardship of differentiating between courses designed to be followed by a college training and those that are not rests, so far as we can see, upon the idea that a college has no rights that a true democrat is bound to respect. It may be that the objects which a college pursues are not worth pursuing; but so long as it does pursue them, it must of necessity demand, on the part of entering students, such preparation as is necessary for their attainment.

On the subject of the injury done to secondary schools by the dominant part played by college entrance examinations much might reasonably be said. The need of taking the examinations into account does unquestionably hamper many an earnest and enthusiastic teacher, and prevents him from giving to his students all that he might give through a freer play of his individuality. It is probable that ways and means might be found by colleges to lessen this evil. But the question to which these outbursts of hostility or contempt direct attention is far deeper than this. They touch not college methods, but college aims. They challenge the underlying idea of college education. And they are but a proclamation, in plain language and in loud tones, of what has been vaguely implied or timidly or unconsciously expressed in many an utterance of men in the highest places in the college world. Like all human institutions, the American college is full of imperfections; like them all, it has to undergo change with the passage of time. But it should not bow humbly to every passing wind of popular doctrine. It has a history of which it has ample reason to be proud; it has deserved well of the country, and the work that it has been doing there is still need for it to do. Agricultural schools, industrial schools, technological schools, have grown up alongside of it, and other kinds of schools may be equally necessary, and may meet the needs of a far greater number of individuals. There is no compulsion on any one to go to college, nor is it desirable that every one should have a college education. But out of the thousands who have had this opportunity, a very large proportion have derived from it something that they could not otherwise have got, something that they have prized as an invaluable possession to themselves, and something that has supplied to the country an element without which American life would have been immeasurably poorer. Nor do the confident but reckless assertions of educational muckrakers furnish any reason for believing that the day of its usefulness is past, or for abandoning that spirit of loyalty to the traditions of culture which, until very recently, has been the general possession of our college men.

AN ATHLETIC SCHOLAR.

Dr. Frederick J. Furnivall, whose death we had to record last week, had been for two generations a frequenter of the reading-room of the British Museum. Perhaps no scholar of the age was so widely acquainted and so generally beloved. He added to the diligence of the text-critic the enthusiasm of the administrator. Publishing societies sprang up in his wake. The Early English Text Society, the New Shakespeare Society, the Chaucer, Browning, and Shelley Societies represent merely a part of his activities in this field. As general editor for these bodies he associated with himself the best talent of England, America, and the Continent. Toward his fellow-workers he was of unfailing helpfulness. Stationed at the British Museum, he was the eyes for scores of students and their ultimate court of appeal. A sound instinct led him to lay chief stress upon the literal reproduction of manuscripts. The work done under his charge is of permanent value, since it avoids both the dilettantism of the Old English publishing societies and the perverse ingenuity of the German compilers of bedevilled texts miscalled critical. The judgment of the man was as remarkable as his friendliness and diligence.

His personality was indomitably picturesque. In the sober precincts of the British Museum his ruddy face and silver hair and beard, surmounting a scarlet tie, were about the most stimulating spectacle there offered. A lifetime spent largely in the close labor of reading proofs and collating manuscripts had not subdued him. Toward his antiquarian researches he kept an always fresh romantic enthusiasm. In the unpublished records and literature of old England he saw a duty to be fulfilled, but what really fascinated him was the glimpse of a life more racy, freer from cant, more variously interesting than our own. The sense that we may learn much from what we regard as the crude conditions of our English ancestors he expressed in a hundred prefaces. It was a faith that he shared with William Morris, a conviction that made him throw himself into Ruskin's movement for a working man's college. Many will regret that he never published at length his opinions on the exemplary value of mediæval crafts. A life spent in superintending and often in doing other men's work made such a study impossible. Perhaps it was better, after all, to strike a spark here and there amid the dry material of scholarship.

A part of Dr. Furnivall's youthfulness of spirit was due to his love of the open. There was no more familiar figure on

the Thames above Richmond, or, in summer-time, on the Isis. As he sculled vigorously past he was smilingly greeted as Father Thames. Characteristically, he combined his favorite recreation with a philanthropy. For years he directed a rowing club for shop-girls. By way of this club some of his foreign associates have made a perplexed entrance into English society, for it was not Dr. Furnivall's way to vouchsafe unnecessary explanations. When his friends desired to celebrate his seventieth birthday they naturally provided the customary *Festschrift*, but they could think of no more acceptable personal gift to add than a Clasper double scull. Some of them had the good luck to occupy the forward seat, and we warrant it was no easy task to follow the stroke of the octogenarian host. He was an unconventional spirit, with a vivid sense of reality. His very writing had something bristling about it; his zest, or, more rarely, his scorn, frequently broke through the orderly surface of his argument; he was volcanic after the fine Victorian tradition. Yet with the friendliness he so readily showed to all comers, he was essentially a reserved man. His contacts were by preference professional, but surely there was scope enough for delightful if impersonal intimacies in a profession that comprised all English antiquity. For many a visiting scholar the pleasantest thing in London was to stroll out from the Museum and take tea with Dr. Furnivall. Now that he is gone, the pull of the great city will be for scores of his associates sensibly weakened.

By a sort of irony, his least valuable work is that which most fully enlisted his ardor—his Shakespearean investigations. His real monument is the publications of the Chaucer Society. He not merely accomplished almost single-handed the editing of the chief manuscripts, but arranged the reprints with utmost ingenuity to serve the ends of comparison. Of its sort, the work is definitive, and Dr. Furnivall's name will not be forgotten until Chaucer himself fails to attract scholars.

A STUDY OF THE JESUITS.

PARIS, July 1.

"Les Jésuites" (Armand Colin, 387 pages, 4 francs) is a French translation of the German work of H. Boehmer, professor at the University of Bonn. It demands particular mention because of the eighty pages of introduction and the notes by Gabriel Monod of the Institut de France. These constitute a veritable pronouncement:

> A very large number of questions of religious history remain little or ill-known. In the front rank of the ill-known should be placed the history of the Society of Jesus. Hardly ever has it been spoken of with serenity and impartiality; and nothing is more difficult than to know its history with exactness (vi, vii).

Professor Monod's Protestant heritage, his relation to Michelet, his work on the *Revue Historique*, his two dozen years of forming university professors of history in the famous Ecole Normale, his lectures at the Collège de France and practical instruction at the Ecole des Hautes Etudes, and countless writings of historical research have given him a unique position among students of history. Little or much as one may agree with him, the initiative he has taken so courageously is sure to have consequences far beyond the present significant, but still essentially defective, work. In truth the fact so frankly acknowledged by Professor Monod enters into a larger fact of immensely wider import. The particular existence of the Society of Jesus comprises altogether less than four centuries; and it has never been more than a single phenomenon of the general existence of the Church in which the Roman Catholic religion is embodied. Its birth and inheritance from the past, its principles, inspiration, and practice, its works, conflicts, triumphs, and defeats, are only subordinate incidents in the history of Roman Catholicism. It is not too much to say that all such history—and not that of the Jesuits alone—has regularly been written for edification or for controversy, always by a friend or by a foe, never by Plato's "spectator of all time and all existence." Professor Monod assigns to the Society of Jesus, for the whole course of its history, "millions of members." From his own and Professor Boehmer's scattering statistics, it is mathematically impossible there should have been one half-million of Jesuit priests all told from the foundation of the order until now, while students belonging to the order (who are apt to be counted twice, since they regularly became priests), and lay brothers have not been numerous enough to make up with the priests a single million in the four centuries. The total number for any one year, in times of prosperity and active foreign missions, has ranged from 10,000 to 25,000. These are the only Jesuits whose existence has been sanctioned by the church in the constitutions of the society.

Professor Monod lays too much stress on the secrecy in which the Jesuit archives are kept: "No one, outside of the Society, knows even where they are to be found" (vii). As a matter of fact, it is surprising how much of the matter in the volumes which the society itself is now publishing of its history in Spain, France, Germany, and Italy is drawn from sources accessible to any student properly prepared for the study of such subjects. Yet the singularly incomplete bibliography in the present work notes this as "a sort of official history of the society, composed from documents of its archives and of very scientific character." Professor Boehmer has used the only volumes yet published in his chapters on the early society, after which he skips over whole centuries, perhaps from lack of material. Fundamental works, such as Suarez's "De Religione Societatis Jesu," seem not to have been consulted by Professors Boehmer and Monod. They even leave aside the formula *Quicumque* ("Whoso wishes to serve as a soldier under the standard of the Cross"), which was presented to the Pope by Ignatius of Loyola and inserted in the bull of approbation as expressing the essence of the Society of Jesus.

Perhaps the most striking effort made by Professor Monod to be fair to the Jesuits is found in his section on "casuistry and their moral teaching" (xliv-lii). This is the oldest and most notorious subject of controversy in Jesuit history. Traces of it are found in the English king's public repudiation at his coronation of all "evasion, equivocation, mental reservation," or any possible Pope's "dispensation" for calling himself a Protestant without really being so; in Shakespeare's Macbeth, where Maeterlinck (like Voltaire, a Jesuit college boy) turns English "equivocator" into French *"jésuite"*; in the popular idea that a Jesuit is a man holding that the end justifies any means; in the Terror of the French Revolution when a partisan of Robespierre was charged with employing "Jesuitical means"; down to the French political elections of May, 1910, when Professor Painlevé of the Institut de France, to win his seat in Parliament, hurled against the rival candidate as his last electioneering epithet—*triste et répugnant jésuite.*

In all this Professor Boehmer's text shows little understanding of his subject, and here as elsewhere there are enormous gaps in his knowledge of the facts. Professor Monod recognizes that casuistry is not an invention of the Jesuits; that it is not enough to bring into Parliament, as Paul Bert did, a manual of moral theology written by a Jesuit but used the world over in countless Catholic seminaries where no Jesuits ever teach, and to style extracts chosen baldly from it "Morale des Jésuites"; and that there have been *casuistes laxistes* like Alphonse de Liguori who were not Jesuits. Paul Bert's manuals, by the way, classify Liguori technically, between "proba-

biliorists" and "probabilists," as an "equi-probabilist," whereas a "laxist" in their sense ought to be an extreme probabilist; and the manuals admit the *probabilis opinio* (which Professor Monod limits to the anti-Catholic controversial sense *approuvable*) only where there is no certain knowledge on which to base a judgment of what is right and what is wrong. A thousand years before Jesuits existed this had been a universal axiom in law—*Lex incerta non obligat*. Newman has introduced Liguori to English readers in his "Apologia"; and the Anglican Bishop Butler long before familiarized English thought with probability as the guide of life; and John Stuart Mill insists on the use of probable judgments as essential in all moral sciences, while much in Pascal's "Provinciales" would apply to Dr. Johnson equally with Jesuits.

Professor Boehmer is faithful to the habits of mind against which Professor Monod's Introduction is a protest. Liguori's canonization (1839) and his elevation to the rank of Doctor of the Church (1871) have "consecrated officially the traditional methods of the society's casuistry, as models for the science of moral theology"; and these two events are for him "results of the indefatigable activity of the order" (page 283). This ignores the rival society of Redemptorists, founded by Liguori himself, and, from the history of Bismarck's *Culturkampf*, apparently active enough to take care of its own glories. But—and this is the real lesson for all who can read between the lines of Professor Monod's Introduction—Jesuits still crop up as the *deus ex machina* in all controversies, political and religious alike, against Roman Catholics.

In the particular history of Jesuits, as distinct from that of Roman Catholics in general, the chief value of the present work is again to be found in Professor Monod's few pages. Even he uses, though with apologies, the controversial word *initié* for what French Catholics call *retraitant* and the English *exercitant*, that is, the person who follows the "spiritual exercises" of St. Ignatius Loyola. This is not so bad as Carlyle casting Werner into certain magical "exercitations"; but it makes a mystery of something very commonplace wherever Jesuits perform their ministry of "retreats" or "missions." Even Catholic writers have not noticed the historical descent of John Wesley's "revivals" from such retreats and missions.

It is probably due to preconceived general principles that neither Professor Monod nor Professor Boehmer adverts to something which drew the attention of Sir James Mackintosh a century ago and appears in our own time in the direction given by Leo XIII to Catholic political teaching, namely, the introduction into modern thought by Jesuit authors like Suarez, in spite of the determined opposition of Sorbonne and Parlements, of a fundamental modern idea. This is that, however much all authority may come from God, all national sovereignty receives its authority through the people. The influence of such Jesuit writers on European thought from James I of England to Grotius, seems unknown to our authors. They similarly pass over the stimulus given to physical science by Boscovich's centres of force. In education they do not recognize that the formation of nearly all modern prose dates from the Humanist teaching of Jesuit colleges. In all this, the necessity of reducing Jesuit activity to the negation of liberty of every kind (lxxvii) stands in the way of that impartial judgment which Professor Monod desiderates. Lalande, who has seen the Jesuit at work, in a curious discourse indexed by Aulard, took up the defence of their teaching before the Revolution was fairly over in France.

Professor Monod has had the intellectual courage to give this introduction to the world. He need not be surprised if it should have far-reaching results, not unlike those which followed the publishing of a like courageous essay in English literature—Newman's Tract Ninety. If, like that celebrated document, Professor Monod's introduction is the sign of an intellectual reaction against anti-Roman Catholicism, it is because history, which has been written as controversy, will always have such rebounds when found out. Macaulay, in the famous passage cited entire by Professor Monod, gives out first, all that he has heard in favor of the Jesuits and then all that he has heard against them—and asks you to believe the two can exist together in the same human individuals. The general reader and the historical student find it difficult to accept such identity of contradictories, and Professor Monod, although he repeats the accepted anti-Catholic formulas, seems to agree with them. S. D.

LIBRARIANS AND BIBLIOGRAPHERS AT MACKINAC.

CHICAGO, July 7.

"How is it with coöperation in the handling of human beings?" asked Mr. Hodges in his presidential address to the assembled members of the American Library Association last Friday; and he continued:

> The public libraries have been called into existence in industrial communities apparently to assist in relieving the strain arising from the monotony of modern industrial employment. Playgrounds, sensational journalism, dance halls, moving-picture shows, ball games, sunshine societies, social settlements, are all coadjutors. It would be well if some day we were to have a co-operative conference, at which we should lay aside, for the most part, consideration of our administrative snags, and have heart to heart talks with those who are answering in such varied ways the unspoken appeals of the lever haulers and the pedal kickers.

As a matter of fact, the present conference was in a measure an attempt in the indicated direction. A large part of the general session was devoted to matters of recreation, for librarians and others, and an illustrated lecture on Playgrounds was given by Graham Romeyn Taylor of Chicago. The most notable address given before the librarians in session was that of Prof. Charles Hubbard Judd, of the University of Chicago School of Education, on "The Library and the School." He came as a representative of the National Education Association, and spoke in no uncertain tones of the great value of the library to the pupils in the public schools, and the importance of their learning thoroughly how to use a library. He wished that the present study hours in the class-rooms, in the presence and under the supposed supervision of a teacher, could be changed to library hours, where the pupils, under the guidance of a school librarian with wide knowledge of books, could be led away from the thralldom of the text-books and learn to use books as tools. Professor Judd's address evidently made a deep impression and gave the library workers much encouragement, particularly in view of the lack of interest in the subject that had been shown at the latest meeting of the National Education Association.

Mr. Hodges remarked, in opening one of the general sessions, that, whereas the keynote of the Bretton Woods Conference last year was coördination, that of this year's might be said to be affiliation; and, truly, the affiliated societies were very much in evidence: the National Association of State Libraries held two sessions, besides one in conjunction with the American Association of Law Libraries; while the latter had not less than three sessions in addition to this; the Special Libraries Association had also three sessions, the League of Library Commissioners two, and there were two meetings of the Agricultural Libraries' Round Table; two informal discussions were held outside the official programme of those interested in branch libraries. It is apparently increasingly difficult to keep a hold on the various interests and movements centred in the American Library Association, even if the ramifications of librarians into the other fields of sociological endeavor be left to one side.

Besides the independent associations affiliated with the American Library Association, meetings were held by the various sections of the association itself. The Children's Librarians' Section discussed not only books for children,

but children's gardens and other means of recreation that apparently had no connection with library work; the College and Reference Section discussed the relations between college libraries and public libraries; and the coöperative cataloguing of serials carried on by five large libraries under the auspices of the A. L. A. Publishing Board was presented to the assembled college and university librarians by Clement W. Andrews of the board. At the Professional Training Section an animated discussion took place concerning the essentials of a good library school. Whereas one speaker would have technique and business methods the essential studies, another opined that the essential thing might be books; and the suggestion was thrown out that the schools might well demand more than mere college degrees for admission: a few years of university work would not, it was thought, hurt a prospective librarian.

The Bibliographical Society of America held, as usual, its annual meeting at the same time as the American Library Association. The president of the society, Azariah S. Root, after calling the society to order at its first session, delivered an address about the "Present Situation as to the Origin of Printing," in which he surveyed the results of the investigations of the last thirty years, beginning with J. H. Hessels's book on Gutenberg, published in 1882, and the first really critical examination of the documents, and ending with the very remarkable discoveries made since the celebration in 1900 of the five hundredth anniversary of the inventor's birth. It would be important, the speaker said, if the same kind of minute typological investigation that has been given to the Gutenbergiana could be given to the so-called Kosteriana, and he added that, if no one else took up this matter, he should do so at the first opportunity. Prof. Colbert Searles of Stanford University sent in a paper on "The Library of Jean Chapelain and its Catalogue," and L. J. Burpee read a paper on "The Literature of the Fur Trade."

The second session of the society was devoted to a discussion of the Bibliography of Modern Languages and Literatures, and was preceded by a statement, by J. Christian Bay of the John Crerar Library, entitled "A Survey of Periodical Bibliography," in which he deprecated the duplication of bibliographical efforts in so many subjects, although, at the same time, many gaps may be found in these same subjects, while other subjects are entirely neglected by the bibliographer. The principal contribution to the subject under discussion was a paper sent in by Prof. Clark S. Northup of Cornell University, entitled "The Present Status of the Bibliography of Modern Philology." After enumerating the principal retrospective as well as current bibliographies, and giving for some of them the classification of the material used in them, Professor Northup turned to the future. "Obviously," he wrote, "if we are to make, in modern philology, progress commensurable with our progress in other branches of science, the present largely unsatisfactory bibliographical conditions cannot continue." Among the unsatisfactory conditions he, too, mentioned duplication. He doubted whether the present existing bibliographies could be made better. "We need, it seems to me, a new bibliographical enterprise, in which some twenty-five or fifty scholars and professional bibliographers should join, and which should have its headquarters at some great geographical centre, American rather than British or German, and, in America, in Chicago rather than in New York." A number of representatives of modern language studies at leading American universities had submitted, at the request of the secretary of the society, short, written statements of their views regarding the bibliography of their particular field. W. N. C. Carlton read a summary of these statements. Among the desiderata brought out in these letters may be mentioned the following: J. F. Spingarn and F. I. Carpenter desire a comprehensive bibliographical history of English literature, on the pattern of Goedeke's "Grundriss" or Teuffel-Schwab's "Geschichte der Römischen Literatur"; J. M. Manly puts in the first place a bibliography of bibliographies of English philology, and in the second a bibliography of current philological publications; this latter desideratum is also brought forth by H. P. Thieme, while W. V. Lawrence desires the same for his particular field, the history of the drama. J. W. Cunliffe and W. P. Trent want a new Lowndes on modern lines, perhaps accompanied by a new edition of Halkett and Laing; A. C. von Noe desires better treatment for the output of American scholars; J. F. Spingarn and A. R. Hohlfeld ask for more attention to translations; J. Scott Clark says that literary criticism is the department that is "in most serious need of attention"; and, finally, A. P. Thieme and A. C. von Noe see the solution in a central bureau.

Professor Northup suggested a joint committee of the Bibliographical Society of America and the Modern Language Association to work out the financial and other details of his plan; Mr. Bay closed his paper by suggesting a committee "to investigate the scope, manner of publication, and relative utility of existing bibliographies, 'Jahresberichte,' and reviews." Both recommendations were accepted by the society and referred to the council for consideration and action. The council afterwards decided to make only one committee, to charge it both with the investigation of existing bibliographies and with the study of the ways and means for a bibliographic bureau for modern philology; the committee will be asked to begin its investigation of the bibliographical field with a study of modern philological bibliography. W. Dawson Johnston was elected president of the society, and A. G. S. Josephson, Carl B. Roden, and W. N. C. Carlton re-elected, respectively, secretary, treasurer, and librarian.

AKSEL G. S. JOSEPHSON.

NEWS FOR BIBLIOPHILES.

A Bibliography of the writings of J. A. McNeill Whistler and the books about him, by a New Yorker, Don C. Seitz, has just been printed and published in Edinburgh. It is a 16mo volume of nearly 200 pages, printed in an edition of 350 copies on hand-made paper. Among other facts of interest, the introduction contains an account of the first publication of "The Gentle Art of Making Enemies," which Mr. Seitz calls "the true starting point in Whistler literature." The book was first put in type for Sheridan Ford, a one-time close friend of Whistler, at the Leadenhall Press, by Field & Tuer; and plates were made. No impressions had been taken, when the printer learned that Mr. Whistler objected to the publication of the book, and it was suppressed. Next, Ford carried his manuscript to Antwerp, and there found a printer who once more put it into type, and two thousand copies were printed, when the Procureur du Roi confiscated both types and paper. No copy of either of these two editions is known to exist. Next, in Ghent, was printed the first edition of which any copy is extant. This had the imprint "Paris, Delabrosse & Cie, 1890." Mr. Seitz's own copy is, he says, the only one he has seen, although 4,000 copies were printed. This number probably included the copies for the American market, with the New York imprint of "Frederick Stokes & Brother." A few copies with this imprint have survived, but many were destroyed in a bindery fire. These printings were all surreptitious and unauthorized. Ford's persistence, however, compelled Whistler himself to print the book, and this he did, the same year, 1890. There are copies on both large and small paper.

The "Writings by Whistler" include only thirty-one numbers (books and editions), but the books and articles about Whistler, or containing references to him, run far into the hundreds. The total number of entries in the Bibliography is 772, of which about five hundred are articles or references in magazines and newspapers.

A misprint, "Joseph Parnell" for Joseph Pennell, whose name appears so often in such a bibliography, is an extraordinary error, but easily overlooked.

Bishop Gott's Four Folios of Shakespeare, which were bought in for £3,850 when his library was sold at Sotheby's in March, 1907, will be again offered in the same rooms in a sale to take place on July 21 and 22. It is probable that this time they will be sold without reserve. The First Folio is a good sound copy; the leaf of verses is guarded, one corner of title is in fascimile, and some other leaves are mended. The Third Folio is the 1663 issue, without the por-

trait on title. The seven spurious plays have been added—they do not properly belong with this issue. The Second and Fourth Folios are described as good copies.

Among other books from the Gott library which were, apparently, bought in at the sale, and which are now offered again, are: "The Merchant of Venice" (1600), the Roberts quarto: Spenser's "Complaints" (1591), on large paper, supposed to be unique; three editions of the Edward VI Prayer Book, and other liturgical works.

Other properties in the sale include a Manuscript Book of Hours of the fifteenth or early sixteenth century, done by an English artist, and containing forty-three fine miniatures; Smith's "General Historie of Virginia," first edition (1624); the first edition of the "Hypnerotomachia Poliphili" (Aldus, 1499); several ancient manuscripts from the Abbatial library of Waltham Holy Cross and the Monastic library of St. Edmundsbury; another First Folio Shakespeare, this one with the leaf of verses, title, and last leaf in facsimile; and a very rare Byron pamphlet, the first edition of his "Bride of Abydos" (1813), in the original blue paper wrapper, with the errata slip which is found, it is said, in only one other copy.

In the cabled reports of the Thomas Gray sale at Sotheby's on June 28, one very important item was omitted. This was a Block Book Alphabet, consisting of twenty-four letters and six leaves of "ribbon letters," the letter A dated 1464. It brought the large price of £1,520.

The following are prices paid for autographs at Sotheby's sale of July 6: Shelley, A. L. S., two and one-half pages quarto, to Thomas Medwin, £43; Oliver Cromwell, A. L. S., one page folio, 1646, to his daughter, £53; Franklin, A. L. S., four pages folio, March 14, 1764, relating to the anti-Quaker riots and the Indian uprisings, £33 10s.; Charlotte Brontë, a collection of ninety A. L. S., all to Ellen Nussey, mounted and bound in a volume, £102; Alexander Pope, a series of eleven A. L. S. and autograph verses, in all 29 pages 4to, £155; and Thackeray, A. L. S., four pages 8vo, written from Buffalo, December 29, 1852, addressed to "Mammy" (his mother), £35.

Correspondence.

AN AMERICAN VISITOR TO COLERIDGE IN 1832.

To the Editor of The Nation:

Sir: There is in a little-known Boston book an interesting account of a visit paid to Coleridge by a young American in 1832. It was not written with any view to publication, and is all the more valuable for that reason, as it gives the impression made by the poet on a fresh and sympathetic nature.*

Henry Blake McLellan was born at Maldstone, Essex County, Vt., September 16, 1810. He was the son of Isaac and Eliza McLellan of Boston, and the grandson of Gen. William Hull of Newton, Mass. After a preparatory course at the Boston Latin School, McLellan entered Harvard University in 1825, and graduated in 1829. He studied for the ministry at Andover, 1829-31, and then went on a tour, which included Great Britain, France, Germany, Italy, and Switzerland. He left America September 16, 1831; started on his return April 18, 1833, and landed at Boston June 12. Then came the tragic ending to a bright young life. Eight weeks after his return he was stricken by typhus, and died four weeks later, in his twenty-third year.

Such was the young and ardent spirit who went to see Coleridge in the filial spirit in which a disciple might have sat at the feet of an ancient philosopher. He writes this simple and affecting account of the interview:

Saturday, April 27th, 1832—Walked to Highgate to call on Mr. Coleridge. I was ushered into the parlor while the girl carried up my letter to his room. She presently returned, and observed that her master was very poorly, but would be happy to see me, if I would walk up to his room, which I gladly did. He is short in stature, and appeared to be careless in his dress. I was impressed with the strength of his expression, his venerable locks of white, and his trembling frame. He remarked that he had for some time past suffered much bodily anguish. For many months (thirteen) seventeen hours each day had he walked up and down his chamber. I inquired whether his mental powers were affected by such intense suffering; "Not at all," said he. "My body and head appear to hold no connexion; the pain of my body, blessed be God, never reaches my mind." After some further conversation, and some inquiries respecting Dr. Chalmers, he remarked, "The Doctor must have suffered exceedingly at the strange conduct of our once dear brother laborer in Christ, Rev. Mr. Irving. Never can I describe how much it has wrung my bosom. I had watched with astonishment and admiration the wonderful and rapid development of his powers. Never was such unexampled advance in intellect as between his first and second volume of sermons. The first full of Gallicisms and Scotticisms, and all other cisms. The second discovering all the elegance and power of the best writers of the Elizabethan age. And then so sudden a fall, when his mighty energies made him so terrible to sinners." Of the mind of the celebrated Puffendorf he said, "his mind is like some mighty volcano, red with flame, and dark with tossing clouds of smoke, through which the lightnings play and glare most awfully." Speaking of the state of the different classes of England, he remarked, "We are in a dreadful state. Care, like a foul hag, sits on us all; one class presses with iron foot upon the wounded heads beneath, and all struggle for a worthless supremacy, and all to rise to it move, shackled by their expenses; happy, happy are you to hold your birthright in a country where things are different; you, at least at present, are in a transition state; God grant it may ever be so! Sir, things have come to a dreadful pass with us; we need most deeply a reform, but I fear not the horrid reform which we shall have. Things must alter; the upper classes of England have made the lower persons, *things;* the people in breaking from this unnatural state will break from duties also."

He spoke of Mr. Alston with great affection and high encomium; he thought him in imagination and color almost unrivalled. (pp. 230-232.)

Coleridge's gloomy view of the condition of England was in the year of the first legislation for a Reformed Parliament, yet he was opposed to the measures which poured new and healthy blood along the veins of the body politic. In Disraeli's novel, "Sybil," there is a vivid picture of the "two nations"—the rich and the poor—into which the people were divided. The political strife of to-day, bitter as it sometimes seems, is tame indeed when compared with the hatred that raged between class and class in the first half of the nineteenth century. Of the very mild measure of electoral reform Coleridge could say: "The bill is bad enough, God knows; but the arguments of its advocates and the manner of their advocacy are a thousand times worse than the bill itself; and you will live to think so." William E. A. Axon.

Manchester Eng., June 30.

*Here is the British Museum catalogue entry: McLellan (Henry Blake)—Journal of a Residence in Scotland and Tour through England, France, Germany, Switzerland, and Italy. With a Memoir of the Author and Extracts from His Religious Papers. Compiled by Isaac McLellan, jr., Boston, 1834.

LIBRARY RESTRICTIONS.

To the Editor of The Nation:

Sir: Recently I have had occasion to make inquiry as to facilities offered by historical societies and other great libraries containing historical material, not to the general public, but to special investigators. Without doubt all the purely historical collections were formed to preserve the history of the field they cover—preserve the material and encourage its transmutation into actual history. It should seem, however, that some of them, or, for that matter, all of them, are in danger, as they wax stronger and grow older, of losing sight of this end, and making the collection an end in itself. They thus acquire a species of society or library rheumatism or a hardening of the joints, and they become less flexible and less useful. It has been known to become so serious as to lay virtually prohibitive burdens upon authorship, resulting in a reversal of the true aim of the collection.

An illustration of this reversal is in the rule regarding the use of ink. I do not refer to its use by the general public, many of whom would not appreciate the dangers in the use of ink to precious materials, or would not have the careful habits of the trained scholar. I refer only to scholars engaged in special extended investigation to result in some serious written work, and who are properly known. To forbid such men the use of ink even under proper circumstances, is not simply not to encourage; it amounts to virtual prohibition of production in some cases. Strange as it may seem (or, should I say, naturally, and as one might expect) the only institutions in which this condition obtains, so far as I can learn from experience or extended inquiry among historians, are the splendid, old, strong historical societies of Massachusetts and Pennsylvania, the latter having succumbed comparatively recently. Every historian must confess to a certain idolatry for the rare old manuscripts and volumes in these and like collections, but when it extends to prevention of the natural use of them by trained men who value them, one is reminded of that sepulchral front parlor in the farmhouse into which only weddings and funerals may enter.

The rules of societies and libraries are not uniform, but if their aim is to meet the needs of scholars engaged in extended investigation, a flexibility and permissive discrimination must be lodged somewhere. Mr. Putnam of the Library of Congress has rules that are nearly ideal in this matter, and the New York Historical Society lodges this flexibility of judgment in its librarian. So with other societies and libraries with historical collections in this country, and, as Professor Andrews of Johns Hopkins in-

forms me, in England. And is not this as it should be? Historical collections are made for man, not man for historical collections. BURTON ALVA KONKLE.

ASTROPHEL.

TO THE EDITOR OF THE NATION:

SIR: The Oxford English Dictionary in less mature days, culled from two passages in Spenser the word "Astrophel," defining it as the name of a plant hitherto unidentified. Truly, it is of a kind unknown on land or sea, being compounded, as the poet avers, of the personality of Sir Philip Sidney and his lady love.

It first growes red, and then to blew doth fade,
Like Astrophel which therinto was made.

And in the midst thereof a star appeares,
As fairly formed as any star in skyes;
Resembling Stella in her freshest yeares . . .
Spenser, "Astrophel," 174-8.

The transformation of Astrophel into a flower may have been suggested, I submit, by the fate of Adonis, who was likewise slain while hunting (Cf. F. Q., iii, i, 38).

The source of this plant name is diffidently stated by Sir James as "perh. corruption of *astro-phyllum*—star-leaf; Nares suggests of Aster Tripolium." The context, however, implies that it was named "for that shepheard's sake." Just how Sidney hit upon his pastoral name, eternized in "Astrophel and Stella," has long remained untaught; for the erstwhile explanation of it as a play upon his name is unanimously passed over by his editors and biographers. Yet as Phillisides is repeatedly used for Philip Sidney, and *sidus* = ἄστρον, the conceit is reasonable—Astrophel, the lover of the star Stella.

Conceivably the name was not original with the circle of Sidney. In Rabelais (iv, xviii), we read of "maistre Astrophile" in connection with Pantagruel's escape from a tempest at sea. The significance of the name to Rabelais is clear from the preface to "Pantagrueline Prognostica":

I'ay reuolué toutes les Pantarches des cieulx, calculé les quatratz de la Lune, crocheté tout ce que iamais penserent toutes les Astrophiles, Hypernephelistes, Anemophylaces Uranopetes, & Ombrophores, & confreré du tout auecque Empedocles.

Ch. Marty-Laveaux, in his glossary, derives this from "Ἄστρον, astre, et φίλος, ami." The word then must have been encountered by members of the Areopagus, and may have been adapted, rather than coined anew, by Sidney. PERCY W. LONG.

Harvard University, July 2.

A FREE ACADEMY OF GRAPHIC ARTS.

TO THE EDITOR OF THE NATION:

SIR: Opinions vary as to the respective merits of the several systems of artistic education. The following of an academical course for instance is advocated by some and disapproved of by others. Education in a studio again and private teaching labor under the possible disadvantage of too great a predominance of the teacher's manner. There are partisans of self-education, so-called, who follow no other teaching but that of nature, as the phrase is; and, fourthly, there are those who consider copying the old masters the best education. Each of these systems may be said to have its merits and its defects. In any case and whatever the system followed, even the best teaching will be rendered futile by a want of receptivity in the pupil. Coöperation of master and pupil is the *conditio sine qua non* of success. Academical education, however, seems desirable to me, though I am ready to admit the objections that can be urged against it. The great advantage lies in the working together of so many young artists, whereby an undue preponderance of the teacher is counteracted, while constant comparison with the work of his co-pupils stimulates ambition and enlarges the horizon. The disadvantage consists in a certain narrowness and dogmatism to which this kind of training is prone; it is apt to confine effort in one direction.

Messrs. Hart, Nibbrig and Moulyn, who intend to open an art school this autumn in Laren (North Holland), aim at combining the advantages of academical teaching with those of a freer and more inspiring study after nature. Mauve's fascinating country will enable them to keep away from their school the depressing influences of academic work. The range of studies can be easily made to comprise the living model and landscape. In order to render the programme as extensive as possible a course in applied art, to be given by Jan Eissenloffel, is to be added to those in drawing, painting, etching, and modelling. For the history of art and æsthetics, they have engaged the services of the art critics H. P. Bremmer and Plasschaert, and the well known author Adriaan van Cordt, who will lecture on their special subjects.

The American and English art students who resort to Laren should not fail to avail themselves of this opportunity.

AUGUSTA DE WIT.

Amsterdam, Holland, June 30.

ATTENDANCE AT FRENCH UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: The recent report of the minister of public instruction of France gives some interesting statistics concerning the sixteen universities of that country. On the 14th of January, 1910, the total number of students in attendance at the French universities was 40,131. Paris leads the universities of the world with an enrolment, excluding students in the lycées—which correspond to our colleges—as well as those in the technical and summer schools, of 17,512. The provincial universities rank as follows: Lyons, 2,922; Toulouse, 2,828; Bordeaux, 2,552; Montpellier, 1,965; Nancy, 1,899; Lille, 1,675; Rennes, 1,602; the new university of Algiers, 1,442; Aix-Marseille, 1,236; Grenoble, 1,156; Poitiers, 1,111; Dijon, 992; Caen, 722; Clermont, 275; and Besançon, 242. Of these 40,131 students, 7,038 are foreigners, of whom 3,500 are in the University of Paris. Of the 17,512 students in this university, 7,688 are taking law, 3,115 are in literature, and 1,845 in the sciences. Another noteworthy fact is the remarkable increase in the number of women studying in the French universities. There are 3,830 women enrolled, of whom 1,300 are studying in Paris; while of the 7,038 foreign students, 1,707 are women.

The Parisian newspapers take especial pleasure in noting the remarkable increase in the number of foreign students in the University of Paris, which now leads the universities of the world in that respect. Twenty years ago (1888-89) there were 457 foreigners enrolled in this university. Ten years later (1898-99), the number had increased to 1,174, while five years later (1904-05), there were 1,633; and in 1908-09 the number was doubled (3,326). The 3,500 foreigners now studying in Paris are apportioned as follows: England, 115; United States, 107; Egypt, 165; Rumania, 233; Germany, 231; Austria-Hungary, 139; Russia, which has the largest delegation, 1,356. South America, as well as Mexico and Panama, Turkey, and the Orient are also well represented. Among the reasons for this astonishing affluence of foreign students to Paris are the exceptional library facilities—there being sixteen libraries, of which at least six contain more than 200,000 volumes each—excellent laboratories, and free tuition to all.

Literature.

RECENT VERSE.

The Younger Choir. New York: Moods Publishing Co.

The Frozen Grail and Other Poems. By Elsa Barker. New York: Duffield & Co.

The Poems of James Ryder Randall. New York: The Tandy-Thomas Co.

Flower o' the Grass. By Ada Foster Murray. New York: Harper & Bros.

Monday Morning and Other Poems. By James Oppenheim. New York. Sturgis & Walton Co.

The Enchanted Island and Other Poems. By Alfred Noyes. New York: Frederick A. Stokes Co.

Odes on the Generations of Men. By Hartley Burr Alexander. New York: The Baker & Taylor Co.

New Poems. By Madison Cawein. London: Grant Richards.

The Shadowy Garden and Other Plays. By Madison Cawein. New York: G. P. Putnam's Sons.

Happy Ending: The Collected Lyrics of Louise Imogen Guiney. Boston: Houghton Mifflin Co.

Mingled Wine. By Anna Bunston. New York: Longmans, Green & Co.

Verses and Sonnets. By Julia Stockton Dinsmore (F. V.). New York: Doubleday, Page & Co.

It was a good idea to issue, under the title of "The Younger Choir," a small selection of more or less representative verse by the new poetic generation. Such a mode of publication has one advantage so obvious that it is surprising not to find it used more often. It spares the poet with one or two good verses the embarrassment of putting out an entire book; and, what is even more to the point, it saves the reader the trouble of ransacking the whole haystack. To be sure, Mr. Markham's "word of introduction," with its references to the "Ly-

rical Ballads" and "The Ancient Mariner," is not particularly felicitous. But prophecy is rash work at best; and it is enough to say that the spirit of the affair is a kind of modern romanticism—neo-romanticism, we are learning to call it—in which the nerves are beginning to predominate over the senses. From among the work of such contributors as Zona Gale, Elsa Barker, Viereck, Ridgeley Torrance, Lewisohn, and Richard Burton, whose name in this connection sounds like an anachronism, a single sonnet by George Sterling will serve as an illustration of the skill and the disposition of the group.

Sargon is dead, Semiramis a clod!
In crypts profaned the moon at midnight peers;
The owl upon the Sphinx hoots in her ears,
And scant and sear the desert grasses nod
Where once the armies of Assyria trod,
With younger sunlight splendid on the spears,
The lichens cling the closer with the years,
And seal the eyelids of the weary god.
Where high the tombs of royal Egypt heave,
The vulture shadows with arrested wings
The indecipherable boast of kings,
As Arab children hear their mother's cry
And leave in mockery their toy—they leave
The skull of Pharoah staring at the sky.

Heroism, it may as well be acknowledged, is not much in the way of this youth. Their tone is either *mol* or mutinous. It is only exceptionally that the austere virtues—fortitude, endurance, "and courage never to submit or yield"—find such celebration as Elsa Barker in her "Frozen Grail" reserves for the adventure of the pole:

What shall prevail against the spirit of man,
When cold, the lean and searching wolf of hunger.
The threatening spear of ice-mailed Solitude,
Silence, and space, and ghostly-footed Fear
Prevail not? Dante, in his frozen hell
Shivering, endured no blackness like the void
These men have warmed with their own flaming will,
And peopled with their dreams. The wind from fierce
Arcturus in their faces, at their backs
The whip of the world's doubt, and in their souls
Courage to die—if death shall be the price
Of that cold cup that will assuage their thirst,
They climb, and fall, and stagger toward the goal,
They lay themselves the road whereby they travel,
And sue God for a franchise. Does He watch
Behind the lattice of the boreal lights?
In that grail-chapel of their stern-vowed quest,
Ninety of God's long paces toward the North,
Will they behold the splendor of His face?

As for war itself, once the school of manly virtue, it is slightly out of fashion just now; but none the less are the robust sentiments of a war-poet like James Randall a good deal of a relief after sundry of our modern chorusings. Randall, it will be remembered, was the author of "Maryland! My Maryland!" And while his polemics do not, as a whole, meet the expectations raised by this popular and spirited performance, the admirers of "the Poet Laureate of the Lost Cause" will be glad to have all that survives of his writing. Of his more pacific manner, which is very much that of his period, the following stanza from "Silver Spring" will give a pretty fair idea:

When the sad and solemn moon
Muses o'er the lone lagoon,
And laughs the melancholy loon;
When the crooning winter breeze,
Hapless from the Hebrides,
Chafes the dead cathedral trees
'Mid the vultures' muffled wails,
Stifled by the panther-hails
Shuddering up palmetto trails;
When the globe is wrapt in sleep,
And the gnomes their vigils keep
By the mountain and the deep—
I can fancy phantom things,
On their thunder-tarnished wings,
Soaring with a fallen grandeur over
these enchanted springs!

This is not wholly unfamiliar; but it is as far away from our peculiar preoccupations as crinoline and hoopskirts. After all, if there is any poetic movement in progress among us just now, as many are inclined to doubt, it would appear to consist in an effort on the part of the muse, like Browning's person of quality, to leave the country and establish herself in town. On the one hand there is a certain impatience and distrust of solitude and the rural deities, the familiars of wood and water and field, even among those who still sing them, albeit rather despondingly, like Miss Murray in her "Flower o' the Grass":

Are these the glad young deities we knew
Long, long ago in the world's dawning day—
These pallid shapes that wander here astray
In the gray vapors and the glimmering dew?
Where are the forms of satyr, nymph, and fay,
The flash of wings in the descending blue,
The wild enchantments that about us grew
When first we heard the pipes of Pan aplay?
. . . . . .
Silent is Ida with great Jove asleep;
No more a garlanded, soft-footed throng
Thrills the wild aisles with laughter, dance, and song;
Naiad and faun their dreaming vigils keep.
Dried are thy dews, Olympus; dust is deep
On Enna's fields, and where the gods so long
Held their young sway—how jubilant and strong!
Vague shapes and ghostly, alien shadows creep.

On the other hand, there is a gradual yielding to the lure of the city—a manifest admiration, in the manner of Mr. Lewisohn, for its ready impressionism, its violent contrasts and spectacular inversions of drab and purple, of glare and obscurity—or, more significantly still, a dim instinctive yearning to the masses of street and slum, the vague unrest of the animal in the presence of the herd. Such is the burden of Mr. Oppenheim's "Monday Morning." Listen to the crude appealingness, the elementary pity of his rhythms in "An Italian Funeral":

Humbly, O humbly, in slow procession, the hearse and horses, the drivers and mourners
Trail between tenements hung with dark faces and eddying crowds at the gray street corners—
Clouds hold the skies in, the gutter is muddy, workmen are ripping the streets for a sewer,
And lo, to a drum-throb musicians are leading the dead, the dead to a church of the poor.

And lo, to that music yon swarthy Italians between them are sawing a pine-beam in half,
The dead-march rhythm runs through their labor; they swing, they sweat, they grumble and laugh;
Hurrying men greet each other and justle on errands of business: all are alive:
But the dead trails through the red storm of living, and the mourners are dumb in the loud man-hive.

He is gone: one mouth less now to be filled; but, oh, one toiler less: he is gone!
A month shall you nearly starve for the burial: you must pay, pay dearly for leave to mourn.
And why do you do it? Is there love among shadows, in cellars; have you dreamt of eternal life?
Were you led, after all, by the flaming Vision O son, O brother, O mother, O wife?

That, like it or not, is the most significant verse that gets written nowadays—and the amount is constantly increasing. Even Mr. Noyes in his new volume has abandoned his lofty rhyme to some extent for the elegy of the streets, as thus of the "Rank and File":

Drum-taps! Drum-taps! Who is it marching,
Marching past in the night? Ah, hark,
Draw your curtains aside and see
Endless ranks of the stars o'er-arching
Endless ranks of an army marching,
Marching out of the endless dark,
Marching away to Eternity.
. . . . . .
Count as they pass, their hundreds, thousands,
Millions marching away to a doom
Younger than London, older than Tyre!
Drum-taps, drum-taps where are they marching—
Regiments, nations, empires, marching
Down through the jaws of a world-wide tomb,

Doomed or ever they sprang from the mire.

. . . . . .

Wearing their poor little toy love-tokens
Under the march of the terrible skies!
Is it a jest for a God to play?
Whose is the jest of these millions marching,
Wearing their poor little toy love-tokens,
Waving their voicelessly grand good-byes,
Secretly trying, sometimes, to pray.

. . . . . .

Marching out of the endless ages,
Marching out of the dawn of time,
Endless columns of unknown men,
Endless ranks of the stars o'er-arching,
Endless ranks of an army marching
Numberless out of the numberless ages,
Men out of every race and clime,
Marching steadily now as then.

The most thoroughgoing attempt, however, to write the epic of humanity is that of Mr. Alexander in his "Generations of Man." In spite of a certain clutter of materials, unavoidable, perhaps, in such a plan, Mr. Alexander has a breadth of horizon, an acquaintance with the shifting symbols in which human experience has successively clothed itself, and a power of abstraction, which give the varying movements of his poem something of the impressiveness of a vast cosmology. A quotation from his second ode, which has to do with the development of the religious feeling, will supply as good an instance of his style as can be expected of a short extract:

Strange prayers ascending up to God
Through all the aching æons, year on year;
Strange tongues uplifting from the sod
The old antiphony of hope and fear:
Strange if He should not hear!

. . . . . .

Aye, men have prayed
Strangely to God:
Through thousand ages, under thousand skies,
Unto His thousand strange theophanies,
Men have prayed . . .
With rite fantastic and with saerifice
Of human treasure, scourged with the heavy rod
Of their own souls' torment, men have prayed
Strangely to God . . .
East, North, South, West,
The quartered Globe,
Like a prone and naked suppliant whose breast
A myriad stinging memories improbe—
Hurt of old faiths,
And the living scars
Of dead men's anguish, slow-dissolvent wraiths
Of long-gone yearnings, and delirious dream
Of saerificial pomp and pageant stream:
Gods of the nations and their avatars!—
East, North, South, West,
The suppliant Globe
Abides the judgment of the changeless stars,—
Abides the judgment and the answering aid
Of Heaven to the prayers that men have prayed
Strangely to God.

Naturally this anthropological and sociological verse is liable at times to strange mishaps. Its pursuit requires an imperturbable gravity, a stern insensibility to the suggestions of humor, which occasionally exposes it to the levity of the Philistines.

But, fortunately, there are other voices—feebler, perhaps, but insistent, like the faint familiar sounds of nature, with the still persuasiveness of old association. In particular, Mr. Cawein has a way of quickening inanimate objects with a kind of fanciful spell, of awakening silence and peopling solitude with a swift and transient spirit:

I saw the acolytes of Eve, the mystic sons of Night,
Come pacing through the ancient wood in hoods of hodden-gray;
Their sombre cloaks were pinned with stars, and each one bore a light,
A moony lanthorn, and a staff to help him on his way.

I heard their mantles rustle by, their sandals' whispering, sweep,
And saw the wild flowers bow their heads and close their lovely eyes:
I saw their shadows pass and pass, and with them Dreams and Sleep,
Like children with their father, went, in dim and ghostly guise.

Something of this same attitude toward "our mother the earth"—a spirit at once earnest and playful like a riper childhood—has always made one of Miss Guiney's attractions, though touched in her case with something more of a Celtic melancholy:

Open, Time, and let him pass
Shortly where his feet would be!
Like a leaf at Michaelmas
Swooning from the tree.

. . . . .

Take him, weak and overworn·
Fold about his dying dream
Boyhood, and the April morn,
And the rolling stream.

. . . . .

He hath done with roofs and men.
Open, Time, and let him pass,
Vague and innocent again,
Into country grass.

The line where this feeling for nature passes over into a kind of symbolism, is hard to define. It is then that objects begin to take on a life of their own, independent of ours or even hostile to it, and that poetry retraces the steps of mythology, or shelters under its images, as in Miss Bunston's "Ad Extremas Tenebras:"

I hear the lapping of the waves of death
In Stygian wells,
I see the white-winged moths that bring the breath
Of Asphodels;

. . . . . .

Yet if, oh dread Aidoneus, one like me
May ask a boon,
I pray it may not be Persephone
Who meets me soon:

. . . . .

She doth but winter in thy realms, O Dis,
Not nest with thee.
Her regal mouth still haunted by a kiss
Would weary me.

But let there meet me one, too poor for scorn,
Dim-eyed and hoar,
Wan as Demeter when she sat forlorn
By Celeus' door.

And let Tiresias come, who, shrinking, knows
A woman's heart,
To guide my feet where Lethe coldest flows,
And pitying yew its deepest covert grows
Far off, apart.

It is rather odd that in spite of the recent fad for the dramatic mould current verse should show so few dramatic effects, even of the simpler and more incidental sort. Confrontation, *mise-en-scène*, situation, passion, are uniformly weak or bungled. All is subjective, self-communing—and not only so, but there seems to reign a kind of divine confusion upon the poet's composition as upon his spirit. Now and then, however, it is possible to find a pretty good lyric impersonation, such as Browning well nigh turned into a poetic convention. Miss Dinsmore's "Verses and Sonnets" contain several, of which the best is probably "Sappho:"

How I could love, if gods but walked this shore,
And I might meet them wandering, face to face!
But when I speak of it with awe profound,
They mock me with "Too late" and "Nevermore."
Too late—alas! What do vain words avail?
"The gods themselves cannot their gifts recall."
Wail, ineffectual lyre, a last, long wail:
There is no place for me—earth is too small—
But toward the immeasurable regions of the dead,
One open, trackless way remains to tread
That leaves no trace behind: the boundless deep
Shall roll its shelter o'er my homeless head.
There shall my lyre with me in silence sleep—
Our fire quenched in death's tranquillity.
I, who have borne the earth, why should I dread
The awful, the immitigable sea?

CURRENT FICTION.

Fortune. By J. C. Snaith. New York: Moffat, Yard & Co.

The moving finger of Mr. Snaith has so long been accustomed to write in unwonted ways that no whimsical novelty on his part should amaze the reader. It was a far cry from "Fierceheart the Soldier" to "Broke of Covenden," although the two Spartan fathers furnished in some sort a bond of unity. It was yet further from the gloom and bloodshed of both to the gentle if somewhat satirical cream-bun cheer of "Araminta"; and one opens "Fortune" with that sense of entire uncertainty what to ex-

pect that is rarely the portion of a well-known novelist's following. As Miguel Jesus Maria de Sarda y Boegas sets forth upon his journey, we are touched with astonishment. Do history—and Mr. Snaith—thus repeat themselves, and, be it whispered, with none too much originality in the repetition? Here begins, apparently, the ordinary swashbuckling romance, and with more than a casual tang of Hewlett in its composition. The setting is strongly reminiscent of "The Spanish Jade," the young hero is blood-brother to "The Fool Errant," and surely Sir Richard Pendragon, as he first appears, is only another of the many disguises of Brazenhead the Great. It is not long, however, before the reader realizes that the smile of "Araminta" has swelled into Homeric laughter, and that this is a notable piece of burlesque. Perplexity dispelled, the book is food for hearty enjoyment. Mr. Snaith revels in not unloving caricature of his early gods, and the result is as delightful in its own way as Hichens's memorable explosion of "The Londoners." The figure of the English giant assumes at times a vigor beyond the merely farcical: he is of the kin of Bardolph, Nym, and Pistol, with a dash of Porthos, and the visit of the three soldiers of fortune to the French court is of a quality to linger in the memory. Fortune is indeed the liege lady of these adventurers, the "sweet baggage with the moist lip and the enkindling eye," and Pendragon strikes their keynote when he cries, "To Fortune will we wet our beards, good Spaniard, for we of England court her like a maiden with a dimple in her cheek." This proud and capricious Princess, invested for the purposes of romance with the winsome if somewhat choleric flesh and blood of the Countess Sylvia, touches a chord of truth at the climax of the tale, when she turns from all her suitors to woo the careless and masterful Pendragon, only to be consigned to the arms of another by that "Captain-General of the Jogalones"; but the delight of the book is to be found rather in its obvious mirth than in its subtle philosophy.

The Silent Call. By Edwin Milton Royle. New York: Charles Scribner's Sons.

Reading this novel is like witnessing a spirited play. Much of the dialogue, most of the situations, and all the cues for entrances and exits bear the impress of the dramatist's art. The half-Indian son of the Earl of Kerhill—known to Mr. Royle's public as "The Squaw Man" of an earlier work—has grown to maturity and figures in these pages as Harold Calthorpe. Like the father, the son is obliged to leave England for reasons not really discreditable, and the "silent call" of the wild strain in his blood lures him to the home of his mother's people. The tribal reservation is so faithfully described in its natural aspects, and such liberties are taken with the names of local celebrities, that no one acquainted with northeastern Utah can be deceived by its thin disguise. Against this scene we find grouped as *dramatis personæ* a scheming agent; an unscrupulous trader who helps him to his ends; an army officer, brave, but sadly fettered by departmental red-tape; a bluff mining prospector and his gang; an intrepid ranch-boss; a beautiful Indian maiden, beset by lovers both red and white; and a right-minded but wholly unconventional parson. Summoned back to England by news of his father's illness, Harold has a chance, of which advantage is cleverly taken for the reader's profit, to contrast the freedom of the frontier with the artificialities of an advanced civilization; of course, unfavorably to the latter.

Under the romantic surface of this and the earlier story, Mr. Royle has given us not only an excellent picture of the untamed West, but also a glimpse of his own philosophy on the race question. In spite of an occasional resort to theatrical methods, he has set forth admirably the serious side of attempting to change the Indian into something non-Indian through the influence of an alien environment.

The Rust of Rome. By Warwick Deeping. New York: Cassell & Co., Ltd.

For the reader who likes to be kept on the shivery edge of apprehension in an atmosphere of vast tragic portent blended with illimitable detail, Mr. Deeping is the man. The magnified episode is the note of the book, although a definite story runs in and out among the episodes. The reader is asked to be interested in Benjamin Heriot's every step, from the prison life he is quitting on the first page to the last incident on the four hundredth. His morals, manners, tastes, pursuits, clothes are offered with a confidence in the reader's interest which is almost naïve. The reader meanwhile forges along, enduring repetition for the sake of many merits on the way and in anticipation of the supposed final tying up of threads. The end is complete and seems to satisfy the actors. But it may be doubted whether violence undetected, even violence in a good cause, will ever become a popular marriage portion for hero and heroine of a romance.

Benjamin Heriot for an hour's irresponsibility paid the heavy penalty of two years in Reading gaol. Once more free, he is near to wrecking himself a second time from sheer reaction. In his self-disgust, he is meditating suicide when chance sends him on a Sunday morning into a beech forest. Under the spell of the trees, he is seized by a passion for Nature and finds himself taking heart. He buys a piece of English woodland, builds a shelter, digs, plants, and grows sane. The attempt to escape humanity, however, is vain. Men, boys, women, and a woman spring up in the wilderness. The author's touch in describing the forest atmosphere is that of a lover, and the earth is made no less fascinating to the antiquarian than to the agriculturist. Characterization is also a marked accomplishment of the writer. His portraits are in the round, anatomy and covering both well-considered. Not a figure, great or small, that does not have its being in its own individual way.

The Professional Aunt. By Mary C. E. Wemyss. Boston: Houghton Mifflin Co.

The "Helen's Babies" order of fiction is, it seems, not yet superannuated. Indeed, the irrepressible infant is an inexhaustible theme. The "professional aunt" of the present book is, of course, the person who sees the funny things done and hears the funny speeches made by the particular urchins who are to be exploited. The author, Mrs. Wemyss, is an Englishwoman who has written one or two other books about children. That kind of thing has not been done so much in England as with us, and is still rather stiffly done. The humor of Mrs. Wemyss is over-broad and self-conscious for the American taste. She begins with a definition of the Professional Aunt, as the spinster from whom devotion to her nephews and nieces is exacted as a primary duty. Then she introduces the particular children with whom the particular aunt is implicated, and the series of infantile exploits and "bright sayings" begins. It must be confessed that the point of a large majority of the sayings is due to their happy childish indelicacy. Of course, the random speech of an innocent child can sail far closer to the wind than the considered and actionable utterances of your barnacle-crusted adult. But there is, after all, a limit to the enjoyment of a voyage under these conditions. The fun of little Johnny's conception of religion and little Sally's notion of motherhood are capable of exhaustion. The perfunctory "love interest" injected into these artless pages is quite helpless to turn a congeries of anecdotes into a real story.

CRETAN DISCOVERY.

Scripta Minoa: The written documents of Minoan Crete, with special reference to the archives of Knossos. By Arthur J. Evans. Vol. I. Pp. xiv+302, with 13 plates and many illustrations in the text. New York: Henry Frowde. $12.75 net.

The art of prehistoric Crete has of recent years become known in such a way as to afford a wonderfully vivid picture of the life on that island well into the third millennium before our

era. So far as it is possible to know an ancient people without an understanding of their own written records, we may now be said to know the ancient Cretans really well, for we have the material setting of life among them in uncommon completeness. There has come to light also the fact that for above a thousand years an evolution in the art of writing was going on. The characters used show a change from conventionalized pictorial forms to those of earlier and later linear types. Moreover, the most advanced type of linear script (Evans's Class B) reaches a high stage of development, while even the latest manifestations of it are considerably earlier than the earliest records of Phœnician writing. When one remembers that only a short time ago the consideration of the antiquity of writing played an important part in discussions of the Homeric question, it is possible to realize how greatly in this respect the present point of view has changed. Furthermore, with these Cretan discoveries, the source whence the Greeks took the characters of their alphabet becomes comparatively a less simple matter to explain. Has not the part the Phœnicians played in the transmission of the letters been too exclusively emphasized? Is there not a large element of truth in the old traditions given by Diodorus that letters were invented in Crete, and that the Phœnicians merely modified them and passed them on, or may it not be that some knowledge of the Cretan script was transmitted directly to the Greek settlers there?

It would indeed be difficult to enumerate the interesting questions which recent discoveries in this wonderful island have raised for students both of prehistoric and of Greek archæology; but the answers to these questions must in many cases depend upon the nature of the language used by the early Cretans, and touching this point we are still largely in the dark. In the absence of bilingual inscriptions, as Dr. Evans remarks in his preface, a comprehensive attempt at interpretation or transliteration is not likely to be attended with fruitful results, but this fact makes it none the less an urgent need that scholars should have before them in as complete a form as possible the existing records of the early Cretan script. This need will be adequately met in the present handsome publication.

The whole work is planned in three volumes: the first includes the hieroglyphic and primitive linear classes of writing, together with some general discussion of pre-Phœnician scripts; the second and third will be given to a detailed publication of the documents of the advanced linear scripts. The whole will therefore constitute a *corpus* of the early Cretan written documents. In Part i of the first volume, Dr. Evans gives an exceedingly useful survey of his whole subject, taking up the question of the antiquity and diffusion of pictographs and linear signs in Europe, the discovery and the nature of each of the types of Minoan writing, the survivals of the art of writing as the different phases of Cretan civilization pass away, and the influence that this art had in other regions. This leads to a discussion of the Cretan Philistines and the Phœnician alphabet, and to a statement of the theory that this alphabet is to an important degree of Minoan origin. The various tables of illustration supplement the text in a most valuable way. Part ii is devoted to a careful and complete presentation of the hieroglyphic or conventionalized pictographic script. The influences under which it grew up are discussed, and its use on seals and clay documents. Then follows an extended catalogue of hieroglyphic inscriptions on seals and sealings, and one of similar nature for inscriptions on clay sealings, tablets, bars, etc. There is further a catalogue of the hieroglyphic signs, and an analysis with extended discussion of the nature of the script. Part iii is a study of the so-called Disk from Phæstos, discovered by Dr. Pernier of the Italian Mission, in 1908. This is the largest single hieroglyphic inscription yet discovered in Crete, and its nature is, of course, of high interest. Dr. Evans subjects its signs to a searching examination, showing how radically in most cases they differ from the Minoan classes, and coming to the conclusion that the script is the product of a culture allied to the Minoan, but "existing on the southwest coastlands of Asia Minor and not improbably in the Lycian area." At the present stage of our knowledge any interpretation can hardly be more than an interesting suggestion, for one cannot be certain how exactly the original form of a hieroglyphic character indicates its meaning at a given time. It seems as if a bilingual inscription was the only thing which could possibly clear away the uncertainties. Nevertheless, a surprising amount of information about the probable contents of the writings, both hieroglyphic and linear, is scattered through the volume. A decimal system was in use in both, and, especially in Class B of the linear script, it is possible to make out the enumeration of various classes of objects stored in the chambers of the palace. The arrangement of the clay tablets was often very careful, and they were sometimes placed like books on a modern shelf, so that the edges showed; then the edge would be docketed with a summary of contents.

It is superfluous to add that the book as a whole is of high importance—the careful record of a considerable part of the extraordinarily able archæological work which has placed Dr. Evans in the front rank of really great discoverers.

Charles Sumner. By George H. Haynes (American Crisis Biographies). Philadelphia: George W. Jacobs & Co. $1.25 net.

Except Lincoln, no statesman of our civil war period has been so elaborately commemorated as Sumner. We have the fifteen volumes of his works, edited by himself, the four bulky volumes of memoirs by E. L. Pierce, the biography by Moorfield Storey in the American Statesmen Series, and less considerable accounts in large number. Professor Haynes thinks it worth while to add to the list a new life, not at all claiming to add fresh material, but undertaking to adjust the figure properly in the perspective, after the lapse of a momentous half-century. Professor Haynes is thoroughly informed and an excellent narrator; while strongly sympathetic, he is by no means undiscriminating; he does not blink the faults of his hero's character or the mistakes of his career. Nevertheless, we feel that he accords Sumner a place among the statesmen of his time which he did not hold, and which in the retrospect of history he never will hold.

Professor Haynes adopts from another the statement that "at the close of the civil war Abraham Lincoln and Charles Sumner were the most influential men in public life." Lincoln's eminence no one will question, but as to Sumner? Did he outrank in influence the great military figures? or, if we restrict our view to civil life, did he stand before the country so superior in wisdom and service to Chase, Seward, Stanton, and Charles Francis Adams? Good men in those days believed Sumner to be intrepid, untiring, well-purposed, and adorned with statesmanlike accomplishments; but they also believed that he gravely lacked patience; also the sagacity for measuring accurately great and difficult problems and dealing with them wisely in view of their relations with other problems and with the facts of human nature; also, the invaluable quality of tact, the faculty for getting on with men and winning out in the welter of varying temperaments, clashing judgments, and conflicting interests. Conspicuous though the service of Sumner was, we yet believe that in many contemporary eyes his leadership had the handicap of these unfortunate limitations; that his work, therefore, in behalf of his country and of humanity was far less effective than that of Lincoln; indeed, that several among his fellow-strivers were fully his equals in the accomplishment of good results.

While to multitudes of his contemporaries Sumner seemed thus to fall short, indications abound that a later generation is not disposed to judge him more kindly. Ideas are broached to-day by voices of authority which are not in harmony with the views and anticipa-

tions of the anti-slavery men of fifty years ago. C. F. Adams, for instance, makes declarations as to the negro problem which sound strange in view of his antecedents and earlier associations. Again, the Rev. Dr. W. S. Rainsford, in his recent "Land of the Lion," asserts with great emphasis that the urgent need of the African blacks is "*that they shall be firmly, lovingly forced to work.*" Dr. Rainsford will not assert that there exists now among advanced races any such warm and comprehensive altruism as will engage, unrequited, in this firm and loving enforcement of labor upon black millions. What remains but to devise a scheme through which a body of uplifters shall find it to their interest to do the enforcing? And when that is said we come perilously near to the suggestion of a society of masters and bondmen—the masters, loving, we hope, but performing their task with an eye to their own interests as well—the bondmen held to unwilling work for a benefit they have not craved and do not appreciate.

More interesting still, Booker T. Washington, asserts ("Up from Slavery," page 16):

> We must acknowledge that, notwithstanding the cruelty and moral wrong of slavery, the ten million negroes inhabiting this country, who themselves or whose ancestors went through the school of American slavery, are in a stronger and more hopeful condition, materially, intellectually, morally, and religiously, than is true of an equal number of black people in any other portion of the globe.

American slavery then, in Mr. Washington's view, has been for its victims an uplifting influence of great potency, and how, in contrast with this view is the doctrine of the "Barbarism of Slavery," in which Sumner pronounced the institution only brutalizing upon master and slave alike!

Distinctly, we express here no approval of Mr. Adams's depreciation of negro capabilities; nor are we accepting the theories of Dr. Rainsford and Booker Washington. We cite them simply as utterances that are significant of the present moment. They are strangely out of accord with the utterances of the old anti-slavery men among whom Sumner was a chief. Citations of a similar character might be multiplied; and they all indicate that a state of mind prevails now among many humane men not in harmony with that of the zealous combatants of the former time. It is not difficult to understand why the prestige of Sumner, much questioned in his own days, has lost rather than gained in later years. As is well set forth by Professor Haynes, while a man of many foibles, he possessed in a high degree courage, sincerity, high purpose, and scholarly accomplishments. His service was great, but, over-confident in his own wisdom, he set his hand to much reconstruction of ideas and institutions. Often he made, but too often he marred. In the world's judgment, he falls far short in beneficent leadership of the supreme statesman of his era, and is doubtfully eminent even among the secondary figures.

Great and Greater Britain: The Problems of Motherland and Empire, Political, Naval, Military, Industrial, Financial, Social. By J. Ellis Barker. New York: E. P. Dutton & Co. $3 net.

Mr. Barker is a German who has been long enough in England to naturalize and Anglicize his name; to sit at the feet of Mr. Chamberlain, and imbibe the fiscal and economic and other Tory doctrines associated with Mr. Chamberlain's name since 1903, and to become a member of the Constitutional Club. The English "Who's Who" is silent regarding Mr. Barker. It is therefore possible only to conjecture how long he has been a naturalized British subject. But it is clear that he has been in England a sufficient number of years to become possessed of the Tory idea—traditional now for a century or more—that England is going to the dogs; and his devotion to his new country is so great that he appears to have made it his special and peculiar mission to prevent the appalling catastrophe that is threatening not only England, but the British Empire. It is something of a reproach to the governing classes who have done so much for England, and for whom England has done even more, that they should have to welcome Mr. Barker's aid in the task of saving the Empire from its threatening fate. But the welcome has undoubtedly been extended to Mr. Barker. He and Mr. Garvin of the *Observer* and Mr. Blatchford of the *Clarion*, one of the organs of English Socialism, were the literary lights on the Tory side at the general election. The *Daily Mail* was open to Mr. Barker whenever he was ready; and many of the forebodings embodied in "Great and Greater Britain," which is concerned with the problems of Motherland and Empire—political, naval, military, industrial, financial, and social—have already been published in the *Nineteenth Century* and the *Fortnightly Review*, both of which exist among other purposes to aid the governing classes of the Tory party in safeguarding the Empire.

According to Mr. Barker, the situation of the British Empire is to-day most critical, but not yet desperate. Everything depends on the British navy. Otherwise by the inexorable law of history and of nature the British Empire must soon come in at the tail of the procession of Phœnicia, Carthage, Athens, Rome, Constantinople, the Arab Empire, Amalfi, Pisa, Genoa, Venice, and the Dutch Empire, and all her greatness pass away. The lesson that Mr. Barker would enforce on England, on Mr. Chamberlain, to whom he dedicates his book, and on the Constitutional Club, from whose house on Northumberland Avenue he dates his preface, is that "all the good things of this world, land, riches, commerce, and shipping, are not to the peaceful and feeble, but to the warlike and the strong"; that wealth and power can be preserved only by military strength; that wealth is a bad substitute for power; that money bags do not defend themselves; that "neglect of the army and of agriculture has been fatal to all great commercial states of the past from Phœnicia to Holland; and that large towns devour the strength of the country."

Mr. Barker is convinced that Great Britain and the British Empire stand at the parting of the ways. The crisis has arrived. But he is confident of a safe and comfortable future for England if she will only build a navy equal in strength to the combined navies of the United States and Germany; adopt protection, because free trade means cheap labor and cheap men; give the colonies a voice and share in the administration of the British Empire by means of an Imperial Cabinet, an Imperial Navy, an Imperial Exchequer, and an Imperial Senate; and establish an army based on universal military training. A year ago the Tory *Quarterly Review* celebrated its centennial, and a large part of two issues was devoted to the history of the *Review* and the lost political causes to which it had since 1809 attached itself. Had Mr. Barker bestowed a couple of hours on this history of Tory propaganda for a century past, he might have realized that the cry of the Empire's danger is an old and well-worn one with the political party with which he is now serving; that it was raised in 1832 and again in 1846, and again whenever the Tory party has found itself out of office; and he would have realized also that he could expect no shock to the English people to result from his dismal forebodings.

A Vagabond Journey Around the World. By Harry A. Franck. New York: The Century Co. $3.50 net.

On graduating from the University of Michigan, Mr. Franck started out in a cattle ship "for to see and for to admire." Until he reached Marseilles his status was that of a tourist pedestrian of frugal sort. But already, in England, France, Germany, and Italy, he had come to know the gentry of the road, their resorts and resources. The last of his money found him a member of the beachcomber colony at Marseilles, waiting his chance to work or beat his way eastward. The chance came, and our gentleman vagabond debarked at Beirut, whence he visited the sites of the Phœnician cities and tramped to Da-

mascus, Jerusalem, and Jaffa. Everywhere he was taken in and aided. From one sheik who had started a collection for a railway ticket Mr. Franck escaped with difficulty. At Nazareth he stopped with the Kawar family, a most variously gifted and articled group. The father spoke only Arabic, two sons spoke English, and one German, and were stout Protestants. Another pair knew, respectively, French and Italian, and were devout Catholics. The youngest son, well versed in Russian, held by his father's confession, the Greek. The family showed Mr. Franck the sacred spots of the city of Jesus; returning from the visitation they pointed out "the house of the only Jew, thank God, who still dwells in Nazareth."

At Cairo there was a long wait under conditions made easy by the meeting of old comrades and new and by the liberality of mission charities. Employment came after long search, and the wages were spent in a trip up the Nile as far as Wady Halfa. Here Mr. Franck could have gone on to Khartum as secretary to a Greek bishop, but, avoiding the *cul-de-sac*, he returned at public expense to Port Said, where the beachcombing life was renewed. It was a question of stowing away or completing an indefinitely long postgraduate course at the vilest of Levantine ports. Between the canvas cover and the ribs of a life-boat on a British liner our author left the canal and got his first taste of the Red Sea. The reward for his hardships was Colombo, and that earthly paradise which is Ceylon. Here the white man, though a vagabond, is a king. Mr. Franck fell in with a sociable colony, including a Britisher, Haywood, badly wanted, on his own showing, by the American law; Marten of Tacoma, who excelled the natives as a pearl diver and harried sharks in his morning swims, and Askins, M.A., of Dublin, engineer when luck served, and adept in half the dialects of the East. Here our author would have joined the police force had not his American nationality got known. Instead, by a friendly understanding with the force, the Anglo-American fraternity of wanderers slept in the public garden, where they also smoked and chatted their days away. Tramping to the temples of Kandy, Mr. Franck made a remarkable deal in bananas, and was opportunely relieved of twenty-eight of them by a holy pilgrim, a *yogi*. Whether because of this benefaction or for other cause, the priests at the Temple of the Tooth received him with all kindness, displayed the sacred relics, and undertook his conversion. They used an argument that recalls the famous wager of Pascal: "Even if you are not yet convinced of the truth of it," they said, "why not accept it now and run no risk of future perdition?" Such arguments had prevailed with U Damaluku, born Larry O'Rourke, and widely experienced as an American roustabout. Him Mr. Franck met in India in the guise of a Burmese bishop. U Damaluku gave a good account of the faith, or, to quote him, philosophy that was in him. With ease he put to flight a Christian convert. Upon the benefits of Buddhism he was eloquent. Referring to his early monastic days, he said:

Ivery blessed afternoon I stbudied the bistory of Buddha and Burmese with the ould priests. 'Twas a foine tbing fer me. Before I found the thrue faith I was that blessed ignerent I cud hardly rade me ouwn tungue. To-day, bless ye, I know eight languages and tbe ins and outs of ivery religion on the futstool. I was a vile curser whin I was hoboin' in the States, and 'twas harrd te quit it. But ivery toime I started te say a cuss-ward I thought of the revired Gautama and sid blessed instead, and I'm master of me own tungue now.

Beside the admirable U Damaluku, an American priest met at a Buddhist monastery in Rangoon made but a poor impression. He was a horny-handed sailor and illiterate. His past was inscribed on his arms in tattooed figures that would have outdone "those on the raciest posters of a burlesque show." Though exact in observance, he was not expansive as to his religion, which apparently he had adopted as a steady graft.

At Rangoon, Mr. Franck and his companion, James, an Australian, being warned that, once in Singapore, no beachcomber ever escaped, conceived the audacious plan of cutting across the neck of Burma and Siam to Bangkok. This trip through the jungle affords some of the most interesting pages of the book. On the way the two tramps met strange isolated English engineers who had almost forgotten how to talk with a guest. From the villagers the wayfarers, after their money ran out, simply took what they needed. Such levies were impartially distributed among many huts, and the villagers took the incursion as a joke. On the Siamese border a different temper prevailed, and more than once the strangers had to fight for it. By a lucky chance they saved the bungalow of a European lumber king from burning, and were liberally rewarded. As deck passengers to Shanghai the two white men were mob bed, and gave a good account of themselves, the officers of the ship being too cowardly to interfere. Here Mr. Franck caught in his hand the celestial blade that was intended for his heart, and James, with a strained back, was landed as a hospital case. Our author's way through Japan was embittered by constant surveillance. The police took him for a Russian spy, the curious throngs molested him frequently. The formidable *jiu-jitsu* he never encountered. It is his opinion that one American collegian can handle several Japanese policemen. Before accepting a verdict so flattering to our higher education one would like to know just what orders the Imperial police had in his case. A grim chapter is that which tells of the two months between Tokio and Victoria on the windjammer Glenalvon. Food, weather, and treatment were of the worst. Ten days Capt. Andrews beat about the Bay of Tokio to save a tug which he finally had to take. Once out, twenty-seven sails were successively carried away. It is a relief to be landed and out of such an atmosphere of sordid tyranny and resentment.

About two years from starting our author rode triumphantly into his native Chicago in charge of seven carloads of cattle. He brought back the camera which in the Siamese jungle had been pretty much his entire baggage—and costume. The photographs are a very acceptable commentary on the narrative. The book is not based on journals, but is the yarn spun in the first flush of recollection. Mr. Franck writes with vividness and humor. He commands the arts of the mimic, and his vagabonds, exotic Americans of many tongues and hues, native dignitaries of many rules and sects, fairly live before the reader. His achievement was extraordinary, calling for adroitness and courage at every turn, and his book is no common one.

Notes.

William De Morgan's "An Affair of Dishonor" has passed tbrough the stage of final proofs, according to tbe announcement of Henry Holt & Co.

Scudder's "Fables and Folk Stories," Burroughs's "Squirrels and Otber Fur-bearers," and Sherman's "Little Folk Lyrics" are to be printed by Houghton, Mifflin Co. in American Braille type for the blind.

Still another book on "The Tragedy of Hamlet" is soon to appear. Sherman, French & Co. announce tbe author as Henry Frank.

"The Birch Bark Roll," by Ernest Thompson Seton, and "Scouting for Boys," by Sir Robert Baden-Powell, are to be combined into a single volume by Doubleday, Page & Co.

The John Lane Company is to issue tbis month a new volume of verse by William Watson. The book takes its name, "Sable and Purple," from a poem which offers tribute to tbe late King and to his successor.

Thomas Y. Crowell & Co. announce "Siegfried," a new volume in tbe list of translations of Wagner's "Nibelungen Ring"; an *édition de luxe* of "Tbe Ancient Mariner," and a volume of essays by William P. Trent.

A complete biography of John Wilkes is being prepared by Horace William Bleakley, who is best known as tbe autbor of "The Story of a Beautiful Ducbess."

Sturgis & Walton will bring out in tbe autumn "The Lady," a series of imaginary

portraits, by Emily James Putnam; and a study of New York playgrounds, by Esther Singleton, "The Children's City."

A translation by Charles Recht of "The Clouds," a Bohemian drama in three acts, is announced by R. G. Badger.

The publisher, Eklund, of Stockholm, has in preparation a national edition of the works of the late King Oscar, which will contain, besides various essays and notes made during his travels, a translation of Goethe's "Tasso," and of Herder's "Cid," and epics and ballads.

Among the books soon to be issued by Henry Holt & Co. are an annotated edition of "Le Bourgeois Gentilhomme," by Prof. Moritz Levi of the University of Michigan, and a Spanish composition book by Dr. Crawford of the Unversity of Pennsylvania.

The *Academy* has recently changed hands, Lord Alfred Douglas having sold out to a syndicate, which henceforth will have entire control. By the change the *Academy* has also lost the services of T. W. H. Crosland.

A. T. Quiller-Couch, author, and editor of the Oxford Book of English Verse, is one of the recipients of Birthday honors. He is a strong Liberal. The newly made knights also include Dr. Alfred Hopkinson, vice-chancellor of Victoria University, Manchester.

The Macmillan Company has begun the publication of a library edition of Walter Pater's works, to be complete in ten volumes at two dollars the volume. The books show wide margins and large, clear type, and are in every way made pleasant to handle and convenient to read. So far three volumes have appeared, containing "The Renaissance" and "Marius the Epicurean."

It was inevitable after the furious success of Francis Thompson's posthumous essay on Shelley that we should have a volume of his stray papers. On the whole the little book including "A Renegade Poet and Other Essays," edited by Edward J. O'Brien, and issued by the Ball Publishing Company, was worth printing. Thompson's wit, as seen in the titular paper, is pretty thin, his rhetorical imitation of De Quincy in "Mœstitiæ Encomium" is rather flat, as is the imitation of Poe in "Finis Coronat Opus." But some of the critical papers are good, and the essay on "Paganism: Old and New," with its distinction between the real paganism of antiquity and its resuscitation by Christian poets, is decidedly worth preserving.

"Leaves," by Violet Clarke (London: Heinemann), is a memorial volume to a talented young gentlewoman, who, undertaking the social duties of an Indian presidency, showed uncommon tact and a rare capacity to grasp the native point of view. Her father, Sir George Sydenham Clarke, has brought together some twenty sketches, English and colonial, most of them humorous and descriptive, some of which had appeared in London journals. Obviously a large circle of friends may welcome such a collection. Outsiders will, we feel, merely note a certain fresh humor and a literary ambition pretty widely diffused among the more intelligent young women of the author's class.

Volumes XIII and XIV of Scribners' Memorial Edition of George Meredith bring us to the middle of the complete set, which is calculated to run to twenty-seven volumes, and to the novel, "The Egoist," which probably most Meredithians regard as the centre of his work. Other novels may have special attractions, but in "The Egoist" they think they come at the very heart of Meredith's views of life. The illustrations are three: The splendid photograph of the author taken by Harold Roller in 1888; Flint Cottage, Box Hill, Meredith's home during the last forty years of his life; and View over the Garden to Box Hill. The last-named picture gives the view from an upper window of a room in Flint Cottage, where he wrote before the building of the chalet.

Professor Münsterberg's robust, if not very subtle, vein of public comment has its admirers. They will doubtless welcome his new book of essays, "American Problems from the Point of View of a Psychologist" (Moffat, Yard & Co.). His subjects are The Fear of Nerves, The Choice of a Vocation, The Standing of Scholarship, Prohibition, and Intemperance, The Intemperance of Women—to wit, an undue pride in the frills of the mind and the milliner; Spiritualism—the exposure of Eusapia Palladino; the Market and Psychology, with especial regard to labelling and advertising; Books and Bookstores—the publishers are urged to combine to revive the true book store; and, finally, The World Language—an admirable exposure of the cheap fallacies behind the simplified spelling movement and a destructive survey of the pretensions of any language, artificial or traditional, to impose itself upon the world. Here is surely topical matter in plenty, and, since the American Woman is involved, contentious issues of spectacular attractiveness. In general, Professor Münsterberg is on the side of idealism against pragmatism, scholarship against dilettantism, rational moderation against fanaticisms of all sorts. He traverses for America something of the ground that Matthew Arnold plotted for England, and in a not dissimilar spirit. The difference is in amenity. Many will find a somewhat rasping quality in Professor Münsterberg's literary manner, which is all the more trying because he is so much in the right of the questions he treats. In part this unsympathetic effect may result from his writing in a language which, though astonishingly well mastered, is not his own; but were these essays put over into German there would still be, we feel, a sense of delicate issues somewhat ruthlessly and at times superficially dispatched. The most novel and valuable part of the book is the suggestion that by psychological experiment we can do much to detect aptitude, or its absence, for particular work. The mind that can efficiently tend a complicated loom is unfitted to manage a trip hammer. Experiment can determine who will work most efficiently on a typewriter with switch-keys, who on one with the double keyboard. Simple tests would weed out the men who ought not to drive locomotives or motor cars. Evidently this is a possibility of real importance. Applied psychology might actually do for us in charting aptitudes and disabilities what the old phrenology pretended to do. One would be glad to see the idea developed at greater length. Obviously, on Professor Münsterberg's showing, psychological tests should be offered to all beginners at trade schools. We find our author more inspiring in the laboratory than in a pulpit which he occupies with a somewhat incongruous mixture of dogmatism and jauntiness.

It is well known to all who have occasion to use the earlier reports and appendices of the Historical Manuscripts' Commission of Great Britain that some of the work was performed in a fashion not in accord with the historical standards of the present day. Consequently, a number of these volumes have been revised and reissued. Among the most important of them is Appendix iii of the Ninth Report, first published in 1884, and containing a calendar of the Sackville Papers. The first part of the reissue was published in 1904, and now the second and final part has appeared. The nature of the papers thus calendared is too familiar to call for comment here. It will be enough to say that they comprise the correspondence of Lord George Germain, secretary of state for the colonies from 1775 to 1782; that the revision has been made by Mrs. S. C. Lomas, and that in the new volume are large numbers of important additions, to which ample reference will be found in the preface.

An addition to the list of source-books for the study of American history is made by Prof. Samuel B. Harding of Indiana University in his "Select Orations Illustrating American Political History" (Macmillan). Professor Harding is undoubtedly right in holding that "a great part of a people's history, where self-government prevails, may be found in the speeches of its public men"; and his volume of extracts and abridgments will help somewhat to make available a class of historical material whose portentous bulk, joined often to comparative inaccessibility, has unquestionably repelled all but the most zealous teachers and students. With the way in which Professor Harding has performed his task, however, we feel less satisfaction. To say that the editor of a book of selections is entitled to the benefit of the doubt in all questions of inclusion or exclusion, is, of course, to utter only a platitude of criticism. The range in this case is certainly wide, reaching as it does from James Otis to Booker T. Washington, and the work of condensation has been skilfully done. We frankly think, however, that such documents as Washington's Farewell Address, and the inaugural addresses of Jefferson and Lincoln, are hardly to be classed as "orations" in any proper sense, or, for that matter, that they bear any such relation to the political history of their times as do, for example, Webster's reply to Hayne or the Lincoln-Douglas debates. Neither can it be said that Henry W. Grady's oration on the new South, or Booker T. Washington's Atlanta speech on the race problem, interesting as they are as examples of modern American oratory, exercised any special influence on the course of events, or contributed very directly to the formation of public opinion. The inclusion in the volume of an introduction on oratorical style and structure, together with some notes on the various speeches, both contributed by Prof. John M. Clapp of Lake Forest University, confirms us in the impression that the editor has often been guided in his selection quite as much by the oratorical interest of a piece as by its political significance.

Popular works on Pilgrim history are numerous, hut with the exception of "The Pilgrim Fathers" of Dr. John Brown, which gives disproportionate space to the English end of the story, nearly all have been written hy Americans with American interests in view. Miss Winnifred Cockshott, of St. Hilda's Hall, Oxford, had an excellent opportunity, therefore, not of discovering new facts, hut of recounting old ones for the benefit of English readers. Her proportions are good, the pages devoted to life in England, Holland, and America standing, respectively, in the ratio of ahout one, two, and three, while her desire to give adequate setting to her pictures leads her to furnish rather a hroader outlook, particularly in what relates to Holland and the Dutch, than the reader will find elsewhere. She has made an honest attempt to understand and describe the institutional and economic life of the Plymouth colony and to avoid an excessive devotion to merely hiographical details. Her work is to he commended as in the main well-written and accurate. Still, it is always difficult for an English writer to handle our colonial history with precision, and Miss Cockshott has contributed her sheaf of hlunders. Her account of the settlement of Connecticut shows that she has not fathomed the mysteries of the Warwick Patent, the Sayhrook colony, and the relations hetween Sayhrook and Connecticut, while her implication that Vane, Peters, and the younger Winthrop took part in the Connecticut settlement hetrays the hand of the novice. Miss Cockshott is evidently not familiar with some of the minor questions under discussion, such as the identity of Capt. Jones and of the Mayflower itself, and she manifestly knows nothing of the Bradford letter of 1623 or the suit of 1624, to which the Plymouth colony was a party, the papers regarding which throw light upon the early history of the colony. Her version of the passenger list of the Mayflower, intended to be an exact copy of that given by Bradford, shows many departures from the original manuscript. ("The Pilgrim Fathers"; G. P. Putnam's Sons.)

Prof. Henrik Schück, who has heen paying a flying visit to this country as the representative of the University of Upsala, where he holds the office of rector magnificus, has heen mentioned in these columns from time to time as the author of several volumes of essays. These he has grouped into two series, "Ur gamla papper," and "Ur en resandes anteckningar"; the essays collected in the former series, which has already reached the quite respectable numher of eight volumes, deal with topics in Swedish and comparative literature, as well as with Shakespearean suhjects, which have always greatly attracted Professor Schück since in the early eighties he puhlished his life of Shakespeare, the only comprehensive work ahout that poet in Swedish. The other series contains, as the name implies, studies resulting from or written during his travels ahroad. In 1884 he visited Rome for the first time, and nearly every summer since then he has paid longer or shorter visits to that city, always studying, always adding to his knowledge of its history. All the three volumes in this series contain Roman sketches; those in the two latest are to a certain extent connected, dealing with the excavation in the Forum, with legends ahout Virgil and St. Peter, and with the Swedish saint, Brigitta, who lived in Rome for nearly a quarter of a century.

The last few volumes of Oscar Levertin's "Skrifter" contain his early short stories, articles on Scandinavian and foreign literature, and, in the latest volume so far issued, a numher of editorials from the Stockholm *Svenska Dagbladet,* now reprinted under the title "För och mot." Among the literary studies, most of them printed as hook reviews in *Svenska Dagbladet,* those of French writers are the most interesting, particularly the series dealing with Anatole France. In "För och mot" we find Levertin's indignant protest against the awarding of the first Nohel prize in literature to the late Sully-Prudhomme, and two or three other articles in which he pays his compliments to the Swedish Academy and its leading man, C. D. af Wirsén. The volume contains also an interesting survey of Swedish helles-lettres during the reign of Oscar the second, and the prose-poem in which he surveyed the nineteenth century at its close. The opening essay is entitled "To Henrik Schück on his Fiftieth Birthday." Levertin hails, and rightly, his friend and former teacher as the first to introduce modern scientific methods into Swedish literary history, and as having taught the lesson that "in science there is nothing small except for him who sticks in the mud of small things," and, finally, as the preacher of humanism, who, though himself a modern *kulturmänniska* with the critical point of view of the nineteenth century, can speak with warm sympathy of "the dreams of the pious friar, or the tracts of the austere Lutheran theologian."

"L'Epopée castillane à travers la littérature espagnole" (A. Colin, 330 pages, 3.50 francs), by Ramon Menendez Pidal of the Spanish Academy, is the French text in which the author delivered his lectures at the Johns Hopkins University. The interest of the matter was appreciated at the time. The hook has a complete index of proper names and texts, and tahular analyses of each lecture, considerahly enhancing its value for reference.

Dr. William James Rolfe of Camhridge, Mass., died last Thursday at the home of his son, Charles J. Rolfe, in Tishury, Vineyard Haven, aged eighty-eight years. He was horn in Newhuryport, Mass.; spent his hoyhood at Lowell, and was educated at Amherst, which he left at the close of his junior year in order to work in Maryland. He went hack very soon to his native State as principal of Day's Academy at Wrentham. Here and at other schools where he taught, he commenced what afterwards hecame his mission in life, the teaching of English literature, a thing almost unheard of at that time. In 1859, Rolfe received the honorary degree of A.M. at Harvard, and in the following year went to live at Camhridge, where he spent the rest of his life. From 1869 to 1890, Dr. Rolfe was one of the editors of the *Popular Science News,* and since 1890 he had had charge of "Shakespeariana" in the *Critic,* hesides contrihuting to the *North American Review, Poet-Lore,* and other literary and scientific periodicals. As an editor of school texts he is hest known. In additlon to his Shakespeare in forty volumes, a "Handhook of Latin Poetry," and the "Camhridge Course of Physics" in ten volumes, the last two works heing prepared in collahoration with other editors, he hrought out annotated editions of selections from the poems of Gray, Goldsmith, Milton, Wordsworth, and Browning; the "Lady of the Lake," "Marmion," and "The Lay of the Last Minstrel," and a complete edition of Scott's poems; the "Sonnets from the Portuguese," the "Lays of Ancient Rome," "Childe Harold," "The Princess," "In Memoriam," and "Idylls of the King," and two volumes of selections from Tennyson's other poems, hesides a twelve-volume *édition de luxe* of Tennyson, in the preparation of which, as in his previous editions of Tennyson, he had valuahle suggestions and assistance from the poet and his son. He has also edited six volumes of a series of "English Classics" of a more elementary character, and he revised annually the "Satchel Guide to Europe."

Prof. Julius Jung, the historian, died recently at Prague, at the age of fifty-nine. Among his works are "Lehen und Sitten der Römer" and "Römer und Romanen in den Donauländern."

Georges Berger, critic, essayist, and formerly professor of æsthetics and art at the Ecole Nationale des Beaux-Arts, died last Saturday, aged seventy-six years. He was a grand officer of the Legion of Honor, a memher of the Institute, and devoted most of his life to promoting the study of art. Besides contrihuting frequently on this suhject to the *Journal des Débats,* he wrote in 1879 "L'Ecole française de peinture depuis ses origines jusqu'à la fin du regne de Louis XIV," and was a memher of many puhlic art committees.

Science.

The small hook on "The Family Health," by Dr. Myer Solis-Cohen (Philadelphia: Penn Puhlishing Co.), may he commended as a good guide for the individual as well as for the family. The hygiene of the community and the household is hriefly touched on, most of the book being given up to personal care and conduct. All the important points concerning clothing, food, drink, exercise, and rest are treated in a simple and sensihle fashion, well calculated to develop a rational attitude towards daily prohlems. There is also a brief hut sufficient statement of ahout all that the average layman needs to know concerning the treatment of disease. The author has no fads to advocate, and is unusually happy and clear in his presentation. Here and there perhaps a little more detail would he helpful, and an index would add to the usefulness of an excellent hook.

"How to Keep Hens for Profit" (Macmillan), hy C. S. Valentine, is a disappointment if one expects systematic treatment of fundamentals. The heginner who huys this hook will find the plan fragmentary, while its phraseology will he beyond him, and most of its information obscure until he has had not merely instruction, hut also experience, in practical poultry raising. When, however, he has reached the point where he hegins to ask questions based on

observation, and when he has mastered the poultryman's vocabulary, Mr. Valentine's book will be of value to him. It discusses the leading breeds of hens—giving a fair statement of the advantages of each—and considers new and unusual methods of many kinds. On diseases and present poultry problems the book is sensible and commands confidence, for Mr. Valentine has no fads to advance. His chapter on the Indian Runner duck is of much present interest. Considered as a Second Book of poultry-raising this is an excellent production, but no beginner can depend on it alone.

An extract from Voltaire, "Madame, songez à la santé surtout, c'est là ce qu' il faut vous souhaiter—la beauté, la grandeur, l'esprit, le don de plaire, tout est perdu, quand on digère mal; c'est l'estomac qui fait les heureux," was evidently well understood by the accomplished mistress of Tillypronie. She left sixteen notebooks of recipes gathered in several lands and from many chefs. It was her custom whenever anything good came upon the table to get the exact manner of cooking it from the maker; her recipes are accordingly reliable, practicable. It must have been an arduous task to select the best from such a mass of material, but Miss C. F. Frere has compiled a book, well indexed and admirably arranged, for the searcher after a particular manner of cooking an article ("The Cookery Book of Lady Clark of Tillypronie"; E. P. Dutton & Co.). And the recipes, though designed primarily for a large establishment, will give the keeper of a simpler ménage many new and delicious dishes. It is rather noticeable that in these days of abstemiousness from sweets almost a fourth of the book is composed of recipes for sweet dishes and puddings, besides the cakes and ices.

"Rock and Water Gardens," by the late F. W. Meyer (Country Life Library, imported by Scribner), in its opening chapter allays all prejudice by its unsparing condemnation of the formless upheavals on too many front lawns. Thus enabled to approach the subject dispassionately, the reader discovers that there are frequent conditions in landscape gardening which can best be met by rock gardens. The book is written to its illustrations, a careful study of which reveals the skill with which the finished garden is built up from its crude beginnings. Since it concerns itself with small gardens as well as large, the volume will bring to many householders the means of solving vexatious difficulties even on the two-acre lot, and should help to turn many bare or unsatisfactory corners into the most pleasing features of small places. The management of water and the beautifying of the average stone wall are also discussed here. A chapter has been added to the book on the heath garden, by W. Dallimore.

A national edition of the works of the Italian mathematician, Count Giulio Carlo di Fagnano, will be issued some time in the current year, and will include not only the "Produzioni matematiche" (now rare), but also other writings, both scientific and polemical, and important scientific papers recently discovered in the Biblioteca Oliveriana of Pesaro. In order that this edition may be complete, the committee in charge request that information regarding the existence in any public or private library of manuscripts, including letters on mathematical or scientific subjects, by this writer, be sent to the chairman, Prof. Vito Volterra, Via in Lucina, 17, Rome.

Dr. Johannes Gottfried Galle, the astronomer, died on Monday at Potsdam, at the age of ninety-eight. He is remembered as the first man actually to see Neptune. In 1846, after Leverrier had calculated that it must surely exist, Dr. Galle began a search for the planet, and on September 23 of the same year announced that he had found it. He contributed frequent articles to scientific periodicals, especially on comets, three of which he himself discovered.

Drama and Music.

The Mystery of Hamlet, Prince of Denmark. By Robert Russell Benedict. Philadelphia: J. B. Lippincott Co. $1 net.

Although coming from the hands of a self-confessed layman, this monograph forms interesting reading, and is encouraging, because of the author's habit of turning, in case of any doubt, directly to the text of the play, instead of being influenced by preconceptions. For its main contention, the book expresses the belief that Hamlet's procrastination is to be explained by his desire, before doing anything else, to awaken his mother's conscience and to save her. To make this the chief cause for his distraction is doubtless to simplify Hamlet's character too much, and to do violence also to probability. For why should Hamlet not have believed that a speedy murder of the King would be the quickest way to bring his mother to her senses?

Mr. Benedict insists, further, that Hamlet, after having threatened "to put an antic disposition on," never really feigns madness at all; that his thought of feigning madness was suggested to Shakespeare by earlier forms of the story, and that Shakespeare after having inserted this detail saw later that a highly strung temperament, like Hamlet's, when wrought upon by such distressful circumstances, would of necessity furnish enough whimsicality of utterance to throw the King off the track without the help of any pose. In answer to this suggestion, one recalls Hamlet's words to the King with reference to the body of Polonius. It is hard to explain them except by the theory of feigning.

That Hamlet was well under thirty, the age ascribed to him by the grave-digger, is another point urged by Mr. Benedict. He finds that throughout the play, except for this one instance, the Prince is referred to as young, and believes that only extreme youth, that of nineteen or twenty, will account for Hamlet's idealism and impetuosity. He, therefore infers that the grave-digger's words are more than counterbalanced, and that they may have been inserted later with reference to the age of Burbage, the first reputed actor of this rôle. Here, again, the author is on perilous ground, and seems not to be aware of the loose way in which both "young" and "old" were employed in Elizabethan days.

Mr. Benedict tries in conclusion to prove to the world that he does not make an infallible idol of Shakespeare, and has strictures especially on the "To be, or not to be" passage:

> In the first place, we must acknowledge that it adds nothing to the development of the story nor of Hamlet's character. It is plainly an interpolation, disturbing the continuity of the dramatic interest, for we last left the Prince planning for the play and intent upon the detection of the King and the performance of his duty. He now comes before us dreamily meditating upon the expediency rather than the moral right of a distressed soul to end its earthly troubles by suicide.

It has not occurred to the writer, apparently, that Hamlet has for the moment sunk to the depths of despair and is contemplating the thought of actually taking his life, rather than live up to the part which he must otherwise play. This lack of understanding is of a piece with a confusion, earlier in the book, caused by ignorance of the word "honest" in the sense of chaste.

In his "Studien über die Genealogie und Psychologie der Musiker" (Wiesbaden: Bergmann), Oswald Feis discusses the question of the origin and nature of musical talent from genealogical and psychological points of view. The fact that the wonderful ability of many distinguished musicians, Handel, Mozart, Bellini, and Richard Strauss, manifested itself in very early childhood would naturally suggest that it was inherited, but in scarcely a single instance have we any evidence of it, nor did these youthful marvels, in general, transmit to their posterity their own precocity. In only two or three families is such a tendency perceptible, notably in that of John Sebastian Bach, where it was operative in a greater or less degree for more than three centuries (1550-1869); also, on a much smaller scale, in the families of Puccini and Pfitzner. Neither Robert Schumann nor Richard Wagner belonged to the class of youthful prodigies, but it is hardly correct to state that their musical tastes and talents were recognized comparatively late in life, since both of them became conspicuous in this respect as students of the gymnasium. The assertion of Hegel that musicians are, as a rule, "poor in ideas," is regarded by Feis as wholly unjust, and the facts which he adduces in refutation of it may be accepted as authentic and conclusive. A prominent characteristic of musical composers is their untiring industry, which accounts for their remarkable productivity, even when they are subject to severe physical sufferings, like Chopin, or die an early death like Mozart and Schubert. This interesting series of psychological studies criticises in the concluding chapter Lombroso's theories of genius and insanity, and finds them due in a great measure to the distinguished psychiator's habit of observing the actions

of men of genius through a magnifying glass and of thus making them appear abnormal and unsound.

Art.

Douris and the Painters of Greek Vases. By Edmond Pottier. Translated by Bettina Kahnweiler, with a preface by Jane Ellen Harrison. New York: E. P. Dutton & Co. $2.50.

The study of Greek vases has hitherto been confined almost exclusively to the professional archæologist. The average layman interested in Greek art has devoted his attention mainly to the appreciation of Greek sculpture and perhaps of Tanagra figurines; but Greek vases have not been popular. The reason for this cannot be said to lie in the vases themselves, since they contain rather the elements which one might have thought would make them appeal to any student. They satisfy the artistic sense, both by their beautiful shapes and by the spirited paintings with which they are decorated; and moreover the subjects of these paintings bring us into intimate contact with Athenian life, illustrating as they do the daily occupations of the people, as well as their mythology. And, though these vases belong to one of the "minor arts" of Greece, they are virtually our only means (with the exception of some painted gravestones) of obtaining any idea of the higher art of Greek paintings during that period, since none of the famous works of Polygnotos or Zeuxis have survived. The fault therefore lies not with the material itself, but with the treatment it has received. The books hitherto written on the subject have all been of so technical a nature that they have had little interest for the general reader.

Edmond Pottier, whose book appeared in French in 1905 under the title of "Douris et les peintres de vases grecs," has been the first to address himself to the reading public, and the success of his attempt is the best guarantee for the potential popularity of Greek vases. In a volume of less than a hundred pages and with twenty-five good illustrations, he gives a fascinating account of the life of the Athenian potters and of the methods of their work, and then proceeds to describe in detail the work of Douris, one of the best known of Greek vase-painters, selected as representative, both for the large number of vases signed with his name (twenty-eight), and because his work reflects the contemporary art of painting most fully. Nor is the popular element of the book its only attraction. Coming from the pen of so distinguished an archæologist as E. Pottier, it carries with it an authoritative weight which will appeal to the more serious student. Miss B. Kahnweiler has earned the gratitude of many for making this book accessible to the English-speaking public by her excellent translation.

"A bibliography of American books relating to prints and the art and history of engraving," by Howard C. Levis (London), is a privately printed book of eighty pages issued in an edition of 150 copies. The material was prepared for Bourcard's *Essai de Bibliographie* (recently noted in these columns), but is presented here with more bibliographical detail, such as full titles, with indication of lines, size of book, and notes. The entries are arranged on the dictionary plan, in one alphabet, with cross references from subjects to authors, twenty-six such references under "Book Plates," for instance. Errors and omissions appear to be surprisingly few in this well compiled and printed little volume.

The ninth annual exhibition of the Pennsylvania Society of Miniature Painters and the Pennsylvania Academy of the Fine Arts will be held at Philadelphia from November 12 to December 11. The jury of selection consists of Colin Campbell Cooper, Ludwig E. Faber, Clara F. Howard, Amy Otis, and Mabel R. Welch; the hanging committee of Herman Deigendesch, Sarah Yocum McFadden, and Amy Otis.

Finance.

THE RECENT DECLINE.

There is reason to hope that the financial situation has about reached its period of convalescence. It would be futile to predict an early return to satisfactory conditions, but that affairs are at last headed in that direction seems a warrantable conclusion. The decline of anywhere from 15 to 50 points which the stock market has experienced in 1910 has a significance not to be ignored. Extraordinary measures have been applied to rectify an over-extension of credit, and the indications all are that the result is already highly beneficial.

The recent fall in securities came at the most opportune period. The great hysterical movements in the stock market are apt to come later in the year. The 1907 panic occurred in October, just at the time when the marketing of the crops is most active and when general industry is making its arrangements for a twelvemonth. The autumn of 1902 was another nervous occasion, owing to the fact that Europe had begun to distrust our credit and had served notice to our bankers, who were swinging a tremendous load of underwritings on foreign capital, that there must be widespread liquidation on this side of the Atlantic. The 1910 situation is an improvement on both 1907 and 1902, not only because the process of rectification has begun considerably in advance of the period of the year when the severest strain is made on the money market, but also because Europe's attitude toward us is less austere. Europe has found not a little to criticise in our stock market methods in the last two years, but the things she has seen there have really borne no comparison with those that excited her apprehension in 1907 and 1902. Credit has been overextended here, but with no such disregard of moral and economic considerations as in the two previous periods. The expansion of credit since 1907 has, in short, been mainly for the attainment of legitimate industrial ends, though we have not been wise enough to see that these ends could not be attained in the time we set for the task. Our precipitancy has been clearly attested by the events of the last few months, and particularly by the events of the last few weeks. Nevertheless, although most persons, both here and abroad, are to-day convinced that such a readjustment of conditions is necessary as will admit of a larger volume of business being done on a given amount of capital than in recent years, there is nothing like a general lack of confidence in the fundamental stability of our financial and industrial situation.

It is that fact that differentiates 1910 from 1907 and 1902 and 1893. There has been a great amount of speculation in the past year, but it has been for the most part built up on solid expectations, rather than on the froth of some earlier periods. The earnings of our railways have been of such magnitude as to incite speculation in Wall Street. It was a rash speculation, because it failed to take into account the coördinate facts of the financial situation, such as the inability of the banks permanently to finance an upward movement of such proportions, and the probability that higher wages and supplies would sooner or later deprive the railways of a very large part of the profit from their great increases in gross earnings. Nevertheless, the fact remains that the large railway earnings of the past year denote that we are a vast and expanding nation, from which the largest economic results can be expected in the future.

While it is regrettable that the Western land speculation should have been allowed to run to such extremes, it must be borne in mind that this, too, has been based on expectations of a most encouraging nature. An extraordinary amount of farm land has changed hands at greatly enhanced figures, resulting in a heavy drain on the supply of capital which is ordinarily at the disposal of general business. But this eagerness for farm lands has sprung from the palpable fact that agriculture is our most prosperous industry and seems likely to continue so. The margin between what our farmers produce and what our population consumes has diminished to such an extent as to raise predictions that we must shortly cease to be an exporting

nation. That may or may not be a safe prediction. Taking a broad view, the recent craze for farm lands is an encouraging indication, for it undoubtedly points to a larger competition in agriculture, more intensive methods of farming, larger crops, and, in the end, it may be hoped, a decreased cost of living. Still, it is a fact that the movement has been at the expense of the general industry of the nation, more so than can be tolerated, despite the good results that may eventually be expected from it.

Enough has perhaps been said to show that the financial situation of 1910 really differs in kind from that of 1907 and 1902 and 1893. There has been an over-extension of credit, but it has in no marked degree been the product of rascality or sheer folly. The people who have made such large drains on the money market have for the most part sincerely aimed to "deliver the goods." But it may be said of them, and of the banks who have so liberally supplied them with funds, that they have had zeal without knowledge. There has been an altogether unequal distribution of the working capital of the United States in the past year; and not only that, but more loanable capital has been allotted to industry than was warranted by the amount of gold at the disposal of the banks. That we are now all prepared to admit.

With such a drop as we have had in the stock market, with such a stoppage as has been put of late on the money drain to farm-land speculators, and with such a curtailment in manufacturing and general industry as has been under way for some weeks past, there is ground for the assertion that the nation is well on the way to a complete rectification of its economic situation. No doubt, much still remains to be done in abridging the chasm that exists between the purchasing power of the nation and level of prices fixed by the producers of the necessaries of life, but there is good reason to suppose that this can be accomplished without the accompaniment of hysterical conditions.

BOOKS OF THE WEEK.

A REALLY REMARKABLE NOVEL

The First Large Work of a Young Writer Fills with Admiration the Highest Critics

The best book is not necessarily the best seller.

"PREDESTINED"

a novel of New York life, by STEPHEN FRENCH WHITMAN—now in its third edition—although not a best seller yet, is pointed out by the best judges of fiction—those both acute and sincere—as fiction of highest merit and deep significance. Are not these opinions guarantee of a novel's excellence:

"Excluding the work of these masters (William Dean Howells and Henry James), we are of the opinion that this is the most important book of the sort written by an American in the last twenty years." —N. Y. EVENING SUN.

"From every point of view it is one of the most interesting pieces of fiction produced by an American in many years." —COLLIER'S WEEKLY.

" 'Predestined' is a 'big thing,' an overwhelmingly big thing. It might almost claim to be called a great novel." —N. Y. TRIBUNE.

"Mr. Whitman has treated a dangerous theme with delicacy and strength. It is realism with restraint and human sympathy, and on the whole gives a juster and more vivid picture of certain aspects of life in New York's 'tenderloin' than does any other novel we can recall." —N. Y. EVENING POST.

"The descriptions of places, people, and incidents in the story are accomplished with great understanding and skill. An excellent piece of work." —N. Y. SUN.

"If it is a first novel, it is a surprisingly good one—a portrayal of character both vivid and penetrating, a study of realism shot through with poetic glints." —THE DIAL.

These papers—as every one dealing with books will tell you—are influenced by no consideration but that of actual worth. They see a book's substance and, however distasteful to those interested, tell the truth about it. On their word you can depend—so, when next you want a deeply interesting narrative which is at the same time a significant comment upon life, get "Predestined."

It was published this spring, a dollar and a half in price, by

CHARLES SCRIBNER'S SONS, 153 Fifth Avenue, New York

A. C. McCLURG & CO.

CHICAGO

Educational.

New York, Tarrytown, Box 760.

Hackley Lower School (Boys 9 to 13)

Situated on an elevation of 500 feet above the Hudson River, twenty-five miles from New York City. Modern facilities for thorough school training with every natural advantage for healthful home life. Prepares for Hackley Upper School. For catalog and illustrations, address

HAROLD F. AVERY, Director.

THE FISK TEACHERS' AGENCIES.

EVERETT O. FISK & Co., Proprietors.

2 A Park Street, Boston — 1505 Pa. Ave., Washington
156 Fifth Ave., New York — 414 Cen. Bld., Minneapolis
203 Mich. Ave., Chicago — 611 Swetland Bld., Portland
405 Cooper Bld., Denver — 238 Douglas Bld., Los Angeles
319 Hyde Bld., Spokane — 2142 Shattuck Ave., Berkeley

Send to any address above for Agency Manual.

ALBANY TEACHERS' AGENCY

Supplies schools of all grades with competent teachers. Assists teachers in obtaining positions. Send for Bulletin No. 20.

HARLAN P. FRENCH, 81 Chapel St., Albany, N.Y.

BETHLEHEM PREPARATORY SCHOOL.

Bethlehem, Pa. Prepares for leading colleges. Catalogue. H. D. Foering, B.S., Principal.

JUST PUBLISHED.

THE HISTORY OF POLITICAL THEORY AND PARTY ORGANIZATION IN THE UNITED STATES.

BY SIMEON D. FESS.

$1.50.

A logical discussion of the most important problem of popular government.

It is exposition rather than advocacy, and emphasizes the necessity of liberality on the part of the citizen in all matters of political opinion.

GINN AND COMPANY

The Mechanics of Writing

By EDWIN C. WOOLLEY, Department of English, University of Wisconsin, author of a *Handbook of Composition.*

A book that will prove invaluable to the young author, the English teacher, the schoolgirl, the stenographer, the clerk, the freshman, the proof-reader. It teaches how to write, spell, abbreviate, compound, and divide words, capitalize, italicize, punctuate, and paragraph.

Cloth. 427 pages. Price, $1.00.

D. C. HEATH & CO., Publishers

LIBRARY RESEARCH

Researches made in Boston and Harvard Libraries. Ancient and modern languages. Translation, revision of manuscripts, etc.

MISS M. H. BUCKINGHAM.
96 Chestnut Street, Boston, Mass.

BOOKS—All out of print books supplied, no matter on what subject; write me, stating books wanted; I can get you any book ever published; when in England, call and inspect my stock of 50,000 rare books. BAKER'S GREAT BOOKSHOP, John Bright St., Birmingham, England.

INSPIRING AND HELPFUL BOOKS

WHY WORRY? and THOSE NERVES!

By GEORGE L. WALTON, M.D. Cloth, $1 net, each.

J. B. LIPPINCOTT CO., Philadelphia.

SITUATION WANTED, as private secretary to gentleman, preferably with literary interests, by university graduate, aged 24, experienced. Write "H. S.," care The Nation, New York city.

The Nation.

NEW YORK, THURSDAY, JULY 21, 1910.

The Week.

As candidate, distinct from philosopher, Senator Lodge has to be all things to all men, promising "scientific" tariff revision to those constituents who dislike the Aldrich-Payne duties, because they are too high, and intimating still higher duties for the benefit of those who wish them so. Thus in his address last week to the New England Shoe and Leather Association, he declared that the duty on boots and shoes is "too low." The reason he gave is that, under the new 10 per cent. duty, the imports of foreign boots and shoes are increasing. For the nine months ending March 31, they amounted to $116,635, as compared with only $79,247 for the same period in the previous fiscal year. Senator Lodge affirms that this is "suggestive" and even "ominous." We think so, too. It is suggestive of high-tariff methods that no inquiry at all was made into the nature of these imports, to discover whether they were not articles of fancy or luxury of which the importation has been increasing in so many departments. It may also be fairly said to be ominous that the Senator said nothing about our exports of boots and shoes. For the twelvemonth ending June 30, 1909, their value was $10,305,814. Yet no sooner does $100,000 worth come in than the wise and scholarly Senator from Massachusetts cries out that we are in danger of "getting on our uppers" in the pauper shoes of Europe.

If there had been doubt in anybody's mind that "Uncle Joe" intends to die with his boots on, the Speaker removed all traces of it in his speech at Burligame, Kan. There is something fine about the consistency of the old campaigner, and his refusal to allow either the howling blasts of Kansas insurgency or the scorching heat of the Kansas sun to swerve him from his accustomed attitude. He declares flatly for a "real, virile Republican minority" in preference to "an apparent majority that could not take account of stock and know from one day to the other whether it was the majority or the minority." If the old gentleman were less deeply stirred by his feelings on the subject, he might perhaps take a moment to consider what the prospects of the party would be today if the Republican majority at the recent session of Congress had acted upon the principle that he represents. Imagine the regular organization in both houses having put through a cut-and-dried programme prepared by Cannon in the House and Aldrich in the Senate, and leaving to the Democrats alone all the fighting and protesting; what would be the chances of the party in the coming elections? The only thing that stands between it and a snowing-under such as it has not dreamed of since 1890 is that insurgency which has made it possible for thousands of voters to remain in the party who would otherwise have abandoned it in disgust. A compact and "virile" minority is all very well to talk about while you are still in the majority, but it is mighty dispiriting when it has become an accomplished fact.

Mr. Bryan's gift for picking out the winning issue is notoriously not an over-developed talent. When the fanatical strain in the man joins in to accentuate his want of insight and foresight, we get some such disastrous result as the overwhelming defeat of Mr. Bryan's county-option scheme at Saturday's county primaries in Nebraska. Out of twenty-one county conventions, one only, and that one his own, will stand by the peerless leader. Yet this setback, hailed by Mr. Bryan's opponents as marking the end of his ascendency in the Democratic party of Nebraska, may easily be exaggerated. In the first place, William J. Bryan has so long been the prophet and leader of defeat that one reverse more or less does not greatly matter. That undeniable hold which he exercises over a large section of the Democratic masses is by this time proof against the discouragement attendant upon a single defeat. Or, rather, it is a loyalty which thrives upon defeat, and cites its leader's unsuccess as proof of his disinterestedness, of his unwillingness to compromise, of his instinct for the right issue as against the winning issue.

The appointment of Mr. William George Jordan as secretary of the House of Governors marks an important advance in the history of that institution. To give such a body the strength and weight requisite to enable it to play an important part in our history, there must be some central agency for keeping continuously alive the movements with which it is concerned, and for shaping the programmes of its successive annual meetings. A session of two or three weeks a year can be made tenfold as fruitful as it would otherwise be by a careful planning of the work, and this can be properly accomplished only through the medium of a permanent officer. Mr. Jordan has the credit of having given the initial impulse to the idea of a House of Governors, and he is imbued with a profound sense of the vital service it is capable of doing for the country. To secure uniformity of laws and of action in matters in which the absence of such uniformity is paralyzing, is, of course, the central aim of the House of Governors. And it offers a hopeful means of correcting a weakness of our Federal system without so centralizing power as to threaten the extinction of that spirit of self-government which is the very life of our republican institutions.

A conviction of bribery that has taken place in Massachusetts has attracted less attention than the extremely unusual peculiarities of the case seem to warrant. That the Mayor of a city of 75,000 inhabitants should have been convicted on a charge of bribery after a trial lasting only two weeks, and promptly sentenced to imprisonment for three years in the house of correction; that he and the three other men convicted with him should have been at once taken in charge by deputy sheriffs and handcuffed like ordinary criminals —all this is a story that certainly sounds unlike most stories of political crime. Yet this is what happened a few days ago to Mayor White of Lawrence, Mass., and it seems to indicate the existence of a standard in such matters in the old Bay State which is very different from that prevailing in most of her sister commonwealths. Another circumstance in the case seems, indeed, to

point in the opposite direction—namely, the demonstration of attachment to the Mayor made by a crowd of more than 2,000 people as he ascended the steps of the jail. The trial was held at Salem, and on his return to Lawrence, in custody, this affectionate greeting was given him. But evidences like this of the loyalty of the neighbors and political followers of a popular or successful man do not, after all, necessarily show anything but refusal to believe that the person in question can really have been guilty of crime.

Woodrow Wilson has done the right thing, and in precisely the right way, in stating his attitude toward the proposal to make him the Democratic candidate for Governor of New Jersey. He will "not in any circumstances do anything to obtain" the nomination; he does not "wish to draw away from" his present duties and responsibilities as head of Princeton University; but if, as many well-informed persons have assured him, it is "the wish and hope of a decided majority of the thoughtful Democrats of the State that he should accept" the party's nomination for the Governorship, he would deem it a "duty as well as an honor and a privilege to do so." If he should be nominated, it may confidently be predicted that he will express himself on the questions of the day with the same frankness and the same dignity with which he has stated his position in regard to the acceptance of the nomination. The New Jersey campaign would be sure to become one of the centres of interest throughout the country, besides being of a character to tone up the political situation in New Jersey itself. Already it is stated that Republican managers are bracing up to the necessity of finding a candidate fitted to be measured against Woodrow Wilson in case he should be put up by the Democrats.

Reviewing the situation in the American stock market, the London *Economist*, in its issue of July 2, after admitting that a great deal must be ascribed to the manipulation of powerful financial interests, declares that it is "the intrinsic conditions surrounding the market itself" upon which critical attention should be concentrated. Among these, it says, "the huge borrowing by the railroads" is one of the most important. "The American companies go on pouring out bonds upon the investor," and "upon this vast amount of new capital the interest charges must be met," while the outlay, though made for reproductive purposes, does not immediately bring in earnings. It is interesting to place this view of the American railway situation alongside that given out by one of the leading railway presidents of the country a few weeks ago, on the occasion of the Government's application for an injunction against the combination rate-advance of Western railways. "The credit of railroads in this country," he was quoted as saying, "has already been so badly shattered by the attacks that have been made upon them during the last six months in Washington that I believe it has been almost totally destroyed by this action." A borrowing capacity which strikes the London *Economist* as amazing, hardly accords with this description; and if some trouble has been experienced in placing the vast total at favorable rates, there is no difficulty in finding a reason for it without recourse to the supposition that Government hostility has broken down the credit of the roads.

European students of medicine can now safely reverse the old process, and come to America to enlarge their knowledge. Such is the opinion of Hofrat Professor Doctor Freiherr von Eiselsberg, expressed before the Medical Association of Vienna after his return from a tour of inspection in America. He was impressed particularly by our splendidly organized hospitals and the daring operations of our surgeons. As an example worthy of imitation in his own country, he referred to the fact that our hospitals are often supported by private munificence. In one town he made the acquaintance of two famous surgeons whose 6,500 operations, 3,700 of them abdominal, had entailed a mortality of only 1.8 per cent. In Boston he was interested in seeing the room in which the first operation under anæsthetics was performed, and pleased to find that the 6th of October is celebrated annually, particularly in Boston, as ether-day. In the Rockefeller Institute he had occasion to marvel at the success attained in bone-transplantation. He was also struck by the strict observance of medical etiquette on this side of the ocean, and the prompt disciplining of offenders against it. His only adverse criticism related to the number of our medical schools; more than 150 are, in his opinion, too large a number even for our vast country.

The moral atmosphere of Pittsburgh has attracted so much attention of late that her long-standing distinction as "the smoky city" has almost been forgotten. It is all the more pleasing to find, therefore, in the current news dispatches that the physical atmosphere of the Pennsylvania iron centre has also been undergoing improvement. The Director of Public Health is quoted as declaring that if the present progress continues Pittsburgh will in the not distant future be almost a smokeless city. "Look in almost any direction from the top of a high building," he says, "and you can find many clear spots which a short time ago were dense with heavy smoke." It is stated that during June seventy-five large manufacturing plants either installed or contracted for new smoke preventives. There are two morals of general application in such a story as this. One is that it is worth while for energetic officials and public-spirited private citizens to stick to the task of improvement in the face of discouragement and delay. The other is that when a change demanded by the public good is pronounced impossible or impracticable by interested parties, the statement is seldom entitled to a particle of weight.

Undeterred by the rapidly swelling list of aviation fatalities, the Wright brothers announce a programme of aeroplane building which would show that, so far as these two pioneers are concerned, airship construction is passing out of the experimental and into the practical stage. They are to build machines specially adapted for speed, for altitude flight, and for endurance. Hence, while most would-be aviators still find it a problem how to fly at all, we have here the beginning of specialization. What is more to the point is that of the three new Wright models announced, two will go in primarily for what the recent series of accidents has shown to be of primary importance—solidity of construction. Built especially for sustained flight and passenger-carrying capacity, these comparatively slow machines will in the end do more for the

science and art of aviation than the faster and more spectacular racing craft.

From whatever point of view it be considered, the vote in the House of Commons on the woman-suffrage bill is of great significance. This conciliation measure, as it was called, does not go the whole length of abolishing distinctions of sex in the franchise, but would add the names of about 1,000,000 women to the Parliamentary register of voters; and for it 299 members of the House went on record, as against 190 opposed. So large a majority in so full a House obviously puts the whole movement in a better strategic position than it has ever before occupied. The voting was not at all on party lines and the political leaders were divided. The most influential of them were against the bill, though some based their opposition on the fact that it did not go far enough. But in any event it will hereafter be impossible to ridicule the agitation as something wholly fantastic and negligible. A cause which can command a majority of 100 in the House of Commons is certainly to be seriously reckoned with in English politics. It is only fair to say that probably so great a majority could not now be secured for the final passage of the bill. Doubtless some members voted for it on the understanding that it would be pushed no further for the present. Yet its reference to the committee of the whole, whence it can be reported only in the autumn session of Parliament, if at all, was virtually agreed upon in advance.

Socialism and jingoism seem to mix very well in England. During the last general election, one of the biggest guns on the Tory side was the German war-scare letters, written for the *Daily Mail* by Robert Blatchford, who is easily at the head of Socialist journalism in Great Britain. More recently the big-navy cry has been raised by that veteran leader of uncompromising British Socialism, H. M. Hyndman. The aristocratic *Morning Post* is the medium in this case. With Hyndman as with Blatchford, the main point is that England, as the home of such fragmentary popular liberties and rights as the present wicked social order allows, must not permit all Europe to be Prussianized. Socialist Hyndman is explicit. In the first place, England must have a navy to safeguard her food-supply. In the second place, she must have a navy to safeguard the right of asylum for political refugees from other countries. In the third place, England has in her charge the liberties of the smaller nations, who look to her as their protector. Finally, England must be in a position to defend her own freedom. For these reasons Socialist Hyndman is at one with those high Tories who want a special loan of $500,000,000 for war-ship-building, which is strange company, indeed, for the best-known English advocate of international Socialism.

The threatened strike of railway employees in France may bring to a sharp test the announced intention of the Government to limit the right of association of *fonctionnaires*. As most of the French railways are now owned by the state, the men who work for them are really public servants. In his speech in Parliament a few days ago the Prime Minister, M. Briand, declared that a law would be laid before the Chamber to draw a distinction between the liberty of association which ordinary workingmen enjoy, and that which may safely be accorded to state officials. In fact, the general draft of such a law has since been published, and it is easy to see how directly it would apply to a strike on the national railways. The proposed statute—which is really offered as an amendment of existing laws—would concede freely to public employees the right to form unions for all purposes of mutual aid and protection; it would provide means of making representations to superior officers and laying demands before them, while establishing boards of "conciliation"; but would absolutely deny the right to a general strike. The exact words of the Government proposal are: "In case they [the unions] go beyond their lawful functions, and especially if they foment a strike of public employees, they will be subject to dissolution judicially, apart from the punishment which their leaders may incur for such a violation of the law."

Press comment in Germany throws little light on the recent sweeping changes in the Ministry. By some newspapers, as by the Berlin *Tageblatt*, the new appointments are regarded as reactionary; but others see in them only an effort on the part of the Chancellor to secure a more "homogeneous" and efficient Ministry. Equally divergent are the opinions in regard to the probable continuance in office of Chancellor Bethmann-Hollweg. There was a general feeling, after the mess made of the Prussian franchise bill, that his tenure of power would be brief. Yet now it is said that his act of strengthening the Ministry argues an expectation of remaining at its head. On the other hand, the breaking up of the *bloc* by means of which Von Bülow governed may be said to have compelled his successor to make new combinations; and the selection of a new Foreign Secretary and a new Minister of Finance may simply mean the necessary arrangements for support in the Reichstag. Probably the safest inference would be that this is one of the things which, the more they are changed, the more they remain the same; and that the Chancellor will go on struggling with his difficult governmental task much as before.

If the Russians and the Japanese are up to mischief in their new convention about Manchuria, they are very careful to keep outside appearances extremely proper. Japan and Russia are to "lend each other their friendly coöperation with a view to the amelioration of their respective railway lines in Manchuria," they are "to maintain and respect the *status quo* in Manchuria resulting from the treaties, conventions, and other arrangements" heretofore concluded, and "in case that any event arises of a nature to menace the *status quo*" they are to enter into communication with each other with a view to taking steps to maintain it; and that is all there is in the convention. The State Department is also informed that the Japanese Government has assured our Ambassador at Tokio that no understanding has been entered into between Japan and Russia beyond what is contained in the instrument now made public. What may be in the hearts of Japanese or Russian statesmen is, of course, another question, but that question we have always with us. As a means of quickening suspicion and hostility, or furnishing ammunition for the chronic fomenters of trouble between this country and Japan, the new convention is a sad disappointment.

THE CURRENCY QUESTION.

It is known that quiet negotiations have been going on between the Treasury and leading banks, looking to the formation of "national currency associations," as authorized by the act approved May 30, 1908. Secretary MacVeagh has issued a statement confirming the report, and giving certain details of his plans, or, it would be more accurate to say, his hopes. The Secretary takes pains to say that he sees no cloud on the financial horizon. It is not because he fears an "emergency" that he would like the banks to take advantage of an emergency measure. His idea is simply that if the banks were now to put themselves in a position where they could act quickly in case of a currency famine, the possibility of any such famine would be, by that very step, made so slight as to be negligible. At the very moment of urging the banks to form national currency associations, Mr. MacVeagh declares his belief that not a single one of them "within the life of the law" (it expires by limitation on June 30, 1914) will have to "avail itself of the powers with respect to the issue of currency." One sees that it is a kind of big-navy argument in the realm of finance!

There is, however, another reason given by Secretary MacVeagh why the banks should act under the Aldrich-Vreeland emergency law. It is that the hope of a general measure of banking and currency reform is growing dim. The Secretary still believes that something will be done as a result of the elaborate inquiries and reports of the National Monetary Commission, but frankly admits that the passage of a satisfactory and comprehensive law is "not as imminent as we hoped it would be at this time." In line with this is what Congressman Vreeland, who is a member of the Commission as well as chairman of the House Committee on Banking, said at the meeting of the State bankers last week. Discussing the investigations of the Monetary Commission, which looked so unmistakably to the establishment of some form of central bank in the United States, Mr. Vreeland avowed that there were very great obstacles in the way, one of them being the large amount of outstanding Government 2 per cent. bonds, and that it now seemed doubtful if we could have a central bank before the date of their maturity—that is, in 1930! This is truly to defer the matter to the Greek Kalends. If this is the best we have to hope for—though, of course, a scheme less radical than a central bank might be feasible—it is not surprising that the Treasury and the banks should be thinking of makeshifts.

Turning to the provisions of the emergency law, Secretary MacVeagh accurately states the objection which the banks had from the first to entering into national currency associations. Any given bank's liability as such a member was not clearly defined, and there seemed to be no provision under which a bank, once in an association, could withdraw. Doubts of this sort were so formidable that, in fact, only one association of the kind was formed—and this in Washington, as it were out of neighborly deference to the Treasury; as Mr. MacVeagh now points out, the impulse to form currency associations completely died away. This was done, he says, "before it became evident that the objections found by the banks could and would be overcome." But he does not explain how they are to be overcome. By a Treasury regulation? By an amendment of the law? Light on these points is much needed. From the first, critics of the emergency law showed how cumbrous would be the formation and working of the proposed currency associations. Delay would attend every step, though a crisis would demand speed; and the currency when once issued would be subject to a heavy and cumulative tax. These facts are, of course, consistent with an argument for forming the associations long in advance of their actual need, so that they might act quickly when the time came; and the tax of 5 up to 10 per cent. would be a positive check on the use of emergency circulation for speculative purposes. Yet it still remains a good deal of a mystery why some banks should look with favor upon the project of entering into currency associations.

If it is possibly a fear of "tight money" ahead that moves them, it should seem that they would more naturally turn to other measures of relief. For the Aldrich-Vreeland bill offered a distinct alternative to currency associations. Section 3 provided that any individual bank might deposit with the Treasury "bonds or other interest-bearing obligations of any State, or any legally authorized bonds issued by any city, town, county, or other legally constituted municipality or district in the United States," and be entitled to issue notes upon such security up to 90 per cent. of its market value. Now, if there is one familiar complaint in the situation to-day, it is that bonds are not selling well, that the banks have too many of them. If, then, anything like a currency stringency is in sight, the banks have in this enlarged provision for bond deposits a swift and sure means of relief. From the very passage of the bill, expert financial opinion was certain that the banks would act under Section 3 rather than trust themselves to the complicated machinery of the national currency associations. And the special wonder now is why there should be an apparent readiness to do what all were averse to doing in 1908. The law is explicit about the nature of the "commercial paper" upon the security of which banks in associations may issue notes. It must "represent actual commercial transactions," "bear the names of at least two responsible parties," and "have not exceeding four months to run." Strictly interpreted, this would appear to be safe, especially with the increasing tax upon the circulation; but how could the Secretary of the Treasury be "satisfied with the value and character" of the great mass of paper that might be offered? It would come down in the end to a question of good faith on the part of the banks; and if any of them are now favoring the currency association plan in the hope that it will enable them to make profitable use of "commercial paper" otherwise hard to carry, they may rest well assured that their motives and every detail of their operations will be closely scrutinized.

MACHIAVELLI AND ROOSEVELT ON INSURGENTS.

Col. Roosevelt's announcement that he is not taking sides in the factional quarrels within his party, but is simply hearing all comers and inquiring, seems to argue that in his trip through Italy he stopped long enough to read a page of the great Florentine master of statecraft. Machiavelli has a chapter in his "Discorsi" which is all about insurgents. He uses almost the very word, writing of those who would "reprimere la insolenza di uno che *surga* in una repubblica." But the advice which Machiavelli gives to rulers and statesmen is, in

such cases, to go slow. He would evidently not favor Mr. Wickersham's plan of dealing with dissidents by "reading them out of the party," since he declares that the safer way, and the way to avoid scandals, is first carefully to inquire into the causes of the strength (*potenza*) of insurgents. What are their grievances? Why do they suddenly break with men with whom they have before been glad to work? How much popular support have they? What can be done to satisfy their desires without imperilling the settled order? These, says Machiavelli, are the questions that the wise publicist will ask and seek to answer before proceeding with a high hand (*forza*); and it should seem that Mr. Roosevelt is adopting the method recommended by this great authority.

Thus far, it must be admitted, the Colonel's utterances do not show that he has made much progress with his investigations. He lays down two propositions: (1) he is for "the best man"; and (2) he is for his party only so long as it does what is "right." We fear that the Florentine Secretary would have called this vague and unsatisfactory. An intense political realist himself, he had little patience with mere words and abstractions that "get us no forrarder." He would probably have insisted upon asking by what test we are to know who is the best man, and who is to be the judge of what is right. As there was no Oyster Bay for Florentines to resort to in order to have all such doubts resolved, the Colonel's oracular deliverances would not have been welcomed by them as a present help in time of trouble. Still, the spirit and intent are the important things at the beginning; and we are sure that Mr. Roosevelt is going about the business in the right way. Before striking the insurgents, he will hear them; he will discover the real positions they take and the aims they cherish; and in the process he may be able to make some things clear to his countrymen which they now find obscure.

Take, for example, the case of that insurgent, Hiram Johnson, who is making a stirring canvass for the Republican nomination as Governor of California. Mr. Pinchot, after a conference with Col. Roosevelt, said that he was going out to take the stump for Johnson. The primary comes on August 15, and there are three leading candidates, Curry, Anderson, and Johnson—the first two regular, the latter an avowed insurgent. In a speech at South Pasadena last month, Johnson made his political alignment clear. He said:

> I do not take my Republicanism from a Cannon nor from an Aldrich. Neither do I take it from a Ballinger, who to-day disgraces the Cabinet. My Republicanism is the Republicanism of Dolliver and Cummins and of La Follette; it is the Republicanism of that great American patriot, Theodore Roosevelt.

This certainly is flat insurgency, and Johnson's avowal of it has filled the regular Republicans of California with mingled horror and rage. They call Johnson a chronic bolter, and a voter who "usually supports Democrats for office." The San Francisco *Argonaut* harshly characterizes him as one who "is attempting by vociferous damnation of men better than himself to revive old scandals and to besmirch the party with which he pretends to be affiliated." To add to Johnson's party crimes, he has ignored a test which it has been sought to impose upon all the candidates in the primary—namely, whether, if beaten, they will support the nominee. Johnson has refused to reply at all to the question; and the inference is drawn that, if the result of the primary be adverse to him, he will stand independently for the Governorship as the candidate of the Lincoln-Roosevelt League.

All this does not take us beyond the mere fact of Johnson's insurgency; the Machiavelli-Roosevelt method would carry us further. What is the secret of Johnson's power in California? Why, it is his direct attack upon a corrupt political machine. "Smash the machine and make California free," he cried at one public meeting. The machine he refers to is that which goes by the name of Republican, but which really ought to be called "the Southern Pacific machine." His hearers believe Johnson to be within the truth when he declares that it is this railway-political machine which has debauched the State and even got its grip upon a part of the judiciary. So the issues which Johnson is pushing to the front are those of honesty and manhood. Anybody can say he favors good roads and material development and conservation of resources, declares Johnson, but those are not the real questions before the people of California. What they are called upon to decide is whether they are to be for or against graft and corruption. One begins to understand how a fearless and energetic campaign along these lines is rattling the political dry bones in California, and making Johnson both hated and feared. And with Pinchot and Roosevelt to aid him, it is doubtful whether the regular Republicans will be able to "repress the insolence" of this insurgent.

AUTOMOBILES AND SAVING.

Dealers in bonds are complaining that the usual amounts devoted to the purchase of these securities out of the mid-year payments of interest and dividends have not been forthcoming, and some put the responsibility for this state of things upon the craze for automobiles. "Bonds," the cashier of a bank is quoted as saying to a bond salesman, "what have we to do with bonds? See that man just gone out? Well, he borrowed money on his life insurance policy and is going around the corner to buy a car." "That's nothing," said another bond man. "A client of ours came in with a city bond of large denomination and asked us to split it up and sell $2,000 of it at once. He wanted to take the money with him. We said it would be very difficult to realize the cash while he waited, but he would have it, and we asked him why such haste. He was going off on a motor trip, he said, and he needed new tires and a lot of things. He got the money."

The figures that deal with the aggregate expenditures of the people upon the purchase and maintenance of automobiles are largely guesswork; but it is plain that the draft thus made on the productive resources of the nation is so large as to be a very considerable economic factor. A quarter of a billion dollars annually is probably a safe estimate of the amount spent on the purchase of automobiles in this country; another quarter of a billion, perhaps, is expended on their care, maintenance, and repairs. If all of this can be looked upon as a net addition to the outlay of the nation for luxuries and comforts—as so much deducted from what would otherwise have been saved and put into the form of permanent productive investment—it is evidently a factor of real importance and contributes in a sensible measure to the maintenance of high rates of interest and to the difficulty of disposing of gilt-edge low-rate securities at the prices of former years.

But while there is unquestionably something in all this, there are a number of considerations that tend to break the force of it. Chief among these is the fact that the enormous increase in the automobile business has been concurrent with that great advance in the cost of living which has been occupying everybody's attention in the past year or two. We are often told that the necessity of more income to meet the increase of habitual living expenses is one great cause of the unwillingness of people nowadays to invest in low-rate securities; and this explanation is apt to be advanced by the same persons who take the darkest view of the reckless expenditure for automobiles. It does not seem probable that both of these changes are going on simultaneously on a very great scale. If the pinch of high prices is driving great numbers of people into buying less safe investments than before, in order to secure the income necessary to maintain their customary mode of living, it is not likely that a great multitude are also, in the face of the same situation, cutting deep into their income to provide themselves with the new luxury. A great multitude, that is, in a national sense; that there are many thousands who are foolishly extravagant in the matter is, of course, undeniable. The probability, therefore, is that the tremendous expenditure on automobiles is quite as much a sign of increased income as it is a cause of diminished savings; if a great deal of it is due to a sudden access of extravagance under the stimulus of the passion of the typical American to have the latest and the best thing going, probably an even greater part is due to the increased income that has come to large classes of people with the increased prices.

In principle, however, the idea of those who look askance on the pouring out of vast quantities of money upon automobiles is sound. American optimism, American free-handedness in the spending of money, and the desire of every American to have what any American has, all conspire toward the production of a wave of extravagance. And it is no answer to the critics to say that the expenditure thus arising "puts money into circulation" or gives employment to workmen. If it is taken out of that part of the income of the spenders which would otherwise have been put into income-bearing investments, it diminishes by so much the producing power of the country. Had the money spent upon the automobiles been invested in this way, it would have "gone into circulation" just as truly, but it would have taken, in some shape or other, the form of capital that reproduces itself as it is used, instead of that of a commodity that is used up in two or three years, or of services which leave no trace after they are rendered. This, of course, is not saying that money expended for recreation, for pleasure, or even for luxury, is money wasted. It is only saying that you cannot eat your cake and have it too. A certain amount, and a very large amount, of expenditure for things other than what are usually called necessaries is not only proper but eminently desirable; the only question is where to draw the line. And if the line is drawn, in a given case, beyond the point of ordinary prudence, it is not open to the nation to console itself with the thought that it made no difference, since the money simply kept things going in one direction rather than another. In the one case you keep things going while your money lasts; in the other case you keep them going permanently, because productive capital is the source not only of an annual output, but also of the means of its own permanent maintenance.

THE ACTOR IN SUMMER.

During the warm months theatres are mostly under lock and key. Their only bustle springs from painters who refurbish the proscenium or carpenters who alter traps and improve the "grid-iron." There are neither plays nor audience, and rehearsals come only with the waning of summer. Meanwhile, where are the players? With regard to some of them the public is kept well informed. Their comings and goings are chronicled, their habits and diversions bulletined. A is taking a motor trip through France, B is at his country home on the Sound, C is furnishing good advertising by his presence at some hotel. In such wise does the star commune with nature the while he steadily plays a part before his midsummer audience.

But what of the rank and file? All winter they have been telling us that the carriage waits without, m' Lord. Or they have been vinegary mothers-in-law, or stern fathers, or sophomoric younger sons, endlessly "feeding points" into the insatiate stellar maw. For them there are no automobiles and motor boats. And there is small chance to work, for the number employed by summer stock companies is almost negligible. Therefore they linger in the metropolis.

They manœuvre like yachts jockeying at the start of a race—drifting, tacking, backing, and filling, killing time in various ways till the starting gun. It is hard to believe that these are really people like ourselves. Lamb remarked: "It is with some violation of the imagination that we conceive of an actor belonging to the relations of private life, so closely do we identify these persons in our mind with the characters which they assume upon the stage." None the less, one stares at them with the same vague curiosity he feels in the presence of a celebrity. As for them, they are serenely Olympian; the rest of mankind is on a level far beneath. As in primitive society, the local and professional topics are bandied about by word of mouth. In point of gossip a group of idle actors is like a New England sewing circle; the resemblance ends there.

It is the liking for companionship, as well as the opportunity for making engagements for the next year, that draws the player to New York. Broadway is the rallying-point, a lodestar to the Thespian. The town is meat and drink to him; he loves its bricks and walls, its cacophony and glitter. To him the city means actual life, whereas trees and daisies and cows mean nothing but so many trees and daisies and cows. Comus-like surroundings make no stage to his liking. Indeed, they bore him. But at least he has the merit of admitting this frankly, unlike some Janus-minded individuals who rhapsodize about "Nature." There is nothing essentially shameful in regarding a grazing cow as a planked steak in embryo. The actor is fond of a good dinner, but of good fellowship most of all. So there be friends about, it matters not who has to pay for the repast. Goldsmith long ago hit off the unemployed player:

> "I am sorry, sir, that a person of your appearance should labor under difficulties." "O, sir," returned he, "my appearance is very much at your service; but, though I cannot boast of eating much, yet there are few that are merrier: if I had twenty thousand a year I should be very merry; and thank the fates! though not worth a groat, I am very merry still. If I have threepence in my pocket, I never refuse to be my three-half-pence; and if I have no

money. I never scorn to be treated by any that are kind enough to pay my reckoning. What think you, sir, of a steak and tankard? You shall treat me now; and I will treat you again, when I find you in the park in love with eating, and without money to pay for a dinner."

There speaks the play-actor himself. It is impossible not to feel a certain affection for him. Oddly enough, only the workaday winter season reveals some of his least admirable traits. Summer shows merely the surface flaws. Like a great, good-natured, grown-up child, he loafs through his hot-weather months, gayly clad, with little thought for the morrow, but with a keen zest in the present and in the friends about him. Though the summer may deprive him of his livelihood, it at least gives him greater opportunity to become a human being according to his own lights.

THE GOETHE-FEST.

WEIMAR, June 19.

Many years have passed since quiet little Weimar last witnessed a festival such as yesterday marked the twenty-fifth anniversary of the Goethe Gesellschaft. The programme was appropriately opened with the unveiling of a statue to Alma von Goethe, the grandchild of the poet, who died at the age of seventeen. All who knew her, including Thackeray, agree in ascribing to the girl more than ordinary loveliness, and something of her charm Jerichau, the Danish sculptor, sought to breathe into his plastic marble, in Rome, 1848. Strange to say this work of art—showing the maiden reclining in sleep, her hands full of roses, her feet amid lilies—disappeared for years, and was only recently rescued by chance from oblivion. Prompted by the same spirit which actuated their erection of the monument to Frau von Stein last year, the Goethe Gesellschaft has placed this Carara stone on the eastern side of the old Friedhof's middle wall, not far from the memorial to Goethe's mistress, and here, on a gentle rise of ground, surrounding the graves of the Goethe family, assembled, on Friday, June 17, the admirers of Goethe's genius. But few well-known Goethe *Forscher* were absent, and in the hushed company were several authors widely famous. The stillness of the afternoon was broken with Hölderlin's suggestive couplets,

Die Linien des Lebens sind verschieden,

sung by Von Baussnern, to music which Professor von Oettingen, in a polished but simple address, used as a guiding thought in tracing the strange and varied fate of Goethe's descendants: August, his son, falling in foreign Rome; Ottilie, the gifted and cheerful daughter-in-law, long Goethe's faithful companion and nurse, a wanderer after his death, finding nowhere a home; Walther and Wolfgang, her sons, ailing, unhappy epigoni, void of all accomplishment; and finally, Alma von Goethe, their one bright hope, sinking in the flower of her youth. Dr. Vulpius, on behalf of the family of Goethe's wife, feelingly laid a *Rosenkranz* on Alma's grave; Prof. H. G. Fiedler of the University of Oxford briefly and modestly added another cluster of flowers, in the name of the English Goethe Society; while a representative of the Modern Language Association of America, with a not very tactful speech, placed another emblem—a huge laurel wreath, gay with a streamer of red, white, and blue!

Of the four thousand members of the Goethe Gesellschaft, above four hundred sat down at dinner in the evening. Prof. Erich Schmidt, Rector of the University of Berlin, presiding. The usual toasts were given, Erich Schmidt and Professor Fiedler, among others, speaking. President Schmidt paid a graceful compliment to Ambassador David Jayne Hill (sitting at his right), in recollection of Mr. Roosevelt's visit to Berlin, and Professor Fiedler, in a whole-souled speech, introduced himself and the delegation sent to Weimar by the English Goethe Society. Almost thirty English men and women were grouped together. The American representation, on the other hand, was disappointingly inadequate, especially considering the far greater advance in America in scholarship relating to Goethe and German literature generally, and the number of American professors known to be in Europe this very day.

Saturday, the following morning, the annual meeting of the Goethe Gesellschaft was held at the Armbrust—the club where, twenty-five years ago, the Gesellschaft first came into being. In a characteristically masterful address, full of personal reminiscence, Professor Schmidt, formerly director of the Goethe-Schiller Archive, and the only surviving member of the original committee that organized the Gesellschaft, reviewed the history of the association, sketching its growth, falling off, and revival, the work it had accomplished, and what it still purposed to do. He recalled intercourse with those who had really known Goethe, and the charm of seeing the faces he had seen, and described the odd and distinguished personalities drawn to Weimar from everywhere. These included Kuno Fischer, "a man of great gifts and enormous combative power, with just as enormous consciousness of his own importance," and Hermann Grimm, who at first refused to have anything to do with the movement, then under the protection of the Grand Duchess Sophie, saying that "princesses have no holding-out power." To this Sophie answered: "I will show Herr Grimm whether my interest in the Goethe Gesellschaft will hold out, or not!" with the result that but a year or two elapsed before Grimm was the chief lecturerer of the Society. The venerable Dr. Suphan read a report on the Goethe Archive, showing that its great work with the documents entrusted to its care is at last nearing completion. Professor Fiedler addressed the Gesellschaft, saying that he and his colleagues were present to prove that the influence of Goethe at points distant in the world is of an enduring character, and that in England especially Goethe's influence is steadily increasing. Of all modern literatures, he said, none is so closely associated with Goethe's thought and production as the English. Goethe's youthful genius was kindled at the altar of Shakespeare, and Walter Scott began his literary career with the translation of Goethe's Shakespearean "Götz." Goethe and Byron, Goethe and Carlyle, belong closely together. Nobody will maintain that Goethe's influence in England is yet as effective and apparent as the influence of Shakespeare in Germany, but Goethe will some day come to his own in British lands. Of all English-speaking countries, England is the only one where a Goethe brotherhood has resolved itself into a Goethe Society, and in England Goethe's influence lies in the future.

At this session, honorary membership was conferred on Alexander von Gleichen-Russwurm, Maria von Ebner-Eschenbach, Friedrich Spielhagen, and Professor von Donndorf, and announcement was made that the Gesellschaft had decided to create a Society Gold Medal, to be awarded from time to time for accomplishment in Goethe study. The first persons to receive the medal will be Prof. Julius Wahle, for twenty-five years archivist at the Goethe-Schiller Archive, and Dr. Max Norris of Berlin.

The event of most general interest, however, in the anniversary was the Goethe-Fest in the park at Tiefurt, a lawn party attended by thousands in costume, no one being admitted without a dress of the Goethe period or some garment suggested by his works. For such an open-air display, the clear, cool weather was ideal, nor was anything defective in the historic pageant. Even in the morning, the Saxe-Weimar *Kleinstadt* was enlivened with gayly-attired figures, contrasting often oddly with the dress of the peasants driving their green-grocery trade in the Market Place, and when the hundred vehicles began to move from Weimar up through the woodlands to Tiefurt so oft traversed by Goethe and his roysterers, full thirty thousand spectators lined the shady roadway, stretching two miles to Tiefurt Castle. The group representing "Hermann und Dorothea" led the procession, part of the company riding in

heaped-up emigrant wagons or historic carriages—among them the old *Jagdwagen* of Karl August, drawn out for the first time in many years, from the Grand Ducal carriage-houses—and part walking. Slowly the entire procession made its way to and through the charming Tiefurt Park, passing the long-standing Venus Temple, where it was reviewed by the court. Then the groups disbanded, every one free to roam the woods and fields until the beginning of "Das Jahresmarkt zu Plunderswciiern."

At half past five, this clever satire of Goethe on society was played again after a lapse of many years, probably twice as many participating as in the *Uraufführung*. Judged by itself, the play to-day was a great success. It may be doubted, however, whether there was the charm of the first performance (at the neighboring castle of Ettersburg, October 20, 1778), for which "three weeks of painting, hammering and noise" were required, when Kraus was decorator. Then young Goethe, with Anna Amalia and Kraus painted the tableaux of the *Bänkelsänger;* and Goethe played no less than three rôles. Music from Haydn—in part by an orchestra of twenty-five children, costumed as in Haydn's time—followed. Appropriate songs were to have been given; but a stage-frightened soprano made too deep a *Hofknicks*, or bow to the court, lost her balance, and had to be carried out, incapacitated for weeks!

Towards nine o'clock, "Die Fischerin," crowning the festival, was again given on the spot where it was first produced one hundred and twenty-eight years ago. Seeing his opportunity to make use of nature at this point in the beautiful dense Tiefurt Park, Goethe, assisted by the sprightly Corona Schröter, wrote the charming little play of the fisher-maiden, who, tired of waiting supper for her father and lover, determined to teach them a lesson by pretending that she had been drowned. After various rehearsals in Goethe's garden at Weimar, the play was tried at Tiefurt on July 15, 1782, with such success that Goethe sent a private copy to Frau von Stein, charging her, however, to show it to no one, and adding: "We will dispose of the melon together." A day or two after, Goethe issued placards—copies are still extant—announcing the first public performance for July 18; but the play seems to have been given first on the 22nd. Then Aulhorn was *der alte Fischer*, "Demoiselle Corona Schröter" was *Dortchen*, and Seidler was *Niklas*, parts taken to-day respectively by Herr Strathmann, Frl. Runge, and Herr Szpinger, all leading singers at the Weimar opera. It may not be known to many that Goethe's "Erlkönig" was written for this little play, Dortchen singing it to music by Schröter as she draws water from the Ilm, stirs the fire, and waits for the belatod fishermen. A stirring effect is produced by the noisy fisher and his young companion rowing down the stream in the darkness, and singing lustily as they row; and all that Goethe expected from the *Hauptmoment* in the piece, when the neighbors are called to look for the "lost Dortchen," and the woodland breaks into flaming torches, was again realized on this night. When Goethe was stage-manager, the court and select friends sat near the *Fisher-Hut* and the nets, on the same bank where the scenes were played; this time, however, all the auditors were on the opposite bank, the narrowness of the stream, and the strength of the players' voices—especially that of Strathmann—permitting everything to be seen and heard, and justifying again the closing words of the roguish song,

Was soll die Aussteuer seln?
Der Beifall soll die Aussteuer sein!

As usual, some liberties were taken with the original text, but, all in all, it was a faithful reproduction, and a marvelously successful one. By ten o'clock, the play was finished, and the Festival concluded with bon-fires and dancing on the new-mown grass. PERRY WORDEN.

NEWS FOR BIBLIOPHILES.

The following is a complete bibliography of the published writings of the late William Graham Sumner:

1872—The books of the Kings by K. C. W. F. Bähr. . . . Translated, enlarged and edited. . . . Book II by W. G. Sumner. (*In* Lange, J. P. A commentary on the Holy Scriptures. . . . New York, Scribner, Armstrong and company. 1866-82. 26v. v. 6, 312 pp.)

1874—A history of American currency. . . New York, H. Holt and company. lv, 391 pp, 2 fold. diagr.

1875—American finance. Boston, Williams.

1876—Monetary development. (*In* Woolsey, T. D. & others. First century of the Republic. New York, Harper and brothers. pp. 238-259.)

1877—Lectures on the history of protection in the United States. . . . New York, Pub. for the New York free trade club by G. P. Putnam's sons. 64 pp. Contents.—The national idea and the American system.—Broad principles underlying the tariff controversy.—The origin of protection in this country.—The establishment of protection in this country.—Vacillation of the protective policy.

1878—Earle, A. L. Our revenue system. Preface by W. G. Sumner. New York, Pub. for the Free trade club by G. P. Putnam's sons. 2 p. l., xi, 47 pp. (Economic monographs. No. V.)

Correspondence.

SENHOUSE AND JOHNNY APPLESEED.

To the Editor of The Nation:

Sir: It seems hardly possible that Maurice Hewlett should have happened upon an almost legendary figure in the footnotes of our early nineteenth-century history for the hero of his Senhouse trilogy; but certainly Senhouse is of kin to Jonathan Chapman, more familiarly known as Johnny Appleseed, not only in his outward life but more particularly in temperament.

Jonathan Chapman's history, like that of Senhouse, begins upon the road. In the cider-making season of 1801, Jonathan Chapman, then a young man, appeared among the orchard lands of Western Pennsylvania. He loaded a wagon with the seed gathered at the presses and set forth into the territory of Ohio. Under his hand the wilderness was to blossom and bear fruit. For fifty years he wandered back and forth through Ohio and Indiana, planting and cultivating the apple tree. Within those years many thousands of young trees grew to maturity under his care and wafted forward a civilization that still lingered in the East. Senhouse, it is to be remembered, spent his days in sowing the waste places of England with flowers.

Chapman and Senhouse are not unlike in personal appearance. Chapman is described as a slender, wiry man, full of a restless activity; his hair was long and dark; he wore a scraggly beard that was never shaven; he had keen black eyes that sparkled with a peculiar brightness. Senhouse is lean and tall with densely black hair, his moustache thin and drooping; "his eyes were what is called black and had a burning quality."

Chapman's dress was of the simplest, cast-off garments of homespun or buckskin, obtained in exchange for his young apple trees. He went bare-footed, even in the coldest weather, occasionally wearing rudely constructed sandals for travel in rough places. Later in life, he grew to scorn such conventions of dress as he had before observed, and clothed himself in a single garment of coffee-sacking. It is interesting to note that, while Senhouse also dresses simply, bare-headed and with sandaled feet, he finally comes, in Rest Harrow, to wrap himself in a white burnous when he sits in meditation.

There is also a marked similarity in their relation with other men. Neither man, in spite of his odd mode of life, met with ridicule from the world that each shunned. The peasants and gypsies believed that Senhouse had a wisdom and a healing power peculiar to himself. The Indians looked upon Chapman as a medicine man, while his extreme piety filled the settlers with awe.

If Hewlett drew wholly upon his knowledge of the human soul rather than upon concrete fact in the creation of Senhouse, the correctness of his deductions is not to be questioned; for not only do the real Chapman and the fictitious Senhouse resemble each other in the details of their physical life, but their spiritual life is consistently analogous. Each is a poet and a mystic, each loves nature with his whole being, and each worships God in nature. Their tenderness extends to all living things. They were both vegetarians, because they could not take life. Senhouse is made to say: "Whether the beasts perish or not, it is very clear that they live to the full in this world." He would injure no living creature. Chapman refused to kill an attacking wasp, "because it did not mean to injure him."

The doubts of one, the perfect trust of the other, represent a difference in time and experience, rather than in soul or character. Hewlett's hero is modern and sophisticated. He enters upon his strange life with a full knowledge of good and of evil and is always conscious of the workings of his own spirit. "Wind and rain and sun have bleached me; dinners of herbs have reduced my flesh to obedience, incessant toil with meditation under the stars has driven my thoughts along the channels graved deep by the patient plodding of the field. I am become one with nature." And so far as he is one with nature he is one with God. As to the future the modern Senhouse is uncertain, but his faith in the present never wavers, and it is in the present that he lives well, "If I die to live again, I have lit behind me that I have lived well already."

Whatever the chance that drove Chapman into the forest, it is certain that he went about his work with the unconscious simplicity of a child. He professed himself a Swedenborgian, he believed in a personal God, in angels and in spirits. Nature was not God, but he inspired it with his essence and therefore was it sacred. It is thus that Johnny Appleseed would account for his own tenderness toward all living things, never in his humility conscious of the poetic harmonies within himself.

We have yet to read what end Hewlett makes of Senhouse. Chapman's passing was the perfect climax of a simple life. An old man, he stopped at evening at a settler's cabin. Food and shelter were offered him; the latter he declined. After reading the Beatitudes aloud to his hosts, he was left sitting at the door with his eyes upon the setting sun; and so he passed.

Certainly, if the chroniclers of Jonathan Chapman have spoken true, and there is little reason to suppose they have not, these two characters, the real and the fictitious, have too much in common to let the similarity go quite unnoticed.

Elisabeth M. Comstock.

Richmond, Ind., July 12.

HONORARY DEGREES.

To the Editor of The Nation:

Sir: Is it the proper function of a university to act as a bestower of social honors, or should a university give its degrees as a tangible symbol of work accomplished in that university? If in England a wealthy brewer receives a title which enables him to sit in the House of Lords, is there any good and sufficient reason why our universities should attach a label of scholarship to a person who is not especially scholarly, but is prominent in the public eye? What do the degrees of A.M., Ph.D., and LL.D. really signify? Or what should they signify? If in France a successful fishmonger can become an officer of the Legion of Honor, must we in free and enlightened America follow suit? And, moreover, if Congress will not grant titles of distinction, is there any reason why our universities should? We are ostensibly a plain, democratic people, despising titles and social tinsel—why should our centres of learning cater to a degenerate and un-American hankering after social tags and labels?

Or, if we are prepared to admit, shamefacedly and covertly, that we are very much like other people in other countries, and that after all we dearly love a lord or something of the sort; and if our universities are to assume the functions of a monarch in social matters, why not, as the Chicago *Record-Herald* suggests, create a new set of degrees suitable to the occasion? The titles should be in English, easily understood, and should plainly set forth their *raison d'être*. For instance: D.H.F. (doctor of high finance), D.Wp. (doctor of wire-pulling), D.A.P. (doctor for advertising purposes). Other suitable degrees will doubtless suggest themselves to inventive American genius, but D.H.F. should be reserved for people whose only distinction is that they have money, no questions being asked as to how acquired. D.Wp. would meet the case of successful politicians, no inquiry as to methods being had. D.A.P. would save the face of small colleges that grant degrees for the sake of calling attention to themselves—the receiver being bigger than the giver.

However this may be, there is certainly one thing upon which reputable universities ought to agree among themselves, and that is not to confer the ancient and honorable degrees of A.M. and Ph.D. on persons who have not really done work in that particular university sufficient for those degrees. Perhaps the case of LL.D. is hopeless now, but a stand can be made on the A.M. and the Ph.D. An honestly earned A.B., for instance, should be an indispensable prerequisite for either of these titles.

ALTERED QUOTATIONS.

To the Editor of The Nation:

Sir: After re-reading Mr. Lewis E. Gates's admirable essay on Matthew Arnold, I was struck by a misquotation which Arnold makes in his study of George Sand: "A presence that disturbs me with the joy of animating thoughts." Here is an uncommonly interesting example of an author's revelation of his own leading characteristic by his slip of memory, for Mr. Gates refers to "that impression of vitality that is perhaps, in the last analysis, the most characteristic impression the reader carries away from Arnold's writings." How could that sprightly controversialist have confirmed this judgment more happily than by substituting "animating" for "elevated" in the quotation above? I am far from asserting that such a test would apply to the misquotations of the average writer, but it is frequent enough to merit the attention of the literary psychologist.

Some authors, it is to be feared, deliberately alter a word now and then, in quoting, in order to apply the sentiment to their own purpose. Hazlitt, for example, can hardly have been guilty of the following save by design: "The native hue of *emulation* is sicklied o'er with the pale cast of thought." He had been speaking of the attempt to copy a fine painting. In spite of his frequent minor inaccuracies, he had a keen feeling for the really fine word. One of his favorite quotations is that on music from the opening lines of "Twelfth Night," and he never writes "sound," but always "south":

> O, it came o'er my ear like the sweet south,
> That breathes upon a bank of violets,
> Stealing and giving odor!

Nearly all modern editors print "sound." Hazlitt's instinct for poetry was too exquisite for that; it is clearly the gentle breeze which brings odor with it; how a sound can steal and give odor passes the poor comprehension of the present writer. Even if "sound" be taken to refer to a breeze, this is a strained and fantastic usage which it is not probable that Shakespeare would have employed in his mature period. Are our present-day editors of the great dramatist lacking in imagination? Or is Hazlitt to be dismissed as a mere "belletristic trifler"?

Harry T. Baker.

Beloit, Wis., July 11.

THE USE OF MANUSCRIPTS.

To the Editor of The Nation:

Sir: I have read with some amusement the letter of Mr. Konkle printed in your issue of July 14. Either his inquiry was superficial, or his question was not properly framed. No society holding collections of valuable manuscripts permits the indiscriminate use of ink in copying. The risk would be too great, and I speak after a somewhat wide experience in such matters. Indeed, a custodian of manuscripts who should say that he allowed ink to be used by any or all copyists would, in my opinion, be a very unfit person for his place. The rule that ink shall not be used exists in every institution, even in the Library of Congress; but it is lifted as occasion requires, and so falls under the discretion of the guardian. Mr. Konkle must have asked librarians who have few or no manuscripts in their possession. Abroad the rule against ink is more generally enforced than with us.

Mr. Konkle asserts that scholars, of known reputation and serious purpose, should enjoy the use of ink. Why? Scholarship does not imply care and consideration for the safety of the manuscripts. I have seen a very capable biographer and a charming companion empty an inkstand over a seventeenth century letter, doing irreparable injury by a nervous movement of the arm. No one ever complained of my use of rules in the Library of Congress, but no one could say the rules were not there, and to be enforced when necessary. I have never hesitated to use pencil where that was imposed by the rules, and I question if many have had as wide an experience in copying as I have enjoyed.

While on this subject let me say that I have been much impressed by the ignorance of most people of the care that manuscripts entail. It requires months to arrange a collection of papers in either chronological or alphabetical order; in half an hour any one can introduce hopeless confusion in a collection so arranged. Examiners do not hesitate to mark the original document for their copyists, and a red or a blue pencil appeals to them because either will make a broad, almost indelible mark. They will separate parts of the same paper, they will splash with a spluttering pen, and they will trace with an unusually hard and sharp point, in apparent unconsciousness of injuring the original manuscript. And the next person to look at the collection blames the custodian for letters out of place, for private markings on the papers, and for stray papers which they bring together, and make much of the feat! A manuscript is unlike a book, in that it is unique and easily injured or stolen. For the proper care of such material special rules have to be made—and enforced.

WAR TIMES IN THE NORTH.

Social and Industrial Conditions in the North during the Civil War. By Emerson David Fite, Ph.D. New York: The Macmillan Co. $2 net.

Professor Fite is to be congratulated upon his successful excursion into a comparatively new historical field. In all the voluminous writing about the civil war, it is the military, political, or diplomatic aspects of the period that have claimed chief attention: no one, apparently, has thought it worth while to pass beyond the battlefields, whether of soldiers, statesmen, or diplomatists, and study minutely the social and industrial life of the country during the four years of strife. Professor Fite has now made a notably good beginning in this direction, so far as the North is concerned. The labor of the undertaking has obviously been great. The material has had to be sought in newspapers and magazines, State and municipal documents, trade publications, college catalogues, and innumerable out-of-the-way places; and there was the added difficulty of discriminating, in the mass of relevant matter, between the general and the local.

The first and clearest impression which these pages afford is of the extraordinary industrial activity and material advancement of the North during the war. Far from suffering check, industry was in reality more active and prosperous than ever before; and that, too, in directions where prosperity would hardly be expected. Agriculture flourished beyond precedent: each year there were bountiful harvests and sufficient labor to gather them. In each year of the war the production of wheat, for example, exceeded that of 1859, the banner year thus far; and although the corn crop showed a slight falling off for the country as a whole, that of the West increased. Cattle-raising was still unimportant, but the increase of sheep and hogs was unprecedented. The explanation of this remarkable agricultural expansion, in a time when the men in farming communities were being drawn off in large numbers by the war and by the opening of western mines, is to be found, as Professor Fite points out, in the increased use of labor-saving machinery, the work of women in the fields, and foreign immigration, the last-named being fostered by the railways, which both employed and distributed labor, by State immigration agencies, and by the opening of new lands through such national incentives as the homestead acts and the great land grants to railways and agricultural colleges. The lessened influence of American cotton in English industry was more than offset by the greatly increased foreign demand for wheat, a demand which had much to do with preventing recognition of the Confederacy by Great Britain.

The expansion of agriculture was equalled by that of mining. The output of coal, iron, copper, salt, and the precious metals exceeded, in general, that of any previous period, while the production of petroleum opened up a new industry of vast possibilities. Mining, moreover, drew tens of thousands of men from the older East to the far West and Northwest, altering the distribution of population, building up towns like mushrooms, and developing for a time a type of frontier society the like of which no other part of the world has ever so well exhibited. The railways, on the other hand, though confronted with a previously unheard-of burden of traffic, were at a disadvantage: water competition was serious, traffic by canal and river increasing as fast as traffic by land; there was extreme inequality in the distribution of railway mileage in different parts of the country; and there was no standard gauge to facili-

tate through trains and the interchange of cars. Nevertheless, while construction fell off in comparison with the previous decade, many new lines were projected or begun during the war, old lines were improved or consolidated, rolling stock was greatly increased, and through service to the West introduced. Profits from railways were unprecedentedly large, stocks which hitherto had maintained a low market level now rising to par or a premium, and many roads paying dividends for the first time in their history.

More familiar, doubtless, as matter of recent history, is the activity in manufacturing, not only in lines in which the war made an extraordinary demand, but in many others also. The production of cotton textiles, naturally, declined, though profits were large; on the other hand, the demand for woollens expanded by leaps and bounds, many cotton factories being converted into woollen mills in consequence. Less creditable, but enormously profitable withal, was the shoddy industry, lending its name, as time went on, to the cheap performance in other industrial lines of which the war period was full, and to the moneyed aristocracy which the new wealth suddenly created. The greatest stimulus to manufacturing, of course, was the government contracts, which furnished opportunities for exceptional profits as well as for extensive frauds, and from which many a Northern patriot extracted both riches and social position.

In the wide field of commercial life, the war wrought more diverse effects. The period saw the rise of values due to greenbacks and treasury notes; the establishment of the national banking system and the suppression of wildcat paper money in the West; the expansion of savings banks, whose deposits were swelled not only by the savings of labor, but by soldiers' wages and bounty payments; unexampled progress in life insurance, with the rise of accident insurance and marked gains in fire and marine insurance; and phenomenal response to the repeated offers of government bonds. The post office, between 1861 and 1865, introduced more reforms than can be credited to any other Presidential Administration, before or since. The consolidation of telegraph and transportation companies brought new problems in the aggregation of capital, which resulted in new methods and relationships for banks, trust companies, speculators, and investors; and new difficulties in such matters as prices, rates, and monopolization. Of the career of the Camden and Amboy Railway, the most hated monopoly of the time, controlling transportation between New York and Philadelphia, Professor Fite gives a particularly good account. Protective tariff interests, on the other hand, worked successfully against the continuance of reciprocity with Canada, and the American merchant marine suffered eclipse.

The prosperity of employers and capitalists was not, unfortunately, duplicated in the labor world. With the introduction of paper money, the gratifying conditions which had prevailed before 1860 suddenly changed. "Peace in the industrial world gave way to discontent; labor, indeed, remained scarce, even more scarce than before, but the laborer was no longer sure of his daily bread and of decent comfort; the ability to lay by for a rainy day was threatened, and instead of being petted and humored labor came to regard itself as aggrieved; it assumed an attitude of hostility towards employers and took concerted measures in self-defence" (p. 183). Wages not only failed to keep pace with the rise of prices, but were further unfavorably affected by foreign immigration, the increased employment of women and negroes, and the use of machinery. Professor Fite is clear that the war-time scarcity of labor has been exaggerated; but the quality of labor deteriorated, unions became aggressively militant, and the longer strikes generally failed. Salaries, too, failed to share equitably in the general advance, the most bitter illustration being the college teachers, whose virtually stationary incomes often entailed positive want.

We cannot follow in detail here Professor Fite's exceedingly interesting chapters on the course of public improvements, education and literature, luxuries and amusements, and charity. In spite of the heavy burden of taxation, the years of the civil war saw widespread activity in building, and in the construction of waterworks, gas, and sewerage systems, street railways, fire-alarm telegraphs, and public parks; though to a considerable extent this was only the continuation of a development already begun. Street improvements, however, halted, and filthy thoroughfares bred frightful disease. One thinks with horror of New York, with a death rate in 1863 of one to every thirty-five inhabitants, and 12,000 cases of typhoid fever and 1,200 cases of smallpox in a single year. On the other hand, there was conspicuous increase in the number of new churches and public buildings; new colleges and technical schools were established and old ones enriched, though the college enrolment as a whole declined; public schools were filled to overflowing; and even the wages of teachers advanced to about the level of those of low-grade mechanics. Public libraries grew apace, literature flourished, theatres were generally crowded, even in the darkest days of the war, and the round of social functions went on with added feverishness. Of public and private charity, the war afforded striking and widespread illustration, from the smallest local efforts to the great Sanitary Commission, with its twenty-five million dollars worth of beneficent service.

Professor Fite has evidently been oppressed at times by his wealth of material. The footnotes bulge with statistics and citations; statements relegated to the notes are sometimes quite as significant as those of the text; while here and there a paragraph ends abruptly, with a note to the effect that the writer has accumulated a mass of evidence on the topic which cannot now be presented. The index is slight for a book of this character, the treatment of persons and places being singularly poor. Occasionally, too, a faulty passage suggests haste or lack of revision. For the most part, however, these are only the faults of unpractised writing, or the irregularities of path-breaking in a new field. Taken as a whole, the book is eminently readable, and, in places, graphically written, while its scholarly thoroughness makes it a work to be reckoned with by any one who shall hereafter set himself to tell comprehensively the story of the civil war.

CURRENT FICTION.

The Ramrodders. By Holman F. Day. New York: Harper & Bros.

Stories of American politics commonly suffer from too much intention. It is over-clear what the author is driving at in the way of partisan or moral effectiveness. Yankee politics has seemed to afford a particularly uncertain foothold to the novelist. Either seductions of dialect and local color have proved too strong, or the imagination has been insufficiently stirred by the public scene. Twice of late, however, with "Mr. Crewe's Career" and "The Ramrodders," a really vigorous narrative has emerged from the vague limbo in which float the materials of the historical story-teller's art. Mr. Churchill's theme was the corrupt dominance of a government by a corporation; Mr. Day's is its dominance by an insincere tradition. The name of the State involved is nowhere mentioned in the course of the story, but that is not because the author feared to acknowledge his locus. This kind of anonymity, formal as it may be, serves to enhance the suggestion of a wider meaning in the parable. However, the "color" is unmistakable. The Hon. Thelismer Thornton is as racy a native in his way as Hosea Biglow or David Harum. His fund of rustic parables is inexhaustible, and no contretemps is too serious to be hit off, Lincoln-wise, with some analogy from "up our way." Thornton has been known for many years as the "Duke of Fort Canibas"—an up-State district which he represents in the State Legislature. His adroitness and lack of scruple have made him a power in the

State. At eighty-five he determines to retire from politics, and to make a grandson his successor. Harlan Thornton has no desire to enter politics, and is outraged to find himself nominated by an unscrupulous trick. Once in the game, however, he makes up his mind to play it according to his own rules, not his grandfather's—to play fair, and to put himself on the honorable side of every issue. Thornton, Senior, has no such intention. He believes that his grandson will be very quickly shaken down from his untenable heights by contact with practical politics. A reform agitation is in progress, and the Duke of Fort Canibas feels that neither of the advertised candidates for the Republican nomination is strong enough for the situation. Consequently, he persuades a contemporary of his own, an ex-Governor, to stand for the nomination—believing that he will stand by the party machine in the Governor's chair. Young Thornton comes out of the fight a strong man. There are, of course, two girls in his case, but they are neither of them conventional, and the "love-interest" is not too obviously lugged into a story of unusual force.

Why Did He Do It? By Bernard Capes. New York: Brentano's.

Stories of fantastic plot and whimsical manner are by no means rare, but in this instance both machinery and personnel give an effect of originality hardly, perhaps, to be borne out by chill analysis. Inventiveness is the word. Hitherto, we believe, the philosopher's stone has not been identified with "the stone of the fruit of the Tree of Knowledge." Set it in a ring, and give to the wearer of the ring that knowledge of good and evil which was not meant for mankind, and you have a novel fulcrum for twentieth-century romance. The "he" of the title is a Professor Urchin, antiquarian, and director of the department of antiquities in the "United Goods Stores," London. The professor is not a recluse: on a convivial occasion his young host, Mr. Roger Mandrake, bets that he can steal something from under the noses of the officials and detectives of the great shop. The professor undertakes "in case of accidents to hold him immune." The next day the young man makes the attempt, and is at once arrested: to his amazement, the professor denies all knowledge of a bet, and Mandrake is hurried off to prison. The case is not pushed, but the youth's reputation is seriously injured, since he has been discharged rather than acquitted. The fact that he is in love with the professor's daughter makes matters worse. Both the lovers are at loss to explain what looks like wanton perfidy on the part of the professor. "Why did he do it?" The key to the answer is to be found in the character of the article stolen—a rare book in which the professor has discovered a clue to a mystery of great import. Mandrake's random selection of this book leads the antiquary to the suspicion that one other at least is on the trail of the secret. What that secret is we have already hinted: far be it from us to unravel the series of events which lead to its discovery, or to describe the strange events which follow. That true love is rewarded is the least important consideration. The style is far better than would be expected in a yarn of this sort: Mr. Capes has a turn for epigram, and it is just as well that his whimsical habit is too much for his intention to make a solemn and impressive thing of his mystery.

The Master-Girl. By Ashton Hilliers. New York: G. P. Putnam's Sons.

To make a plausible heroine of romance out of that stark and by all accounts unprepossessing person, the cave woman, is something of a feat. Mr. Hilliers does not conceal the fact that the "master-girl" was in some respects unlike the Gibson girl. She had, for instance, small hairy ears, which she "pricked perpetually," and she scalped her enemies in a way now considered unladylike. Nevertheless, she is made out an attractive person, and one does not grudge her the authority over her husband which, according to the legend, was given to her first among women to enjoy. From the hour in which she captures the primal wooer who has set forth to capture her, the question of dominance is settled. Her supreme achievement is the invention of the bow, which gives her the place of chieftainess over her husband's tribe, and changes all the conditions of tribal life thereafter. It is a picture well "calculated" to please the eye of the feminist. However, we do not take it to be a tract, so much as a parable of vigorous and suggestive type. The advance of the race rather than of a sex is the theme. But taken purely on its ground of fiction, the narrative has enough of spirit and simplicity to stand on its own merits. It is quite as likely to interest the small boy as the antiquary or the new woman.

Letters to My Son. Boston: Houghton Mifflin Co.

This is a kind of thing which ought to have been done better if it was to be done at all. The effect of the actual performance is rather unpleasant. The idea is that of a woman of thirty, who after seven years of marriage finds herself with child. She is much pleased, but almost as much frightened, and, getting it into her head that she may very likely never see him, writes a series of letters to be read by him in case she dies.

The style of emotional smartness, hysteria varied by flippancy, in which they are written, might perhaps be tolerated in a very young girl in the circumstances, but must be distressing, not to say unseemly, in a woman of thirty:

> Oh, little thing, if your mammy has to leave you and by any chance gets to Heaven, they won't want her there very long. She'll always be leaning out of a top-story window, trying to catch sight of her baby as he goes out for his walk, or else forgetting to do her singing while she worries about his gaiters being long enough, or his vests warm enough.

So goes the strain; and some there be, no doubt, who will find it amusing, or touching, or both. Good material does not lack, in the way of maternal feeling and maternal moralizing, but all is spoiled for the sensitive reader by the habitual slop-over of the style.

MR. HILL ON NATIONAL RESOURCES

Highways of Progress. By James J. Hill. New York: Doubleday, Page & Co. $1.50 net.

Here is a vigorous book, from one who can put into the printed page the same effective energy and directness of aim that have marked his efforts in the business world. Much of the material has already had a greater or less degree of publicity. The opening chapter, delivered before the Agricultural Society of Minnesota four years ago, had much to do with stimulating the present deep interest in the general subject of conservation of our national resources, while the volume concludes with a substantial reproduction of the address delivered by Mr. Hill before the conference of Governors assembled at the White House in 1907. Other chapters have appeared in whole or in parts in various periodicals, and yet an unbroken unity of purpose and the inherent value of each part warrant republication in book form.

The first three chapters, with the tenth and sixteenth, deal with agricultural conditions and prospects. Much has been written of our wasteful methods, and the sure disaster to which they must lead, if not corrected, but no one has put it quite so lucidly and forcibly as Mr. Hill. We boast of our immense wheat crops, but when we are brought down from a seemingly magnificent total of nearly three-quarters of a billion bushels to the generally overlooked fact of a ten-year average of less than fourteen bushels per acre, we readily assent to the brief comment, "It is a disgraceful record." Our inspiration at the thought of the busy American farmer swarming into the rich new regions of the West, as they are opened up, is somewhat dampened when we realize how often this means that he is abandoning fields worn by wasteful methods beyond the point of profitable tillage, only to repeat the same unintelligent process with the virgin soil to which he removes. With no radical revolu-

tion in the direction of "intensive" rather than "extensive" farming, but merely by the general application of better methods again and again successfully demonstrated on a small scale, the author shows convincingly that the gross agricultural product of the United States might be more than doubled, with no increase whatever in the area under tillage. And it is in this direction that we must look for our future prosperity. The dream that, with the products of our factories, we can master the markets of the outside world is folly. "There must be a national revolt against the worship of manufacture and trade as the only forms of progressive activity, and the false notion that wealth built upon these at the sacrifice of the fundamental form of wealth production can endure." As a practical stimulus to a more intelligent agriculture, he would have Congress provide for a large number of small model farms, possibly one in every agricultural county throughout the country, so that every farmer might see the difference in results between the unprofitable habits inherited from an ignorant past and the intelligent application to the soil of present day scientific knowledge. The contrast thus presented to the eye "would be worth more than all the pamphlets poured out from the government printing office in years." To build one warship less each year, he suggests, would effect a saving sufficient to maintain one thousand of these practical schools of agriculture, or one in every county of ten or twelve States like Ohio.

Next to farming, Mr. Hill naturally gives his attention to problems of transportation. Development of civilization and of transportation facilities go so inevitably hand in hand that he does not deem it necessary to determine which is the leader. The important truth for the present day is that any serious check upon the latter, whether it springs from the vagaries of the unpractical political theorist or the rancor of unfounded prejudice, must react unfavorably upon the interest of the former. One can readily agree with the author that untold harm has been done by the avalanche of "railroad-baiting," both State and national, which has marked the legislation of recent years, but he would have added effectiveness to his plea for reason and justice in legislative dealing with railway problems by a fuller admission of really serious offences on the part of the defendant in the case. To show that many of our legislative attempts at regulation have been both unintelligent and unjust is not to prove that the popular feeling against railway corporations has no real ground for existence. It is true that such a corporation, looking for its profits to the receipts from its legitimate carrying business, cannot permanently exact freight rates so high as to destroy the profits of the producers and shippers along its route without disaster to itself. And yet there have unquestionably been many cases in which the inevitably monopolistic situation of carrying corporations has been so abused to the detriment of the producer and shipper as to justify bitter resentment. A positive government regulation of rates has unquestionably come to stay, and the one thing most needed for the immediate future is the cultivation of such a spirit on both sides as shall allow that regulation to be based on principles of justice to all concerned, not upon an undiscriminating spirit of retaliation. A chapter given to water transportation assails severely and convincingly the hap-hazard way in which the hundreds of millions so far appropriated to waterways have been squandered. No money should be spent for this purpose, except in accordance with a general plan, in which two great trunk systems, the Mississippi and an outlet from the Great Lakes to the Atlantic, should come first. In the latter case, the Great Lakes "must be supplemented by a true deep waterway along the line of the Erie Canal, instead of the commercially valueless ditch into which the people of New York State are now dumping another $100,000,000, principally for the benefit of politicians and contractors."

As a man whose financial interests are bound up with the continued industrial development and general prosperity of the country, Mr. Hill argues with especial force against the unreasonable tariff barriers which the country sets up with one hand to counteract much that it is ostensibly trying to do for commerce with the other. The assertion that the tariff has nothing to do with the high cost of living, he rejects with scant ceremony. "Common sense says that when the cost of the necessaries of life in a town on the Canadian side of the Detroit River is reported at nearly 25 per cent. less than on the American side, the tariff accounts for the difference." With Canada, especially, he would sweep away every barrier, in the confident belief that absolute freedom of trade would mean immense material advantage on both sides of the border. For Mr. Hill's business head is too clear to entertain the childish theory that an act of trade can benefit only one of the parties concerned. We commend this suggestive and forcibly written book to the attention of every thoughtful citizen.

Camp and Camino in Lower California. By Arthur Walbridge North. New York: Baker & Taylor Co. $3 net.

Although an appendix to this volume contains a Lower California bibliography covering seven pages, that part of Mexico is still largely *terra incognita* to the world at large. No complete maps or reports of the interior have been published, and there are plenty of unvisited places with sufficient mystery hanging over them to tempt a man who, like Mr. North, is "filled with eager anticipations of adventures in the wilderness." Like Upper California, it is a land of contrasts. In most minds the words "Lower California" conjure up visions of cacti, palms, deserts, broiling sands—and they are all there, no doubt whatever; yet on the first page of this book we find the author with chattering teeth, too cold to care whether his mule followed the trail, his canteen filled with a solid mass of ice. This was when the raw December wind came shrieking down on him from the snowy peaks of the San Pedro Mártir Sierra. Six months later he takes the reader with him to the crest of this same Sierra, where the mighty backbone of the Lower California cordilleras has attained its supreme height. It is totally unlike the rest of this country, a region where condors and eagles, wild ducks, mountain quail, deer, wild cats, lions, coyotes, half-wild horses, and cattle—descendants of the herds of the mission friars—alone dwell. No wonder that the inviting glades of this plateau are becoming the goal of most visitors to the interior of Lower California.

After a frosty morning on this crest the explorers found themselves stretched out at night far below, on burning sand, with the thermometer registering 112 degrees. That strikes the keynote of the volume. Heat and thirst are the leading motives which recur on nearly every other page. The most generally interesting chapter is the one which is devoted to Magdalena Bay, the only great anchorage between San Francisco and the Isthmus. The story of this bay is "dashed with the wild flavor of the romance of ages," and Mr. North tells briefly all the various attempts, since the days of Cortez, to utilize this wonderful harbor, spacious enough to accommodate the navies of the world. They all failed because of the want of water to drink. More vivid are the two chapters in which the author's narrow escapes from death by thirst are narrated. On one of these occasions the guide said: "Sir, to-morrow morning no water, to-morrow afternoon—we die." But they luckily stumbled on one of the caminos built by the missionaries—highways that connect the garden spots of the peninsula—and found water. A foolhardy crossing of the Colorado Desert, about the mouth of the river, where, in August, "a pedestrian can last perhaps eight hours without water—then come insane delusions, harbingers of death by thirst," again came near ending the career of the travellers.

They came into regions more than once where the only camino was the line of graves of men who had died of thirst.

On the other hand, they dwelt in garden spots, enjoying the magic languor of the land, living on wild mutton and wild honey, and having no other wish than that they might continue forever in these retired places in the rugged wilderness. They came among Indians who had never seen whites, and found one who recalled as the happiest day of his life that on which he scalped the women and children of a caravan. They wondered at the ethics of the whites who would not hesitate to shoot an Indian, but allowed no one to kill an Indian's pig. They found scorpions in their beds, and were often in danger from the sidewinders, an extremely poisonous kind of rattlesnake that travels at night on the caminos. They had opportunities to kill mountain sheep, and once saw a desperate combat between two rams, who were oblivious of all else, with a third one endeavoring to separate them. The mission ruins were inspected, and the Indian petroglyphs studied. The towns also were visited, and the author has a good deal to say about the pretty señoritas he saw in them and the hospitality of the resident foreigners, as well as the natives. Then came the news of the San Francisco calamity, and he had to hurry north to look after his bank account. But he returned—as who would not to a country where there are places like San José del Cabo, in which "if a man stops a week he becomes a 'lotus eater' and only ropes can haul him away"? The many photographs which adorn his pages help to explain why Mr. North enjoyed his tour so much, notwithstanding thirst and sidewinders and other dangers.

A History of the Irish Parliamentary Party. By F. Hugh O'Donnell, M.A., Q.U.I. With portraits and other illustrations. Two volumes. New York: Longmans, Green & Co. $5 net.

Frank Hugh O'Donnell was of the Home Rule party from the beginning of the movement in 1873, and he was of the Nationalist group in the House of Commons as member from Dungarvon from 1877 to 1885. In these two volumes there is necessarily much about the history of the Irish Parliamentary party from the point of view of Mr. O'Donnell —from its beginning in 1873 to the general election of 1910. There is, however, nearly as much about Mr. O'Donnell himself and his achievements in the social, journalistic, and political life of London. Modesty and restraint in style are not characteristics of Mr. O'Donnell. In almost every chapter he seeks to impress his own importance on the reader; and according to his own showing he is indeed a man of extraordinary achievement in British politics. With the exception of Isaac Butt, for whom Mr. O'Donnell shows more admiration than for any other man in Irish politics in the last forty years, no Irishman domiciled in London since the Union has achieved more than he himself claims to have done. He devised the policy of interference in all British affairs that brought the Home Rule group into Parliamentary prominence. Mr. Parnell, "who went up like a rocket and came down like the stick," was Mr. O'Donnell's "apprentice." Joseph Biggar served under him in a similar capacity; and "neither the one nor the other at the outset could move an inch without my guidance, nor utter a criticism without my inspiration." Mr. Biggar and Mr. Parnell were, again according to Mr. O'Donnell's statement, no better than hedgerow orators when he recruited them. But Mr. O'Donnell was so convinced that these two novices were likely to be serviceable to the cause of setting up king, lords, and commons in Ireland, that he condescended to a remarkable degree, and also underwent much self-denial, to act as their Parliamentary associate and tutor:

> They were neither kinsmen nor comrades of mine. There were a hundred would-be Parliamentarians who were infinitely closer and nearer to them in every respect than I. Except in relation to his labors for my policy, Mr. Biggar was a total stranger to me and I to him. I knew absolutely nothing and cared less about Mr. Parnell, before I recruited the well-born malcontent for my views and for my views only. Outside the furtherance of my policy it was impossible to me even to have an enjoyable conversation with either of them or with both. Any patriotic ham-and-bacon merchant could discuss Greece and Rome, the French Salon, or the British Academy, the Renascence and the Revolution, the tragic muse of Dante or that *voix d'or* of Sarah Bernhardt, quite as delicately and as eruditely as the excellent Biggar; and Parnell's accomplishments were not one whit less than the solid tastes of Mr. Biggar. I lived on the contrary with the finest flower of the intellectuality of three capitals. . . . What on earth outside of the policy had I to do with an unlettered squireling and a rugged provincial tradesman?

In England at this time—that is, in the closing years of the Parliament of 1874-1880—Mr. O'Donnell was as powerful as he was within the Irish party. His claim is that he was the founder of the Farmers' Alliance. He next asserts that as a result of his work for this organization sixty Conservative county members failed of reëlection, and that thereby the Gladstone Administration of 1880-85 came into being. Mr. O'Donnell is animated by as strong and as persistent a dislike of the Union as ever inspired Mr. Parnell, and it has been the aim of his political career to restore what he often describes as king, lords, and commons in Ireland. But it must be conceded that the Union gave Mr. O'Donnell great opportunities for the exercise of his political capacity and acumen; and surely no one can read his history of the Irish Parliamentary party without perceiving that Mr. O'Donnell made the most of the opportunities, and also made opportunities when to less well-endowed politicians none was offering. Ireland since the Union has been a country of crises. There has been an almost endless series of crises since 1870. But no crisis could develop of which Mr. O'Donnell did not see a way out, whether it arose out of the Land Act of 1881 or out of the appearance of Mr. Parnell in the divorce court in 1889.

One aim of Mr. O'Donnell's history is to show that what was really serviceable to the cause of Ireland in the Home Rule movement was achieved while Mr. Butt and he were of the Irish party, and that since he came to the conclusion that Irish-American intervention meant the ruin of the movement for the re-establishment of Grattan's Parliament, and consequently withdrew from the Irish party at Westminster, virtually nothing of value has been achieved. The movement has survived Mr. O'Donnell's withdrawal for a quarter of a century. At the last general election eighty-two Nationalist members were returned from Ireland. But Mr. O'Donnell considers the movement to be now of little account. In his closing chapters he insists that the clergy are now in control of the United Irish League, and the present-day Home Rule movement. He is convinced, moreover, that the reëstablishment of a Parliament in Dublin is one of the last changes that bishops and priests really desire to see. He is at issue with the Roman Catholic bishops on the question of education. He is opposed to the concessions which have been made to them; and the chapters in his book which are concerned with education in Ireland—elementary, secondary, and university—and with the position of lay teachers in Ireland under the existing system of church control, are likely to command some degree of attention from students of Ireland's political and social economy.

A Handbook of Foreign Study By H. J. Darnton-Fraser, Convener of the International Academic Committee. Edinburgh: The Darien Press.

The Students' Representative Council in the University of Edinburgh is an organization composed "of representatives of the matriculated students in the university, and of university societies, associations, or clubs, mainly composed of such matriculated students." Its functions are described in the following words: (a) To represent the students in matters affecting their interests; (b) to afford a recognized means of communication between the students and the university authorities, and (c) to promote social life and academic unity among students. The council is said to

be the oldest institution of its kind in Great Britain. The germ of the idea of forming such an organization appears to have been brought by R. Fitzroy Bell, advocate, from Jena, where he had been much impressed by the useful Studenten Ausschuss.

The Council has not confined its useful activities to the students of Edinburgh, but it has taken the initiative and a most prominent part in the organization of an International Academic Committee whose purpose is "to give information and introductions to British students going to foreign universities, and to foreign students coming to British universities." For this purpose it has appointed certain gentlemen, who appear to have been selected with great care and good judgment, as honorary academic consuls, at a large number of universities. These consuls act without pay and give immediate attention to any inquiry received relative to the university under their special view. It is plain that an organization so useful as that of the International Academic Committee has the ability to be of great service not only to British students, but to all English-speaking students, and this appears to have been early seen and acted upon by the untiring convener of the committee, H. J. Darnton-Fraser of Edinburgh. It appears to be the hope that this endeavor to bring the students of different universities into closer relations with one another, at that period in their lives when the character is still plastic, may be productive of substantial results in removing jealousies and misunderstandings between the cultivated people of different nations. Already this International Academic Committee has begun its invasion of America, and some progress has been made, in a quiet way, in the selection of a few consuls. But, as yet, the aims of the organization have not been brought prominently before our American students.

The Handbook of Foreign Study, compiled under the auspices of the committee, is sold at Edinburgh at its cost (sixpence net). It contains far more information respecting universities than we have ever before seen in a handbook. More than one hundred and fifty universities are pretty fully described as to the following points: Climate, cost of living, fees, conditions of matriculation, dates of sessions, libraries and museums, attractions, general information, vacation courses, cost of journey, special foreign classes, degrees. It is plain that such a handbook needs frequent revision in order to keep it well up to date, but many of the facts, once clearly stated, are of permanent value. Thus, the edition of the handbook now before us bears the date of 1909, but a critical examination of a large part of it shows that it is fully up to the times.

The success of the whole scheme is shown by the remarkable increase in the amount of business transacted last year over the year before, which was really its first year of active work. The number of applications from students desirous of obtaining information in regard to universities has more than doubled, and the number of letters of introduction has kept pace with this increase. To lessen the great amount of correspondence necessarily falling on the consuls, three consuls-general have been selected, to whom the more general questions of the choice of a university in a given country can be referred: this new arrangement, which keeps in touch with the headquarters at Edinburgh, makes an efficient organization.

George Sand: Some Aspects of Her Life and Work. By René Doumic, of the French Academy. Translated by Alys Haliard. With 18 portraits and a facsimile. New York: G. P. Putnam's Sons. $2.75 net.

The publishers have illustrated this volume much more liberally than was the case with the French original, and they have made of it on the whole an attractive book. We regret to say that we cannot give equal praise to the translator, but, remembering that the way of such a person is always hard, we prefer to pass at once to a consideration of M. Doumic's tribute to the greatest woman in French literature.

The book consists of ten *conférences* given before the Société des Conférences, a fact which is duly set forth in the original, but for some inscrutable reason is omitted in the translation, despite the explanation it affords of the sketchy and incomplete character of the work. M. Doumic has not attempted to write a detailed biography or a profound study of George Sand. His book, to use his own words, is only a series of chapters envisaging divers aspects of her life and her work. As such it seems to us to be a useful and not unagreeable contribution to the literature of its subject, notwithstanding the fact that in our judgment the author would have done well before printing to excise many half-humorous and wholly platitudinous passages, which may not have been out of place in his pages as they were originally read to his complacent auditors.

The distribution of topics is satisfactory in view of the public for which the book is designed. Two chapters suffice to sum up the life and work of the "Bonne Dame de Nohant," the serene woman who had left behind her not only her fervid attachments, but her extravagant romanticism and her militant socialism. As a result of this distribution several good novels of her later years are not so much as mentioned, and the general reader gets little or no conception of the large amount of intelligent critical and miscellaneous work accomplished by this wonderful woman. In the nature of things, only two chapters could be given to her interesting youth and to her unfortunate marriage to M. Dudevant. A chapter on the "Feminist of 1832," one on the ardent but soon disillusioned supporter of the Revolution of 1848, and four chiefly occupied with her relations with Musset, Michel of Bourges, Chopin, and Pierre Leroux make up the rest of the book. In his discussion of the early years of her emancipation and of that extraordinary story, "Indiana," M. Doumic seems to us to allow his wit and his anti-romantic bias to get the better of his critical faculty. One is somewhat amused by his pages, but one wonders how many modern readers will understand the fascination exerted by George Sand's first great story, not only upon her ebullient contemporaries, but also upon readers of to-day quite as unromantic as M. Doumic himself.

This criticism does not appear applicable—at least not to any great extent—to the chapters dealing with George Sand's chief affairs of the heart. Our writer is notably successful in taking a middle, and a sensible, position between the extreme partisans of George Sand and those of Musset, misguided persons who have wasted too much ink within the past fifteen years. He seems fair also in the chapter devoted chiefly to Chopin, and we agree heartily with the high estimate he puts upon the literary quality of such of George Sand's passionate letters to Michel of Bourges as have been permitted to see the light. Unless we are greatly mistaken, these "Lettres de Femme," which are fully as remarkable for their interpretation of nature as for their expression of complete surrender to love, have been published only in the *Revue Illustrée*. If he had done nothing else than call attention to them and publish the fairly numerous bits of hitherto inaccessible correspondence to be found in his pages, M. Doumic's book would perhaps have had its sufficient justification for appearing at this juncture.

It has a better justification, however. Despite what seem to us serious omissions and fairly frequent lapses of sympathy and taste, the book has what are for the moment two great merits. It emphasizes in an adequate fashion George Sand's influence on French fiction and the quite unrivalled charm of her rustic idyls, "La Mare au Diable," "François le Champi," and "La Petite Fadette," to say nothing of "Jeanne," "Les Maîtres Sonneurs," and portions of "Mauprat." It furthermore enters an effective protest against the absurd neglect, not to say contempt, that has been exhibited by partisans of the realistic and naturalistic schools of fiction, as well as by those over-subtle and delicate souls who in these latter days have come near making

all forms of art a by-word and a source of reproach throughout the world—it enters a needed protest, we say, against the neglect and contempt displayed by a generation far less intelligent than it has fancied itself to be toward one of the greatest of the world's story-tellers, and one of the most sincere, lucid, and essentially benevolent minds that ever reported through the medium of the printed page its observations upon human life and character. For M. Doumic, as for us all, there are features of George Sand's life and work that call for amused indulgence or for severe censure; but she is for him, in the main, a great writer, one of the glories of his country's literature, and his book, if read in the light of this prime fact, ought to do good both at home and abroad. It is not a book that will live or that will add to his reputation, but it is a book that may be of use in calling fresh attention to George Sand.

Addresses and Essays. By Morris H. Morgan. New York: American Book Co. $1.50.

This book was issued only a day or two before the death of its gifted author, and is a valuable memorial of him. All but the first article had already appeared in print, but the collection is none the less desirable. Of the technical studies, which were reviewed as they appeared, we need not speak here. They include subjects as diverse as the water-supply of ancient Rome, the date of Cicero's "Pro Roscio Comœdo," Quintilian's quotations of Horace, *quin* with the subjunctive in questions, various etymological notes, and critical and interpretative studies of Lysias, Persius, and especially Vitruvius. The value of the collection is that these careful and minute investigations are assembled with writings of an entirely different nature, which bespeak a genial and well-rounded personality gifted with a feeling for literature and a sense of humor. Taken together, they suggest a definition of what philology is when rightly understood.

Of the lighter essays, the most audacious is the exposé of "the real Persius," which was written at a time when various "true" biographies of great men were appearing and which proves by all the canons of philology that this innocent youth was a deplorable gourmand and roué; it is a thoroughly Horatian burlesque, in which the satirist with no trace of flippancy can laugh at himself and his art. The author's mild fling at Teutonic deficiency in humor has just received added point from a review by a learned German who triumphantly refutes the base insinuations of this essay. All the essays, even the most technical, are distinguished by a firm and aristocratic style; in the Greek and Latin verses at the end of the volume, there is real poetic quality, especially in the beautiful threnody on Professor Child. The initial essays contain many helpful counsels to the student and the teacher of the classics, to whom they are addressed. By precept and by example, they insist that "a philologian must be many-sided before he can be one-sided." When present-day discussions teem with abuse of the philologian, it is refreshing to find here a broad and noble conception of philology which includes other kinds of interpretation in something larger:

> It is the fundamental knowledge of the ancient languages which makes the philologian, and marks him off from the mere antiquarian or historian who works with translations.

None had a better right to repeat these proud words of Ritschl than the writer of this book.

Notes.

Scribner's have in the press A. T. Quiller-Couch's new novel, "Lady Good-for-Nothing," and a biography of Molière, by Brander Matthews.

Henry Holt & Co. will bring out a new edition of "The Last of the Mohicans," with colored illustrations by E. Boyd Smith.

An unpublished comedy of George Meredith, "The Sentimentalists," or at least the portion of it which he completed, will appear in *Scribner's Magazine* for August.

Duffield & Company's list of books for the autumn contains "Chantecler," in English; H. G. Wells's novel, "The New Machiavelli"; Marguerite Bryant's "Anne Kemburn: Truthseeker"; Richard Dehan's "One Braver Thing," a novel issued in England under the title of "The Dop Doctor"; "Devious Ways," by Gilbert Cannan; Katharine Holland Brown's "White Roses"; "The Getting of Wisdom," by Henry Handel Richardson; "Angela's Quest," by Lilian Bell; "The Pools of Silence," by H. de Vere Stacpoole; Mrs. Sharp's "Memoir of William Sharp"; "Furniture," by Esther Singleton; "Heroic Spain," by E. Boyle O'Reilly; "The Science of Advertising," by Edwin Balmer; "Stories of the Spanish Artists," in the Art and Letters Library; Oscar Wilde's "Ballad of Reading Gaol," in the Ruhric Series; "Ancient English Christmas Carols" and "The Cell of Self-Knowledge," in the New Mediæval Library; "Sketches and Snapshots," by the Right Hon. G. W. E. Russell; "Rambles with an American," by Christian Tearle; "The Quintessence of Nietzsche," by J. M. Kennedy; "Leaders of Socialism: Past and Present," by G. R. S. Taylor, with studies of Owen, Saint Simon, Karl Marx, Ferdinand Lasalle, William Morris, Bernard Shaw, Robert Blatchford, and many others; "An Eighteenth-Century Correspondence," comprising Letters of Deane Swift, Pitt, Robert Nugent, the Earls of Guilford, Coventry, and Hardwicke; "The Life and Letters of William Beckford," by Lewis Melville; "The Bolster Book," by Harry Graham; Marguerite Merington's "Holiday Plays"; "Plays of To day and To-morrow," to include Rudolf Besier's "Don," and J. B. Fagan's "The Earth"; Hawthorne's "Wonder Book and Tanglewood Tales," complete, with drawings in colors by Maxfield Parrish; "A Child's Book of Old Verses," selected and illustrated by Jessie Willcox Smith; Kate Dickinson Sweetser's "Ten Boys from History," illustrated by George Alfred Williams; Oliver Clay's "Treasure Finders; or How the Adventurers of Four Centuries Discovered a New Land"; "The Animal Trainer"; Olive Hyde Foster's "Cookery for Little Girls"; John Rae's "The Pies and the Pirates: A Shadow Show, with Scissors Supplement"; Edith B. Davidson's "The Blowing Away of Mr. and Mrs. Bushytail."

Houghton Mifflin Co. makes the following announcement of books for the autumn season: "Clever Betsy," by Clara Louise Burnham; "John Winterbourne's Family," by Alice Brown; "Enchanted Ground: An Episode in the Life of a Young Man," by Harry James Smith; "A Man's Man," by Ian Hay; "The Meddlings of Eve," by William J. Hopkins; "The Empty House, and Other Stories," by Elizabeth Stuart Phelps; "Husband, and The Forbidden Guests," a play, by John Corbin; "Stories and Tales," by Sarah Orne Jewett; "Light Horse Harry's Legion," by Everett T. Tomlinson; "The Crashaw Brothers," by Arthur Stanwood Pier; six stories from "Tales from the Alhambra," by Washington Irving, arranged by Josephine Brower; "Young Americans in the British Isles," by Everett T. Tomlinson; "The Bunnikins-Bunnies in Europe," by Edith B. Davidson; "Dixie Kitten," by Eva March Tappan; "Brothers in Fur," by Eliza Orne White; "Star People," by Katharine Fay Dewey; "Little Girl Blue," by Josephine Scribner Gates; a holiday edition of "The Children's Book," edited by Horace E. Scudder; "The Homecomers," by Winifred Kirkland; "When Sarah Went to School," by Elsie Singmaster; "Finella in Fairyland," by Demetra Kenneth Brown; "The Old, Old Story Book," stories from the Old Testament, compiled by Eva March Tappan; "The Christmas Angel," by Abbie Farwell Brown; a holiday edition of "Rebecca of Sunnybrook Farm," by Kate Douglas Wiggin; Bret Harte's "Salomy Jane," illustrated in color by Harrison Fisher, Arthur I. Keller, and others; "Pages from the Book of Paris," by Claude C. Washburn and Lester G. Hornby; "The Digressions of V," by Elihu Vedder; "John Brown: A Biography, Fifty Years After," by Oswald Garrison Villard; "Richard H. Dana, jr.: Speeches in Stirring Times, and Letters to a Son," edited, with introductory sketch and notes, by Richard H. Dana (3d); "The Battle of the Wilderness," by Morris Schaff; "The Corsican: A Diary of Napoleon's Life, in His Own Words," compiled and translated by R. M. Johnston; "The Japanese Letters of Lafcadio Hearn," edited by Elizabeth Bisland; "An American Citizen: The Life of William H. Baldwin, jr.," by John Graham Brooks; "Among Friends," by Samuel M. Crothers; "Our House and the People in It," by Elizabeth Robins Pennell; a holiday edition of "Cranford," by Mrs. Gaskell; "Touring in 1600: A Study in the Development of Touring as a Means of Education," by E. S. Bates; "In the Footprints of Heine," by Henry James Forman; "In the Catskills," by John Burroughs; "Jeanne d'Arc: The Maid of France," by Mary Rogers Bangs; "Old People," by Harriet E. Paine; "The Mystery of Golf," by Arnold Haultain;

"Tales from the Old French," by Isabel Butler; "Emerson's Journals," edited by Edward W. Emerson and Waldo Emerson Forbes, Volume III 1833-1835, Volume IV 1836-1837; "Records of a Lifelong Friendship: Ralph Waldo Emerson and William Henry Furness," edited by Horace Howard Furness; "The Autograph Poets," including the works of Longfellow, Emerson, Lowell, Harte, Holmes, Keats, Tennyson, Burns, Whittier, and Scott; "The Complete Poems of Edgar Allan Poe," edited by J. H. Whitty; a holiday edition of "Pippa Passes and Men and Women," by Robert Browning; "Rose of the Wind, and Other Poems," by Anna Hempstead Branch; "The Psychology of Religious Experience," by Edward Scribner Ames; "The Old Testament Narrative," in the classic English version, edited by Alfred Dwight Sheffield; "The Presentation of Religion to Educated Men," by George Hodges, D.D.; "The Birth and Resurrection of Our Lord," by William H. Ryder, D.D.; "The Early Religion of Israel," by Lewis B. Paton, D.D.; "Primitive Psycho-Therapy and Quackery," by Robert M. Lawrence, M.D.; "The Stone Age in North America," by Warren K. Moorehead; "Copyright: Its History and Development," by Richard Rogers Bowker; "Methods of Attracting Birds," by Gilbert H. Trafton; "How to Judge a Book," by Edwin L. Shuman; "Education in the United States since the Civil War," by Charles F. Thwing; "A Beginner's History of Philosophy," by Herbert E. Cushman; "Prose Literature for Secondary Schools," edited by Margaret Ashmun, with an introduction by Willard G. Bleyer; "Little Mr. Thimblefinger Stories," by Joel Chandler Harris; "The Story of the Roman People," by Eva March Tappan; "Children's Classics in Dramatic Form," Books I and IV, by Augusta Stevenson; "Ethics for Children: A Guide for Teachers and Parents," by Ella Lyman Cabot; "The Teacher's Philosophy, in and out of School," by William DeWitt Hyde; "The Problem of Vocational Education," by David Snedden; "The Ideal Teacher," by George H. Palmer; "The Siege of the Seven Suitors," by Meredith Nicholson; and in the Riverside Literature Series the following six new issues: "How to Teach English Classics," by Charles Swain Thomas; "Macaulay's Essay on Lord Clive; and Essay on Warren Hastings," edited by Allan Abbott; "Sheridan's The Rivals," edited by Joseph Q. Adams, jr.; "The Nibelungenlied," translated and edited by Daniel B. Shumway; "The Old Testament Narrative," edited by Alfred D. Sheffield; "Captains of Industry: Selected Sketches," by James Parton.

Now that the great "New English Dictionary" of Dr. Murray and his associates has advanced into S, the "Etymological Dictionary of the English Language," by Prof. W. W. Skeat, can no longer claim quite the same relative importance which it possessed in the earlier editions. The new (fourth) edition, however, which has just been published by the Oxford University Press, is thoroughly revised and enlarged, and, as the author states, alterations, in many cases radical, have been made in almost every article. In its new form the work presents a great improvement on all previous editions, indeed entirely supersedes them. Professor Skeat was able to avail himself, among other things, of the assistance of the "New English Dictionary" down to Ph. The list of "Books referred to in the Dictionary" does not contain the names of some recent authorities of importance, and a closer examination of the present edition will discover, no doubt, as in the case of the previous editions, points in which the author's methods of workmanship differ from those of his German and American colleagues; but his unsurpassed familiarity with the English vocabulary—especially in the earlier periods—and his long occupation with Anglo-Saxon and Middle English texts give exceptional weight to his opinions on all questions of etymology, so that no student of our language can afford to neglect the present revised edition.

We have in "Leigh Hunt's Relations with Byron, Shelley, and Keats" (Macmillan), by Barnette Miller, an excellent doctor's thesis (Columbia University) which affords a relief to the studies of types of literature that now so largely engage the energies of scholarship in our American universities. One cannot but feel that critical and biographical monographs like the present, by keeping closer to life and the spirit that produces literature, serve the interests of true culture better than the other class of studies, which owe so much of their inspiration to the methods of modern science. The work before us gives a fair estimate, we believe, of Leigh Hunt's character and influence on his great contemporaries. It is based, for the most part, of course, on sources that are generally accessible, but the author has gone carefully through the files of the *Examiner* and other publications with which Hunt was connected, and is consequently in a position to give a more accurate idea of the character of his journalistic style and influence. These researches, it may be remarked, incidentally, seem to have fixed the winter of 1816 definitely as the time when Keats and Hunt first met. The author does justice to Hunt's genius for friendship and the fine critical sympathy which enabled him from the very start, almost alone among his contemporaries, to give the due meed of appreciation to Shelley and Keats. He had, of course, his weaknesses, but Seneca's *mala pecunia* was, after all, the cause of virtually every trouble of his life. The loose habits of lending and borrowing money which prevailed in the early part of his career were by no means confined to those who came under Godwin's influence. All the lives and correspondence of the period show a state of feeling in regard to these matters which reminds one strongly of the conditions in our own Southern States before the civil war, when, under a mistaken conception of generosity, almost every gentleman held himself ready to run the risk of ruin by "going security" for his friend. The result in the end, as a rule, simply confirmed the wisdom of Polonius's advice to his son. Students of Byron will turn with especial interest to our author's treatment of the affair of the *Liberal*, where the blame for the failure of this famous, though short-lived, periodical—if blame there was—is, we believe, rightly apportioned. Whatever may have been Hunt's shortcomings in this matter, he paid dearly for the blunder of his "Lord Byron and some of his contemporaries" by the even excessive condemnation which that work received. Not only this affair, however, but the whole history of everything pertaining to Hunt's relations with the three great poets, is related in this monograph, with full knowledge and in an agreeable style. On the other hand, it is to be regretted that the proofs were not read with more care. At the bottom of page 119 there is a bad typographical confusion, owing to the fact that there is no division between text and notes. Poetry appears more than once in the volume as "poety," and we never heard before of Milton's being an "entomological" expert.

Dr. C. E. Slocum's volume on "The Ohio Country, Between the Years 1783 and 1815" (Putnam) is devoted to proving the thesis, set forth on the title page, that "the war of 1775-1783 between the United Colonies and Great Britain was revolutionary; the war of 1812-1814 between the United States and Great Britain was the War of Independence." The period covered is not pleasant reading at best, and the unpleasantness of it is decidedly heightened, for the present-day reader, when colored by a partisanship too strong to admit of exact justice to both sides. That the British were slow in showing a disposition to make good their treaty engagements assumed in 1783, and that the young Republic suffered great harm through untoward British influence with the Indians of the North and West, is all true. These facts are too generally known to need statement as such, and the only valid reason for bringing them up again in detail would be to set them in truer relation to the fundamental currents of history than has ever been done before. This can be done only by the historian whose sense of justice is keen enough to search for faults as relentlessly on the one side as the other, and Dr. Slocum's book will not convince the fair-minded reader that this has been done. From cover to cover it is a persistent attack on the British, with virtually nothing to indicate that there was anything whatever on our side to which objection could reasonably have been taken. Even if one admits this one-sided view to be true, it still remains that the current and future relations of Great Britain and the United States are of vastly greater importance than the past, and to rake over the century-old ashes again, without even the excuse of making some substantial addition to historical knowledge, is a doubtful use of time and energy.

It is singular how long the modern dialects of Palestine, and especially of Jerusalem, were neglected while those round them found diligent students. But of late, under the pressure of practical necessities rather than through academic studies, that gap is being rapidly filled, and by nothing better than by the "Manual of Palestinean Arabic" of Dr. Hans Spoer (resident now for some years in Jerusalem, and once fellow of the American School of Archeology there) and Elias Haddad, a local Arabic teacher of repute. The book is strictly a practical manual, but one of singular richness in construction, idiom, and vocabulary. It endeavors to state the facts of a standard educated dialect—that of the Muslim better classes of Jerusalem—and avoids confusing the beginner with local details. It also frankly recognizes the horror which all non-phonetically trained English spellers have for rigid phonetic systems, and tries so to write the words that their pronunciation may be instinctively apparent to the English reader. There is a full English-Arabic

vocabulary, but it is to be hoped that Dr. Spoer will follow up this book with a Syrian Arabic-English lexicon and a larger collection of *Märchen*.

The appearance in English of the excellent Japanese Encyclopædia, "A Historical and Geographical Dictionary of Japan," by E. Papinot, M.A. (the "Sansaisha"), which contains 300 illustrations and several maps, is sure to meet with a very general welcome. The work, which represents a vast amount of labor, is compiled by an old resident of Japan, and is on the whole more specific and complete than Professor Chamberlain's "Things Japanese," being primarily a book of reference. It certainly may be regarded as the most satisfactory work yet issued in respect to the special subjects with which it deals, and in a very compressed form contains the gist of almost everything that is known about them. The subjects of religion, politics, literature, drama, social customs, the administration of justice, and a host of other matters relating to Japanese history and civilization, are dealt with admirably under their respective headings. Some of the more important items receive as many as two or three pages, while those less significant are disposed of often in as many lines. The ample manner in which the references are illustrated, chiefly by reproductions from Japanese drawings, adds much to the practicability of what often might appear too remote for Occidental comprehension. These, together with colored maps and useful appendices, greatly increase the value of the work as a book of reference. The book is printed on good paper, in large, clear type, and is well bound in cloth.

A. C. Clark, the well-known Oxford scholar, has published a paper on "The Cursus in Mediæval and Vulgar Latin" (Clarendon Press). This is at once a review for the uninitiated of a subject much bruited of late, and a contribution to that subject. The writer traces the *mixtus cursus*, or combination of accentual and metrical elements in the *clausulæ* of rhetorical prose, farther back than scholars have followed it before. He finds it in Petronius, Frontinus, and even in the colloquial Latin of Cicero's letters to Atticus. This somewhat startling result is inherently probable, and corroborates those theories of Latin versification which make the Saturnian measure accentual and emphasize the function of word-accent in Plautus and Terence. But we need further evidence. We also need a workable definition of *mixtus cursus*, and a further consideration, even after Zielinski, of possible metrical *clausulæ*. The passage from St. Jerome cited by Mr. Clark seems to us metrical rather than mixed. The *clausulæ* in the theological works of Boethius are probably not mixed; it seems more likely that in the introductions and epilogues, as always in the "Consolation" Boethius uses metrical *clausulæ*, while for the discussion itself, as in his other technical works, he only incidentally uses *clausulæ* of any kind. But whatever the truth as to these details, Mr. Clark's paper is useful as a general summary, and should stimulate further investigation of his attractive hypothesis.

Dr. Delos F. Wilcox, chief of the bureau of franchises of the Public Service Commission for the First District of New York, has produced a work of standard value, on "Municipal Franchises" (The Engineering News Publishing Co.). It is a description of the terms and conditions upon which private corporations enjoy special privileges in the streets of American cities. The mere statement of its scope is enough to indicate that preparing the work has been a task of difficult and laborious research, the performance of which deserves the gratitude of all students of American government. The work will be completed in two volumes, the first of which has been issued. It considers pipe and wire franchises, but also contains five introductory chapters dealing with the general subject of franchise grants, and the relations between public authority and public service corporations. Dr. Wilcox's systematic analysis of the conditions that promote abuse of public trusts, waste of public resources, and deterioration of public service, is carried out in a scientific spirit which gives to his observations special value, so that they are capable of exerting a powerful influence in bettering conditions.

Dr. Leonhard Felix Fuld describes his work on "Police Administration" (Putnam), as "a critical study of police organizations in the United States and abroad." The contents hardly support the claim. The casual references to English, French, and German methods are too slight to be regarded as a critical study. The organization and work of the Canadian mounted police, consideration of which would have been particularly instructive, are not even mentioned. The author has amassed much information as to the operation and defects of police departments in the United States, but at times his opinions appear to be unsupported dicta rather than sound generalizations. For instance, he remarks that "it has been the experience of the world that the efficiency of the detective force varies inversely as the freedom of the people." Is the London detective force less efficient than that of St. Petersburg? In some comments, generally sound, as to the superiority of policemen over soldiers in dealing with mobs, Dr. Fuld goes to unwarranted lengths in holding that it is the inclination of the rioter to retreat before the policeman's bâton, while "the rifle and the bayonet, on the other hand, are strange and to a certain extent fascinating." The Pennsylvania State constabulary has shown that mounted troopers, trained to such duty, are superior to policemen in dealing with mobs. An account of the organization and equipment of that force might properly have been expected in a work of this character, but it is not mentioned further than to note its existence. Altogether, the book, while a useful compilation of data in regard to police organization and discipline, does not fully grasp the subject.

A new text of "Wilhelm Meister" has come to light. It appears that last December one of the students of Prof. Gustav Billeter of Zurich handed him a manuscript which had for a long time been preserved by the student's father, and which, according to tradition, had been attributed to Goethe. On the cover was absurdly written "Manuscript of Goethe's book, the Sorrows of Werther." One glance sufficed to show the professor that the words were false, and he brushed the manuscript aside for the moment, not noticing until later that within was the title, "Wilhelm Meister's theatralische Sendung." He thereupon sent the text for identification to Professor Mayne of Berne, who recognized in it the original version of Goethe's celebrated novel. The text is to be published this summer, but meantime certain facts about its origin and character have been given out in advance by the *Deutsche Rundschau* and the *Petit Temps*.

The significance of this *Ur-Meister*, or original form of the first six books of the novel, is by no means slight. The problem of understanding Goethe's meaning in "Wilhelm Meister" has always been great, and is complicated by the fact that the work passed through almost as many stages of revision as "Faust," during the fifty years in which Goethe occupied himself with it. What aggravates the difficulty is that Goethe's outlook on life sustained a great change when he visited Italy, and that afterwards his earlier attitude in "Meister" was more or less effaced. Thus in the original version the sister of Wilhelm, who in the later text is transferred to the background, bears the name Amelia, a transparent pseudonym of the poet's sister, Cornelia. This is an interesting tribute, not to be found in any of Goethe's other works. Amelia grows up alongside of Wilhelm, and in the second book marries Werner, who is clearly Schlosser, Cornelia's husband. Some of the original phrasing in the Mignon episode shows that with the visit to Italy Goethe's imagination became more precise, *Dunklen Laub* is surely more effective than *grünen Laub*, and *hoch der Lorbeer steht* is exacter than *froh der Lorbeer steht*. The new text, also, probably serves to correct an error in a well-known line. Mignon, in the current version, closes a first stanza with:

Dahin! dahin!
Möcht ich mit dir, o mein Geliebter, ziehn.

The word *Geliebter* does not occur in the other stanzas, where Wilhelm is called "father" and "protector," and seems out of place, because Mignon is trying to conceal her love. Now in the original version the word is *Gebieter*, "master," and Professor Mayne believes that the later alteration was a printer's error. In general he informs us that the early copy is so different in spirit from the other that it constitutes virtually an independent work.

The death is announced of Dr. William Wetz, professor of English philology at the University of Freiburg, at the age of fifty-one. He was editor of the *Zeitschrift für vergleichende Literaturgeschichte* and the author of several works, including "Shakespeare vom Standpunkt der vergleichenden Literaturgeschichte."

Major Martin Andrew Sharp Hume, who died about a fortnight ago, in his sixty-third year, was well known as a writer on Spanish subjects, both historical and literary. Like his compatriot, Fitzmaurice-Kelly, he was an authority on the relations of Spain and England, especially in the period of the Renaissance. The list of his publications is as follows: "Chronicle of Henry VIII," "Calendar of Spanish State Papers," "Courtships of Queen Elizabeth," "The Year After the Armada," "Sir Walter Raleigh," "Philip II of Spain," "The Great Lord Burghley," "Spain, Its Greatness and Decay," "Modern Spain," "A History of the Spanish People," "Treason and Plot," "The Love Affairs of Mary, Queen of Scots," "Españoles é Ingleses en el Siglo XVI," "Cam-

bridge Modern History," Vols. III and IV; "Spanish Influence on English Literature," "The Wives of Henry VIII," "Queens of Old Spain," "Face to Face," "Through Portugal," "The Court of Philip IV," "Dictionary of Spanish Quotations" (in collaboration), "Two English Queens and Philip," "Queen Elizabeth and Her England," and numerous contributions to English and Spanish periodicals.

Gen. de Beylié, commanding the French troops in Cochin China, was recently drowned in the Mekong River. He is best known for his archæological discoveries in Burma and Mesopotamia, where he met the American scientific mission from the Smithsonian Institution, which was much interested in his work. He was born in Strasburg in 1849. He was a commander of the Legion of Honor and a member of the following organizations: the Comité Technique des Troupes Coloniales, the Société Asiatique, the Société de Géographie, the Société de Géographie Commerciale, the Société de Topographie, the Société des Fouilles Archéologiques, and the Académie Delphinale. He wrote, besides several treatises on military art, "De Lorient à Sammarcande," "Histoire de l'habitation byzantine," "L'Art Hindou en Extrême-Orient," "Voyage Archéologique en Birmanie et en Mésopotamie," "La Kalaa des Beni Hammad," and "Le Musée de Grenoble."

Science.

Our Garden Flowers. By Harriet L. Keeler. New York: Charles Scribner's Sons. $2 net.

Great as is the number of garden books, none of them is just like this. Most of them are for beginners, containing directions for fertilizing the soil, putting seeds in the ground, and caring for the plants, young and old. Such things are not to be looked for in these pages, except in a few instances, as when the writer chides amateur gardeners for permitting pansies to die in summer, when, by giving them a place shaded in the afternoon and by keeping them well-watered, they can be kept in bloom till late in the autumn. What the author does dwell on is the native lands of garden flowers, their life histories, and their structural affiliations. It is, therefore, a book for those who have already become familiar with flowers and their nurture, and now desire to know something about the genealogy, botanic structure, and original habitat of their floral pets.

Time was when flowering plants were cultivated because of their real or supposed medicinal qualities, rather than because of their beauty. Some peoples, however, reared them for their shapes and colors, many generations ago. While the mediæval Europeans still believed that peonies drove away evil spirits and averted tempests, the Japanese gardeners were busy bestowing on them such cultivation and variety of color as they only knew how to give. The first of their tree peonies were brought to England in 1789. To-day there are above a thousand named varieties of this glorious flower.

There were Burbanks before Burbank, in Europe as well as in Japan. Unlike the many-sided Luther Burbank of California, however, most of them were specialists, devoting a life-time to one variety of flowers. The old English were very fond of the small pansies which are now contemptuously called Johnny-Jump-Ups; they had many names showing their liking for it, such as Heartsease, Love-in-Idleness, Cuddle-Me-to-You, Three-Faces-Under-a-Hood, Herb-Trinity. What would they have said could they have seen the modern pansy, as enlarged and beautified by those three French specialists, Bugnot, Cassier, and Trimardeau! Or the modern sweetpea, as transformed by their own Henry Eckford of Shropshire, who up to 1908 had created about seventy-five varieties of wonderful colors and remarkable size. About twenty years ago these new sweetpeas began to attract special attention in this country; to-day, the author tells us, "practically the world's supply is produced by the California sced-growers, and amounts to hundreds of tons annually."

After mentioning in this volume the great French and English specialists, it seems unfair to omit all reference to the American Burbank, who revealed such astonishing new possibilities in several kinds of poppies, for instance, including the Eschscholtzias. This hideous name inflicted on one of the loveliest flowers was, it seems, given it by Chamisso in honor of the surgeon of his expedition, whose name was Eschscholz. It ought to be forbidden by a special act of the Legislature of California, of which this is the State flower.

The remarkable achievements of the past two or three years in the development of both the science and the art of aeronautics, and the widespread interest in this subject thus created, have resulted in a notable increase in the literature of it. Among the more recent books, one of considerable interest is "The Conquest of the Air," by Alphonse Berget (Putnam). This makes no pretension to be a handbook, but is rather a lucid and attractive volume, which may properly be styled an introduction to the study of aeronautics. Part i is given over to a consideration of dirigible balloons, while part ii is concerned with a discussion of aviation apparatus. The aim of the writer has been to suppress useless details which might tend to confuse the student, and to minimize the importance of the history of aeronautics in order that he may present sufficient data to familiarize the reader with present-day aerial locomotion. The volume is profusely illustrated, containing upwards of 100 well-selected plates and diagrams. The brief appendix will be of interest and value to those who may wish to inform themselves concerning the laws governing the resistance of the air.

A useful little book is the "Garden Primer," by Grace Tabor and Gardner Teall (McBride, Winston & Co.). It undertakes to give, in language clear to a beginner, directions for all the fundamental garden processes. To do this in one hundred small pages is something of a feat. The expert may cavil at the result, as being incomplete in various particulars, but that is inherent in the nature of the task. In general, the authors have well measured the limits of their subjects, and have produced a simple, clear, and trustwortby little volume.

Drama.

Will Shakespeare. By Margaret Crosby Munn. New York: Dodd, Mead & Co. $1.20 net.

It is told of Addison that when Queen Anne died and it became his duty as Secretary of State to announce that fact to the Powers of Europe, he, master as he was of the English tongue, found himself unable to frame a message befitting so solemn an occasion in words to satisfy his own fastidious taste, and finally abandoned the task to a more confident and less imaginative subordinate, who quickly scribbled a conventional dispatch and ever afterward boasted of his superior literary facility. To picture Shakespeare in his habit as he lived, not only as man, lover, and player, but as poet—to endow him with appropriate thoughts, action, and utterance—is an enterprise from which the most inspired and aspiring of modern poets might well have shrunk appalled. But Mrs. Munn—inspired, as she says, by the Hamlet of Forbes Robertson—has not feared to undertake the task, and the result is this four-act drama. And her vaulting ambition, if it has overleaped itself, has not fallen altogether disastrously. Her Shakespeare, though he glows with no divine fire and is somewhat too plainly a thing of shreds and patches, is, on the whole, a picturesque figure. Much of the blank verse allotted to him is pretty and mellifluous; some of it is virile and passionate, some wisely reflective; none of it is feeble or slovenly. The references here, of course, are to the purely original matter, not to those passages which are suggested by the works of the poet himself.

The author claims that the play is historically accurate in regard to its dates and principal events, but it is not at all necessary to discuss that question, which, in a case of admitted fiction, is not very important. Suffice it to say that the course of the story is in general but not invariable accordance with tradition and such few historical facts as we have. In the first act the young Shakespeare, dreaming and poaching in Charlecote wood, is pursued by Anne Hathaway, represented as an

amorous shrew. Captured by Sir Thomas Lucy and his servants, he agrees to marry her upon the understanding that he shall not be punished for his past sylvan offences. In the second act, four years later, Shakespeare, harassed by Anne's exacting temper and his pecuniary distresses, is visited by a band of strolling players — including his old friends Heminge and Greene—and, having already written several plays, makes up his mind to go to London to seek his fortune. Twelve years then elapse, and he is next revealed at the height of glory, the cherished friend of Southampton and Essex, and the favorite playwright and actor of his day. At this point the play, hitherto deficient in action, assumes rapid movement in the development of a romantic intrigue—which might easily be made effective on the stage—in which Shakespeare, after winning assurances of love from the beautiful Elizabeth Vernon, and rescuing her from a compromising situation by an ingenious use of his histrionic powers, is shamelessly jilted by her in favor of Southampton, into whose guardianship he had entrusted her. The mechanism here is conventional and often awkward, but as the incident is plentiful and exciting and the action is carried on under the cover of a masque, which provides opportunity for disguise and spectacle, the theatrical value of the third and fourth acts is considerable. The hand of the novice is betrayed, however, in the excessive use of the old and always transparent device of mistaken identity. In the end the disenchanted Shakespeare, after unravelling the dramatic tangle, and receiving solace from a vision of the immortal characters yet to be created by him, resolves to return to his deserted family.

In its present form, the play is far too long for stage representation, but this particular fault could easily be remedied. The tale has more theatrical than historical value, and even the verse would suffer nothing from judicious editing. Several of the subordinate characters—Essex, Southampton, Elizabeth Vernon, Bridget Manners—are cleverly and vigorously sketched, and there is no lack of situation. The literary, poetic, and dramatic ability displayed in it is of no common order; but, unfortunately, it is not brilliant enough to satisfy the ideals suggested by so lofty a theme. Nevertheless, in the ambitious dramatist lies the chief hope of the stage.

H. B. Irving has accepted for production a play which has been dramatized by George Pleydell from the novel "Clementina," by A. E. W. Mason.

"The Servant in the House," by C. Rann Kennedy, in which Miss Edith Wynne-Matthison made a great success with Walter Hampden, in America, and which she took recently, with less success, to London, has been translated into German by F. E. Washburn Freund, and will be produced at the Meiningen Hof-Theater.

"Chantecler" is to be played in the open air at Carcassone, at Toulouse, and elsewhere during August and September. It is said that the receipts from the play in Paris have amounted to $120,000; and it is now being played at popular prices. The next production at the Gymnase will be "Miguette et sa Mère," the cast including M. Galipaux, the Merle of "Chantecler," and Mlle. Monna Delza.

At the meeting held in the Mansion House, London, March 23, 1909, it was stated that a promise of £70,000 towards the sum needed to carry out the scheme for a National Shakespeare Theatre had been made by an anonymous giver. It is now generally understood that the generous giver of the large sum referred to is Sir Carl Meyer. In the official note issued with the announcement of the baronetcy conferred upon him on the occasion of the day set apart for the celebration of the late King's birthday, he was described as "a leading supporter of the Shakespeare National Memorial Theatre."

Art.

We have received the first two numbers of the *Rassegna d'Arte Umbra,* edited by Umberto Gnoli and published by the Stabilimento Tipografico and Bartelli & Cia, Perugia. The form is small octavo, the typography excellent, the decorative border of cover is from a Perugian title page of 1522. The illustrations are printed separately on detached gray mounts. The editor is an indefatigable student of the art of Umbria, and will doubtless find plenty of fresh material. Articles of especial interest in the first number are The Windows of Giovanni Bonino in the Basilica of Assisi, by Giustino Cristofani, and a Polyptych, by Pietro Lorenzetti, discovered at Gubbio. This fine altar-piece was found by the editor of the *Rassegna* completely covered by a rude painting of the seventeenth century. The leading article of the second number is the editor's critique of Umbrian pictures in the exhibition of the Burlington Club, London. The special feature of this publication, to judge by the numbers at hand, will be short notes, sometimes documentary, which cover the entire Umbrian territory and bring useful information of restorations and discoveries of works of art. The second number, for example, tells of the finding in the Church of S. Francesco, Gubbio, of a reliquary pieced together in the fourteenth century from older miniatures, two of which are of the fifth century and in remarkable preservation. Altogether, this new periodical promises to make a place for itself. The subscription price is 5 lire for Italy, 6.50 for foreign countries.

We have received from E. J. Brill of Leyden "Publications of the Princeton University Archæological Expedition to Syria in 1904-1905," Section B, Northern Syria, parts i to iii. The architectural portion is written by Howard Crosby Butler, the well-known expert in this field, the epigraphical part by William Kelly Prentice. These studies include the comparatively unknown territory of the 'Alā and Kasr ibn Wardân, il-Anderîn, Kerrātîn, Ma'râtā, besides a more careful survey of the Djebel Rihā and Djebel Wastaneh. In these last-named regions were found abundant and instructive remains of domestic architecture which are fully drawn and described. These late Roman villas range from small houses with three or four rooms, including a stable, to fairly palatial establishments. The ruins are in such condition that the arrangement of the upper story could frequently be made out. Churches are numerous in all these regions, but other public structures, barracks, baths, and inns, were photographed and measured. Since the local stone, basalt, is refractory, there was found little elaborate decoration. The tendency was to simplification of mouldings—mere chamfered courses are common—of the capitals, etc. On the other hand, the expedition found several more of those panelled basalt doors which seem peculiar to Syria. An exception to the rule of basalt is found at Kasr ibn Wardân with its monumental church and barracks built of brick. Here Mr. Butler feels certain that we have to do with imperial constructions of Justinian's time. The church, of which an elaborate reconstruction is presented, is of a truly remarkable kind. All its arches are two-centred and slightly pointed. It had a lofty dome, the pendentives of which were pierced with rather large windows. The vaulting of the aisles and triforium already serves in a manner as buttress for the nave and dome. Here we see Byzantine architecture apparently getting ready to take the step that Romanesque architecture actually did take six centuries later. It looks as if the moment builders began the practice of cross vaulting the convenience of the pointed arch was sure to appear. The barracks of Kasr ibn Wardân boasted a domed hall only less important than the church. We can only hint at the interesting matter comprised in these monographs which cover buildings of all sorts ranging from the fourth to the seventh centuries, many of which are definitely dated by inscriptions. Much of the material is evidently significant in view of the whole Byzantine problem now under agitation.

"Distinctive Homes of Moderate Cost," edited by Henry H. Saylor (McBride, Winston & Co.), is a thin quarto of composite authorship and fully illustrated. Most of the articles have apparently done service in a periodical. They represent the customary good advice about the selection of a site, dealing with architect and contractor, choosing building materials, water supply, heating arrangements, and all the minutiæ of house furnishing to curtain, rugs, and wall papers. Naturally, the advice, coming from a score of writers, is of uneven authority. For example, the expert on garages evidently thinks that shelter for five cars is not excessive for the "home of moderate cost." In general, however, the remarks of the contributors are sensible. The present writer can cavil only at the article which recommends the most bizarre and unstructural fixtures for lights, and at the hopeful attitude of another counsellor toward certain base Oriental rugs of the day. Taken broadly, this compilation is good of its kind and may be read with profit by families meaning to build, who approach the emergency without experience or artistic prepossessions.

There is a distinct charm about P. H. Ditchfield's "The Manor Houses of England" (Scribner importation), with its tasteful cover and frontispiece like an old color print. These modest buildings are not exploited in the guidebooks, the historian of architecture usually passes them by; they are, however, of manifold interest. Being merely an expansion of the farmhouse or village residence, manor houses generally have remained true to the popular traditions of building, avoiding the pretentious aberrations exemplified in palatial structures. So the manor house represents merely the level best of local carpenters, masons, and plasterers, working under the vigilant eye of the squire. In fact, this element of personal care is prominent in these little estates. Our author remarks that "it is easier to discover a good manor house garden than one attached to a more magnificent mansion." Under a broad classification by materials (half-timber, brick, lime-stone, flint) typical houses throughout England are briefly described by the author and delineated by Sydney R. Jones's sympathetic pen. These drawings not merely harmonize delightfully with the letterpress, but give character to the buildings better than photographic cuts. The volume is pleasant reading and to the leisurely tourist full of suggestion for delights off the beaten track. For such readers we quote a tidbit. "The older houses," writes Mr. Ditchfield, "have for a corner-post the butt of a tree placed root upwards, with the top part curving diagonally outwards in order to carry the angle-posts of the upper storey." To reflect on this corner-post and then observe the make of the "Elizabethan houses" that are adorning our suburbs might be the beginning of wisdom in architecture.

Archibald H. Christie's "Traditional Methods of Pattern Designing," an introduction to the study of decorative art (Frowde), has the somewhat rare merit of being a thoroughly well-made book. The illustrations, about four hundred, are kept near the respective text, so that both continuous reading and occasional consultation are easy. Mr. Christie's point of view is that of abstract morphology. He brings together powdering, patterns, stripes, floral motives, strap and knot work, superimposed or countercharged designs, according to their structure, illustrating freely from many periods of art. For the practical designer this method has its advantages. Especially useful will be the chapters on laying out all manner of counter charged on reciprocal patterns and interlaces, and in general the insistence on geometry and the avoidance of realistic examples make this excellent little manual strong precisely where most modern pattern-making is weak. The analysis of intricate designs into their simple elements is a characteristic and useful exercise many times repeated. Among the cuts Oriental, Saracenic, and Persian examples preponderate. They are well chosen, and, generally, are reproduced from the author's sketches of quite unhackneyed originals. Color prints, as superfluous in this kind of a manual, are not provided. The text is somewhat condensed for the young student, but it will repay anyone who will give it the requisite close reading.

Finance.

STOCKS AND CROPS.

The readjustment has apparently gone far enough in securities, and possibly in commodities, for us to take our bearings once more. If it is assumed, as some have been prone to do in the past month, that stocks have declined in anticipation of reduced dividends, there is reason for supposing that, in the main, the downward movement must have about run its course. This will be more clearly perceived if we cite a few instances. Taking the quotations at the close of the market last Saturday, it will be seen that a 5 per cent. dividend on Atchison, in place of a 6 per cent., would mean a net return of above 5 per cent. If St. Paul were to come down from 7 per cent. to 6 per cent., the net return would be almost 5 per cent. (4.9 per cent.). Union Pacific could reduce from 10 per cent. to 8 per cent. without netting the investor less than 4.92 per cent. These stocks may well be used as an illustration, not merely because they are standard stock-market securities, but also because they have played a noteworthy part in the decline of the past month.

This is not to predict any such reduction in dividends; it is merely taking cognizance of a contingency which some persons have insisted on recognizing of late. The point is that if a decline should actually occur, the recent stock-market quotations could be viewed as having in these particular instances fully discounted the situation—that is, unless the situation is going to be affected by other considerations than the earning power of the properties. So far as the whole list is concerned, a good deal, of course, might remain to be done in the way of adjusting securities to the level of those stocks which have been the leaders in the late decline. But in the main, it is perhaps safe to assume that the stock market has at last "found itself," or at least come pretty near doing so.

It is harder to generalize with reference to commodities. Here the situation, to quite a remarkable degree, is affected by cross currents. For wheat and cotton and a number of other products higher prices are predicted, as a consequence of an alleged shortness in the world supply; but these predictions lack weight in the minds of many, by reason of the fact that the purchasing power of the masses, in this country at least, has been undergoing a contraction of late, and by reason also of the fact that there is some question where the money is coming from to finance these commodities pending the attainment of the hopes of the producers and speculators in the matter of higher quotations.

Indeed, there never was a time when the situation as regards commodities was more interesting. A few facts in connection with one or two standard products will show why. As these remarks are penned, spot cotton is quoted handsomely above 16 cents, or approximately 4½ cents above the figure equivalent to the price to which the mills have marked down the finished product, in the hope of creating a demand—which hope, by the way, has not yet been realized in any satisfactory degree. The August, October, and December options, covering the period in which the mills usually buy the bulk of their raw material for the twelvemonth, are also in excess of the equivalent price at which goods are being offered. Will the mountain go to Mahomet? Cotton-market quotations are based to-day on the assumption that the mills will a few months hence be scrambling for the staple. It should be said, however, that at the moment, at least, the attitude of the mills toward the raw material market is one of absolute unconcern. A large part of their machinery is idle, and they are far more concerned to sell goods than to buy cotton. Last year the planters and the speculators had the whip-hand; this year the manufacturers assert that they have in their storehouses too much cotton, or the equivalent goods, to give any thought to the course of the raw material market this autumn.

Naturally, in view of the crop news of the last few weeks, there are a great many persons who look for higher prices for wheat. Their confidence raises a number of considerations in the thoughtful mind. It is worth recalling that every time, for months past, that the price of wheat has gone up, the demand in the flour market has fallen flat. The prices postulated for foodstuffs during the next year may actually be realized, but it must be confessed that it is hard to see how that could be without forcing such rigid economies on the masses as to impair the movement of general commodities. Such prices would seriously menace our export prospects; and, as a matter of fact, not very much

is now expected from wheat in the matter of improving our merchandise balance of trade, which, as shown by the recently published figures for the year ended June 30, 1910, is now far from offsetting our obligations abroad for interest, freights, insurance, bankers' loans, and other purposes. Unquestionably, our bankers are counting on a good-sized export movement of cotton as an aid to drawing gold from Europe this season, but it has yet to appear that their hopes are well founded. It remains to be proved that foreign spinners can pay the prices that are predicted for our cotton. Large purchases at such quotations would possibly place them at some disadvantage in the East, in competition with American mills, which, as has previously been intimated, are carrying very considerable stocks of last year's cotton or goods made from such cotton.

Cotton and wheat are the two commodities most likely to be affected by "scarcity" talk this autumn and winter, and yet even in the case of these there are many who fail to see how prices are going to be maintained, much less advanced. Predictions, however, are futile. The whole discussion, in the minds of the most thoughtful, rests on the fact that the average man's pocketbook has been growing thinner this summer, and we must be content to let time show us the effect of that fact on general prices. Such effect as has yet been witnessed is in the direction of a lower general level of quotations. If the movement should be accelerated, it would certainly be safe to declare our whole economic outlook materially improved. It would be possible, in passing, to call attention to "scarcity" periods in one or another standard commodity that have equalled or exceeded the present situation in cotton and wheat, when prices instead of advancing, declined in very marked degree. Such was the year 1900 in wool, following the great drought which prevailed for so many years in Australia.

The money situation has unquestionably improved; not enough as yet to warrant an early return to 1909 conditions in speculation and general business, but enough to create a strong hope that the readjustment now under way in securities and commodities will be carried to a logical conclusion without serious or prolonged disturbance to the economic life of the nation.

George Sand

Some Aspects of Her Life and Work

By RENÉ DOUMIC

Author of "Studies in French Literature," etc.

Translated by Alys Hallard

8vo. With 19 Illustrations. $2.75 net.

This finely-sensitive exercise in creative criticism first took the form of a series of lectures, delivered before the Société des Conférences, in Paris, during the course of last year. M. René Doumic, of the Académie Française, is peculiarly qualified to estimate the work, and to interpret the life of this diverse and elusive genius, and his study will be found to be full of subtlety and sympathetic intuition. There are several portraits of interest, some of them of a rare order.

G. P. PUTNAM'S SONS, NEW YORK & LONDON

THE TEMPLE CLASSICS
233 VOLUMES

GENERAL EDITOR: ISRAEL GOLLANCZ, M.A.

Each volume contains a photogravure frontispiece, a decorative title-page, and a ribbon bookmark; where advisable, editorial appendices and marginalia, also.

THE FORUM

FOUNDED IN 1886

With its July issue THE FORUM begins
a new volume—the 44th

An editorial in THE CHICAGO EVENING POST says:

The first number of *The Forum* to be published under the aegis of Mitchell Kennerley gives us hopes. Not very often has a magazine been so improved in type, in cover design and in general arrangement. In appearance *The Forum* may now be said to display an unusual combination of sound yet conspicuous taste. In its contents it is quite unusually good—fresh, vigorous and many-sided. The contributors are evenly divided between England and America. "Charles Vale" writes a spirited article on Mark Twain as an orator, and Julius Chambers a defence (rather unjudicial) of American newspapers. These are the only articles of literary or semi-literary interest, though George Meredith's "Celt and Saxon," and H.G.Wells' "The NewMachiavelli" are serials to entice the select.

Poetry in the revised *Forum* is not "filler." Bliss Carman and Curtis Hidden Page contribute ambitious verse that is worthily presented. Frank Harris is the only short-story teller included. He is one of the best living writers of the short story, though "The Irony of Chance" is not of his best work. It has a big idea, but ends in a squib.

The best material in this "review magazine" is undoubtedly supplied by George Bourne, C. W. Saleeby, Thomas F. Millard and Temple Scott. The article on King George by the first-named and on Karl Marx by the last-named are of the kind for which one pines in vain in the dull, orthodox reviews to which this country submits.

We wish *The Forum* well. It has made radical improvements and should become the significant intellectual monthly in America.

ARNAUNE,** First Magistrate of the Court of Accounts, late Director of the Mint; **COURTIN,** Pres. of the Chamber at the Court of Accounts; **BOULANGER,** First Magistrate of the Court of Accounts; **PLAFFAIN,** Inspector of Finance; **SILVESTRE,** late Director of Civil Affairs at Tonkin; **J. CHAILLEY,** Deputy; etc.

SYNOPSIS OF COURSES.

Parliamentary and Legislative History of France, 1789-1875.
Constitutional History of Europe and the United States.
History of European Diplomacy from 1713 to this day.
History of European Politics and Economy.
Colonial Policy of Europe.
Contemporary America: United States, Canada, Latin America.
Political Questions and Economy in Eastern Asia.
Colonial Organization and Administration Compared.
Military Geography and Organization.—Geography of French Possessions.
Ethnography of Europe.—Statistical and Commercial Geography.
Laws of Nations.—International Conventional Law.
Administrative Organization and Matters in France and Abroad.
Algerian and Tunisian Matters.—Mussulmanic Law.
Legislation of Railways.—Important Modern Industries.
Political Economy. — Social Economy. — Labour Legislation.
Public Health and Important Public Works.
French and Foreign Finances.
Money, Credit and Exchange.—Banking.
Commercial Policy of the Great Powers.

GENERAL INFORMATION.

The Instruction given at the School of Political Sciences is the natural crowning accomplishment of every liberal education. In each of its several branches, the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Council of State, Court of Accounts, Inspection of Finances, Inspection of Colonies), in getting thoroughly prepared for the examinations and competitions which they call for, and is also trained for leading posts in all great private enterprises.

The pupils are admitted without examination, with the approbation of the Director and School Board; no University degrees are necessary.

Tuition usually comprises 3 years' course, which, however, may be reduced to 2 years. On completing his studies, every pupil who has successfully passed his examination receives his diploma.

SCHOLAR YEAR, 1910-1911.—The Scholar Year commences on 7th November, 1910, and closes on 3rd June, 1911. Applications are received at the Secretary's Office from 27th October, 1910. Application for the whole Course gives right to all the regular and complementary Courses and Conferences, and also access to the Library (about 25,000 Volumes and 160 French and Foreign Reviews and Newspapers). Per Annum, **$70.**

A Special Pamphlet giving detailed information on the organization of the School and respecting the Professions for which the Pupil receives special training can be had by addressing

L'ECOLE, 27 Rue Saint-Guillaume, Paris (France).

New York, Tarrytown, Box 760.

Hackley Lower School (Boys 9 to 13)

Situated on an elevation of 500 feet above the Hudson River, twenty-five miles from New York City. Modern facilities for thorough school training with every natural advantage for healthful home life. Prepares for Hackley Upper School. For catalog and illustrations, address

HAROLD F. AVERY, Director.

BRYN, MAWR, Pennsylvania.

The Misses Kirk's College Preparatory School

Preparatory to Bryn Mawr and other colleges for women. Small classes supplemented by careful individual instruction. Teachers all thoroughly familiar with Bryn Mawr requirements. Tennis and basketball. Twelfth year opens Oct. 5, 1910.

BETHLEHEM PREPARATORY SCHOOL. Bethlehem, Pa. Prepares for leading colleges. Catalogue. H. D. Foering, B.S., Principal.

ENGLISH LITERATURE

By WILLIAM J. LONG

Price $1.35

Illustrated with frontispiece in eleven colors. A work remarkable for its scholarly treatment of English authors and their works and the simple beauty of its style. Valuable as a textbook or book of reference for the student or general reader.

BOSTON NEW YORK CHICAGO LONDON

The Nation.

NEW YORK, THURSDAY, JULY 28, 1910.

The Week.

President Taft's appointment of a negro as collector of the "port" of Georgetown, D. C., will inevitably be attributed by some to political motives. There is a large negro vote in Ohio which is just now demanding attention as well as "recognition." But Mr. Taft has all along signified his purpose to bestow important Federal offices upon negroes, and this District appointment is in line with the conditions which he has said he should require. It has, besides, some humorous aspects. The President had before nominated a white local politician, but the Senate refused to confirm him. There was a demand by the citizens of the District that the office should be given to a man out of politics but in the District. No politicians and no non-residents, was the cry. Accordingly, Mr. Taft selected a real estate agent who happened to be a negro. The appointment, however, has not prevented the National Negro Independence League from resolving to throw its political strength against Republican Congressmen in the coming elections, partly on the ground that the President refuses to appoint colored men to office in places where any considerable number of white people object, but more because the Republican party has made no effort to carry out its platform pledges to the negro. Unsettled race questions have no pity for the repose of political parties.

What gives the postal savings bank system its most serious importance is well indicated by the character of the letters written by postmasters, especially in small towns, when applying for the designation of their offices as branch postal savings banks. A number of examples of these were given in the dispatches of last week. Conspicuous among the matters mentioned was, of course, the case of newly-settled foreigners, who are afraid to trust anything less sure than the United States Government with their savings; but quite apart from this there is evidently a general conviction that among wage-earners and other persons of small income there are large numbers for whom the opportunity of investing small earnings with perfect safety and without inconvenience will make all the difference between saving and not saving. In the case of large cities, there has really been no excuse for any person of moderate intelligence being deterred from laying by what he can, for lack of a safe place in which to put it, and the interest which our large and perfectly safe savings institutions pay is much larger than what the Government will offer; but in the small towns and the country districts these facilities do not exist. By bringing them to the people's doors, and inviting deposits from recent immigrants and from many others in the ranks of labor who are afraid to trust anything that does not carry the Government's guarantee, habits of thrift and a bracing self-respect should be promoted among thousands.

It is not only against bad laws, or against grasping "interests," that the struggle for the conservation of our national resources has to be directed. Destruction and deterioration through want of proper care cause a vast loss to the country every year. This is especially and most lamentably true in the matter of forest fires. We are making some progress in the direction of protecting the forests against this terrible destruction, but we have not yet risen to the necessities of the case. The tales that the dispatches are telling nowadays of forest fires in the Northwestern States and in Alaska make doleful reading. Of course, it is not only Government lands, but also private possessions, that are being thus devastated, and towns and villages are often wiped out by them. In whatever way the cost of an efficient system of protection against these fires might be distributed between national and local governments and private owners, the money that it would cost would be superlatively well invested. It is to be hoped that the approaching conservation congress will make an earnest effort to advance the system of protection against forest fires to a point far beyond that which it has reached.

Washington reports a turn in the tide of American immigration into Canada. Thousands of settlers from the United States are recrossing the border, and, in the company of other thousands who have hitherto kept their homes in the Prairie States, will move southward upon Alabama, Georgia, and Florida. The probabilities are that the extent of this new migration has been exaggerated in the preliminary reports. The beginning of the American movement into Canada is so recent, and in the main it has proved so strikingly successful, that it is hard to imagine a real turning of the tide for many years to come. If, however, this sudden veering of the American pioneer flow from the chilly plains of the Canadian West towards the sub-tropical climate of our own South should really take on measurable form, it will be to the sociologist, no less than to the practical man, one of the most dramatic and significant folk-movements on this continent. For Canada it would mean that her new-grown sense of independence would be heightened, when British and other European immigrants entirely replace the American settler. In this country, it would exemplify, in striking form, the passing of the pioneer stage of agriculture. The American farmer, finding the way to him closed in the West, turns back in his tracks and hunts about for the vacant lands that hitherto, in his opulence of broad acres, he has neglected.

The President has registered his protest against the traditional two-weeks' summer vacation of the forefathers. Sixty days, he told the good people of Bar Harbor, are not too much in which to make up for the wear and tear of ten months of business. Here is another instance of how Mr. Taft seems bound to keep on differentiating himself, in the public mind, from a recently returned African traveller. Could such a gospel of Capuan dalliance conceivably issue from Sagamore Hill? Is anything more needed to prove Mr. Taft's innate fondness for the flabby and the conservative as against the strenuous and the insurgent? Two months! In two months what could not a man with real, red blood in his veins accomplish? Not in two months, but in a single week, some one recently settled Egypt's business.

Not in two months, but after a single night's tramp with a British Minister through English woodlands, some one recently evolved an article on English song-birds which may be found in last week's *Outlook*. Not in two months, but in five days of ocean travel, some one recently wrote a chapter on Protective Colorations in Animals, which takes issue with prevailing views on the subject, and is to form the concluding chapter of a volume treating of African game trails. Silly optimists who still hope that Mr. Roosevelt will endorse the Taft Administration, are invited to consider this latest plea of the President in favor of a two months' summer vacation.

Reports from the West that the insurgent Republicans were seriously thinking of founding a "third party," with Roosevelt and Bryan as its Castor and Pollux, were from the first too ridiculous for credence, though this did not prevent much grave newspaper comment. Now, however, both Senator Cummins, in whose "personal organ" the suggestion was made, and Senator Bristow stamp the whole yarn as an invention. The insurgents are to make their fight within their own party. If they lose, they may conclude to keep on struggling or possibly to go over to the Democrats temporarily. If they win, they will be in a strong position and able with much more reason than before to demand that the Republican leaders do something to appease the dissatisfaction of which insurgency is the expression. It will be noticed that both Cummins and Bristow keep pounding away on the tricks and frauds in the Payne-Aldrich bill. Speaker Cannon refers to this as an attempt to "put the Republican party out of business." It may prove, however, a means of putting it in the business of making a really honest revision of the tariff.

With the motives and aim of the Camp-Fire Club, in its broadside against the policy of Secretary Nagel in reference to the fur seals of the Pribilof Islands, one may be in full sympathy without at the same time being convinced that the facts it cites are beyond challenge, or that the weight of expert opinion is certainly on its side. The gist of its complaint is that the bill passed by Congress last April was intended to enforce a close season, whereas Secretary Nagel proposes to go on killing a certain number of male seals. But reference to the act itself shows that the whole was left to the discretion of the Secretary of Commerce. There was nothing mandatory in the law. Its chief aim was to aid in preventing pelagic sealing, and the diminution of the herd by the slaughter of females. Yet a long list of experts, headed by President Jordan, are of the opinion that both ends will best be attained by killing every year on the islands, under Government regulation, a certain percentage of males. The Camp-Fire Club exclaims that this is not at all what it expected, or what its own members believe to be the true policy; but the case as it stands is obviously not one for violent attack, on either side, but for careful inquiry into the exact facts and a determination by the highest authority just how we ought to proceed. Secretary Nagel is beyond question as eager as the Camp-Fire Club to preserve the seals; as to the scientific method of doing so, he thinks he has better advice than it has. The thing to do is not to rail at him, but to convict him of ignorance.

Of the two companies which have taken the lead in sending up the price of bottled milk to 9 cents a quart, one company was shown in Attorney-General O'Malley's report to the New York Legislature last April to have paid 12 per cent. dividends every year since its organization. In 1909 it paid 22 per cent. in dividends. It must have been this desperate absence of profit that compelled the company in question to increase the price from 8 cents to 9 last November. Bowing before public opposition and the possibility of prosecution by the State, the milk companies went back to the old price—after five or six months. With courage worthy of a better cause they now return to the attack. If this time the milk companies mean to stick, the Attorney-General's report has laid sufficient basis for a thorough testing out of the question. If the manœuvre is to be the old one of holding out against public clamor for a couple of months and retiring gracefully with a heavy extra profit, the case is more reprehensible still. The reasons for the latest increase in prices are the same hard-worked reasons of last year and the year before. There is the high price which the companies claim to be paying the farmer, and which it has been repeatedly shown they do not pay. There is, in the second place, the season. All seasons smile upon the milk operator. He raises prices in the late fall, in winter, and in midsummer. Unlike the Russians against Napoleon, who had Generals January and February on their side, the milk companies have all the generals from January to December with them.

Legislators who enter into bi-partisan combinations may read a warning in the news from Illinois. Last week, at a conference of Democrats at Lincoln, a movement was begun to defeat for renomination those Democratic members of the Legislature who helped the Republican ring elect Shurtleff Speaker and Lorimer Senator. To a bitter denunciation of these "traitors," the conference added an excoriation of Roger C. Sullivan, the Democratic boss, who is held primarily responsible for the party's disgrace. On the same day it was announced that Gov. Deneen and his friends would conduct a campaign against every one of the thirty-two Lorimer-Shurtleff Republicans who refused to enter the party caucus, and constituted the Republican end of the bi-partisan merger. The Governor himself will go into every district where these men are striving for renomination and raise the clear issue that this is "a question of control by the dominant political party or by an irresponsible bi-partisan alliance." All this is in line with the action of the Wisconsin Democratic Convention which read out of the party three Assemblymen who made possible the election of the Republican Senator Stephenson a year ago by absenting themselves from the session. These protests against corrupt bi-partisanship seem to indicate that so long as party responsibility is an accepted fact in our political system, the party must be made actually responsible. All of which, we may remark, is just as true of New York as of Illinois or Wisconsin.

There is at least one man in the world who has remained faithful to the cause to which, in the stirring days of '96, Mr. William Jennings Bryan declared his undying devotion. Mr. Bryan clung to silver with undiminished zeal in 1900,

and held on with some firmness in 1904; but since that time it has faded out into the dim recesses of his mind. Mr. Moreton Frewen, however, is not only unwavering in his fidelity, but strikes ever and ever again the same old note, and utters again and again the same dismal prophecies. The fall of exchange with Asia continues to hang over the destiny of the Western world, threatening its civilizations with destruction. Vast industries are being built up in China, he says in a letter to the London *Spectator*, through the beneficent workings of cheap money; in certain great lines he is convinced that "a quarter of a century of present exchange rates with China will wipe out all her white competitors." But we have already had a quarter of a century in which an abysmal fall has taken place in the gold-value of silver, and about fifteen years in which silver has been continuously worth (in gold) only half what it used to be, or less; and yet no beginning has been made towards that consummation. Chinese exports have been growing at a jog-trot rate, and imports have been growing likewise—no sign of a Westward flood driving out Occidental industry.

From the mixed results of Saturday's Democratic primaries in Texas, it is possible to argue that real issues will bring out a real expression of opinion from the electors. Even Texas heat did not prevent four hundred thousand Democrats from going to the polls, either because they wanted to have something to say on the prohibition question—the chief issue in this contest—or because they were interested in one of the four candidates for Governor. The returns show, however, that a considerable proportion of the electors must have disregarded the platform on which the candidates stood, for, while the submission of a constitutional amendment prohibiting the sale of liquor was carried by some twenty thousand votes, Oscar B. Colquit, an anti-prohibitionist, who opposed submission, seems to have won over his opponents by almost sixty thousand plurality. Judge Poindexter, who is an ardent submissionist, and who had the support of Senator Bailey, ran about even for second place with Gene Johnson, the unconditional prohibitionist. Many minor issues were injected into the campaign which ended Saturday, part of them personal and part sectional, but if the result shows anything it is that the electors used their discrimination to such an extent that they have chosen Colquit, despite the fact that he is opposed to a proposal which a large majority of his party supporters have endorsed.

The way in which selection interferes with the making of trustworthy causal inferences from statistics is constantly being illustrated by such inquiries as those dealing with the effects of smoking on colleges students. A very careful investigation of this kind, conducted by Dr. George L. Meylan of Columbia University, is summarized in the August number of the *Popular Science Monthly*. It comes out quite plainly, for example, that the percentage of smokers who do well in their studies is very much smaller than that of non-smokers; but Dr. Meylan feels bound to call attention to the fact that there are in college two quite different classes of students, those who go to college with an earnest purpose as students and those who go chiefly for the pleasures or social attractions of college life, and that a vastly greater percentage of the latter class is, of course, to be found among the smokers than among the non-smokers. Thus it cannot be inferred that it is the smoking that makes the poor scholarship, the only thing to say is that the two things are apt to go together. Fortunately, however, quite apart from statistics of this kind, "all scientists are agreed that the use of tobacco by adolescents is injurious," and accordingly Dr. Meylan urges parents, teachers, and physicians to "strive earnestly to warn youths against its use."

Hard luck continues to pursue the British protectionists. When Mr. Chamberlain started his great campaign against free trade, seven or eight years ago, his heaviest gun was the fact that for three or four years the volume of British exports had been about stationary; but, as ill luck would have it, the figures almost immediately began mounting up, and in 1907 they reached the colossal total of £426,000,000, as against £290,000,000 in 1903. After the world-wide depression of 1907, the amount of British exports naturally declined, the total for 1908 and 1909 being £377,000,000 and £378,000,000, respectively; but the returns for the first six months of the present year indicate that 1910 will probably break even the unexampled record of 1907. Exports of domestic products from the United Kingdom, for the half year ending June 30, 1910, exceed those for the corresponding period of 1909 by £27,000,000; so that, unless something should occur to check the steady upward movement that has been manifested during the past few months, the total for the year may be expected to surpass that for 1907. What makes the showing all the more remarkable is the fact that average prices of the exported articles were presumably lower in 1910 than in 1907, the *Economist's* index number having decidedly fallen. With British manufactures and commerce thus perversely prospering under the blight of free trade, the Conservatives would be having uphill work trying to win a majority in the House of Commons on the issue of "tariff reform," if the general election were now on.

The speedy collapse of the strike on the Northeastern Railway in England suggests some reflections that are just now very much in point for our own country. What brought the strike to an end was the refusal of the Amalgamated Society of Railway Servants to recognize and finance the fight of the strikers. This indicates that the sobriety and cool judgment which became characteristic of the great trades unions of England forty or fifty years ago, after a preceding period of wild combativeness, have not disappeared from their councils. There has recently grown up in this country a disposition among large numbers of well-meaning and otherwise intelligent persons to espouse the side of the strikers in any contest without inquiry either into the merits of their contentions or the possibilities of the business situation. There is, of course, a point of view from which practically every strike will command the sympathy of kind-hearted persons; we all feel that the lot of the workers is comparatively hard. But if we are to act simply on that consideration, we ought not to stop at approving and assisting every strike actually declared, but should instigate a universal strike; in other words, should go in for revolution.

"DEMOCRATIC" AS A LABEL.

"Government by label" has justly been called one of the leading political vices of modern times. We are all tempted to be nominalists in politics. It is so easy to affix a tag to a given movement or measure—to say, oracularly, "This is socialistic," "This savors of anarchy," or, worst of all, "This is un-American." Yet the effort of the thoughtful citizen should obviously be to pierce through names to realities; to test definitions by examples. Really intelligent opinions cannot be formed, much less can a discriminating vote be cast, on the basis of adjectives or epithets, whether they be applied by friends or enemies of any bill or project or party. Statutes may be passed to assure us that a package stamped "pure food" will really contain it, but there is no law and no authority to guarantee, by the label, that a proposal or political device is of the essence of pure democracy. Yet the description "democratic" or "undemocratic" is confidently employed on all hands, more freely than almost any other in use.

An amusing but instructive example of this was given in the recent set debate in the House of Commons on the woman suffrage bill. That measure was attacked both because it was too democratic and because it was undemocratic. Winston Churchill opposed it because it was undemocratic in giving propertied women the franchise while excluding their poverty-stricken sisters. The Chancellor of the Exchequer could not vote for it because it was not democratic enough. Similarly, the Prime Minister objected that there was no clear "principle" in the bill, and that it was plainly not democratic. Upon all this playing fast and loose with the term "democratic," Mr. Balfour made a really admirable comment. He refused to be caught in the tangle of question-begging epithets. For him it was not a question of ready-made categories or doctrinaire "principles," but of actual political realities. The distinction which he would make, and which he did make with a force that can be but poorly indicated by a mere extract, was substantially as follows.

> My view is that a democracy, properly understood, is governed by consent, broadly speaking. The idea that you can give to every citizen in this country of a given age exactly the same weight in the counsels of the Empire, or that, if you did give them precisely and exactly the same weight, we should get on better than now—all that seems to me to be rather visionary. But I do think that whenever you get to the point that a class feels itself as a class excluded, and outraged by being excluded, then those who believe that democracy, properly understood, is the only possible government for any nation at the stage of political evolution which we have reached must consider whether it is not their business to try to see that the government which is by hypothesis not a government by consent can be turned into government by consent.
>
> Do not answer me by saying, "How loose is the phrase 'government by consent.' How are you going to define it and put it in an act of Parliament?" You cannot put it in an act of Parliament. You cannot put it into any formulæ. Is it on that account worse suited to deal with conditions so complex as those of our modern civilization, and are we not sufficient statesmen to refuse to reject a system because we cannot clear-cut every frontier of our case and be able to say with perfect precision that this instance falls outside your rubric and that instance within? Therefore my ground, broadly speaking, is not a ground of right, and I refuse to be frightened by all the arguments used by the Prime Minister that if you once admit a right you do not know where it will end. I do not admit the right, but I do say that when women have begun, or any large and important section of women have begun, to feel that they suffer under an hereditary disability it is your business to consider the situation and to see if you cannot remedy that grievance.

We are not now concerned with the particular application which Mr. Balfour made of this reasoning to the bill before Parliament; we merely wish to signalize it as the kind of reasoning which has made Anglo-Saxon government the thing it is, and of which we cannot have too much. It embodies, that is to say, the sort of cautious inquiry and feeling one's way politically, with an entire rejection of the either-or logic, and a sweeping conclusion from a general principle, which have made our liberties slowly broaden down and not come in crashes and revolutions. If certain classes of women are given the Parliamentary franchise in England, it will be because men like Mr. Balfour feel that the women have at last fairly "made out their case," and not at all because Englishmen are as yet ready to draw severely logical inferences from some assumed grand axiom of democracy, or are prepared to jump lightly from one case to another alleged to be on all-fours with it. It is this kind of slow-footed advance and refusal to be deluded by names that led Bagehot to thank God that his countrymen were not logical in their politics. There is, however, the truest kind of political logic in this method which insists upon searching the premises to the bottom before undertaking to draw general conclusions.

If in this country our philosophers were statesmen, or our statesmen philosophers, they would have abundant occasion at the present time to warn their fellow-citizens against being led astray by political labels. In particular they need to be on their guard against the all too facile use of the word "democratic." The very fact that it is a noble name, standing for something that is now in our very life-blood, and connected with our brightest hopes of progress, is a reason why we should not permit it to be indiscriminately used in every recurring political hurly-burly. A thousand things are said to be needed or inevitable because they are democratic, and a thousand others are condemned because they are not. Direct nominations, the referendum, the recall, election of United States Senators by direct vote—all these have the label "democratic" eagerly affixed to them, or angrily torn off. But if our democracy is true to its genius, it will not permit itself to be deceived by tags. It will patiently hear what is said and test each case as it comes up, seeking to discover on which side lies the weight, not of assertion but of argument, and will not be afraid of being denounced for acting on the rule of thumb. A thumb is at least a real thing, whereas a label may be only an airy nothing.

PROGRESS IN CITY GOVERNMENT.

For something like half a century the defects and vices of our municipal governments have been acknowledged, by the common consent of all thinking persons, as the one worst exhibit of our great American experiment with democracy. When, in 1893, Mr. Bryce—at once the most friendly and optimistic and the most competent of our foreign critics—said, in his "American Commonwealth," that "there is no denying that the government of cities is the one conspicuous failure of the United States," he made an assertion which, so far from being startling, was but the statement of an undisputed fact. Indeed, the feeling was widely entertained that the vicious character of our city governments was ineradicably connected either with

our democratic system or with the essential qualities of our people, and that all attempts at radical improvement were doomed to failure.

To-day there is no standing-ground for such a view. Substantial progress toward higher standards, both of honesty and efficiency, has been made by most of our American cities. Part of this progress has been effected simply by the advance of public opinion; but a much greater part has come through an improved organization of municipal government. For the past two or three decades there has been a steady growth of the idea that the old aldermanic system was essentially unsuited to the handling of our municipal problems, and charter after charter has been adopted in which the central idea was a concentration of responsibility upon a few persons charged with definite administrative duties and clothed with ample powers. The commission system, which has lately been attracting so much attention, is but the culmination of this movement. It is not a brand-new manifestation; there is nothing revolutionary about it. What limitations are to be set upon its usefulness or desirability remains to be seen; in the meanwhile, there is no denying the remarkable and beneficial results it has accomplished in the moderate-sized but important cities in which it has been tried. The changes that have been wrought in Galveston, in Houston, in Dallas, and in Des Moines, make a most impressive story.

The extinction of graft is a common feature in all these cases, and is in itself a great thing. But the story does not end there. Under the commission system of efficiency and responsibility we hear of municipal credit reestablished, great sanitary improvements installed, business enterprise promoted, splendid park extensions effected, and so forth—all this in a remarkably short space of time, and without any increase of taxation. What such a change in the spirit and character of city government may mean to the happiness of the people, in the course of a generation or two, may easily be conjectured; and, moreover, we have only to look at the progress in beauty and comfort of the German cities which have long enjoyed government of the highest excellence to have ocular demonstration of its possibilities.

Whether a form of government which does well for a city of 50,000 or 100,000 with a comparatively homogeneous population is equally adapted to a great metropolis of cosmopolitan population and with problems far more complex and formidable is, of course, an open question. The experience of Des Moines or Houston, though valuable, is not conclusive; it is probable that similar experiments in larger cities will present more difficulty. But, in the meantime, a vast amount of light has been thrown on the general question of the honesty and efficiency that it is possible to secure by a proper distribution of responsibility, and on the still broader question of the benefits resulting therefrom. The experiment which Mayor Gaynor is now carrying on in New York city is of essentially the same nature. He has cut loose from many a vicious tradition and precedent, and has gone right to the heart of the question of responsible and efficient administration in one direction after another.

In most of the cities that have adopted the commission plan the "recall" has been made part of the system. Of course, this is not an essential feature of the plan, but it is regarded by many of its advocates as in the highest degree important. On this head it should be remarked that the question of the advisability of the recall in the case of municipal officers is of a wholly different character from the same question as applied to members of a legislature or to other political officers. One obvious objection to the commission plan is the placing of unusual discretionary powers in the hands of a few administrative officials; and the recall is designed as a check on the possible abuse of these powers. It has been said, apparently with good ground, that the success of the commission experiment in Des Moines turned largely on the potential use of the recall in the case of some of the commissioners first elected; when these showed signs of a failure to live up to their responsibilities, the prospect of a recall soon sent them back into the middle of the road. The idea of the recall as a universal medicine is repugnant to the spirit of representative government; but it does not follow that it is undesirable as a precautionary instrument for particular classes of offices. Of course, such talk as Mr. Garfield's, when he considered its possible application even to judgeships, is simply childish.

A "LAWYER'S COLUMN."

We have received a printed copy of the unconventional and pungent address which Mr. James Byrne of the New York bar delivered before the State Bar Association of North Carolina on June 29. Without wasting time on generalities about the obvious duty of lawyers as citizens and patriots, Mr. Byrne went swiftly to his point, which is that members of the legal profession are not so active as they ought to be in promoting the intelligent discussion of important public questions. Most of our legislative bodies are made up largely of lawyers; and nearly every burning political issue finally resolves itself into a dispute about laws, in force or proposed; yet lawyers as a rule do much less than politicians or editors in endeavoring to lead the voters to make right decisions.

To make his remedy for this evil concrete, Mr. Byrne urges the establishment of a "Lawyer's Column" in the newspapers. To it he would have members of the bar of high standing and good repute contribute accurate information especially about new laws under discussion. He gives a sample letter, of the kind which he thinks ought frequently to be published in the press, apropos of the railway bill which was passed in the last session of Congress. It consists of a careful and detached analysis of the existing Federal laws on the subject, put into proper relation with State laws, and then a summary statement of the arguments for and against the proposed changes in the law, with a forecast of their legal effect and probable operation in practice. The advantage which Mr. Byrne contends that a lawyer would have, in writing for the purpose of public enlightenment, is the exact habit of mind which leads to precise citation of statutes and bills, and of the decisions of courts in their full context and bearing, as opposed to the loose and slapdash methods of stump speakers, and the hasty writing and partial knowledge of newspapers.

The general idea seems to us to be excellent, and we admit the force of Mr. Byrne's argument for more serious and informed debate concerning the larger matters which agitate our politics. Editors will not be miffed by Mr. Byrne's

quiet assumption that they are too often in ignorance of the precise state of the facts and the true effect of the law. If he can suggest a way of making up their deficiencies, we are sure that they would jump at the chance. Any newspaper would be glad to accept and print regular communications from the leading minds of the legal profession.

The true obstacles to Mr. Byrne's plan lie elsewhere. Could he bring his fellow-lawyers to the scratch? Many grave doubts present themselves. It is not only that able lawyers are very busy men, and that they are accustomed to be well paid for their written opinions. They are, as a class, very sensitive on the subject of having their motives possibly misconstrued. And they would know perfectly well that, if they were to go into print on the controverted political questions of the day, no matter with what pure and unselfish intentions, they would immediately be suspected of an ulterior purpose. If, for example, a leading lawyer were to write some public letters on a pending bill affecting railways, the sneer would at once be heard, "Oh, Mr. Habeas Corpus evidently wants a retainer!" Or, "I see that Mr. Nisi Prius is thinking of running for Congress!" In a word, the work which Mr. Byrne would lay upon his brethren would necessarily have the air of being professional; and everything of that kind, no matter how well meant, is open to unkind suspicions.

We very much fear, therefore, that any newspaper which put the words "Lawyer's Column" on one of its pages would find the space either unoccupied or wasted. The lawyers whom editors and the public would hear gladly would not write, while those for whose opinions nobody cared would do nothing but write. Moreover, they would be continually falling foul of each other, exposing each other's blunders and fallacies, intimating that the other fellow was no better than a pettifogger, and leaving the public rather more in the dark than before how to decide when lawyers differ. We also beg leave to intimate a doubt whether the average lawyer would at all be able to manœuvre his fleet of heavy-armed verbiage inside of Mr. Byrne's "column"! Yet the force of Mr. Byrne's contention remains great. Public discussion is far too trivial and ill-informed; and if the legal profession can in any way aid in making it more weighty and instructed, it is their duty to do so.

GREAT WRITERS THEN AND NOW.

The initial steps have recently been taken toward the formation in England of an Academy of Literature, which, like the French Academy, is to comprise forty members. The original members number twenty-seven, of whom the best-known are Alfred Austin, Austin Dobson, Edmund Gosse, Thomas Hardy, Henry James, Andrew Lang, Lord Morley, Sir Arthur Pinero, and George Macaulay Trevelyan. The list, it will be observed, is arranged alphabetically, a circumstance that has the unfortunate result of placing in the most conspicuous position the name of a writer of verse whom it is almost inconceivable that any representative body of literary men should include among the prospective "immortals," were it not for the accident of his official laureateship; but with this exception the list of the nine "best-known" among the twenty-seven elect represents, in every instance, a high order of literary merit. Possibly George Macaulay Trevelyan is written in the dispatches by error for George Otto Trevelyan; but either father or son would stand well in the company. Two additional members were selected by the original twenty-seven at their first meeting, which was held last week, these being Maurice Hewlett and A. C. Benson. The name of Kipling is conspicuous by its absence; and other names which will occur at once as having claims to a place alongside the names mentioned are those of Shaw, Chesterton, and Wells.

Leaving out Alfred Austin for reasons already indicated, and omitting Trevelyan on account of a reasonable doubt as to which Trevelyan is meant, we have a list of seven names—Dobson, Gosse, Hardy, James, Lang, Morley, and Pinero—representing, with a fair degree of accuracy, the height of literary eminence in the England of to-day; and it is a natural impulse—for men no longer young, at all events—to compare this array with what it might have been half a century ago. Then, as now, there would have been a great number of highly meritorious and highly appreciated writers from among whom a company of twenty-seven might have been selected in a great variety of ways; but the choice of seven is marked out with singular definiteness. Tennyson and Browning, Dickens and Thackeray, Carlyle and Ruskin, and John Stuart Mill—these were the men who, in 1860, were the shining lights of English letters. To the last name, the objection might be made that he was more of a philosopher, economist, and publicist than a representative of "pure literature"; but it would be mere pedantry to exclude from the category of literature a voice like his, which influenced not only the thought but the sentiment of two generations.

Between the two sets of names there is a difference so profound as to be almost startling. It is not a mere difference of greater literary ability—a question of superior mastery of literary art or greater native powers of expression. There is a certain largeness, a certain breadth and sweep, a certain oneness with the great currents of life and thought, that is characteristic of each one of the seven great mid-Victorians, and is absent almost entirely from their present-day successors. Of all of the seven latter-day names, only those of Thomas Hardy and of John Morley represent that quality of high seriousness which belongs to every one of the earlier masters. In the case of Morley, however, notable as has been his record as a writer and a political worker, it is not as a primary source either of influence or illumination that we can think of him, but only as an unusually admirable writer of the second order. As for Hardy, it would be idle to attempt to appraise the merit of his subtle and profound creative work, and to compare it with such wholly dissimilar achievements as those of Dickens and Thackeray; but whatever the result of such comparison, the fact would still stand out that Hardy's work is, relatively speaking, that of a specialist—an artist with his own peculiar method addressed to one type of mind or to one mood of the soul—as against the wide sweep, the abounding humanity, the all-embracing appeal of his great predecessors. In the other fields—in poetry, represented by Tennyson and Browning, and in the great domains in which Carlyle and Ruskin and Mill held sway—there is of course to-day not even the most distant approach to the experience of the older time.

Nor can we flatter ourselves that the difference is merely apparent, and due

to an illusion of distance. It was while these men were living, and in the prime of their powers, that their greatness was most amply recognized and most fully effective upon the minds and hearts of men. Indeed, with the single exception of Browning, we believe it may be said that the fame of all these mid-Victorian writers was nearly at its zenith in the year 1860. We are not counting others of the first rank who might be included if we were to anticipate by a little their coming eminence; for George Eliot had produced "Adam Bede" in 1859, and George Meredith's "Richard Feverel" appeared in the same year. Nor are we counting names which represent a vast popularity and vogue without having a deeper significance, such as Bulwer, or Charles Reade, or Trollope. In this great galaxy of seven names, each one meant, to millions of their contemporaries, a large element of life, a factor without which the world would not be the same. Of which of the seven "best-known" men in the new-born Academy can the like be said? Who among them is a centre of life-giving inspiration, a source of intellectual and spiritual sustenance? Whatever the reason, we have fallen upon a different time—a time when, with great currents of helpful energy and public-spirited zeal flowing alongside the mighty tides of commerce and industry and science and invention, there is yet a lack of something refreshing and vivifying and inspiriting which was poured forth mightily in days that in many ways were far darker.

ENGLISH LITERATURE IN INDIA.

Bombay, India, July 1.

Despite the caricatures that Rudyard Kipling and other Anglo-Indian writers have seen fit to make of "Babu-English," there is no doubt that the Hindu has a better genius for learning foreign languages than has the Briton. Whereas the average Englishman, after virtually a lifetime in Hindustan, has a wofully inadequate vocabulary of Hindustani and an execrable pronunciation, hundreds of thousands of natives in India now speak and write faultless English; millions of boys and girls to-day are acquiring a more or less intimate acquaintance with the English and American masters of prose, poetry, and drama; and the volume of periodicals and books printed wholly or partly in English which daily pours from the presses in the Land of Ind has already assumed gigantic proportions, and year by year is growing in size.

At present there is not a town of any importance in the whole of the peninsula in which an English paper—fortnightly or weekly, if not daily—is not printed. These newspapers are set up and printed by natives, who also prepare and edit all literary matter and correct proofs. The metropolitan cities maintain English daily papers—Calcutta, Bombay, Madras, Allahabad, and Lahore each possessing several dailies printed wholly in the language of the rulers, but brought out and read by the ruled. In these larger cities, several newspapers, also, are printed for the exclusive benefit of the Englishman domiciled in India, and for his half-breed brother, the Eurasian; but although they are edited, financed, managed, and read by the white man, they are invariably set in type and printed by natives. From Calcutta, Bombay, Madras, and Allahabad are issued monthly publications printed in English—all serious reviews, and with two exceptions unillustrated. One of the magazines in question, the *Modern Review*, prints color-types which nearly approach the excellence of colored illustrations in the best American magazines. It seems almost superfluous to add that many of these Indian papers and periodicals are set up by linotypes and printed on modern presses run by steam and electricity.

Exact figures are not available as to the actual number of English papers in India. The total number of all newspapers printed in Hindustan in 1905-06, however, was 747, whereas there were only 674 in the previous year. The number of periodical publications, for the same year, mounted up to 793, an increase of 283 above the preceding year. During this period the Indian post office statistics show that 44,045,566 individual pieces of current literature were received for delivery. At a rough estimate it may safely be assumed that out of this circulation at least one-fifth of the copies were printed in English. It must be remembered also that, India being a poor country, papers and periodicals pass from hand to hand, each copy being read by from ten to fifteen times the number of people that would read it in the United States. Considering the cheapness of Indian labor, current literature is much dearer in Hindustan than it is in America. In fact, the one-cent English daily is an unknown institution, even among the native community in India. The newspaper, as a rule, costs two cents, or more likely, three, four, five, or even six cents. The reason for this is that the newspaper—the English and the vernacular, native-conducted as well as foreign-managed—lacks the patronage of the advertiser.

In contrast with this, the Indian manages to print his books at a very low cost. The English books, especially, are a marvel of cheapness, the native edition of standard works whose copyright has expired being almost half the price charged for it in America. Among English publications, text-books for schools and colleges easily take the first place. The Indian publisher seems to be very ambitious to publish annotated standard books of English prose and poetry for use in the class-room, the notes being specially prepared by an English or native professor with the peculiar needs of the Indian pupil in mind. Deservedly these special editions are popular, and the student buys the foreign book only when he cannot find a reliable home edition.

Fiction and drama are poorly represented. This is probably due to the fact that, after all is said, English is a foreign language, and since the facile pen is the *sine qua non* of a novelist, the Indian must have recourse to his dialect, no matter how poor in expressions it may be. Besides, during the past few years, the native vernaculars have absorbed thousands of English words, and thus they are to-day a far better means of expression than they were a few years since. Of the few English novels written by Indians and printed in Hindustan last year, "Satyananda," by A. Madhaviah, published by the press of the *Mysore Review*, Bangalore, is the only volume of any importance. The action of the plot, which requires 422 pages to work itself out, takes place at Bengras, across between Madras and Bengal, the characters all being natives of the former presidency. You are made acquainted with the modern, Western-educated Indian lawyer, with his fine contempt for moral scruples, who in one respect, is like the American attorney in that he advertises himself through his patriotism and uses it as a ladder to fame, fortune, and position. Then there is the typical ignorant, superstitious Hindu wife, who succeeds in ruining the happiness of her family. You have almost a personal affection for the educated young Hindu, who still retains his religious orthodoxy, and who, no matter how he is circumstanced, invariably reveals himself as a true gentleman. You find depicted, with life-like reality, the treacherous Jesuit managers of an Indian college. The book affords an insight into the contempt with which the natives of the land regard the Christian missionaries, and also throws strong side-lights upon the hatred existing to-day between the white rulers and the brown ruled in Hindustan.

Another interesting English novel from the pen of an Indian, recently published, is "The Slave Girl of Agra," by Sirdar Jogendra Singh. It is an historical romance dealing with Mumtaz-Mahal, in whose memory the celebrated Taj Mahal was built by her surviving consort, the Emperor Shah Jahan. The story is well written and cleverly work-

ed up. This volume has been issued by a London publisher, but is largely imported into India.

The great bulk of the English books, printed in India, save the text-books, are religious and metaphysical. The Hindu has been philosophical and mystic; and the leaders of India to-day are doing what they can to prevent the younger generation from abandoning the ancient religion; to this end they are providing translations and commentaries of the sacred books which the younger readers cannot read in the original. In the present decade, especially, this seems to be the dominant tendency, and, from the presses all over the country, pretentious and unpretentious volumes are poured out, all written with the purpose of keeping the young sheep from straying into the pastures of free thought, agnosticism, atheism, and Christianity—for among the orthodox natives the last-named is put on a par with the preceding heresies. Of the serious attempts recently made along this line a notable example is the volumes entitled "The Sacred Books of the Hindus," by Major Vamandas Basu, now being published by the Panini Office, Bahadurganj, Allahabad.

But for better or for worse, the Indian is losing his love for the metaphysical and is becoming more infatuated with politics. This change is strongly reflected in the English books issued in Hindustan. The leaders may redouble their activities to produce wholesome literature for the religious edification of the English-educated young Indians, yet the political pamphlet by far outnumbers the sacred book. Nearly all the political propaganda work is done through the medium of the English language and among the English-speaking Indians. As a natural result, the majority of the political books brought out in India are published in English.

This political literature may be divided roughly into two classes. The first is frothy and foamy, more or less with a red tinge, and contains nothing but agitation directed against the continuance of Great Britain's rule in India. The second is of a more serious character, it is written with a view to inspiring a sentiment of nationality in the incoherent masses of Hindustan, and appeals to them to arise from their slumber of ages and set out on the path of organized progress. On the one hand, the Indians are urged to give up the hampering ways and prejudicial institutions that have come down to them from the ages, and on the other they are enjoined not to permit themselves to be denationalized.

As showing the present trend of India, I may mention "The Tonsure of Hindu Widows," an essay by M. Subramanyam, B.A., B.L., published by G. A. Natesan & Co., Madras. This little book is one of a series of prize essays brought out by authority of the Madras Hindu Association, which is interested in doing away with hindering religious practices. The author proves, by the "Shastras," the Hindu sacred books, that the practice of shaving the head of the widowed girl has no religious sanction, since they enjoin merely that a Hindu widow shall not dress her hair elaborately.

SAINT NIHAL SINGH.

Correspondence.

ART IN THE AMERICAN UNIVERSITY

TO THE EDITOR OF THE NATION:

SIR: Recently a painter and critic who is well known in the art centres of the world said that, in his honest opinion, "the best art work to be done would shortly proceed from the universities." His statement compels us to consider the standing of art in the present-day American university.

Most of us consider that art is eminently respectable, but that artists are the precise reverse. We have a dim, vague notion that painting and sculpture, like poetry, are the results of a disordered brain. We expect the artist to be a "Bohemian"—which has a bad connotation—and we more than suspect that his charming pictures may be the product or even the direct result of a misspent life. Such is the idea of the public, and artists, as a class, foster these opinions; for many of them, when asked by admiring laymen how they paint pictures, will say that they have worked hard to master their technique, but, with a touch of pride, that they cannot explain how they do it—they really don't know. They leave one to imagine that their art has come straight from the gods, and that they, as the prophets of art, should be considered in a different light from other people. Thus the uninitiated imagine that art is not amenable to law; in short, that it is perfectly non-reasonable.

These two attitudes, that of the artist and that of the public, have determined more or less the present standing of art in the American university. Universities are local, no matter how much one may wish that they were national. There is the University of the East and the University of the West. Each includes art in its curriculum, and the treatment in each is the result of local conditions. The Eastern university realizes that art stands for culture, that much-abused word in the West. Art is, therefore, and for a long time has been, a part of her curriculum; it is taught from the literary and æsthetic standpoint, and here, for all practical purposes, the instruction begins and ends. Drawing is taught, of course, and some excellent design; our best masters of water color visit the university once or twice a week and criticise classes. The courses are, however, intended primarily for architects, for it is thought that other students who take up such studies are loafing. Few understand the value of these courses for laymen. The Western university, with her intense desire to *do* things, cannot afford to pay a good man to lecture on æsthetics and other impractical subjects. She is now laboring under the impression, in very many cases a mistaken one, that the people who are paying the taxes and supporting her must see the most tangible results possible, and that they do not appreciate the value of culture, and, consequently, art, *per se*. She, therefore, introduces classes in the arts and crafts, and leaves the rest severely alone. The great new West is really beginning to see the commercial value of æsthetics, however, and the universities will soon be confronted with a new aspect of the problem.

Now, as Sir Roger de Coverley would say, "there is a great deal to be said upon both sides." The Eastern attitude is over-conservative and senile; the Western ill-considered and puerile. The remedy is a combination of these two attitudes, for it can easily be seen that a fusing of the over-practical and the ultra-æsthetic will give a sane result. What would the combination of present Eastern and Western courses mean? Thorough and consistent study of the history of the fine arts and the conditions that produced them; color theory and the theory of pure design (at these the art schools laugh); technical courses in applied design and in the study of form and color to progress simultaneously with the æsthetics and the history. This combination will undoubtedly come, and it will probably have its inception in the West. In reconstructing the courses, why not try to give to art the same advantages that have been given to other courses, courageously, as if it were really "scientific" and worth while?

The great masters were thoroughly alive; they were well-informed men whose horizons were not limited by their own canvas and clay. We know that Michelangelo was an engineer; that Leonardo da Vinci, also an engineer, was one of the best chemists of his day; that blustering old Benvenuto "admits" that he could do anything at all and do it well. But, layman and artist may say, Leonardo was forced to be a chemist; he and all the rest of them were compelled to make their own colors. Truly a terrible misfortune. To what magnificent flights might their art have attained had they not been forced to take time from it to meddle with chemistry! That is the modern idea in a nutshell. If a man is going to paint let him paint and that is all.

The truth of the matter probably is that Da Vinci was a better painter because he was a good chemist, a good naturalist, and many other things. He was brought closer to the universal good; and seeing it from many different points understood that no good thing was the result of blind chance, and from his very reasonableness was able himself to do good things. The university must aim to teach art under the law; to create the demand for the broad-minded, cultured, and sane artist, and the pure and noble art. Just as soon as the artist becomes a broad-minded man, as soon as he becomes a good business man and can talk intelligently with other men about subjects not related directly to his art, just so soon will he take a great forward step for himself and for his art, and the universities should be the means of his doing so. Then hysterical children will not leave the high schools to study "art." On the contrary they will do sound work in the secondary schools, understanding fully its necessity; they will flock to the universities for sound training, technical and theoretical

inseparably hand in hand. From their very reasonableness they will become the founders of a greater and more vital art, the stimulators of a deeper and truer thought, and will themselves be, as they will help others to be, better, more useful, and contented citizens.

EXPRESSIVE LANGUAGE.

TO THE EDITOR OF THE NATION:

SIR: As the centuries have passed, many peculiar expressions have crept into our language, but none more peculiar and expressive than those that have come as a result of our association with animals. To-day they are accepted by all as authentic and good English, particularly by those who are acquainted with the peculiarities and traits of animals.

We say "a man is a dark horse," and, knowing the horse and his racing associations, we know what kind of a man we are speaking of. Again, we say, "I will win the horse or lose the saddle," meaning, will gain or lose all. How often do we hear this expression when we are told of a good man going wrong, " 'Tis a good horse that never stumbles." Then, again, we see some friend putting on airs, and we say, "He's on his high horse." Sometimes, when we lose through carelessness some valued object or position of trust, we plan to prevent such a recurrence—"when the horse is stolen, we lock the stable." If we see some one aspiring for a position he is not capable of filling, we say, "He's putting the cart before the horse." We hear a loud, boisterous, coarse laugh, and we exclaim, "What a horse laugh!" We see an awkward soldier on parade, and we consign him to "the horse marines," and, when we see a strong fellow, we say, "He's as strong as a horse."

The hog also has added his share to the expressions that make our language so forcible. When we see some fellow taking more than his share of the good things, and wasting them foolishly, we say, "He is going the whole hog." We find, also, that the sheep has done its share, as well, for we call a bad boy in a family, "the black sheep," and when we catch a youth winking at a girl, we laugh and say that "he is making sheep's eyes."

But no other animal has been so closely associated with man as has the dog, and as a result we find many peculiar expressions. We hear of a husband and wife quarrelling, and we say, "They are leading a cat-and-dog life." We hear of a friend who has gone astray, and we say, "He has gone to the dogs." We hear of a useless, good-for-nothing fellow, and we call him "a dead dog." Some man does a mean, contemptible thing, and we class him as "a dirty dog." We come in contact with a cranky, cross old fellow, and we say he is "a surly dog." When war breaks out, we say, "The dogs of war are let loose." When some one is giving it to us good and hard, we tell him "to call off his dogs." If we are not getting along well, we console ourselves with the thought that "every dog has his day." In the game of life we see innocent men accused of wrongdoing, some of which always sticks, and we think of the expression, "Give a dog a bad name and hang him." The wife tells us she has some article for which she has no use, and we tell her "to give it to the dogs." We hear of a man who is always talking, and we tell our friends confidentially that "barking dogs seldom bite." We place an old man in a new position; he cannot master the tricks of the trade, and tells us sadly that "old dogs cannot learn new tricks." In the morning after a night at the club, our friends prescribe "a hair of the dog that bit you."

In fact, if we take all animals, and study language in relation to them, we will be surprised at the thousand and one expressions that have crept into our language as a result of their peculiar traits. Surely we can exclaim, "They are dumb, but yet they speak." DUNCAN W. JOHNSON.

Ottawa, Ontario, July 15.

ALFALFA.

TO THE EDITOR OF THE NATION:

SIR: The etymology of alfalfa, the name of a well-known variety of lucern (*Medicago sativa*) is, I believe, wrongly given in our dictionaries. The Century Dictionary states that it comes to us from the Spanish, and further says that "it is said to be from the Arabic *alfaçfaç*, the best kind of fodder."

This assumes that the first syllable is the Arabic article *al*, which begins so many Arabic words adopted into European languages. The Century Dictionary does not give its authority; but I find the same derivation in Roque-Barcia's great Spanish encyclopædic dictionary, whence I presume Murray's Dictionary also took it. Murray says "Identified by Pedro de Alcalá with Arab. *alfaçfaç*, the best sort of fodder."

Roque-Barcia is untrustworthy; and I think that any trained etymologist would hesitate to accept a derivation involving such a violent change as that of *alfaçfaç* into *alfalfa*, or even into *alfalfez*, which is another and an earlier form of the word in Spanish. Moreover, the source of error is evident, since *fiçfiç* (from the verb *façfaç*) is the Arabic name of this very plant.

I believe that the true etymology may be traced as follows: The first syllable of *alfalfez*, the older form, and therefore the best to trace back, is not *al*, the Arabic article; but the word *alf*, beginning with the guttural *ain*, which few Europeans can pronounce, and which is usually represented by a simple *a*. This word means fodder.

Your readers, even without special knowledge of Arabic, will readily understand the Semitic construction whereby the article standing between two nouns comes to represent the English "of." A grammatical analysis of this construction would here be out of place; but an example familiar to your readers is the title "Sheich-ul-Islam," which means "the Elder of Islam."

Alfalfez (alf-al-Fez), then, is merely the fodder of, or from, Fez. The Spaniards, or the Moors, doubtless introduced this kind of fodder from Morocco (Fez), and hence the designation.

Literature.

SAINTSBURY'S PROSODY.

A History of English Prosody from the Twelfth Century to the Present Day. By George Saintsbury. Vol. III, from Blake to Mr. Swinburne. New York: The Macmillan Co. $3.75 net.

The three volumes of this history of Prosody stand beside the equal bulk of the history of Criticism as the greatest work yet accomplished by the most indefatigable of English critics. If a comparison is to be made, we think the Prosody more valuable than the Criticism. Some experience with the latter as a reference book has brought us to the conclusion that quite as often as not Professor Saintsbury misses the real thing that a particular critic signified—if he does not actually pervert it. In the Prosody, on the contrary, so long as he deals with pure poetic form, he is almost invariably right. As a work for reference these three volumes are, indeed, of little value; they have nothing of the text-book or the dictionary about them, no tabulations and very few metrical schemes. The method is purely historical, and great license is taken in selecting and omitting points for discussion. The advantage of this procedure is twofold. In the first place, it permits the author to render a dry subject extraordinarily interesting, though, of course, this entertaining quality is due as much to Professor Saintsbury's inexhaustible spirits as to his mere method of exposition. Unfortunately, it must be immediately added that his spirits sometimes indulge in pure high jinks. We are ready to forgive a good deal to an author who succeeds in bestowing upon a treatise on metric all the raciness of a political squib, but we must still regret the lack of restraint and decorum which Professor Saintsbury too often seems to regard as essential to vivacity. Thus, in defence of his darling Blake, he exclaims: "If anybody objects to the 'cockney' rhyme of 'dawn' and 'scorn,' he may 'go shake his ears,' which are probably long enough to wave like the reeds that told the story of Midas." Well, "dawn" and "scorn" is a hateful rhyme nevertheless, and as a matter of fact our author scolds Mrs. Browning for less offensive faults. Professor Saintsbury might have been just as entertaining without being vulgar.

But the historical method employed by Professor Saintsbury has a more important advantage than that of interest; it leads him to a sound metrical system, and we cannot be too thankful, in a subject which has called forth more perverse writing than most others, that this book, which for its very bulk if for nothing else will take a predominant place in the teaching of prosody, does not countenance any of the pedantic fads. For

English prosodical theory has been the victim of two distinct and belligerent pedantries. At its beginning, in the Elizabethan days, it fell a prey to the scholars who despised all things modern and tried to revive the classical world. To this end they sought to remodel English rhythms in accordance with the laws of Greek and Latin grammarians. In this they suffered a double error. They supposed, in the first place, that English verse as actually practised was entirely unquantitative; secondly, in attempting to introduce quantity they proceeded on the theory that syllables were long and short in English for the same reasons as in Latin. Thus they held that a vowel followed by two consonants was in English long, whereas a double consonant often has with us the effect of shortening. They overlooked the indeterminate quantity of our syllables, forgetting that the same syllable is often made long or short by sentence accent. The result is that the verse written by them under their arbitrary assumptions is not English, and is not even quantitative, in any sense; it has no rhythm at all.

The consequence of this fiasco was the reversion to an opposite and more persistent form of pedantry, of which the egregious Guest is the High Priest. This school will have nothing to do with classic laws, and is all for the Middle Ages. English rhythm with them was established in Anglo-Saxon times, and the invasion of Romance elements and the Renaissance has troubled but never altered the fundamental Anglo-Saxon metre. Our rhythm is purely accentual, and has nothing to do with quantity. Now, if by "quantitative" you mean the syllabic laws of quantity introduced by the Areopagus, in accordance with classic models, Guest and his fellows are right. If by "quantitative" you mean the division of the line into groups of syllables taking equal lengths of time, they are demonstrably wrong; there can be no rhythm except by divisions of time. If, on the other hand, by "accentual" you mean that these measures of time are marked off by recurring accents, Guest again is right; English verse is "accentual" and differs in this respect from Latin. If by "accentual" you mean that accent alone and the mere counting of syllables, without consideration of time, can make rhythm, Guest is wrong. That is to say, Latin verse is purely quantitative; the word and sentence accents have no recognized effect on the length of syllables, and the feet are marked off purely by the recurrence of regularly long and short syllables without regard to accent. English verse is accentual in so far as the quantity of the syllables depends largely on accent, and the feet into which a line is divided are marked off by regularly recurring accents; but English verse is also quantitative in so far as its rhythm is due to the fact that the feet represent equal quantities of time in pronunciation. Unfortunately, Guest and a succession of Teutonic "accentualists" have taken quantity and accent in the wrong way, and have, so far as was in their power, reduced English prosody to a pedantic nightmare.

Now Professor Saintsbury has been saved from these pitfalls both by his historic method and by his taste. He was in the earlier volumes rather chary of committing himself to any prosodical theory and contented himself with girding at the pedants. In the present volume, he comes more frankly into the open, and especially in his admirable discussion of Guest's system becomes himself almost systematic. The basis of rhythm with him is the foot: that is to say a line is made up of groups, or feet, of one, two, or three syllables each, these groups taking equal intervals of time in reading. Though he misses no opportunity to ridicule the "accentualists" he evidently tries to avoid the word quantity, and uses foot as a kind of non-pedantic term which will rescue him from the theoretic dilemma. But it is easy to see that he really understands English rhythm in accordance with the true meaning of accent and quantity. Nothing could be better than his summing up of the matter in a footnote at the end of his chapter on Guest:

> An article on Greek and English Accentuation in the *Eclectic Review* for 1838, and so exactly contemporary with Guest, contains a proposition which might be fruitfully handled as a text, though it can hardly be accepted as a dogma: "Accent determines that a line shall be metrical. Quantity gives it expression, harmony, variety." I should translate this: "The presence of equal or equivalent feet determines that a line shall be metrical. The constitution of those feet, with the arrangement of their pauses, gives expression, harmony, variety."

The foot is thus almost a perfect analogy for the bar in music. But Professor Saintsbury, curiously enough, after slaying the "accentualists," falls foul of the musical metrists with almost equal vehemence. No doubt he has here some provocation. Musical analogy has led to strange errors; it tends for one thing to overlook the essential fact that prosodical rhythm is a much looser affair than musical rhythm, and allows the reader far greater liberties than any musician would dare take. But apparently Professor Saintsbury's rage against the bar is due to a confusion in his own mind. He seems to think the attempt to express prosodical rhythm in musical notation results necessarily in the same distortion of pronunciation as that which occurs when verse is set to an actual and independently rhythmized tune.

Of Professor Saintsbury's many subtle observations on the rhythm of particular lines and poems, we shall not speak at length. He is here at his best and rarely, if ever, goes astray. We may instance as a specially keen stroke his thrust at the English hexameter for its tendency to "tip-tilt" its dactyls into anapæsts; and, indeed, his distinctions between rising and falling rhythms, between the iamb or anapæst and the trochee or dactyl, are always as sound as they are, by some strange dulness of metrical writers, unusual. But as a matter of fact the book is by no means confined to metrical questions; a considerable portion of it is literary criticism of the most general sort. This relieves the tedium of the discussion, and it also introduces the virtues and vices that are familiar to all readers of his other critical works. Within his own romantic sphere his taste is almost unerring, and he has something like genius in the selection of beautiful passages to illustrate his text. His present work, for instance, is notable as an anthology of quotations, often from unexpected sources, invariably well-chosen and effective. But beyond this praise cannot go, and indeed vigorous protest is needed. He writes always under the old romantic fallacy of the pure lyric; the contents of a poem, in the prosaic sense of the word, are a matter almost of indifference, and the only thing of real weight is the indefinable song quality that reaches its perfection in Blake and Coleridge. Thus "Kubla Khan" is "pure poetry" and is surpassed by the "Odyssey" only as "the hogshead is a greater health than the nipperkin." We submit that to place the iridescent bubble of Coleridge's dream, magical as its enchantment may be, beside the "Odyssey" with its freight of human meaning and its "sober certainty of waking bliss," is to speak from a cloud of German romanticism which should long ago have been dispelled. Professor Saintsbury quotes two stanzas of Blake:

> O Earth! O Earth! return!
> Arise from out the dewy grass.
> Night is worn,
> And the morn
> Rises from the slumberous mass.
>
> Turn away no more;
> Why wilt thou turn away?
> The starry floor,
> The wat'ry shore,
> Is giv'n thee till the break of day.

The poem is certainly not without its exquisite charm, but to say that one "would rather have written these lines than anything in English poetry outside of Shakespeare," is simply to stultify one's self; in the case of a writer like Saintsbury, who is the most voluminous and the best-known living English critic, to say such a thing is to bring discredit on the whole art of criticism. There is a good deal more enters into the making of great poetry than the melodious breathings of a vague revery. These errors do not belong strictly to prosody, but they are

in Professor Saintsbury's book, and they challenge reproof wherever found.

CURRENT FICTION.

The Flower of Destiny. By Margaret Mordecai. New York: G. P. Putnam's Sons.

Here are assembled five tales, ranging in dates from the seventh century to modern times, all relating to what the author is pleased to call the Serail. As a rule the foundation of each story is a single historical fact embroidered as thickly with inventions and descriptions as ever was Sultan's velvet with gold and pearls. Thus the first one, though the story "is entirely my own," is woven about the old Oriental theme of the loves of Ferhad and Sira, and the troubles which fell upon Sira's master, King Chasroes, because he tore the letter of Mohammed which summoned him to embrace the new religion. Another tale introduces Mohammed the Second killing his favorite in the presence of his soldiers to disprove their accusation that in love he had forgotten war. It seems a pity that the author, obviously competent, had not given us history trimmed with millinery instead of the reverse. As it is, she leaves a cloying impression and a haunting memory of the handkerchief-box pictures of the last century. And when will story-writers consult the nautical almanac?—

> The sun had set. . . . a glimmering light appeared behind the mountains. . . . there rose and glittered in the summer night a silver crescent, the new moon of Islam.

The Red Flag. By Georges Ohnet. New York: G. W. Dillingham Co.

The Lehrange-Steingel works lie on either side of the Alsatian frontier. M. Didelot, head of the French establishment, is in theory—and in politics—a Socialist; in practice a very successful and benevolent employer, who, with no idea of sharing the control or the ownership of his business with his workmen, has hitherto kept them so uncommonly well-off and happy that there has never been the least excuse for a labor-disturbance. Into this paradise enters the serpent in the form of one Stylb, an emissary of the extreme Socialists, whose real object is to supplant Didelot as deputy from the district and who succeeds in bringing about a violent strike. Didelot, however, has always his trump card in reserve: he can declare an indefinite lockout, and turn over all his orders to the German branch of the establishment; this, in his anger, surprise, and wounded vanity, he is driven to do.

The situation is interesting and affords some significant contrasts. When a French lieutenant of dragoons, sent out against the mob, with the order, "Receive blows, but do not return them," is shot dead, the troops are confined to barracks, the officers ordered not to go about in uniform, and the body of their murdered comrade is actually shipped off to Paris to avoid the excitement of a military funeral. Emboldened by this treatment, the strikers march across the frontier to call out their fellows from Steingel, and in an instant a howling, panic-stricken mob is fleeing back to France before the charge of a squadron of Uhlans.

Interesting, too, is the variety of types, not so much of character as of opinion: the sentimental Socialism of the "bon bourgeois" Didelot, facile, kindly, and shallow; the rabid class-hatred of the fanatic Grangel; the deliberately and selfishly adopted collectivism of the orator Bouillaud—and, on the other side, the simple, direct Nationalism of Didelot's soldier son, and the romantic Conservatism of his clever daughter.

Were these persons really alive, were they anything but types and mouthpieces, "The Red Flag" would be an exciting story, though as a "document" it would still suffer from the extreme partisanship of the author, all of whose Socialists are knaves or dupes, while every defender of the old order wears a halo of intelligence and virtue.

The translation is stiff, but seldom positively bad.

Those Brewster Children. By Florence Morse Kingsley. New York: Dodd, Mead & Co.

This is the same kind of book as "The Professional Aunt," reviewed the other day in these columns—with a difference. The author of the aforesaid sprightly book conceived of children only as *enfants terribles*, out of whose exploits and remarks the adult is destined to extract a species of agonized amusement. The chronicler of "Those Brewster Children" also finds the infantile mind and habit a source of entertainment, but she is chiefly concerned here with the rearing of the human young as a problem. She holds a brief for the bloodless and blowless method. She regards it as wicked to strike a helpless child, the sure way of undermining its morals and compromising its future. The Brewster parents are not of the brutal sort: they believe in moral suasion and the rule of love. Their three children are saucy and self-willed. The mother is able to get the semblance of obedience out of them only by an endless process of coaxing and nagging, bribes and grieved looks. When she does try a little feeble discipline, the father, who likes to have everything comfortable about him when he gets home at night, turns the attempt to naught. There are plenty of households like this in America, but few disinterested observers are able to view them with the complacency of the present chronicler. The children are so "cunning"; the parents so tender! The horrid spectacle is understood to be that of another couple of parents, bold, bad ones, who spank their children freely with the butter-paddle, and glory in the practice. The children, instead of being subconsciously grateful to this assiduous pair, as most normal children are in real life, become sneaks and rebels, bent only on mischief, and altogether undesirable companions for the "cunning" little Brewsters. However, the author is conscious that all is not absolutely as it might be with her favorites, and we leave the senior Brewsters revolving plans for the self-government of their children according to some vague Judge Lindsay, George Junior recipe. The author's "Afterword" is a little tract against child-beating, which ranges the uplifted slipper and the promoted butter-paddle with "the rack and the thumbscrew, the gag, the branding-iron, and the scourge." To the mind which regards torture and punishment as the same thing, there will be nothing to take exception to in this little story, unless it be the unusually feeble "love-interest" connected with a Miss Tripp and a Mr. Hickey.

In the Shadow of God. By Guy Arthur Jamieson. New York: R. F. Fenno Co.

In spite of its failure to develop successfully its conscious plot, and in spite of its crudities of form, this story has a certain quality of the soil which prevents it from negligibility. At its best, it is a tale of the Southwest by a native. At its worst, it is a series of incidents concerning a young man named Garner who is of no particular importance or reality. As a boy, he developed an ambition to become an "artist"; but a brief experience in a New York art school sent him back to the country without money or encouragement. So he becomes a preacher, in accordance with his parents' wishes. He develops skill as an exhorter in the fold of the shouting Methodists, and for a time aspires to be a bishop. Presently he undergoes a number of perilous adventures connected with susceptible young women, and with difficulty maintains his blamelessness. However, he has not only his religion as a safeguard, but the memory of a girl's face, seen once in the distant city. Of course the face is destined to be brought into his immediate vicinity, and its owner to become, in due time, his bride. In the meantime, he is cast out of the ministry because of a nude picture discovered in his rooms by the elders of the faith: a symbolistic painting of his own. Fortunately, it is no very long time thereafter when his art finds itself vindicated by the agency of a Fifth Avenue auction, and he is free to dedicate his genius to the interpretation of the forests and prairies of his own country. The human beings in the

story are far more human in their weaknesses than in their alleged virtues, in descanting upon which the author inclines to the high-flown. The "shadow of God," it may be said, is that bane of crude religion which the hero identifies with all religion. The world, he says, has groped too long in this shadow: it is his purpose to lead it, by means of his art, "into the sunlight."

The pages are defaced by an incredible typographical carelessness.

GROWTH OF PUBLIC LIBRARIES.

The American Public Library. By Arthur E. Bostwick. New York: D. Appleton & Co. $1.50 net.

The development of public libraries during the last fifteen to twenty years can be gauged by comparing Mr. Bostwick's book with Mr. Fletcher's "Public Libraries in America," which was published in 1894. Many of the activities of which Mr. Bostwick writes at some length were scarcely thought of when Mr. Fletcher wrote his book. Work with children and the schools, the distribution of books for the blind through public libraries, coöperation with museums and art galleries, cooperative cataloguing, open access to shelves, branch libraries, travelling and home libraries—now well-established parts of the activity or administration of most public libraries, large or small—are barely mentioned in the earlier book. In 1894, the only national organization concerned with the interests of American libraries was the American Library Association; now there are separate organizations of State libraries, law libraries, and "special" libraries, the last-named being such as cater particularly to the needs of special business interests. The first, and long the only, State Library Commission was that of Massachusetts, organized in 1890; at present the library interests of not less than thirty-two States are guarded by some such official authority, and in 1908 these commissions joined themselves together in a League. Thus the comparison could go on, showing how the libraries of the country have grown in importance, and their activities developed and multiplied.

Mr. Bostwick, as well as Mr. Fletcher, addresses himself chiefly to the general public, and his book should be read by those who wish to keep themselves generally informed in regard to the educational and intellectual movements of the day. More particularly, it may be hoped that library trustees will give it close attention, as by so doing they will obtain a clearer understanding of the real position and needs of the institutions they are appointed to govern. They might ponder especially those portions of Mr. Bostwick's book, in which he speaks of librarianship as a profession and of the salaries paid to the workers in libraries. These salaries Mr. Bostwick compares with those of teachers, and he shows that, while librarians are apt to receive higher pay than teachers at the outset, it soon becomes stationary, whereas the pay of teachers gradually increases. Few chief librarians, for instance, receive more than $5,000 a year, and chiefs of departments and librarians of middle-sized libraries scarcely ever reach $3,000, while the rank and file of assistants receive salaries ridiculously low. Quite often these salaries are so low "as to preclude the employment of any but those living at home in the city where the library is situated." This, the author continues, "is not conducive to improvement of assistants in quality of work and in education, and, besides, it favors the employment of those who work not for self-support, but for pin-money." In other words, the work in many libraries is done at the cost of the assistants, rather than at the cost of the community for whom the work is done: not a situation to be proud of.

The book opens with a chapter on the Modern Library Idea, the new conception of the library's aims and duties which has arisen, "together with the recent great multiplication of popular libraries in the United States—partly as a cause of it; partly, too, as a result of it." As Mr. Bostwick says, "the library is now required to be an active, not a merely passive, force; it not only preserves and guards its books, but it makes them accessible to those who want them, and it tries to see that those who need them realize that need and act accordingly." And this idea "is tantamount to a confession that the library, as a distributor, must obey the laws that all distributors must obey, if they are to succeed in the largest sense." But, and this is an important point, "the comparison of library work with trade holds, of course, only in so far as both are systems of distribution." The library is not a business concern; its purpose is the quick and efficient service of those who need it, and the introduction of business methods into the administration of a library is justified only so far as it answers this purpose. The function of the modern American library—and this holds good not merely of the ordinary municipal library, but of all libraries that do not serve exclusively a particular group of citizens and students—is twofold, to distribute knowledge and to spread literary culture. Mr. Bostwick deals with both sides of the library's function. The chapter on Reading and Reference Rooms considers the distribution of knowledge, and shows how, under certain circumstances, the library can aid in the advancement of research. There is in this chapter an interesting passage in which Mr. Bostwick expresses the hope that the library, by broadening its collections of original sources and making them available for compilers, may bring new life into the important work of compiling books for the general reader. "When the value of careful, intelligent, expert work of this kind," he says, "is more generally realized it will be done better than it is. Readers will insist upon more readable and more accurate work; publishers will cease to prize speed of execution above all else; writers will refuse to give to the public except of their best. The great mass of informational literature must be produced in this way, and the public library is its laboratory."

The chapter dealing with the Library for the Business Man and the Mechanic is one of the most important in the book, and presents a phase of library work which has so far attracted little attention and which is not sufficiently known among the classes of readers or would-be readers for whose benefit it has been developed. Perhaps the recently formed Special Libraries Association, which is to meet annually with the American Library Association, will aid in spreading the idea among the librarians of our public libraries. The demand for technical books is here, the demand that public libraries shall hold them available is growing, the general realization by librarians that this demand is perfectly legitimate is probably near at hand. In time, perhaps, the function of the library to improve the character of the books it holds available will be understood and employed even in the case of technical books; it is nowhere else so greatly needed.

At the Sign of the Hobby Horse. By Elizabeth Bisland. Boston: Houghton Mifflin Co. $1.25 net.

In these thirteen essays Mrs. Wetmore again comes forward in her vigorous manner with a plea for greater vitality of living and for greater capacity to enjoy life as we find it. But hers is no advocacy of the strenuous life in any narrow sense. She has no detailed creed to urge, and even the Ten Commandments are not insisted upon, though the impression is gathered that they are accepted by the author as perfectly proper and just. Her morality is of a large, airy sort, based upon what the ages have found to be good. Against anything looking like smug modernity or a fetich she rises with a club, and how she can wield it! Speaking of the rather *nouveau* passion for reform among writers nowadays, she says, "No hero to-day—except in our very lightest literature—will consent to own a penny until all the washerwomen in the United States have had their humble needs for 45 H. P. motor-cars supplied." She hates, too, the confidence of the literalist who believes that he has at length discovered realism, and gives him truly a stunning blow: "The dewy shimmerings in the soul of man are as

much an actuality as fried onions or a braying ass."

Her impatience with this modern scurry and complacency of reform one might denounce as unprogressive if she did not evince at every turn a familiarity with the ins and outs of contemporary existence. The titles of the chapters would in themselves be enough to prove her strictly contemporary, having been planned with commercial skill to meet the demand for the latest catchy phrases. Here are a few of them: The Importance of Being Earnest, Common or Garden Books, Strong Meat for the Masses, The Little Member, Upon Making the Most of Life. Nor does this smartness end with the chapter titles. "Dick," she says of somebody's brother, "like most men who married, had become so absorbed in his wife's side of the family that he was almost like a stranger." She observes that Americans, in looking for a chief executive, "do not feel that they can safely trust their destinies to one who is restive under platitudes." "A kindergarten teacher, when asked where beefsteaks came from, hesitated, and then stammered forth at last that the nice, kind, good cow *gave* them to us!"

On the side of freshness of example and illusion, the book is a constant delight. But there is a serious side also to be reckoned with. The author has a firm grip on the past as well as on the present. At first her method may seem archaic. To measure our young men of to-day by the nonchalance of an epic hero reminds one a little of the manner of Raleigh's "History of the World." The reader is soon convinced, however, that her comparisons have their justification, and that her judgment is free from the bias of any given age. After her rapid but vital survey the conclusion, one feels, is inevitable that "Life is not as dark as our contemporaries would have us believe. Nor are we all weltering in blackness waiting for slum adventures to regenerate us. Ginger is still hot in the mouth, and Sir John Falstaff is a far pleasanter and more wholesome figure than these introspective, self-conscious gentlemen who are setting about redeeming humanity by toiling in the sweat-shops, and being ridiculously, tediously, and inhumanly in earnest." "The backward pull of those who have a myopic eye for the meaning of life is tremendous." The airy sanity of these essays is sure to act as a corrective on those who are committed to the futile sort of strenuosity, and to give peace and poise to those whose enjoyment of life is full-hearted and old-fashioned.

It is to be regretted that in a book of such importance two or three glaring blunders should not have been removed. To style them all typographical is perhaps straining a point. And yet such they must be, for every one knows, of course, that Plato did not formulate rules for drama, that Galileo did not say quite *per se muove*, and that the gender of *chose* does not happen to be masculine.

A History of Perugia. By William Heywood. (States of Italy Series.) New York: G. P. Putnam's Sons. $3.50 net.

The Story of Padua. By Cesare Foligno. Illustrated by Giovanni Vianello. (Mediæval Towns Series.) New York: E. P. Dutton & Co. $1.75 net.

Among the many pictorial accounts of mediæval Italian cities which have been pouring forth in English during recent years, we have seen none more solid, painstaking, and trustworthy than Mr. Heywood's "History of Perugia." The author is not only familiar with his material, but he is also an open-minded student of mediæval conditions. More penetrating than earlier writers—Symonds, for instance—he lays stress on Perugia, not because it was the scene of the crimes of the Oddi, Baglioni, and other despots, but because it was a bulwark of the Papacy. He scarcely exaggerates when he suggests that but for Perugia's stanchness and effectual aid "the temporal power of the Papacy would hardly have survived the removal of the Apostolic See to Avignon." The working out of this point of view gives to his study a significance which no mere recital of the incessant revolutions could give. In addition to the chronicle, there are chapters on the mediæval city and on life in Old Perugia, which ought to disconcert those reactionaries, religious and political, who would have us believe that men were better and life nobler in the "great Catholic centuries." His description of the rule of tyranny by which her Papal suzerain requited Perugia's loyalty is noteworthy for its understatement. It may interest some readers who have heard much from Ultramontanes of the indispensableness of the City of Rome to the Pope, to learn that Pope Gregory XII actually sold "the States of the Church and even Rome itself for the ridiculous sum of 25,000 florins" to King Ladislaus of Naples (p. 284). The light which Mr. Heywood throws on Papal expansion lends to his "History of Perugia" more than local or provincial importance. There are many excellent illustrations.

There is little to be said of Sig. Foligno's "Story of Padua." It follows the usual plan of the books in this series: half the volume is devoted to an historical sketch, and the rest to a literary description of the city to-day. The history lacks focus and evolution, so that the political overturns come to have hardly more coherence than a Newgate Calendar. The guide-book part gives the point of view of a native, and so differs from most of its predecessors. It is a pity that the manuscript was not revised by some one conversant with English, who would have prevented such solecisms as "Christiandom" (p. 29), "Trivisian" (p. 51), "Parmisans" (p. 67), and "Catharinic" (p. 70). And why, in an English book, employ the German form "Ludwig" for the King of Hungary (pp. 123, 125)? Vianello's pen-and-ink sketches, like most of the others in this series, are inferior to the half-tones among which they figure.

Modern Business: Vol. I, Economics: A Practical Exposition of the Science of Business, with illustrations from actual experience, by Edward Sherwood Meade. Vol. II, Organization, by Lee Galloway; Business Correspondence, by George Burton Hotchkiss; Transportation, by James Mavor. Vol. III, Accounting, Theory, and Practice, by Leo Greendlinger. Vol. IV, Corporation Finance: An Exposition of the Principles and Methods Governing the Promotion, Organization, and Management of Modern Corporations, by William H. Lough, jr. Chicago: The De Bower-Elliott Co.

The several authors have been allowed "complete liberty in the expression of opinions and conclusions." The scope of the series is no less encyclopædic than the complete circle of modern business. The aim is to afford the equivalent of a university course in commerce and business administration to practical business men and ambitious young employees who are kept from attending routine courses of study. Each volume is supplemented by quiz questions, based upon the text. The questions are to test the reader's apprehension of the subject matter, paragraph by paragraph. The books are of substantial size; are printed legibly on a rather coarse variety of paper; and are uniformly bound in buckram backed with coarse leather.

The initial volume, intended in a way to herald the rest of the series, is by Prof. Edward Sherwood Meade. His capacity was signally instanced by his excellent volume on "Trust Finance"; and by comparison the present work merits very meagre commendation. Not but that there are parts of it which may prove profitable to the class for which it is designed. In particular, the illustrations drawn from the actual practice of large concerns and some of the discussions of particular topics, such as woman's labor, are excellent. But the general verdict must be decidedly adverse. The book reads like a gigantic pot-boiler, speedily written, and slapped together by liberal resort to scissors and paste. The editor of the series declares that in Professor Meade's book the reader will find "the keystone of the business arch." The remark suggests that the keystone is evidently of conglomerate. Not far from one-third of the contents—an assay of the first 100 pages

yields exactly 28 per cent.—consists of lengthy excerpts from other authors.

The grounds for an unfavorable judgment upon the book are as follows: First, there are some glaring errors in scholarship. For instance, we are told that "the early Latin tribes counted their cattle by the head (*per capita*) and from this is derived the modern expression 'capital'" (p. 123). Whereas, unless most modern authorities are mistaken, the mediæval Latin expression, *capitalis pars debiti*, denoting the principal of a money loan, yielded the modern expression "capital." Indeed, "capital" was originally an adjective commonly used to modify "stock," and was at times separated from the substantive.

Secondly, the busy man of affairs and the aspiring young captain of industry are entitled to a clearer explanation of capital formation than appears in Professor Meade's mangling of Mill's unfortunate dictum. To say that "all capital, although saved, is consumed in the process of saving" (p. 76) is either paradoxical or nonsense. Cannan's little shilling primer says excellently that "saving" combines the meaning of storing up and abstaining from some enjoyment. "The addition to the stock is what is stored up, and the enjoyment which might have been immediately obtained by the labor which was actually expended in making the addition to the stock is what is abstained from." Clearly, the net addition to the stock of useful material things is *not consumed* "in the process of saving."

Thirdly, Meade's account of "How rates of wages are determined" is hardly consistent with itself. What shall we say of a paragraph whose opening and closing sentences run as follows: "In each of the classes of labor a certain rate of wages is established which is fixed by the custom of the trade and which changes very slowly" (p. 206). . . . "The standard rates of remuneration within each class are fixed by the demand for the labor of that class compared with the supply of that labor" (p. 206)? Clearly, if custom sets wages, demand and supply do not; and *vice versa*. Apparently, the laws of population, if there be such laws, are not operative upon wage levels, or not sufficiently to evoke any mention of such laws from the writer.

Most provoking of all is the general atmosphere which the volume breathes. Its philosophy is a debased copy of Samuel Smiles. It too often prostitutes the ample ideal of social welfare to the art of money-getting. Thus, "we may criticise some of the methods of Mr. Rockefeller and his Standard Oil associates, in making large profits out of railway rebates, but we can not deny that at the outset each one of Mr. Rockefeller's competitors had the same opportunity to take this advantage of the railroads that he had, nor that his remarkable success shows conclusively his greater skill at the game of business" (p. 295). After this we need not be surprised at the author's complacent acquiescence in protection as a permanent policy, nor at his approval of Trusts. For, after all, the Trust only robs the people for the people's good. "As consumers, their free income may be taken from them in the price of commodities; but this is straightway handed back to them in the form of dividends" (p. 388). Emphatically, this will never do.

The second volume is comparatively innocuous. The part on Business Organization is commonplace; the succeeding part on Business Correspondence is feeble to the last degree; the third part, on Transportation, lacks the penetration such as characterizes Acworth or Noyes, who have written much more incisively and illuminatingly upon the same general topics.

With the third and fourth volumes the series shows a decided improvement. The reviewer is not an expert accountant, and can say only that while Mr. Greendlinger's book on "Accounting" lacks the perspective which such authorities as F. A. Cleveland bring to bear upon this field, it is a thoroughgoing system of illustrating the essential cases of bookkeeping. The numerous problems and illustrations give the treatise something of the appearance of an overgrown commercial arithmetic, but probably augment its serviceability. The fourth volume, on "Corporation Finance," by Prof. William H. Lough, jr., is well done. It is an honest piece of informing work upon the methods of corporate financing; and, while making no pretensions to great novelty, it is a thoroughly useful compend, destined—as the first two volumes emphatically are *not*—to instruct and enlighten both the student and the practical man.

The Buccaneers of America. By John Esquemeling. Edited by H. Powell. New York: E. P. Dutton & Co. $4 net.

This is a reprint of an old English translation from the Spanish rendering, in 1682, of Esquemeling's original Dutch account (Amsterdam, 1678) of the exploits of certain notorious pirates, including himself, in the Caribbean Sea and the West Indies from 1666 to 1676. To this is added the journal of Basil Ringrose, a member of an expedition to the South Sea during the years 1679 to 1682. Esquemeling's story, at once translated into the principal European languages, quickly gained wide popularity, appealing as it did to the lawless spirit of adventure characteristic of his time. Doubtless, its effect was, on the whole, pernicious, despite its crude but interesting descriptions of the West Indies. By us of a later day and a higher ethical standard it can only be read with a shudder, for in a cold-blooded, matter-of-fact style it records acts of cruelty and atrocity which are almost beyond belief.

In Esquemeling's days the island of Tortuga, lying just north of Hayti, was the headquarters of these nefarious ruffians, who enjoyed the protection of its French governor, himself a sharer in their profits. From Tortuga were sent forth the majority of the forays. Complaints by Spain to the courts of London and Paris were met by the formula, "That such men did not commit these acts of hostility and piracy as subjects of their Majesties; and therefore his Catholic Majesty ought to proceed against them according as he should find fit." In other words, France and England washed their hands of all responsibility, refused to regulate the conduct of their citizens, and invited the Spaniards to look out for their own. The supineness of the Spanish crown, resulting in failure to police the Caribbean and to protect its people and its commerce in those parts, is astounding, yet it is quite in keeping with Spanish policy. When Pierre le Grand, in an open boat, with but twenty-eight men, boarded and captured a Spanish vice-admiral's flagship, he virtually served notice on all similar marauders that the Spaniards were an easy prey. His example was speedily followed by Pierre François and Roche Brasiliano, the latter being a gentle soul who roasted Spaniards "alive upon wooden spits for no other crime than that they would not show him the hog-yards where he might steal swine.'

From seizing Spanish ships the step was easy to landing in troops to sack, pillage, and ransom towns on shore. One Lewis Scot did this at Campeche; Mansvelt at St. Catherine and Cartagena, and John Davis in Nicaragua. They took all the money and plate they could find, not even sparing the churches. Davis gathered in some fifty thousand "pieces of eight," or over $60,000. It was this last rover who likewise plundered "St. Augustine of Florida."

As might be expected, much space is given to Henry Morgan, one of the ablest and most ruthless of his tribe, who sacked Porto Bello, Maracaibo, the island of St. Catherine, and Panama, leaving in his wake murdered men and women and the ashes of fair cities. Those who fell into his hands were wont to receive drastic treatment, such as the rack with beating of the body and limbs; burning matches between the fingers; stout cords twisted about their heads "until their eyes burst out of the skull," "applying palm leaves burning to his face under which miseries he died"; "others had their feet put into the fire and then were left to be roasted alive." In such manner did he gain about 250,000 pieces of eight, besides "huge quantity of merchandize and slaves." Such a leader had no dif-

ficulty, of course, in securing recruits. His force on leaving the castle of Chagres to attack Panama, in August, 1670, was 1,200 strong. Horrid as was the whole affair, one can but admire his ability and the courage and fortitude of his men as they made their way across the Isthmus, through the dense forests, some marching on foot, some poling up the streams in canoes. Why the Spaniards, knowing their fate in case of defeat, did not use their overpowering numbers to drive back Morgan's thieves and cut-throats remains a mystery. Resist they did, but in a half-hearted, ineffectual way. The tower of the church is virtually all that remains to-day of this splendid city—for a new Panama was built at a different location not far away. Esquemeling's story does not differ materially from the accepted accounts of those gentlemen of the Jolly Roger, who murdered, ravished, and burned at their own sweet will. Their only redeeming feature was their loyalty to each other and the strict observance of their own rules for dividing the spoil and for indemnifying, on a fixed scale, such as had lost eyes or limbs or become permanently crippled.

It is unpardonable to print such a book without the maps and charts which are essential to following the story, and this is particularly true where, through the lapse of time, many names of localities have undergone a change. The index is wholly unsatisfactory. It does not even contain the name of Morgan!

Ringrose, a man of considerable nautical attainments, was pilot under Captains Sawkins and Sharp in a notable cruise in the South Seas which was comparatively free irom the atrocities of L'Ollonais and Morgan. His diary is minute, containing frequent sketches of headlands, islands, and mountains, and charts drawn by himself of numerous harbors and anchorages he visited. It is a valuable contribution to the hydrography of his day.

As offering contemporaneous testimony to a revolting phase of human activity this book is valuable in the extreme, and it is interesting withal, through the quaint and graphic English of its first translator, and the thrilling episodes it records.

The Teachers of Emerson. By John S. Harrison. New York: Sturgis & Walton Co. $1.50.

Dr. Harrison's book is a welcome example of the kind of study now given to American literature at home and abroad. There is comparatively little question of texts or biography in our simple, public-lived authors; for that reason, perhaps, they have not greatly tempted the German-trained investigator. It has remained for a finer scholarship to exercise itself in ideas, in the history of an author's spirit rather than in the record of his dates.

Dr. Harrison entitles his book "The Teachers of Emerson," but his preface makes clear that he means the Greek teachers. So convinced is he of the exclusive influence of Platonic ideas on Emerson, that he is disposed to deny any debt to other philosophy. Perhaps it is enough to say that one suspects a better showing might have been made for Kant, had Dr. Harrison been looking for his influence instead of Plato's. One who feels most keenly the value of this book may well balk at the author's identification of source with influence. The borrower of an idea may chance to be an initial inspiration. "Any history of philosophy," says Emerson, "fortifies my faith by showing me that what high dogmas I had supposed were the rare and late fruit of a cumulative culture, and only now possible to some recent Kant or Fichte—were the prompt improvisations of the earliest inquirers; of Parmenides, Heraclitus, and Xenophon." As Dr. Harrison reads this passage, Kant and Fichte are not to be reckoned with as important teachers of Emerson; yet a different reading is quite possible, especially as Emerson in this address is emphasizing the present, not the past:

> The new man must feel that he is new, and has not come into the world mortgaged to the opinions and usages of Europe and Asia and Egypt.

This is the one serious criticism of the book, which a different title and a slightly different treatment might obviate. And it must be said that Dr. Harrison makes a strong case for his theory, with just that fortification of exact fact, page, and date, that the minute scholar reverences. The books in Emerson's library, the dates when they were published, or when they came into his possession, his indexes and notes upon his reading, are here made to show his special and overwhelming debt to Plato as it has not been shown before.

One asks one's self, before reading far in the book, how can the epigrammatic mind of Emerson derive from the intricate thinking of Plato? To answer this objection, Dr. Harrison takes a hint from Emerson's own statement that books are for nothing but to inspire; and that the Platonists "may be read for sentences, though the reader fails to grasp the argument of paragraph or chapter." "For I hold that the grandeur of the impression the stars and heavenly bodies make on us is surely more valuable than our exact perception of a tub or a table on the ground." From this notion of reading we can expect little that is exact or accurate in Emerson's scholarship; and Dr. Harrison takes into account these limitations, either when Emerson ascribes to Seneca what he had read in Plutarch, or when through the narrowness of his own nature he arrives at defective theories of art.

The method of the book is clear from its main chapters on Nature, Soul, Love and Beauty, Art, and Mythology. The final chapter on the Ascendancy of Platonism attempts to show for how little other influences counted with Emerson. If it does not wholly convince, it at least proves that Dr. Harrison has mastered his field, and is aware of all the problems his ideas will suggest. The book is evidently the result of very wide scholarship; if it made no other contribution, its specific account of the books through which Emerson came at Platonism would be invaluable. Should Dr. Harrison investigate all the teachers of Emerson as effectively as he has the Greek ones, he might give us our most enlightening study of the poet-sage. At it is, every lover of Emerson and Plato will thank him for this book.

The Universities of Ancient Greece. By John W. H. Walden, Ph.D. New York: Charles Scribner's Sons. $1.50 net.

Part of the prevalent impatience of the study of Hellenism rests on the notion that, unequalled as was the glory of Hellas, it was impermanent. A handful of exceptionally gifted men achieved a great deal in a period of perhaps fifty years or so, with chaos behind them and Rome before. They have therefore no lesson for modern peoples whose chief aim is stability. Of course, a moment's thought explodes this error. Even if we take no account of the pre-classical period or of the Byzantine, still from Pericles to Justinian is a thousand years, rather longer, that is, than from the Norman Conquest to the present day. Throughout that not inconsiderable portion of the history of Europe, Greece dominated the intellectual life of the known world by means of ideas, and in some cases of institutions, of a complete historic continuity.

Mr. Walden's study of the educational system, without dwelling on this aspect of the almost unexampled stability of Hellenism, gives a striking, concrete example of it. After an excellent sketch of Greek education during the classical period and of the subsequent tentatives toward systematization, he dwells on the less well-known period of the actual development of the higher education on an official basis through the personal initiative of the Roman emperors of the second century A. D., and carries his narrative down to Libanius and the end of the fourth century. Mr. Walden has the art to make these latter periods, so barren in some hands, to blossom like the rose. The sophist in particular, a much-abused man, receives justice and is perceived to possess the virtues and vices of the college-professor of all ages. The

whole literature is drawn upon, with discretion; in particular Philostratus's "Lives of the Sophists," a most entertaining work, is made to yield up some of its choicest anecdotes. A specially interesting aspect of the story is the account of the college days of various fathers of the church, whose early training explains so humanly the carrying over of Greek ideas into Christianity. From many points of view the book is a valuable compendium of all that most persons need to know of the ground it covers, while the careful and exhaustive notes are a guide for further reading. It is worthy of remark, however, that neither index nor bibliography mentions Norden's "Antike Kunstprosa," with its suggestive discussion of the sophistic as a modernizing rather than an archaizing literary movement. In the course of a sound definition of the μελέτη, Mr. Walden calls attention to an error of Volkmann's which, though palpable, has not hitherto (to the reviewer's knowledge) been publicly corrected.

Notes.

A new poem by Thackeray, entitled, "A Castaway," has recently heen discovered in manuscript form. It is a translation of Béranger's "Ma Vocation," and is to he printed in the *Cornhill* for August.

From the Insel-Verlag of Leipzig is shortly to appear a facsimile edition of the forty-two line Gutenberg Bihle. The plan includes a supplementary volume of introductory matter, prepared hy Professor Schwenke.

Sturgis & Walton are to puhlish in the autumn a volume of selected passages from the "Diary of Samuel Pepys; as Christmas tokens: "Popular Carols," "Ancient Carols," "Sayings of Dr. Johnson," "Thirty Sonnets," "Lyrics from Tennyson," "Rubaiyat of Omar Khâyyâm," "Lyrics from Browning," and "Sayings from Sydney Smith"; "Young Farmer's Practical Lihrary," edited hy Ernest Ingersoll"; "Periwinkle," hy William Farquhar Payson; "Leopold II, King of the Belgians," by Angelo S. Rapnaport, and "West Point and the U. S. Military Academy," hy Dr. Edward S. Holden, lihrarian of the Academy.

Funk & Wagnalls's list of hooks for the autumn contains "The Science of Poetry and the Philosophy of Language," by Hudson Maxim; "The Training and Care of Children," by Dr. Le Grand Kerr; "The Marvels Beyond Science," hy Dr. Joseph Grasset; "The Day of the Country Church," hy the Rev. J. D. Ashenhurst; "Fundamentals in Education, Art, and Criticism," hy Prof. George Lansing Raymond; "How to Develop Self-Confidence in Speech and Manner," and "How to Argue and Win," hoth by Grenville Kleiser; "The World's Childhood," hy Dr. Louis Alhert Banks; "Jesus: A Problem, a Teacher, a Personality, a Force," translated from the German by George William Gilmore, and "Little Talks to Little People," hy Dr. James N. Farrar.

The places of Sir William Huggins and George Meredith, in the Order of Merit, are filled by Sir William Crookes and Thomas Hardy.

In a careful dissertation (University of Pennsylvania, puhlished at Champaign, Illinois), Dr. L. J. Paetow examines "The Arts Course at Mediæval Universities with special reference to Grammar and Rhetoric." He shows that the Latin classics, which had heen revised in a genuine epoch of humanism at the end of the eleventh century, exerted an ever-declining influence on the curriculum, until in the middle of the thirteenth century, "the humanistic movement died a death from sheer starvation." As causes for this decline, he points to the furor for philosophizing and theologizing, induced hy the discovery of long-forgotten works of Aristotle, a new interest in the physical sciences, the rapid development of civil and canon law and medicine, and the commercial importance of the *ars dictaminis*, the precursor of the notary's art, which led to positions ranging all the way from stenographer to secretary of state. The age had some of the characteristics of our own, in which the preëminence of the physical and, especially, the social sciences tends to drive the classics to the wall.

"The Two Knights of the Swan: Lohengrin and Helyas," (Putnam), by Robert Jaffray, is not a work of original research, hut it offers a good survey of the development of the famous Swan-Knight legend based on the hest authorities, Gaston Paris and others. The author gives careful bibliographical references and brief analyses of the different versions, so that his hook constitutes a useful introduction to the study of the legend. Some things hetray, however, the hands of the amateur—for example, the citation of Meyer's "Konversations-Lexikon" as an authority and similar references to an out-of-date work like Fauriel's "Histoire de la poésie provençale." The author's studies have evidently not extended to the Arthurian romances. Citing Fauriel, he remarks: "He instances a prose-romance wherein the author states that the hook containing the history of the grail was hrought to him from heaven hy Jesus Christ in person!" This prose-romance is, of course, the so-called "Grand St. Graal," which since Fauriel's day has heen rendered accessihle in no less than three different editions. The second note on page three contains two errors, "Bologne" for "Boloyne" in the title of Caxton's "Godeffroy of Boloyne," and "reviewed" for "reprinted"—for Miss Colvin did not merely review, she reprinted Caxton's work in the Puhlications of the Early English Text Society, (1893). It may he added that "miles," which Mr. Jaffray translates "soldier," should he translated "knight." It was the regular word for "knight" in mediæval Latin.

Besides his humor, Mark Twain's chief gift as a speaker was an ability to tell a story dramatically. His gift included also a power of concealing the careful preparation which William Dean Howells tells us, in explaining the humorist's curious system of mnemonics, was Mark Twain's practice. This dramatic quality is well hrought out in the volume of his "Speeches," issued in the uniform edition (Harper). Of the hundred-odd selections given here, the most have as basis stories illustrative of the suhject, told rapidly and simply. One of the hest of this sort is the tale of the drinker who unwillingly put in an application for membership in a temperance society, sailed the next day on a three years' voyage, on which he kept the pledge in spite of longing and temptation, and returned to resign only to find that his name had heen hlackhalled originally. Mark Twain's extravagant imagination made rich material, too, of nearly everything he approached; the speech which appropriately ends the volume, his dissertation on morals, delivered upon the occasion of a dinner given upon his seventieth hirthday, is inimitahle. He rarely attempted oratory, although in his few efforts he succeeded hy evident sincerity of emotion, and by the directness of his words. His appreciation of the worth of hrevity is apparent throughout the hook, which presents, on the whole, an excellent view of him in his frequent rôle of speaker.

"The Lihrary and the Librarian," by Edmund L. Pearson (Elm Tree Press, Woodstock, Vt.), is the second number of "The Librarian's Series," edited by John Cotton Dana and Henry W. Kent. Its author has for some time heen known in the inner circles of the library world as the literary wit of his profession, hut during the last few months, through his clever literary hoax, "The Old Lihrarian's Almanac," and the confusion it has brought upon so many learned reviewers, his literary gifts have received wide recognition, hoth in the library and in the literary press. The present volume will materially add to the reputation thus gained, and, in spite of its brevity, may fairly entitle Mr. Pearson to a first place among the literary interpreters of his profession. The hook consists of some fourteen sketches, all of them setting forth with a happy mingling of fact and fiction some characteristic picture, episode, or problem of the modern puhlic library. Throughout the sketches there runs a vein of whimsical criticism, touching impartially now on the misconceptions, idiosyncrasies, and ahsurdities of the library-using public, now on the weaknesses of lihrary trustees and administrators, and now on the fads, follies, and exaggerations of the modern, trained librarian. Both for the librarian who wishes to see his fact clear and to see it whole, and for the outside puhlic who wish a happy introduction into the lihrarian's world, the book will prove as profitable as it is delightful.

English and American publishers are conspiring at present hy their numerous anthologies to disprove the old helief that French poetry is unpoetical. The latest book is Francis Yvon Eccles's "A Century of French Poets" (Dutton). This handsome volume of library or presentation copy aspect is prepared after the plan of a textbook, with introduction, notices, commentaries on versification and language. The best criticism is, perhaps, to be found in the preface of the editor himself, who has appreciated the qualities and defects of his own work: the heavy and ornate style of the introduction, the irrelevance of some of the notes, the selection of poems based more on personal liking than on the con-

sensus of critical judgment. But the book is a scholarly one; the editor knows well, not only the works, but the lives of the nineteenth-century poets, and though some readers may be puzzled at the omission of old favorites, others may be interested in extracts from less-known writers, whether true poets or eccentrics. In view of Mr. Eccles's own statements, specific comment on omitted or included names would be superfluous. His chrestomathy will help to make French poetry better known to foreigners.

P. S. King & Son of London have published a third edition of "People's Banks," by Henry W. Wolf, who for years past has been endeavoring to transplant to English soil the methods which have been employed in various European lands to furnish elementary banking facilities to the multitudes whose means are too small to bring them into vital connection with ordinary commercial banking. Such banking seems trivial in the details at first sight, but when we learn from official reports that 919 "people's banks" of the Schultze-Delitzsch type in Germany dealt out in advances of various kinds during the year 1908 the sum of £175,000,000, the great economic significance of the movement is beyond question. The author, however, is inclined to rate the moral gain from this coöperative self-supply of credit to the poor as of greater importance than the economic. The one new chapter in the present edition discusses and condemns the tendency of the state, in certain instances, to stretch out its paternalistic hand and "assist" the movement by providing funds at a low rate of interest. Both on the moral and on the economic side he is convinced that this official interference is wrong in theory, and he succeeds in producing considerable evidence that this inner weakness has already disclosed itself in untoward results. The difference between a coöperative banking organization of comparatively poor people formed, financed, and managed by its own members and one thrust upon a similar community by the state is just the difference between self-reliance developed and maintained from within and self-reliance undermined from without. Mr. Wolf's volume would gain greatly by condensation and more systematic arrangement, but even as it is it deserves careful study.

In 1885 the Rev. J. R. Bloxam completed in seven volumes his well-known "Register of the Members of Magdalen College, Oxford." Ten years later the first volume of a new series, designed to supplement and correct the former, was issued under the editorship of the Rev. W. D. Macray, editor of Clarendon's History and Correspondence and other similar works. This series has now reached its sixth volume (1821-1880), with one more volume to come, carrying the record to the present time. It carefully avoids duplicating the entries of Bloxam, so that the accounts given in both series must be consulted for the whole period of four and a half centuries. But it contains, what is not in Bloxam, a very complete set of extracts from the registers and bursars' accounts relating to gifts, subscriptions, and appointments, beginning as early as 1454, and closing with December 17, 1880. The last entry records the death of the college steward at the age of seventy-nine, after a continuous service of fifty-one years! The biographical and financial items are chiefly of interest to the members of the college and to Oxonians at large, but the occasional details of management have a value for the history of university education, wider even than that possessed by Bloxam's chronicle.

The literature of American political history receives an interesting accession in "The Federalist Party in Massachusetts to the Year 1800," by Dr. Anson Ely Morse (Princeton: Published by the University). Prepared in the first instance as a doctor's thesis, and preserving, in its voluminous footnotes, the traditional character of such undertakings, the work is of broader scope and more general interest than its title might indicate. While the details of local party origin, management, and growth are not neglected, they are not allowed to overshadow the larger questions of the influence of national affairs on State politics. Students will find of most value the account of the effect of the French Revolution upon both Federalists and Republicans, and of the attitude of the clergy, Federalists almost to a man, towards their political opponents. The political aspects of American ecclesiastical history, indeed, have nowhere a more striking illustration than in Massachusetts at this period, when the Congregational ministers, thoroughly alarmed at the growth of political radicalism and religious indifferences, rose in their might to combat the allied forces of Unitarianism and Universalism, Jeffersonian republicanism, and Paine's "Age of Reason." Dr. Morse, basing his work on a painstaking study of newspapers, sermons, and local histories, has on this point made a contribution of real importance. Fifteen appendices, some of them in reality small monographs, contain a good deal of matter that might well have been incorporated in the text.

To the enthusiast who has spent many spring seasons studying the tricks of fishing for brook and river trout, G. E. M. Skues's "Minor Tactics of the Chalk Stream" (Macmillan) is a mine of timely suggestions. But the writer, though an Englishman, is a traitor to all the fondest fancies of British anglers. He dares to advocate wet flies as a substitute for dry flies under certain conditions, even on the chalk streams. It is gratifying to the American fisherman to hear that a Briton thinks there is quite as much art in hooking "the big fellow" with a half-submerged lure as with a floating artificial insect; all these years English writers on fly-casting have scorned the wet fly as an amateur's decoy, and Mr. Skues has been the object of good-natured bantering in sporting periodicals because of his heresy. "It is true enough," he says in summarizing, "that there are days and times when the dry fly will beat the wet fly hollow, but there are days when the converse is the case, and from experience I can recommend the trial of the wet fly on those dull, nervy days of the milk-and-watery glare." Aside from discussion of the wet and dry, Mr. Skues's book must prove wonderfully good reading to fly-casters of both schools. It contains scores of attractive anecdotes from the brookside, told entertainingly and with an expert's regard for details. The writer knows his favorite sport in all its phases. Yet he is a wise enough fisherman to confess that even a lifetime angler cannot explain the tastes of the speckled trout. "Indeed, why a trout should take any artificial fly is a puzzle to me," he says. "The very best are not really very like the real thing."

In a monograph of forty-two pages, Frau von Bartels (wife of the well-known Munich artist) attempts a new interpretation of the famous Bronze Liver of Piacenza, found in Italy thirty years ago, which has been the subject of much discussion among archæologists. It is now universally admitted that the bronze really represents the model of a liver—probably a sheep's liver—and that it was used as an object of instruction in an Etruscan centre to teach the Etruscan method of divining the future through the liver of a sacrificial animal. We know that this method of divination was in vogue among the Etruscans, as among the Babylonians, and that, through Etrurian influence, it was introduced into the Roman cult, though subsequently the Romans added to the inspection of the liver the examination of the heart and lungs. The Bronze Liver of Etruria dates from about the third century before our era, and is, therefore, a comparatively late object. It is, however, according to Frau von Bartels, a copy from a much earlier period; and instead of regarding the Etruscan words found on the object as the names of deities, our author is inclined to believe that they revert to the early period when what afterwards became names of deities were used to convey certain attributes and conceptions connected with the gods. She believes that these attributes formed the starting point for a semi-mystical development of religious ideas; and, as a further consequence, the parts of the liver and the markings on the liver represented on the object were likewise interpreted symbolically. Thus the finger-shaped appendix of the upper lobe, which played a great part in divination, became the Divine Mountain, regarded as the dwelling place of the gods. In the same way the markings on the liver became the regions to which the gods were assigned. Passing in this way from one part of the object to the other, she reaches the conclusion that this Bronze Liver is a reproduction of the Etruscan cosmological system. To follow her ingenious discussions in detail would carry us too far; indeed the monograph must be read carefully in order to obtain a definite view of the theory propounded. Its ingenuity and suggestiveness cannot be denied even by those who are not able to accept all the deductions. ("Die Etruskische Bronzeleber von Piacenza." Berlin: Springer.)

A frightful famine is the chief event in the three years covered by the fourth volume, "The English Factories in India," of William Foster's excellent calendar of documents relating to the English in India (Frowde). Millions of the natives perished from bad harvests, followed by great floods. "Manie dead bodyes laye uppon the hye way; and where they dyed they must consume of themselfes, beinge nobody that would buirey them. In the cytty of Suratt ther is so great a stanch of dead persons that the sound people that came into the towne were with the smell infected, and att the corners of the streets the dead laye 20 togeather." So runs a typical letter. But in spite of the checks to gain due to the famine, to the seductive practice of pri-

vate trade by the company's own merchants, and to the Dutch and Portuguese competition, the English trade in India and the Persian Gulf steadily throve. The Portuguese were especially troublesome, but were no match for the English in an actual conflict. In 1630, forty-five Portuguese frigates could not beat five English vessels; in a land-fight, which made a great impression on the natives, the Portuguese were routed and driven to their ships, with a loss of several killed and twenty-seven prisoners, while the only loss on the English side was a fat corporal, who drank too much cold water when overheated.

Hunter and other historians have been accustomed to give 1633 as the date of the first English venture to Bengal; a letter on p. 183 shows that two years prior to that date the English made a voyage thither, laying "a good beginning to a future hopefull trade." A letter of 1632 suggests a considerable consumption of punch by some of the agents. This appears to be the earliest mention of this famous drink, the name being derived from the Hindu panch, "five," in allusion to the number of ingredients used. Many of the merchants, on the other hand, had much of the Puritanical spirit. Fines were imposed for non-attendance at daily prayers and divine service on Sundays. There were many complaints and regulations against drinking, gambling, filthy talk, and the "multitude of sacrilidgious and abhominable oaths, which are imitated by the heathen people who have learned to stamer a little English." It is interesting to note that Henry Hudson's son, Richard, appears several times in these pages. In 1614, when practically no hope remained that that famous explorer would ever be seen again, his "wife or widdowe," as she is pathetically termed, implored the East India Company to give employment to Richard; this the company did, "conceyvinge that therein they were partly obliged in charitye to give assistaunce, in reguard that his father perished in the service of the commonwealth." The frontispiece is a reproduction of Van Dyck's portrait of the Earl of Denbigh, who was the first English nobleman to go touring in the East. He was proud of the tour, and the portrait shows him dressed in a semi-Indian costume and attended by an Indian servant, with a background of tropical scenery.

A little volume on the "History of Caste in India," by Shridhar V. Ketkar of Cornell University (Ithaca: Taylor & Carpenter), attempts to give a new interpretation of the vexed question of caste from the point of view of a native scholar. Mr. Ketkar protests against the translation of *varna* as caste; but this is not a new idea. It is only because the idea of caste is foreign to us and because *varna* was originally rendered by "caste" that this remains a convenient word with which to translate what in strictness should be "class" or "order." Yet the correct word for caste was constantly interchanged by the Hindu writers themselves with the word *varna*, and even Manu, with whom Mr. Ketkar is chiefly concerned, is not consistent in his use of the words. Manu's date is put rather late by Mr. Ketkar, who assigns him to the third century, A. D., chiefly on the ground that the Andhras are mentioned in Manu as a low caste, which, as Mr. Ketkar thinks, could happen only when the Andhra race of warriors was sunk to a low level, as it was in the third century. In his ethnological appendix Mr. Ketkar criticises Risley, and maintains that even the Dravidians, in fact, all the people of India, "with the probable exception of the Bengalese and the northeastern frontier tribes," are Caucasian. This is a view requiring more arguments in its favor than are given by the author in the present monograph, and more space to discuss than the limit of this note permits. As Mr. Ketkar promises to write a series of monographs, he will probably take up the subject again. At present it seems to be as inconclusive a suggestion as that given to the world a few years ago in regard to the "Aryan" Ainos of Japan. Mr. Ketkar, by the way, makes a timely protest against confusing "Aryan" and racial characteristics. To the Hindu the word *arya* was not ethnical but ethical. Arya was noble; an Aryan was a gentleman, of whatever race. Yet even here it must not be forgotten that the "noseless" people mentioned in early Vedic times show race-signs not forgotten later on when the "regenerate" (high-caste) Hindus are particularly described as having "fine noses."

Sir Thomas Holdich, whose previous volumes on the "Indian Borderland" and "India" have already been favorably noticed in the *Nation*, adds this year a third volume to the series of his instructive works, and in "The Gates of India" (Macmillan) gives a narrative of the history of the borderland to the west and northwest of India, Baluchistan, Afghanistan, Seistan, etc. He supplements the accounts of ancient writers with his own rich experience of twenty years' wandering through these countries, and the result is a volume made up of history and modern geography, which contains all that is known about the rude barbarians without the "Gates," from the time of the early explorers to the present. Sir Thomas concludes, as a political moral to his tale, that "we must have men and material sufficient . . . to guard these gates when open, or to close them if we wish them shut." Less reliable is his extraordinary statement (p. 241) that Merv had "Christian congregations, both Jacobite and Nestorian, about 200 (sic!) A. D." As Nestorius lived in the fifth century and Jacob Baradal, founder of the Jacobites, in the sixth, one wonders whether the authority for this palpable *lapsus* is the printer's devil or merely one of those erratic historians who derive all Christianity from the farther East. American readers will be interested to see that more than sixty pages of this work are devoted to "American Exploration" in Afghanistan, being a résumé of "Masson's weary walk" in the thirties of the last century. "Fifty years elapsed before the footsteps of Masson could be traced with certainty. As an explorer in Afghanistan he stands alone. His work has never been equalled."

"Germany of the Germans," by Robert M. Berry (Scribner), is an English compilation of heterogeneous facts about various aspects of the German empire of to-day. In spite of the author's disclaimer, the work is hardly more than an ill-digested mass of statistics. "The facts are given: the reader is left to draw his own conclusions." We have not been sufficiently interested in the book to undertake any certification of the figures. They seem to be authentic, and American readers may find the compilation a convenient source of information about contemporary German politics and commerce, as well as national and municipal enterprises of many sorts. Mr. Berry would have done well to limit himself to these practical matters. His account of the organization of the empire, following a somewhat gossipy chapter on the Emperor, is, though it contains nothing new, the most readable part of his book. The chapters on literature, music, art, and philosophy are grotesquely inadequate. There are some thirty miscellaneous illustrations.

The number of matriculated students attending the twenty-one universities of Germany during the present summer semester is 54,845, including 2,169 women. A year ago there were 51,700, and ten years ago 33,700. Besides these matriculates there are 2,686 men, and 1,226 women as hearers, making the whole number in attendance 58,757 (55,554 last year), of whom 27,577 (25,638) are in the ten Prussian universities, 9,369 (9,074) in the three Bavarian, 5,297 (4,931) in the two Baden, and 12,602 (12,057) in the remaining six universities of the empire. As regards the departments of study, 15,475 (13,911) devote themselves to philology, philosophy, and history, 10,682 (9,462) to medicine, 7,937 (7,385) to mathematics and natural science, 2,406 (2,198) to cameralistics, or finance, 1,264 (1,238) to dentistry, 1,840 (1,766) to Catholic theology, and 2,507 (2,398) to Protestant theology; only jurisprudence, 11,323 (11,657), and pharmaceutics, 1,147 (1,154), show a diminution of students in attendance. Of the several universities Berlin takes the lead in numbers with 7,902 (7,194); then follow Munich, 6,890 (6,547); Leipzig, 4,592 (4,581); Bonn, 4,070 (3,801); Freiburg, 2,884 (2,760); Halle, 2,451 (2,310); Breslau, 2,432 (2,347); Heidelberg, 2,413 (2,171); Göttingen, 2,353 (2,239); Marburg, 2,192 (2,134); Tübingen, 2,061 (1,921); Münster, 2,007 (1,760); Strassburg, 1,964 (1,935); Jena, 1,817 (1,606); Kiel, 1,760 (1,593); Würzburg, 1,429 (1,369); Königsberg, 1,381 (1,293); Giessen, 1,334 (1,271); Erlangen 1,050 (1,158); Greifswald, 1,029 (967), and Rostock, 834 (743). Erlangen, alone, has fewer students than last summer. The increase in Leipzig and Strassburg has been very slight, in Kiel, Jena, Berlin, Munich, and Münster considerable. In the list Halle has risen from the seventh to the sixth; Heidelberg, from the ninth to the eighth; Tübingen, from the twelfth to the eleventh, and Münster, from the thirteenth to the twelfth, while Strassburg has fallen from the eleventh to the thirteenth. Instead of 2,169 women, as at present, there were 1,432 a year ago, 320 three years ago, and 137 five years ago, when women were admitted only to the universities of Bavaria and Baden, and to Tübingen in Würtemberg. Of the 2,169 female students, 1,700 are Germans and the rest foreigners, mostly Americans and Russians. The increase in numbers is due in a great degree to the fact that girls have recently obtained in Germany better facilities for pursuing preparatory studies. In this semester 1,217 (699 a year ago), devote themselves to philology, philosophy, history, and kindred branches, 512 (371) to medicine, and to the natural sciences, 313 (245), to political economy, 55 (42), to dentistry, 38 (44), to law, 26 (23), to evangelical theology, 4 (4), and to pharmacy, 4 (4).

The only decrease is in dentistry, and the greatest increase in philology, philosophy, etc. We may add in this connection that in France there are now 3,862 female students in the universities, of whom 2,042 devote themselves to philology and literature, 1,074 to medicine, 508 to natural sciences, 152 to jurisprudence, and 86 to pharmacy. Of the women in German universities nearly one-third, 626 (417), are in Berlin, 204 (114) in Bonn, 200 (110) in Göttingen, 191 (138) in Heidelberg, 176 (148) in Munich, 116 (90) in Freiburg, 100 (64) in Breslau, 68 (38) in Marburg, 68 (25) in Münster, 60 (38) in Greifswald, 56 (30) in Königsberg, 41 (14) in Jena, 37 (26) in Halle, 36 (30) in Giessen, 35 (9) in Tübingen, 34 (18) in Kiel, 34 (21) in Strassburg, 22 (16) in Erlangen, 9 (9) in Würzburg, and 5 (0) in Rostock. There are also 1,226 women as hearers, making the whole number in attendance 3,395.

Léopold Victor Delisle, a grand officer of the Legion of Honor, and for many years administrator-general of the department of manuscripts in the Bibliothèque Nationale, died last Friday in Paris, at the age of eighty-four. He was a member of several learned societies interested in the history and the antiquities of France, and wrote extensively on these subjects. His works include, "Etudes sur la condition de la classe agricole et l'état de l'agriculture en Normandie au moyen âge," "Histoire du château et des sires de Saint-Sauveur-le-Vicomte," "Le Cabinet des manuscrits de la Bibliothèque nationale," "Chronique de Robert de Torigni," various palæographical and bibliographical essays, together with descriptions and summaries of important manuscripts.

Science.

To those familiar with the doctrine of his earlier books, the latest volume of the Inner Life Series, by Horatio W. Dresser, with the title, "A Message to the Well," (Putnam), brings little that is really new. To others it may be a welcome restatement of the principles of mental healing. The title belongs more exactly to one of half a dozen answers to appeals for personal help or explanation, here printed together. Some of these have already been published as contributions to periodicals. Much of the book is concerned with a discussion of the Emmanuel movement which is looked upon as "legitimately carrying out the therapeutic practice of Mr. Quimby," in which, however, the individual is a mere agent, the real power coming from above. Essentially his criticism of the movement is that it is not enough to trust to subconscious processes and suggestion, even though these play a certain rôle; there must be a more fundamental conception of the reality of a divine presence. This idea is elaborated in a fashion which will interest all who care to follow these questions further.

"The Boys' Book of Airships" (Stokes), by Harry Delacombe, is by no means a child's story-book, as one might suppose, but a simple, well-written narrative of the evolution of the various types of aerial crafts; and, though intended primarily for the young, it is none the less interesting to the adult. It should seem as if the author had greatly deplored the relative inactivity of his countrymen, the English, as compared with the French and the Germans, in matters pertaining to aerial navigation. As a consequence of this, his avowed purpose in writing the present book was to interest the rising generation of Englishmen in aeronautics, with the underlying hope that he might inspire some of his young readers to adopt the profession of an aeronaut. In his opinion, "it will be an honorable and glorious profession, affording opportunities for distinction which could scarcely occur on the earth or sea-level, and becoming of greater importance every day." Rather more than two-thirds of the volume is given over to a consideration of the history of human flight up to that point where the coming of the petrol motor, a few years ago, and its adaptation to the glider made possible the successful use of the aeroplane proper. The greater proportion of the rest of the book contains little more than a succession of descriptions of the leading types of heavier-than-air machines of the present day. Reference is made, here and there, to the more comprehensive and scientific treatises which deal with the whole subject of airships, in case the reader should wish later on to get more light upon various questions which do not fall within the scope of the present treatise. The volume contains nearly one hundred illustrations, and the press work is of more than usual excellence.

A new number of the Rural Science Series, "Fruit Growing in Arid Regions," by Prof. Wendell Paddock and Orville B. Whipple (Macmillan), fulfils its purpose satisfactorily. It is addressed to growers in the inter-mountain country of our West, and in a well-illustrated volume gives the result of recent experiment and orchard practice. But while we can recommend this book for use in the arid regions, we are more struck by its value for the Eastern orchardist. It will teach him that only by following Western methods can he hope to equal the better grade of Western fruit. Not until he learns to cultivate and prune and thin scientifically will he be on the way to make the best of his natural advantages of locality and climate. Even then he will not be able to sell in the cities of his own State until he learns to pack attractively and to organize for marketing.

Music.

Instruments of the Orchestra and Precursors of the Violin Family. By Kathleen Schlesinger. New York: Chas. Scribner's Sons. 2 vols. $6 net.

The author of this volume has attacked one of the most difficult problems in musical history—the genealogy of the violin—in a volume of 441 pages, and proclaims boldly that the conclusions reached by her differ entirely from those of such authorities as E. J. Payne, E. Heron Allen, Antoine Vidal, Laurent Grillet, Fétis, Julius Rühlmann, and others, who derive the violin from the Moorish rebab for the reason that, as far as is known at present, the bow was first used with that instrument in Europe. Nor does she side with those who trace the ancestry of the violin to the Welsh crwth. The immediate precursor of the violin was, in her opinion, the guitar-fiddle, or bowed guitar, which in its perfected form was known in Italy as the lyra; and from that she traces the ancestry back to the Greek kithara, with much evidence of careful and independent archæological research. The problem is so involved and obscure, and so many quaint instruments not among those fittest to survive come into consideration, that it is impossible in a review to indicate the line of argument, or to pass judgment on her claim. As she herself admits, we still have almost everything to learn concerning the archetypes of European instruments in the East, and the manner in which they were made known to the nations of the West. Not a few experts will be likely to object to her attempt to make the soundchest (instead of the bow) the most important characteristic of the violin, thus shifting the line of argument. At the same time, the writer of these two volumes deserves unstinted praise for the way in which she has studied and delved and presented the results of laborious research. Her work will be indispensable to all who are interested in the genealogy of the queen of musical instruments. The bibliography, a monument of painstaking labor, takes up 99 pages, while the index fills 53 pages.

In the case of the other orchestral instruments, to which the first volume (212 pages) is devoted, only a paragraph is given in each chapter to the question of origin, the other points considered being construction, production of sound, compass, quality of tone, and possibilities. This volume, therefore, has a practical value, and as it is, like the other, very fully illustrated, it will interest also those who simply desire to know something about the sources of the wonderful sounds produced by a modern orchestra. There is no reference to the heckelphone or the celesta, and in the brief chapter on the viola one misses mention of the new type of instruments invented by Ritter, which so aroused the enthusiasm of Wagner. Otherwise the treatise meets all requirements. Interesting information is given as to the manner in which the problem of imitating deep church bells in "Parsifal," which Wagner was unable to solve to his satisfaction in 1882, is now dealt with. The author got her information direct from Bayreuth. The tones as heard there are a combination, being produced by (1) a large instrument with four strings, constructed somewhat on the principle of the grand piano; (2) four gongs tuned to the pitch of the four notes; (3) a bass-tuba which plays the notes in quavers, to help to make them more distinct; and (4) a fifth gong on

which a roll is executed with a drumstick.

Art.

BERLIN ART EXHIBITION.

BERLIN, July 12.

Until the second of October, visitors to Berlin may see the annual art exhibition. The display numbers over two thousand works of art, including oils, water-colors, pastels, sculptures, and architectural models. That German art is alive—perhaps too much so—to every fad and fancy of the artistic world, an examination of this collection will show; but, happily, one also meets with the work of those who follow the Scriptural precept and "hold fast to that which is good" in the tradition of their art. By which we do not mean to extol a blind obedience to ruling conventions. It should seem, for example, that sculpture were just happily emerging from the centuries of trammel bestowed upon it by Michelangelo when he discarded all sculpture but the pure white. That a tinted cast produces a better impression than the uncolored original, the camera testifies. Of this fact modern artists are now aware, and the sculptors who exhibit at Berlin are no exception. But to return to those who cling to tradition: it should occasion no great surprise to discover a frank imitation of Turner or of Corot, but to uncover a portrait in the spirit of Memling is a distinct surprise. Yet capitulation is necessary before that Flemish-like portrait head of a girl (Mädchenkopf) by Robert Wellmann. Verisimilitude in execution, a simple but vigorous color scheme, and exquisite tone, especially in the flesh, constitute its charm.

The exposition indicates generally that the seventeenth-century Dutch interior painters still furnish inspiration. Müller-Schönefeld's Brother and Sister (Die Geschwister) has all the subtle color harmony and artfully homely composition of a Vermeer. His portrait of a woman reading (Lesende Frau) is thrilling for similar reasons. If these canvases are inferior to those of their Dutch exemplar, their inferiority lies in the lack of that lovely velvet-like finish which is the property of every Vermeer. One might mention other men like Schönnenbeck, Müller-Cassell, and Alfred Höhn, who have produced interiors of almost equal merit and of like source of inspiration.

In devoting a special room to the pictures of Julius Bergmann, the committee have made no mistake. The present writer found these canvases deeply moving. Chiefly rural in subject, they range, in their interpretation of the moods of nature, from the glaring luminosity of full mid-day to the fresh dawn of a morning, or the after-glow of an evening. Even the casual observer would remark the versatility of method—the fine adaptability of technique to subject in hand. The same remark holds true, only in less degree, of the other artists whose work is exhibited in extent. Although successful in pure landscape, Bergmann is perhaps most happy when he localizes his scene by the introduction of sheep or cattle. Never, however, does he permit his animals a preponderance over the background. Such a canvas is his Evening at the Pool (Abend am Tümpel), which one may say combines the qualities of a Corot and a Troyon. The method, while unmistakably impressionistic, is nevertheless subordinated to the subject, and does not overtly flourish the fact of its existence in the face of the observer.

Another painting of a most satisfying sort was the Rising Moon (Mondaufgang) by Max Uth. The problem was the play of the weird moonlight over a mysterious wood. Among many subjects that put a strain on one's moral tolerance it was stimulating to come across Fritz Burger's fresh and cheerful portrait of the youthful H. K. In addition to this accidental merit the portrait had real qualities of force and vividness.

The most vivid and most stenographic treatment of all was to be found in Ludwig Vacatko's Horses at the Pond (Pferde am Weiher). With but a few significant strokes he has embodied the action of the animals and conveyed the sense of motion. In the portrait of the artist and his family, by John Quincy Adams, one was also conscious of force, but of a more potential kind. The observer derived an impression as of strength held in reserve, but none the less potent. A picture that delighted me, with its skilful rendering of bluish-green water encircling a rocky ledge, was Karl Boehme's Cape St. Martin, near Biarritz. Also fascinating for its delicate harmony and cool tones was the portrait of his wife by Schulte Im Hofe. Among those pictures which did not impress at the time, but which one recalled afterwards, may be mentioned Emil Burmester's realistic wrestling-bout, and Franz Paczka's Hungarian peasants, with their audacious greens and rich browns.

As to general impressions, the writer would speak most favorably of the commendable showing of the landscapists. Sunsets are a favorite theme, and are skilfully handled. The trick of representing a shaft of sunlight streaming through a break in the clouds has been mastered by many. The glare of the mid-day sun by the seashore, the cool shade in the grove of an afternoon, and the evening forest gloom, are problems of light and atmosphere that have found clever solutions. But all these good qualities are outweighed by the negligent attitude of these artists, amounting almost to disrespect, towards their medium. I am not criticising the modern or direct method of applying pigment, although there is much to be said in favor of such under-paintings as Rubens, for example, used. The evil consists in painting merely for the moment, with no eye to the permanence of the picture. Select a canvas almost at random, and you will discover cracks and blemishes that foretell an early death, and this before the painting has passed its first birthday. If the artist paints only for the moment, or for himself, one might justly ask what is the use of ever displaying his work. And perhaps this very point of respect for medium would help us to an explanation of the secret of the old masters.

Just as landscape has discovered new fields for itself, so is sculpture reaching out for new forms of expression. At Berlin this movement interests itself chiefly in new materials. For example, the integral beauty of Günther-Gera's portrait bust of a woman was increased by the charm of the reddish gypsum in which it was worked. Rather more in the classical spirit was the bronze figure of the Sandal-Binder by Fritz Röll. Carefully balanced in an unusual position, the figure was so composed as to stand inspection from any point of view. The Spear-Thrower, by Fritz Heinrichs, possessed the same quality of four-sided composition. Classical in inspiration, but delightfully original in treatment, was the tombstone of Johannes Seiler, which represented the figure of Grief in bas-relief upon red gypsum. Captivating for its air of innocence was Johannes Götz's double portrait bust of two children. One cannot close without a reference to the many materials—bronze, marble, sandstone, gypsum, wax, and even wood—with which these sculptors have busied themselves. Some of the happiest results have been obtained in a greyish sandstone, and wood also has furnished a successful medium for not a few subjects. An interesting feature of the architectural department, perhaps appealing most strongly to one's juvenile instincts, was the collection of models ranging from department stores to cottages.

MN.

Finance.

SHOWING OF THE BANKS.

The condition of the national banks of the United States on June 30 has recently excited lively discussion. The figures of the Comptroller of the Currency for that date, as compared with those of March 29, the date of the previous showing, reveal a decrease of nearly $124,000,000 in deposits, and a decrease of less than $2,000,000 in loans and discounts. Virtually the whole of the reduction in loans was in the central and

other reserve cities: to be exact, the reserve cities cut their loans down $63,554,280, and the islands of the sea pursued a similar course to the extent of $149,151, while the rest of the country made an increase of $61,620,273. The last item was disappointing, in view of the assertions for weeks past that the Western banks were cutting down their loans.

Still, four weeks have elapsed since June 30, and they have been exceedingly active weeks. It is possible that the true view of the Comptroller's latest figures would be to regard them somewhat in the light of ancient history. Many persons had supposed that the banks throughout the country, notably those of the West, began a month prior to June 30 to contract their loan account. The presumption is, however, that, though as long ago as that they saw the necessity of so doing, they questioned the wisdom of setting about the task precipitately. The money market is like a huge ship; it cannot turn too sharp a corner. And it is reasonable to suppose that if the Comptroller of the Currency had deferred his call until July 30, the showing of the loan account would have been much better.

Dismissing conjecture, however, and taking the figures for June 30, as they stand, one must infer that New York will be asked to play an unusually large part this year in financing the crop movement. Her ability to do so appears to have been steadily improving. Last Saturday's New York bank statement was highly satisfactory, as compared with previous statements in 1910. That excess of loans over deposits which for so many weeks was a source of uneasiness to some minds has disappeared, and its place is occupied by an actual surplus of deposits amounting to about $9,000,000. A few more weeks of decreasing loans and increasing deposits, especially deposits representing goodly receipts of European gold, should put the New York banks in a position fully to meet the exigencies of the coming months.

The most encouraging feature of the situation still resides in our ability to draw gold from abroad. Europe as a whole is in excellent condition to help us finance the 1910 crop. Her supply of the metal is adequate to her present need. In 1907, European bankers were a good deal exercised over the insufficiency of the gold supply, and did not hesitate openly to express themselves as such. One hears little of that talk in 1910; nor is there this year such a scramble for the new gold from the mines as has taken place on some previous occasions. In fact, Europe appears to regard our situation as one that requires care in the handling, but not as one which should cause her to tie her purse strings against us. Our bankers are as shrewd as any in the world in meeting delicate situations, when they have to, and this time they are fully alive to the necessity of prudence.

There are several things which, no doubt, they have in mind. One is that the farmers are not the only people that will have to be financed this autumn; another is that we shall have to rely to a much larger extent than usual on foreign money to do this financing, and must pay it back eventually. The fact that the New York banks have lately been pulling themselves together in a creditable manner to meet such coming exigencies should, to be sure, occasion no easy-going optimism. The outlook is encouraging only as the situation is properly handled.

Appearances are that the Western banks will have to draw heavily on New York banks for the remainder of the year, in order to finance their agricultural customers. The farmers, in other words, are likely to be more at the dictation of Eastern bankers than they have been for some years. We shall be be curious to note how far any extravagant notions which they may now have regarding the price of their products will be modified by this fact. Conceivably there may be a divergence of view between the New York bankers and the Western agriculturists on this point. The farmers have already made a heavy drain on the working capital of the nation, and one of the consequences has been the slowing up of other forms of industry. General industry, in fact, has been liquidating all summer: manufacturers and merchants have cut prices freely, in order to convert their goods into cash. It is but instinctive, then, to ask if the farmers alone are going to escape this movement. The final decision will rest not with them, but with the New York banks. The scale on which the latter will re-discount for the Western and Southern banks will be the governing factor in the price of our agricultural products this autumn.

It would be futile to ignore the fact that we are putting ourselves under obligation to pay back to Europe a large amount of capital. What we are borrowing now may, perhaps, tide us safely over our situation later; that is, it will afford us time to adjust our finance and industry to a more rational basis, without undue hardship. Yet there is some reason to fear that this foreign aid will be viewed by Wall Street and the industrial world as a means of re-creating the boom conditions of 1909. And any such effort would be profoundly regrettable. Its positive results might not be large, for it is doubtful if Europe is advancing us the present sums with any eye to their permanent employment here. But negatively the effect might be unfortunate; anything may be considered unfortunate at this time that prevents the people of this country from seeing clearly the necessity of cutting our industrial garment a little more in accordance with the real quantity of our cloth.

HAZEN'S EUROPE SINCE 1815
By CHARLES D. HAZEN, Professor in Smith College. (*American Historical Series.*) xxvi+830 pp. 8vo. $3.00.

In this history of Europe since the downfall of Napoleon, the author's method has been to bring down more or less together the histories of those countries, Austria, Prussia, France, and Italy, which have so intimately interacted upon each other. He then returns to 1815 and traces the histories of England, Russia, Turkey, and the lesser states separately, showing their continuous development. A bibliography of 36 pages is provided.

ATKINSON'S BOTANY FOR HIGH SCHOOLS
By GEORGE F. ATKINSON, Professor in Cornell University. xv+493 pp. 12mo. $1.25.

The book is intended for the first or second year in the high school. The keynote is the study of the plants themselves, their life and work. The relation of plants to environment is emphasized thruout the book, and several chapters are also devoted wholly to the subject.

Up-to-the-minute information regarding our Oriental possessions

A WOMAN'S IMPRESSIONS OF THE PHILIPPINES

By MARY H. FEE.

MISS FEE has for several years been prominently connected with the Philippine schools in the capacity of teacher. In her work she has had much opportunity to study the people, their customs and traditions, their needs as a race, and their attitude toward the civilization that is being thrust upon them, yet which they assimilate so readily. Miss Fee's analysis of Filipino character is a valuable and very entertaining piece of writing, in which these "little brown brothers" of ours are placed in a new light. Climatic conditions are explained and the discomforts experienced by newcomers to the islands are humorously illustrated in an account of the author's own experiences upon her arrival. "A Woman's Impressions of the Philippines" is profusely illustrated from carefully chosen photographs which in themselves add greatly to the value of the work.

For sale at book stores. Price $1.75 net, postage 14 cents.

A. C. McCLURG & CO., Publishers
NEW YORK CHICAGO SAN FRANCISCO

George Sand
Some Aspects of Her Life and Work
By RENÉ DOUMIC
Author of "Studies in French Literature," etc.
Translated by Alys Hallard
8vo. With 19 Illustrations. $2.75 net.

This finely-sensitive exercise in creative criticism first took the form of a series of lectures, delivered before the Société des Conférences, in Paris, during the course of last year. M. René Doumic, of the Académie Française, is peculiarly qualified to estimate the work, and to interpret the life of this diverse and elusive genius, and his study will be found to be full of subtlety and sympathetic intuition. There are several portraits of interest, some of them of a rare order.

A HISTORY OF THE IRISH PARLIAMENTARY PARTY

By F. HUGH O'DONNELL, M.A., Q.U.I., Formerly M.P. for Galway and Dungarvan. With 9 Portraits and 8 other Illustrations. 2 vols. 8vo. $5.00 *net.*

VOLUME I, **BUTT AND PARNELL:** Nationhood and Anarchy. The Curse of the American Money. 524 pages.

VOLUME II, **PARNELL AND THE LIEUTENANTS:** Complicity and Betrayal, with an epilogue to the present day. 504 pages.

"His book is not unworthy of the expectation with which it was awaited. . . . It helps us as no previously published book helps us."—*Nineteenth Century*, May, 1910.

". . . an illuminating and important work. It exhibits exceptional knowledge of Irish organizations. It condemns Irish American interference as the worst calamity from which Ireland has suffered during the last thirty years."—*New York Times.*

"It is the best description of Parnell that we know. . . . It is an interesting story. . . . The argument that Butt's party was far more representative of the Irish nation than Parnell's is sound. . . . Of contemporary Ireland he has much to say that is true."—*Saturday Review.*

"He has produced a high-spirited, vigorous, and extremely individual record, which, when it comes to be sifted under the all-winnowing influence of Time, will unquestionably serve as stimulating material, to be consulted by all future historians of one of the most difficult and embarrassing periods of modern political history."—*Daily Telegraph.*

"A very interesting book. . . . Mr. O'Donnell is admittedly one of the most brilliant men who have entered Irish Parliamentary politics during the past forty years."—*Daily News.*

"The whole is presented with the skill of an accomplished literary artist. Even the case-hardened reviewer is debarred from his usual privilege of skipping, and cannot let the book go till he has read the two volumes from cover to cover. All interested in Irish politics will be attracted to these pages. . . ."—*Northern Whig.*

RENSEIGNEMENTS GÉNÉRAUX

L'enseignement de l'Ecole des Sciences politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves *sont* admis sans examens, avec l'agrément du directeur et du Conseil de l'Ecole; ils n'ont à justifier d'aucun grade universitaire.

La durée ordinaire des études est de trois ans, toutefois, on peut la réduire à deux années. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1910-1911.—L'année scolaire commencera le 7 novembre 1910 et finira le 3 juin 1911. On s'inscrira au Secrétariat à partir du 27 octobre 1910. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers).....Par année: **350 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prépare.*

S'adresser à l'ECOLE, 27, Rue Saint-Guillaume, PARIS (France).

The Nation.

NEW YORK, THURSDAY, AUGUST 4, 1910.

The Week.

It was unkind of the Treasury Department to come out so close on the heels of the Ohio Republican Convcution with the showing of a deficit for July of more than $14,000,000. The Ohio platform, in its praises of the Aldrich-Payne tariff, solemnly but not very truthfully declared that it had "converted a deficit into a surplus." It is true that July is usually a month of Treasury deficits, owing to heavy payments at the beginning of the fiscal year, but $14,000,000 is a big minus quantity to start off the account with. It is virtually certain that the next three months will not turn it into a positive quantity. We note that the July reveuue from customs dutics fell off nearly $4,000,000 from a ycar ago. The large return then was said to be due to advance importations in fear of "reduced" rates! In any case, the change shows again the truth of Senator Aldrich's remark that the taxes on imports are gettiug to be a brokeu reed for American public finance to lean upon.

New Jersey may not be the only Eastern State in which the Democrats will name a mau of high ability and standing for Governor. The enthusiastic unauimity with which members of the Democratic State committee last Thursday at New Haven endorsed the suggestiou of Simeon E. Baldwin, formerly chief justice of the Counecticut Supreme Court, for the head of their State ticket indicates their appreciation of the importance of taking the best advantage of the anti-Republicau tide. It is rare that the electors of any party in any State have the opportunity of voting for a man of Judge Baldwiu's attainments and character. His long service on the bench, his learning in the law, demonstrated in his lectures at the Yale Law School, as well as in his writings, have won him the honor of election to the presidency of the American Bar Association and have led to his mention as a fit appointee to the United States Supreme Court. As a publicist and historian he is eqnally well known, being an ex-President of the American Historical Association. If it could elect Woodrow Wilson Governor of New Jersey and Judge Baldwin of Connecticut, the Democratic party would scarcely know itself.

Colorado has almost unaccountably lagged behind other States in the enactment of laws dealing with corporate control, ballot and primary reform, and tne whole class of "progressive" legislation. A mere recital of the proposed reforms to be urged by Gov. Shafroth upon the special session of the State Legislature, which he has called to meet early this month, shows how true this is. Direct nominations, the initiative and referendum, the Massachusetts ballot, railway and public service commissions, bank deposit guarantees—there is scarcely a State west of the Mississippi that has not adopted one or more of these reforms within recent years. Colorado has had, to be sure, a hard struggle to free herself from the grip of mining and smelting corporations. It has taken the best in Colorado to do that work. Perhaps on that account it is unfair to draw comparisons between her and more progressive States. Were the Democratic party, with a majority in both houses of the Legislature, wholly free from suspicion, there would be a promise of a hearty response to the Democratic Governor's plea. But it cannot be counted on with certainty. And fear of adding to Democratic power and prestige may deter the progressive Colorado Republicans from supporting a programme which they really favor.

Congressman Ames of Massachusetts might seem more interested in aerocycles than primaries. Nevertheless, those authorized to speak for him declare that in every one of the 280 legislative districts in the State, Republicans will he called upon to say in September whether they prefer Lodge or Ames for United States Senator. Lodge himself is leaving no stone unturned to see that the decision shall be in his favor. Reports to the Republican town chairmen, gathered by the Boston *Globe*, do not indicate any great danger of his being defeated. Why is he displaying so much concern? His friends say he wants his victory to be overwhelming. But some with long memories recall the contest between Dawes and Long, when the latter, with a clear majority of the Republican votes in the Legislature, was defeated by Dawes with the aid of Democratic votes. Massachusetts Democrats would never support Lodge. If Ames can elect enough members to hold the balance of power, his friends profess to think he may be as lucky as Dawes. And there are unmistakable signs of a sentiment in many strong manufacturing centres like Lowell and Lawrence and Fall River that may not be for Ames, but is decidedly against Lodge. Highly protected Attleboro, for instance, is said to be "95 per cent. anti-Lodge." Lodge might well exclaim: "Et tu, Attleboro"; for it was partly to save her cheap-jewelry manufacture that he beat the French reciprocity treaty.

Attorney-General Wickersham has given his legal opinion in the matter of the Robert E. Lee statue, Mr. Taft has given his approval to that opinion, aud the incident may be regarded as closed. Mr. Wickersham, in asserting that no reason exists for the removal of the Southern leader's effigy from Statuary Hall, attempts very adroitly to placate both parties to the dispute, and at the same time to administer a merited rebuff. Robert E. Lee, the Attorney-General declares, has come to be looked upon as typical of all that was best in the cause he stood for. Southern opinion will receive this pronouncement with satisfaction. But, goes on Mr. Wickersham, Lee gave "also the most loyal and unmurmuring acceptance of the complete overthrow of that cause." To overlook the treason in the man and recognize only his loyalty, is not so legalistic an argument as may appear at first sight. That is the only ground on which the nation can give recognition to a man who took up arms for its undoing—that, having had recourse to the arbitrament of arms, he unmurmuringly accepted the outcome. The example of Lee might very well serve as a reminder to those emotional reconstructors of history who have latterly been so much in fashion. The fact that the lost cause was a lost cause does not

necessarily make it a sacred cause. The fact that the Union cause triumphed does not necessarily make it a triumph of brute force over right.

There are few races in America whose transplanted members tend to flock together politically as do the Scandinavians. This was never better indicated than in the case of the late John A. Johnson of Minnesota, who, although a Democrat, was thrice elected Governor of his State, when the rest of the ticket on each occasion was carried by the usual overwhelming Republican majorities. Engaging as was Johnson's personality, and admirable as was his record in public office, there can be no doubt that he owed much of his strength at the polls to the fact that he was the son of Scandinavian parents. It was doubtless this consideration that had something to do with the choice by the Minnesota Democrats of ex-Gov. John Lind, a Swede by birth, to head their State ticket this autumn. Nevertheless, Lind has independent elements of strength. He was a Republican Representative in Congress from 1887 to 1893, but left that party on the silver issue and was the Democratic candidate for Governor in 1896. He was elected Governor by a Democratic-Populist fusion in 1898, but was defeated when a candidate for re-election in 1900. Subsequently he served one term in Congress as a Democrat. He has thus been a factor in the political life of Minnesota for almost a quarter of a century, and the people know just what to expect of him. His nomination last week was unanimous, despite his protest that he could not accept the honor. If he finally agrees to run, there are close observers who believe that Minnesota, like Ohio, may be rated as a doubtful State this autumn.

Even those friends of the Indian who most firmly believe in tonic treatment for him may have misgivings about the new legislation which enables an allottee holding land under the Government trust to devise it by will. It should seem that property which he is deemed incompetent to handle in health cannot safely be left to his disposal when weakened by the approach of death. In view of the ignorant Indian's confidence in lawyers, and the love of frontier lawyers for the ignorant Indian, we may look for the outbreak of a testamentary orgy as soon as the news of this enlarged privilege spreads through the West. The natural heirs of the Indian landholder, who formerly could count on one day selling his farm for their own profit, can still gamble in post-obit obligations, though subject to a much heavier discount. But hereafter no Indian not a citizen who owns a valuable parcel of land need hope to be permitted to die in peace. His only escape from pestering will lie in privately making as many wills as there are coveters of his homestead, and leaving the beneficiaries to fight it out among themselves.

Newbern, in North Carolina, celebrates the two hundredth anniversary of its birth with an historical pageant. Cape Town, in South Africa, is celebrating or just getting ready to celebrate the birth of United South Africa, and likewise by an historical pageant. The two facts together emphasize the rapidity with which this form of combined public entertainment and lesson in patriotism has swept over the English-speaking world. Until a very few years ago it was too readily taken for granted that the Anglo-Saxon temperament had no place for the carnival spirit. And for that matter the critic is still at liberty to maintain that the Anglo-Saxon in his public merrymaking quite lacks the gayety and the elemental love of color and music that the Latin races claim for their own. Into such refinements we need not enter. The fact stands that while Rome has had the last of its famous carnivals, London, New York, Newbern, and Cape Town have gone in whole-heartedly for the pomp and feast and revelry and masque and antique pageantry of which the Middle Ages were so fond. Is this a desperate endeavor on our part to escape from the drab monotony of modern life? Well, let the critic once more have it as he will; only he cannot keep up his censure very long without falling foul of Mr. G. K. Chesterton, whose heart must be one vast surge of delight at this recrudescence of merrie, hearty, ante-Puritan Anglo-Saxondom.

American courts doubtless err on the side of caution and leniency, but when the abuses of a different system come to light they should at least tend to temper the condemnation of American methods and promote patience with what sometimes seem unwarranted delays.

This remark is a newspaper comment on a case in which a French farmer was convicted of murder years ago, and died in prison, and in which a ragpicker now comes forward and confesses that he committed the crime for which the farmer was punished. At the trial, the presiding judge had "left the bench and from the floor of the courtroom denounced the prisoner as a guilty fiend, while the enraged spectators shouted 'Kill him!'" But it is not the abandonment of the Anglo-Saxon system that is proposed by those who object to the preposterous delays and difficulties which so often characterize its working in this country. These do not turn on any rational demand of care or caution; nor are they in any sense an intrinsic part of the system. The practices on which they rest are a morbid excrescence, not a part of the healthy organism itself. And it is not to France, but to England, that those point who urge the duty and the practicability of a reform. Both in civil and in criminal practice, England has found it perfectly feasible to combine efficiency, promptness, and freedom from the deadweight of monstrous technicalities with the full maintenance of the Anglo-Saxon traditions of law and justice, and there is no reason why we should not endeavor to do as well.

To the jealous eye of the European jingo, this country's intentions with respect to the republic of Liberia stand fraught with direst significance. American aid for Liberia means the entrance of the United States into the field of African interests. It means that henceforth American diplomacy will take its place behind American capital in the exploitation of the Dark Continent. It means, according to some of the most excited patriots in England and Germany, that all the other nations will have to push a little closer together on the African bench in order to give Uncle Sam a place in the sunshine—and a generous place. Finally it means—what in the end all jingo visions and arguments mean—a greater navy for threatened Europe and conscription for England and universal drilling and—who knows—girl scouts, perhaps, for the defence of hearth and home. The fact is that the European fire-eater even more than our own species is bound to make molehills into mountains. European international politics is accustomed to take seriously a market riot some-

where in the Balkans, a marriage between a royal cousin and the member of a mediatized house, the omission of a royal prince to visit this capital or telegraph a kind word to that one. To people accustomed to such a scheme of delicate adjustments a good-sized country like Liberia may indeed loom big. Europe finds it difficult to understand that, in the absence of any deep schemes in Liberia, tradition and sentiment in this country are sufficient to bring us to the assistance of that distressed republic without any thoughts of aggrandizement in the back of our minds.

The vote of 410 to 84, by which the bill modifying the royal declaration passed its second reading in the House of Commons last week, is a 5 to 1 vote against bigotry and for common sense. To speak of the amendment which the Government was induced to accept as a setback for Mr. Asquith is absurd. The Government's prime object was to remove the source of Catholic offence. Instead of defining the King's faith negatively by pointing out what dogmas he "abhorred," the proposed formula simply substituted the declaration, "I am a faithful member of the Protestant Church as by law established." The last four words raised up a Non-Conformist storm. That historically sensitive conscience discerned in the words an additional sanction for the Church of England. In reality, Mr. Asquith, who is himself not of the Anglican Church, may simply have intended a phrase explanatory of the term "Protesant Church." As the oath stands now, King George will declare simply that he is a "faithful Protestant," though we question whether that term has ever received precise definition.

Detailed figures of the vote on the woman-suffrage bill in the House of Commons are now at hand. The vote of 299 in favor of its second reading was made up of 161 Liberals, 87 Conservatives, 31 Labor members, and 20 Irish Nationalists. In the opposing list of 189 were found 113 Conservatives, 60 Liberals, 14 Nationalists, and 2 Labor members. One sees how the question was as a sword for the dividing asunder of parties. On the vote immediately following to refer the bill to Committee of the Whole House, instead of to a special committee, there were a number of abstentions and many changes from one side to the other, the final result being to carry the motion by 320 to 175. In the majority, the Conservatives numbered 176, the Liberals 124, while in the minority were recorded 101 Liberals and 29 Conservatives. The adoption of this motion to refer has been said to mean the indefinite postponement of the suffrage bill. But this was not the understanding of Mr. Haldane, Secretary for War, who voted for the second reading and afterwards for the reference to the Committee of the Whole, the latter on the express ground that the suffrage bill had now become a first-class question, and so was entitled to be dealt with by the House as a whole.

Possibly the breaking off of diplomatic relations with the Vatican is a somewhat abrupt step by the Spanish Government, but it is evident that a rupture of ideas and policies lies behind it. With a Papal Secretary of State who is himself a Spaniard, it might seem that more accurate information as to the actual state of opinion in Spain should have been available to the Holy See. But its misapprehension appears to have been grave. As one member of the Spanish Cabinet observes, the Vatican has been acting as if nothing had changed in Spain since 1750. Yet the increasing anti-clerical sentiment in the Peninsula has long been too obvious to be ignored. That it is not a matter of political parties is shown by the fact that ex-Premier Maura and many Conservatives are standing by the Liberal Ministry in resisting the extreme pretensions of the Church. The actual break has occurred on a question of punctilio. While professing to be ready to enter into friendly negotiations, in a conciliatory spirit, concerning a revision of the Concordat and the subjection of the religious orders to regulation and taxation by the Spanish authorities, the Vatican made it an initial requirement that the royal decree already issued in favor of the liberty of worship should be recalled. This was plainly impossible, and hence the breach. The movement at the head of which Canalejas has placed himself is partly economic, partly educational, and is throughout rather anti-clerical than anti-religious. The Clericals may succeed in their announced purpose of bringing about the fall of the Ministry, but if they do it will only be at the expense of even stronger attacks upon them in the future.

Typical of the profound significance Europe finds in pretty small things is much of the comment aroused by the approaching erection of the principality of Montenegro into a kingdom. This nation of 3,630 square miles and 250,000 inhabitants would apparently be just as powerful a factor in European politics under any ruler, king, or prince. Nevertheless, Belgrade is reported to be greatly stirred up over the matter. Can the move be an Austrian manœuvre against Servia? Is the horrid intention to stir up enmity between the Montenegrin house of Petrovitch and the Servian house of Karageorgevitch for the purpose of preventing any future anti-Austrian *entente cordiale* between the two houses? The Serb radicals have bitterly attacked Prince Nicholas as a traitor to the cause of the Serb race in having meanly preferred a royal crown for himself and his descendants to the opportunity of bringing about a union between the two countries.

The latest of the Swiss mountain railways threw its last section open to passenger traffic a few weeks ago. It achieves a record, inasmuch as it reaches a greater height than any other European railway built on the ordinary system. At the Bernina Hospice, the new Bernina Bahn is 2,300 metres above sea level. As a matter of course, the motive power is electricity; for on the Italian slope the grade is frequently as high as 70 per cent. To insure absolute safety, the Bernina system is supplied with four kinds of brakes—none too many, those will think who drop over a mile in the short distance from the Hospice to the Italian boundary. From the point of view of through traffic, the new route is of no importance; for while by it one can reach Milan from St. Moritz in eight hours, a traveller in a hurry to get to Milan from Berlin, Munich, or Frankfort will save time by using the tunnel routes. More leisurely tourists will appreciate the fact that the new railway avoids all tunnels; nor will they object to its taking three hours and a half to cover a distance of only forty kilometres; for this distance includes some of the finest scenery in Switzerland and Italy.

THE REPUBLICAN DIFFICULTY.

Interpretations of the Ohio Republican Convention vary with the taste and fancy of the interpreter. It was a triumph for the reactionaries; it was also a nine-tenths victory for the progressives. It was a repudiation of Boss Cox, and at the same time a recognition and confirmation of his power. The man whom President Taft and Col. Roosevelt and Senator Burton wanted for Governor was nominated, and yet he was not. The reader pays his money and takes his choice.

Such uncertainties of conflicting inference are always possible where a political convention is not cut-and-dried, and the Ohio convention obviously was not. It is long since we have seen contending forces left, as they were at Columbus, to fight the battle out. Three ballots for Governor, with the vote fluctuating and the result in doubt to the last—that is like old times, before we had the modern system of issuing an order to the delegates on the morning of the convention and expecting them to follow it in sheep-like harmony. Besides this appearance of unwonted freedom from dictation in the Ohio convention, the things most to be noted about its action are its final choice of a colorless candidate for Governor, and its adoption of a platform of far too pronounced a color. Mr. Harding seems to be a pleasant man, who is a good stump-speaker, but there is nothing in either his record or his personality to compel attention, and he appears to be so ill-fitted to cope with a vigorous and positive opponent like Judson Harmon that many, even in Ohio, are taking his nomination as a confession of defeat in advance.

About that we make no predictions, not being fond of prophesying unless we know, and we certainly will not charge the Ohio Republican leaders with deliberately riding for a fall. Yet it is clear that they cared much more about their platform than they did about their candidate; and in fact their declarations on national policy will attract a great deal more attention throughout the country than any aspect of their announced programme for State legislation, or the struggle to regain control of Ohio. The really critical thing was the platform, and on that the progressives led by ex-Secretary Garfield were clearly beaten and badly beaten. True, some of their ideas about State matters were accepted, but not only their words, but their whole attitude, concerning national questions found no favor with the convention. On the tariff, the Ohio platform out-Tafts Taft, admitting none of the abatements which he has made, and laying very little emphasis upon what he considers so important—namely, the creation of a tariff board to inquire into the facts scientifically and to enable Congress to make another and much more thorough revision. On the whole, the stand-patters were victorious at Columbus; and it is mainly on national issues, as they outlined them, that the Ohio campaign is to be fought. Congressman Longworth frankly admitted in his speech as temporary chairman that they could not hope to defeat Gov. Harmon unless they pushed to the front the need of rallying all Republican voters to keep the party in control of Congress and to uphold the President.

The problem which the Republicans had to meet in Ohio is typical of that which confronts them in many States. They have a strong dissatisfied element in their own party, and their difficulty is in knowing just how to deal with it. The practice will doubtless vary in different places, but in the main we think that the method followed in Ohio will prevail. The party managers, that is, will speak the insurgents fair. They will endeavor to placate the opposition within the party, conscious as they are that they are going to need every vote "from whatever source derived." Some of the progressive doctrines they will adopt, more or less sincerely. But when it comes down to what they consider the essentials—control of the party organization, nominations, conduct of the campaign—they will stand firm. And, of course, they have the power nearly everywhere to carry out their plans. Insurgent Republicans have to confess that they are in a minority. They may frighten the party management and intimidate it into acquiescing in some of their contentions, but they cannot hope at present to take charge of it. Hence it is probable that the course of the party leaders in Ohio will be a sort of norm to guide action elsewhere.

All is plain sailing for the Republican organization up to the election. In all that relates to conventions and platforms and the selection of candidates and the appointment of committees, there is hardly any one to dispute control with the existing managers. But their real difficulty is of another kind. How can they tell where the smouldering dissatisfaction will burst forth? What is to be the effect upon the party vote of all the divisions and heart-burnings and rancor? Of what avail is it to announce the official party policy if doubt remains whether the rank and file will sustain it? May there not be economic causes and social forces at work in great masses of the population, producing discontent and leading them to vote from motives and for purposes which party leaders cannot even dimly divine? It is to such questions as these, and the political difficulties wrapped up in them, that Republican managers are giving haggard thought; and in their hearts they are not at all confident of being able to answer the questions or surmount the difficulties.

REPUBLICS AND DIPLOMACY.

M. Alcide Ebray, who was for a time French Consul-General in New York, has just published a book about France, which is a veritable cry of despair. No foreigner would have ventured to be so pessimistic about the present condition and the future prospects of France as is this son of hers. M. Ebray entitles his volume "La France qui meurt," and its whole tenor is that his native land may now fairly be included among what Lord Salisbury called the "dying nations." His arraignment of existing tendencies is most severe, and the curious thing is that he lays it all up to the form of government. It is the republic that is ruining France, affirms M. Ebray. More precisely, his argument is that under a parliamentary régime it is impossible to govern France properly; to keep her army at top strength, and her diplomacy keyed up to the vigor necessary to maintain her old rank among the nations. His longest chapter is called République et Diplomatie; its 170 pages are devoted to proving that no republic can have a strong and successful diplomacy.

It would be easy to take issue with M. Ebray on many of his statements of fact. The Italian republics, for example, had some lessons, both good and bad, to teach the world on the subject of diplomacy. Our author alleges that competent men to direct foreign relations are, in the first place, very hard to find in a re-

public, and that when found they have so brief a tenure of office that they are not able to impress themselves deeply or to work out and establish a consistent policy. Yet both Hanotaux and Delcassé had a longer term at the Foreign Office in France than did other Ministers of their time in other departments of the government. Americans might bring forward the names of Hamilton Fish and John Hay to show what republics can do in the way of sustained diplomacy. M. Ebray envies the practice of Germany in this particular, yet since Bismarck's retirement the Germans have had a succession of new men in Wilhelmstrasse; and just as M. Ebray's book comes from the press still another Foreign Secretary is appointed in Germany to show how the advantage lies with a monarchy. One question is continually rising in the mind of the reader of this book. Its chief contention being that there is no hope for France, except in going back to the Empire, one keeps wondering why the writer does not refer in detail to the terrible diplomatic and military defeats which came to France under the last Empire she had. The point occurs to M. Ebray, too, but he meets it in a footnote by observing that Napoleon III failed only because he tried to make the Empire "Liberal," appealing to *plébiscites*, giving the press more freedom, encouraging parliamentary aspirations, and so on. We do not laugh at this, but we are afraid that most Frenchmen would think it a little ridiculous.

All such criticisms, however, are superficial. They do not go to M. Ebray's real thesis, and on that we may cheerfully admit that he is largely right. His idea of diplomacy, that is to say, is of a sort which we may freely concede cannot easily be realized under a republic—but so much the better for a republic. M. Ebray gives a great deal of space to the tension between France and Germany in 1904-5, over the Moroccan question, and is filled with shame that the French Government should then have been afraid to go to war and should have sacrificed M. Delcassé. It was for France, he argues, to have taken a high hand, to have seen to it that her army was in fighting trim, that her alliances with other nations were favorable and powerful, and then to have waded through blood, rather than admit, as Prime Minister Rouvier did, that the Minister for Foreign Affairs had gone too far and must not be followed in a way where madness lay.

For the sake of argument, it may be admitted that M. Ebray's account of what happened is exact. He is an avowed partisan of M. Delcassé, and all that he says of that Minister could not pass unchallenged, as a matter of history; but granted the truth of it all, where does it leave us? Why, at this: a dubious and terrible war was avoided; the chief matters in dispute were sent to the Algeciras Congress, and from that France emerged with far more laurels than Germany. She was made by Europe joint-mandatory with Spain for keeping order in Morocco, and Germany has since, in a formal agreement with France, absolutely renounced all ambitions for political control in Morocco. If this be the imbecility of French diplomacy under a republic, Frenchmen might well pray Heaven to send them more of it.

For a man of M. Ebray's temper there is, of course, no consolation in the final peaceful and advantageous result. He cannot get over the national disgrace of having shrunk from the "last reason" of a bloody war, and of having admitted in the face of the world that a Foreign Minister had taken an indefensible position and must be abandoned. The cause of this he finds in the dread of public opinion which paralyzes men under a republic; the same men, he argues would, in a monarchy, become daring and resolute. Presidents read the newspapers more anxiously than a King need do. Ministers dependent upon a parliamentary majority have a cringing way of inquiring what Deputies think and what attitude the voters are taking or will be apt to take. How can there be, with such a régime, demands M. Ebray, a diplomacy which shall be fearless and unyielding? The reply is that there cannot be, in the sense he means, and that we ought to be glad of it. Diplomacy in the old conception of it as a game in which subtle masters played armies and peoples against each other, like so many pawns, has broken down and is disappearing everywhere in the modern world. It is as difficult for a Foreign Minister in a monarchy to practise it longer, in the former unscrupulous way, as in a republic. Sir Edward Grey in England has to reckon with public opinion as truly as does Secretary Knox in the United States. And all diplomatists have now to deal with a clearer and more watchful international opinion, which is making with increased strength against every form of international over-reaching and aggression. It was practically this international pressure which prevented even the autocratic Bismarck from going to war again with France in 1875, and it would be applied with even greater power to-day to any too ambitious or reckless diplomat. Whatever the form of government, modern diplomacy has to submit itself to the considerate judgment of mankind; and if republican institutions help on that process better than others, it certainly is none the worse for republics.

MR. CARLISLE.

The late John G. Carlisle offered as clear a case as perhaps even this country ever exhibited of a man's rise by sheer mental ability. Of humble antecedents and with the most meagre advantages of education, he early displayed an intellectual power which won him first local and then national recognition. Not a magnetic man, not even a popular orator, he had gifts of analysis and lucid statement and solid judgment which opened doors to him in the law and in public life. His career as United States Senator was too brief to be distinctive; and his administration of the Treasury fell on a time when any Secretary's reputation might easily have been wrecked, and his own was certainly not heightened. It was in the House of Representatives, as member and Speaker, that his talents had freest play, and there that he acquired his highest fame.

A ready and formidable debater, he also made himself a master of parliamentary law. Without a good knowledge of that, it is rare that any man makes himself a power in the House. Mr. Carlisle was unexcelled in his grasp of the rules, both in their details and their principles, and always had the precedents at command. This great skill he put at the service of his party when on the floor of Congress, and afterwards, when he became Speaker, he added to it a fine judicial quality which made his decisions universally respected. He was popular even with his political opponents, not for genial personal traits, but for their belief in his absolute fairness as Speaker. When called

upon to rule on points of order, his luminous mind, stored with accurate knowledge of the decisions of his predecessors, was able instantly to put the matter in its proper light, and to arrive at conclusions which would commend themselves to all as sound and just. It has often been said that a more judicial-minded man never occupied the Speaker's chair.

Mr. Carlisle's name was never associated with angry controversies about the Speaker's powers, as was that of Thomas B. Reed. For the former it would probably have been impossible to count a quorum in order to get a rule authorizing him to count a quorum. He had too great a respect for the doctrine of *stare decisis* to be capable of that. But in a quiet and almost unperceived way Mr. Carlisle did a great deal to exalt the power of the Speakership. No Speaker before him had used the right of "recognition" in just the way he did. That is to say, where other Speakers had often refused to "recognize" a member with a motion that would be troublesome to the dominant party, of which the Speaker was the tacitly acknowledged leader, Mr. Carlisle followed his own individual judgment. For example, during all the time he was Speaker the Blair Education bill was pending in Congress. Three times it passed the Senate, but Speaker Carlisle never recognized a member who sought to lay it before the House.

An even more striking illustration of his conception of the Speaker's duty came in 1885. In that year a bill was pending to repeal the internal-revenue tax on tobacco. A letter was sent to the Speaker by three prominent Democrats, George D. Wise, John S. Henderson, and Samuel J. Randall, informing him that a majority of their party, together with many Republicans—in all a large majority of the House—were in favor of the measure, and appealing to him "most earnestly" to "recognize" some Democrat who would move to suspend the rules and pass the bill. After thinking it over for two days, Speaker Carlisle sent an answer which Miss Follett, in her book on "The Speaker of the House of Representatives," declares to be "a monumental document in the history of the Speakership." It was a brief discussion of the party situation as respects plans to cut down taxes, and wound up by saying: "I consider that it would not be proper, under the circumstances, for me to agree to a course of action which would present for the consideration of the House a simple proposition for the repeal of the internal revenue tax on tobacco, to the exclusion of all other measures for the reduction of taxation." Thus coolly did the Speaker set his personal judgment against that of his party, and, indeed, of a majority of the House, and make of himself a leader who declined to take orders from his followers.

For more than ten years Mr. Carlisle had dropped entirely out of political life. It is not alone this fact, nor the age at which he died, which made him latterly appear like a survivor of a generation that is gone. He was that, too, in his attitude toward public questions, and the political methods which he adopted. The clamor and the shouting and the advertising which acquired so much greater strength and offensiveness since his retirement were not congenial to his nature, and he could never have felt at home with them. Without bitterness, he called himself old-fashioned, and withdrew from politics to devote his strength to the practice of the law. Never a man of the highest possibilities in our public life, his death yet removes a figure that was both noteworthy in his time and typical of political conditions that passed away before he did.

ENDOWMENT OF BUDDING GENIUS.

In the last number of the *Independent*, Mr. Upton Sinclair gives the results of an inquiry conducted among fifty distinguished American and English writers concerning the desirability and feasibility of establishing a prize fund for the encouragement of commercially unsuccessful young writers. In each of three classes, poetry, fiction, and "prose writing of an inspirational character," there should be one one-thousand-dollar prize and two five-hundred-dollar prizes for a period of three years, the awards to be made by a board of three judges made up of men who "have produced vital work themselves," and have shown themselves able critics of the work of others. To speak of the "results" of Mr. Sinclair's canvass is somewhat misleading, since only sixteen out of the fifty men consulted have gone to the trouble of expressing their opinion. Two of the sixteen replies are neutral, six are in favor of the plan, and eight are against it. If we count by weight of authority as well as by mere number, the balance goes heavily against Mr. Sinclair's project. The best-known names among those who have pronounced in favor of the plan are Bliss Carman, Edwin Markham, Stewart Edward White, and Charles Edward Russell. Voting in the negative are John Bigelow, Henry van Dyke, William James, Henry James, Jack London, Eden Phillpotts, H. G. Wells, and William De Morgan.

If we take into account the writers' intensity of belief, the balance sways still more heavily against the plan. Those who condemn it are very emphatic in their sentiments; those who favor it do so with hesitancy and qualification. Nearly everybody has his doubts whether a suitable board of judges can be found. Mr. Wells points out that if the object is to encourage work of a "new and path-breaking nature," that is just what a selecting jury never will be capable of. Such bodies "invariably become timid and narrow and seek refuge in practical, academic, and moral tests that invariably exclude the real men of genius." Again, Mr. Charles Edward Russell and Mr. Stewart Edward White would exclude fiction from the benefits of the scheme. Fiction is well rewarded now, and we have too much fiction as it is. This would leave poetry and "prose of an inspirational character," essays presumably; and in so doing would, we imagine, negative Mr. Sinclair's main intention. For it is undeniable that the "new, path-breaking" work in literature of to-day is done by the fiction writer and his colleague, the dramatist. As for the poet and the essayist, they have nothing more to gain by our endowment than the meagre three years' sustenance it offers. For even if the prize bring with it recognition and success, these, to the poet and the essayist, can almost never mean material success. The two are in a business that, practically speaking, has never paid, and, if they are endowed at all, they should be permanently endowed.

The geographical division-line of opinion is not the least interesting characteristic of the *Independent's* symposium. Of the six men in favor of the endowment plan, five are Americans. Of the eight men opposed to it, only four are Americans. Probably the fact that

the originator of the project is also an American writer may have had something to do with the result. Yet the odd fact persists that in this land of unrivalled opportunity, of periodicals circulating by the million and paying ten cents the word, the need of an artificial fostering of literature should be so acutely felt; whereas in England, with its appreciably lower standard of living, England where authors do not inhabit rural palaces or own a "string" of motor-cars, the author feels no such need of help from the outside. Mr. Phillpotts, in negativing the entire project, wonders why it should have ever originated on our side of the Atlantic:

> An original man has a better chance to be heard in your country than in mine, because your magazine literature is alive and alert and fairly ready to welcome a new thing. It is not entirely under the thumb of religion, or in terror of public opinion, or hat off to the young person's parents. Here, these forces rule, because they represent the money, and an artist who lives by writing can only boil the necessary pot with discomfort. No; your budding genius is in better case than ours; you are going on all right, save for a stupid petticoat prudery in sexual matters; while for us, what we want is certainly not prizes for unrecognized merit in our writers, but an effort toward more merit in the readers. We and they alike wallow in the mean sties that our journals provide. We cannot get ourselves to them, because magazine proprietors will not suffer us to do so. We must appear before them in the moth-eaten garments that they know.

There is a good measure of truth in what Mr. Phillpotts says concerning the avidity of our magazines for what is new. Under that definition some very good literature now and then gets into our magazines.

And yet in Mr. Phillpotts's statement is contained a strong argument in favor of the endowment scheme. A prize fund in itself would be such a novel institution that it could not but appeal to the magazine editor and the publisher. It may be that a board of jurors would function very imperfectly and that an annual distribution of a bare six thousand dollars would be but a drop in the unfilled literary bucket. The gain would be in the fact that such an institution did exist and did operate in some manner or other. It might not discover many great American poets and essayists—although Mr. Sinclair hopes for a Chatterton or a Keats—but it would make the patronage of poets and essayists of sufficient advertising value to work a change of heart in the magazine editor. Just as a single year of the New Theatre has unmistakably set the commercial managers to thinking of stock companies, répertoires, and revivals, a substantial laurel for poetry and inspired prose might tend to make those branches of literature respectable. Tremendously successful they will never be in a monetary sense, but to the hard-up young writer we imagine that every little would count.

A DUTY OF PARENTS.

The fortune which was left a few weeks back to a beloved son of eight, on condition that he should follow a minute programme of education and conduct, caused many at the time to speculate on its size, and to wonder whether the game was really worth the candle. Those with a bias for the dramatic naturally suspected a hoax, and mentally tucked away a chuckle against the coming climax. Doubtless they will feel cheated at the premature revelation, made a day or two ago, that they were virtually right, that the fortune amounts to almost nothing. But many others will sigh with relief to think that the boy, now that there's "nothing in it," is probably to be spared the huge ordeal which his father prescribed, and will dismiss the case from their minds as being merely eccentric and, therefore, uninstructive.

There is a theatric exaggeration in the case, no doubt, yet underlying it is a problem so important and so typical of any age that it prompts serious thought. The problem is: To what extent may a parent be to his children the divinity that shapes their ends? It is the old, old question. Petrarch's father was determined that his son should become a lawyer, and coming upon him reading poetry tried to destroy his precious library. Boccaccio believed himself so thoroughly to be a poet that he has the fact recounted on his tombstone, but was forced to study law, and ended a first-rate story-teller. Incidentally, it may be remarked that compulsory law has committed a greater number to the Hall of Fame than all the other professions put together. And, in general, parental authority, thus exerted, has turned out to be quite as much of a spur as a curb. Milton, we suspect, would scarcely have done so well if he had not been flying in the face of his father's wishes.

Now, we are not in reality poking fun at the insight of parents. On the contrary, our brief is really on the side of more planning by parents. For the lack of it, the situation in America has become serious. Of the two classes, the wealthy and the poor, wealthy sons with every opportunity go to college unburdened by even the precepts of Polonius, and are expected to emerge cultured gentlemen of genuine ability. It is the rare exception, among this class, to meet a student, as one might do frequently abroad, whose family traditions or wishes are leading him in the direction of medicine or scholarship or politics. As a result, these "rich parasites," through no real fault of their own, drift about from course to course listlessly, often contemptuously—having neither curb to chafe under nor spur to urge them on. There is no plan of life imposed upon them from without or from within to give their thoughts coherence; and the vaudeville theatre is their chief thought-producer. Yet we wonder how it is that so few of these fellows have any real mental fabric, or are able to talk in a sustained way on any subject whatsoever for more than fifteen minutes running! The actual condition is seen clearly by the contrast of an Englishman of wealth, attending one of our large Eastern universities, who announced on one occasion that his father, the governor, had brought home a new book of essays and that they were having some great discussions over it. For one reason or another, and we believe it is due partly to this sort of supervision, the well-to-do graduate of Oxford or Cambridge has more ideas and is a better talker than the corresponding type in this country.

But what shall we say of our students of only moderate or even slender means? Here the situation is brighter, though through no fault of the parents. Indeed, it is our boast that men of this class are qualified to carve for themselves; that even in college they are learning to pick and choose what is best for them out of the great mass of conflicting facts and tendencies which we call life. This they are attempting to do beyond question, and the spectacle is not uncommon of a freshman believing that he knows just what he is going to be and just what courses will best serve his purpose. Yet few freshmen, in the existing conditions, are capable of assuming such responsibilities.

's things are in our highly specialized systems, courses may be found leading to virtually any position whatsoever, either in the professional or the business world—a state of things which has been hastened by the influence of special, technical schools. With such a distraction of courses, how can a freshman or sophomore or a junior, even, know what he ought to do? Plenty of educators have, of course, seen the difficulty, and some of them are attempting to remedy it. It was this undoubtedly that turned President Lowell of Harvard into a reactionary, with the idea of not allowing any boy, from a false notion of his own capabilities, to pass by the recognized elements of knowledge in the broadest sense.

This is a step in the right direction, but it can never replace the idealism which should properly issue from the home and gain strength and direction in college. Idealism, unless fortified, stands very little show of surviving the specialization of college. Indeed, we recall that one of our most distinguished professors recently left for a year abroad with the curse on his lips that there was no longer any idealism in ——, his college town. In behalf of these earnest students much should be done to win back for them the opportunity, possessed by students of old, to dream dreams and to see visions, instead of allowing them to become, before their time, little old men, fighting blindly for recognition. This assistance, we believe, must come first of all from the wisdom of parents, which should give the boy serious purpose, to be sure, and yet at the same time a large enough glimpse of the big realities to make him see the advantage of care-free speculation on other topics than those for which he feels particular interest. Such chance rummaging has in more than one instance in the past started a boy on the way from mediocrity to genuine achievement.

TWO BOOKS ABOUT THE SOUTH.

[A Southern View.]

A Harvard professor, of acknowledged abolitionist descent and traditions and sympathies, and a London man of letters, hitherto better known for his interest in the drama than in race questions or other themes in politics and sociology, are the two latest contributors to the Southern question.* Neither, perhaps, is quite the sort of person to whom one would, at first thought, be inclined to look for either first-hand information or intimate concern about the life of our Southern States. But Mr. Archer is, he tells us, the son of a California "Forty-Niner"; and for all his identification with London and with letters he is clearly of that strain of Englishmen to which the waste places and the lesser tribes have given world-wide occupation. As to Professor Hart, he has evidently always felt that interest in the South, even responsibility for the South, is a part of the abolitionist inheritance. The abolitionist bias is, I feel, perceptible throughout, but it is also quite plain that Mr. Hart is constantly making a sincere and commendable effort to deal with the Southern people sympathetically—to employ, as the phrase is, "the sympathetic method." Not content with mere visits to the South, he has traversed the whole region. So far as was practicable, he has not merely travelled in the South, but gone and lived in the South. If, on the whole, he has not quite succeeded in the endeavor to be sympathetic, it is not because he has not made that endeavor honestly and persistently. It is rather because his temperament and cast of mind, and his habitual intellectual method, as well as his abolitionist traditions and antecedents, have made the sympathetic method for him peculiarly difficult.

On this point a sentence in his introduction is probably more significant than he himself quite understood when he wrote it. Two principles, he is declaring, must be observed in such a work as he is attempting. The second is impartiality—freedom from animus. "The first is that no statement of fact be made without a basis in printed material, written memoranda, or personal memory of the testimony of people believed to speak the truth." That, we take it, is essentially the declaration of faith of what may be called the documentary school of historical and political science. Limited as it is here to mere matters of fact, it is hard to assail, but its adherents do not so limit it. They extend it until it becomes a circumscription on all their mental processes. They make of it a rule which, if rigidly followed, will always insure accuracy in particulars, but which, we are almost persuaded to say, can never produce truth in the general view and impression: certainly, there can be no assurance that it will result in a truthful general view or impression. Scrutinized closely, it is a principle which ties the mind down rather than sets it free. Even in pure science, it is hardly true that our advance is solely by the mere adding of one carefully verified fact to another; and in dealing with so fluid a thing as society in any of its forms the limitations of that method are very great. That is not the way we penetrate to the essential quality and genius of any civilization. Facts, of course, one must have, facts innumerable and of infinite variety, and one's mind must be fairly soaked in them, before one is ready to attempt such a portrait and interpretation of any society as De Tocqueville, let us say, made in his "Democracy in America," or Tacitus in his "Germania." But in drawing the portrait the hand must be free; in bodying forth the interpretation the mind must be not enslaved but enfranchised by its knowledge. In such high inquiries the mind will often, in fact, dart through or over or beyond the mere specific facts straight to its most priceless insights and generalizations. To insist upon the other and more pedestrian procedure is to deny to such studies powers which are in truth quite as applicable to them as to the study of individual human nature. It is as if one held that the only true acquaintance with individual men is by categories of deeds done and words spoken and qualities displayed. It is as if one said that the only true painting is mosaics.

The criticism is not easy to put clearly or to shade fairly. To make it at all may at once do a certain injustice to Professor Hart's book, which is by no means all facts, and is even not entirely without untrammelled leapings after the heart of his subject; but perhaps a passage from the much slighter and less thoroughgoing work of Mr. Archer will serve both to make the criticism clearer and to indicate why it is just. In the matter of thoroughness, indeed, the two books are not to be compared. Mr. Archer made but a hasty tour of but a part of the South. In method and manner, and doubtless in aim also, his inquiry and report were distinctly journalistic. Mr. Hart, on the other hand, has neglected hardly any phase or aspect of Southern life which one would expect to see treated in such a book as he has written. Mr. Archer's contribution to our mere information concerning the South is, accordingly, negligible, whereas Mr. Hart's is substantial. Yet here in Mr. Archer's book is a passage which for penetration, for true interpretative value, is hardly matched by anything one will find in all Mr. Hart has written. Mr. Archer has been describing his visits to a number of homes of prosperous negroes in a Southern city. He tells us that what he saw of them was modern and clean, with a tendency to "plush," and frequently not unlike what one might see in a certain class of English suburban residences. But he goes on:

What troubled me throughout my domiciliary visits was the sense that (with one

*"The Southern South," by Albert Bushnell Hart, Ph.D., etc., Professor of History, Harvard University. New York: D. Appleton & Co. $1.50 net.

"Through Afro-America: an English Reading of the Race Problem," by William Archer. New York: E. P. Dutton & Co. $3 net.

or two exceptions) these homes were not homes at all. I do not doubt that each roof sheltered a home; but I do not believe that the prim parlors I saw had any essential connection with it. They were no more homelike than the shop window rooms of the up-to-date upholsterer. If they were lived in at all, it was from a sense of duty, a self-conscious effort after a life of refinement. They were, in short, entirely imitative and mechanical tributes to the American ideal of the prosperous, cultivated home. I could find in them no real expression of the individuality of their inhabitants. . . .

A remark of my guide on one of these expeditions summed up a phase of culture as I saw it. "We have a little whist club in our set," he said. "We meet to play once a month. But the best part of it is the good dinner at the end of the season."

The whist club, so frankly characterized, guided me to the word I had been searching for in the back of my mind through all these experiences. It was the word "Veneer."

Here, it seems to me, is an instance of a kind of insight into the true nature of the difficulty of the Southern situation which Mr. Hart's method does not yield. Mr. Hart supplies us with much material for forming a judgment about the negroes—their character as a race, their moral quality and economic efficiency, and the stage of development at which they are arrived. He also expresses his own judgments clearly enough. He makes, it is quite plain, a strong effort to keep down his natural impulse to write as their defender and champion. There is also a like self-restraint in what he has to say about the Southerners—except, perhaps, when he finds that he can praise them. But in dealing with both races the form his caution takes is adherence to the verified fact, the attested instance; and it is precisely that caution, that self-hampering, which, while it keeps his work from being anywhere valueless, keeps it also from having anywhere the highest kind of value it might have.

What, however, after all, have these two investigators to tell us of the South to-day, and of the present state of its "problem"? Do they mainly agree, or differ widely, in their impressions? Does one rise from reading them encouraged and hopeful, or baffled and depressed? What, in a word, is their actual contribution?

It is not to be summarized in a word—not, perhaps, to be summarized at all. Mr. Archer's work is, as I have said, not thoroughgoing, but light; hardly, in fact, more than a series of first impressions of parts of the field. A collation of views is therefore impracticable; but one is struck with the amount of agreement between the two writers, rather than the extent of their differences, on what are doubtless the main considerations, the main doubts and queries, about the South. Their agreement on one extremely important and long violently mooted point is particularly noteworthy. Neither of these two outsiders takes issue at all with the Southern contention that the negroes are, as compared with the whites among whom they dwell, an inferior race—not a merely delayed and backward and unfortunate race, but an inferior race in the sense that not only have they accomplished and attained less but that less may be expected of them.

That this is Mr. Archer's view appears from his constant tone and from countless indirect implications, such as the passage cited above, rather than from any single declaration. But Mr. Hart, perhaps because he has found the declaration hard to make, makes it distinctly, in set terms; and it accordingly becomes quite the most salient thing in his book. He ends his chapter on negro character with the positive sentence: "Race measured by race, the negro is inferior, and his past history in Africa and in America leads to the belief that he will remain inferior in race stamina and race achievement"; and he sets down among the "Postulates of the Problem," from which any solution or betterment must proceed, this proposition: "The South is divided between two races, one of which is distinctly inferior to the other, not only in what it now does, but in the potentialities of the future." He goes farther and adds this:

> The lower race is so far behind, and so likely to lag indefinitely, that it is necessary for the welfare of the community that the two be kept separate; and this stern edict applies not only to the pure African race, but also to the two millions of mixed bloods, many of whom in aptitudes and habits of thought are practically white men.

These two convictions, so deliberately arrived at and unequivocally expressed by a man of Mr. Hart's antecedents and principles and leanings, are not merely striking and interesting. They have a practical importance. Northern opinion has always been a factor in the Southern situation, and Mr. Hart represents the kind of Northern opinion which has most constantly insisted on a hearing, even when it has not prevailed. What he says, therefore, may not unreasonably be taken as virtually marking the end in the North of that contention concerning the two races in the South and their mutual relations and obligations, which has been directly contrary to the almost universal Southern contention. To dismiss it makes for candor. There is, moreover, one distinct advantage to be gained by this particular candor on the part of the North. Let it become so general that Southerners will cease to suspect Northerners who concern themselves with the race problem of the design to disturb that which the whole white South has in this matter supremely willed, and the possibility is created of such a coöperation and mutual trust between the North and South as we have never yet had. The criminations and misunderstandings between the two sections which have darkened and embittered all our history, and still confuse our politics, will tend to disappear, so that the race question, while it will doubtless continue to be mainly the question of a section, will cease to be a sectional issue or controversy. In this regard, Mr. Hart has rendered a real service.

But to grant that the negro race is inferior, to grant that the two races must be kept separate socially, even to grant, as Mr. Hart also does quite explicitly, that any "general federal legislation" on the subject would be unwise—these concessions leave the essential difficulty of the situation untouched. They permit a calmer view of it, they bring us upon it less divided among ourselves, but it remains what it was—the hardest challenge in the world to all the noble forces that make for complete justice in modern societies.

Hopefulness can scarcely be said to prevail in either Mr. Hart's or Mr. Archer's view of it. Mr. Archer rejects entirely three of the four "solutions" of it which he discusses. These are, extinction of the blacks, amalgamation, and what he calls the "Atlanta Compromise"—the idea, namely, which Booker Washington expressed in the sentence: "In all things purely social we can be as separate as the five fingers, and yet one as the hand in all things essential to progress." The fourth "solution" Mr. Archer does indeed favor and recommend. But that "solution" is segregation—the setting up somewhere within our borders of a negro State, to which the mass of the blacks shall be transferred; and to most Americans, Mr. Hart included, that proposal seems quite as impracticable as the others seem to Mr. Archer.

Mr. Hart shows good sense in that he offers no "solution" at all. Although he still speaks of the "problem" and occasionally uses other language which is too complacent with our old habit of treating the Southern situation as if it were a sort of puzzle which might be "worked" if we could only find the trick of it, his concluding chapters are wise in that they are unsatisfying—in that they merely discuss remedies, alleviations, agencies of betterment, and disregard the panaceas. His judgment on the crucial question of the extent to which the negroes are rising is also conservative and probably very near right. He holds that perhaps a third or fourth of them are "getting ahead" materially, and that the proportion to which distinct moral and intellectual progress may be attributed is not larger; that the race as a whole is not improving so fast as the whites among whom they live, and that the South as a whole, although undoubtedly advancing, and in a far more hopeful state than ever before, still lags

behind the North in material and intellectual progress. To this last comparison he gives what seems a rather disproportionate amount of space and detail, perhaps in order to strengthen the appeal to Southerners, on the ground of sheer self-interest, for more sympathetic handling of the negroes. The main animus of the book displays itself in protests, which would be more effective if less sarcastic, against various injustices of the stronger toward the weaker race. One of these, I think, he exaggerates. His chapter on "Peonage" gives the impression that the usage still prevails quite widely; possibly he may have got that impression by failing to distinguish between peonage, properly so called, and less objectionable, though perhaps not really defensible, forms of control over negro laborers by white employers.

A word should be added concerning the many specific observations on the life of both races to-day which, as I have indicated, probably give the work its principal value. Nearly all are interesting, some illuminating, but some, I think, mistaken. I am particularly glad to see Mr. Hart doing justice to that neglected community, the Southern town. It has been too much overshadowed in literature by the plantation. He does not overpraise the good taste usually displayed in its public buildings and its residences. He is right in accounting Charleston much the most distinguished of Southern cities. He is again right in declaring that, notwithstanding the tradition to the contrary, Southern white people are far more democratic in their relations with one another than are Northern white people; yet equally right in holding that, as between whites and negroes—even between the best whites and the best negroes—there is less friendliness, and less mutual comprehension and sympathy, than ever before.

But on some things he is wrong. For instance, I think he has been misled concerning the treatment of negro children by their parents. Southern observation is to the effect that negro fathers and mothers do not lack affection for their offspring. That the young are not better cared for is oftener due to ignorance than to indifference or cruelty. He is wrong also in using the term "poor whites"—as nearly every Northern writer about the South does—as if it designated, or ever did designate, a clearly defined class. That error probably goes back to Cairnes's "Slave Power." The term is not used in the South, and the Northern use of it is misleading. I think he also somewhat misinterprets the feeling of the South concerning "social equality," particularly as it was manifested over the episode of President Roosevelt's having Principal Washington to dinner; and I think he again goes astray in dealing with the darkest and most unpleasant of all the aspects of the race question. But these difficult topics cannot be discussed to edification without more space and freedom than is here available.

WILLIAM GARROTT BROWN.

NEWS FOR BIBLIOPHILES.

Volume IV of "Papers" of the Bibliographical Society of America has just been distributed to members. This volume, of which three hundred copies have been printed, contains the addresses delivered at the tenth meeting at Bretton Woods on July 3, 1909, and the eleventh meeting in this city December 31 last. Some of the titles are: "Some Bibliographical Puzzles in Elizabethan Quartos," by Prof. George P. Baker of Harvard; "English Dictionaries Before Webster," by Dr. Percy W. Long; "On Calendaring Manuscripts," by Worthington Chauncey Ford; and "The Manuscript Collections of the American Antiquarian Society," by Dr. Charles Henry Lincoln.

At Sotheby's sale of July 2 and 22, Bishop Gott's four Shakespeare folios sold as follows: the First Folio (1623), a small copy, one corner of title in facsimile and some other leaves mended, £1,800; the Second Folio, 1632, some leaves extended, £210; the Third Folio, first issue (1663), but with the additional leaves containing the seven plays inserted, no portrait on title, the space for it being blank, £870; the Fourth Folio (1685), a good copy throughout, £76, or a total of £2,956 for the set. This is the set which, when offered at Sotheby's in March, 1908, was "bought in" by the owners at £3,850. A year before (in 1907) the same set had been priced in Sotheran & Co.'s catalogue at £7,000.

The following are a few other prices paid at the same sale: Shakespeare's "Poems" (1640), portrait cut close and inlaid, £106; Smith's "Generall Historie of Virginia" (1624), with all the maps, but a poor copy, £48; the "Hypnerotomachia Poliphili" (1599), first edition, a fine copy, £145; and a manuscript Book of Hours on vellum of English execution, end of fifteenth or first of sixteenth century, £580.

The set of the Four Folios brought together by the late John Caldwell of Pittsburgh has been acquired by Dodd & Livingston. The First Folio is the Gaisford copy, and is in an old red morocco binding. The leaf of Ben Jonson's verses preceding the title-page is in facsimile, and some blank portions of the title and two or three other preliminary leaves have been restored, but the copy is otherwise sound and good. The Second Folio, the Allot issue (1632), the usual title with "Copies," is in old sheep binding and uncleaned. The leaf of verses was placed before the Dedication by the binder, and so is unusually clean and crisp. The Third Folio is the most remarkable volume of the set. It is the first issue(1663), with imprint "Printed by Philip Chetwinde," but has the Droeshout portrait printed in the space left for it. This space in most copies (as in the Gott copy described above) is blank. The Caldwell copy does not contain the additional plays—of course they did not appear with this issue. The "Verses" and title are rudely inlaid, but no letter is wanting, and the book is otherwise probably one of the cleanest and best preserved copies extant. A copy of the Third Folio with the 1663 title (with portrait), and with the 1664 title, and the additional plays sold at Sotheby's in June, 1907, for £1,550, was purchased, it is understood, for Marsden J. Perry of Providence. It is curious that the E. D. Church collection of Shakespeare Folios (the most nearly complete in any library anywhere) does not contain a Third Folio, 1663 issue, with the portrait, his copy of this issue (from the Earl of Aylesford's collection) having the blank space as usual, though it contains also the reprinted 1664 title, with accompanying leaf of portrait with verses below.

The Church collection of the Shakespeare Folios consists of eleven volumes, every one perfect, and comprises:

The First Folio (1623). A large and fine copy.

The Second Folio (1632). Five examples showing variations in the title-page:

(1.) With imprint "Tho. Cotes for Robert Allot," with the last word spelled "Coppies" in the line "Published according to the true Originall Coppies."
(2.) With imprint "Tho. Cotes for William Aspley."
(3.) With imprint "Tho. Cotes for Richard Meighen."
(4.) With imprint "Tho. Cotes for John Smethwick."
(5.) With imprint "Tho. Cotes for Richard Hawkins."

The Third Folio (1663-64). Two examples:

(1.) With imprint "Printed for Philip Chetwinde, 1663." With blank space on title and with 1664 title inserted.
(2.) With imprint "Printed for P. C., 1664."

The Fourth Folio (1685). Three examples:

(1.) With imprint "Printed for H. Herringman, and are to be sold by Joseph Knight and Franklin Saunders."
(2.) With imprint "Printed for H. Herringman, E. Brewster, R. Chiswell, and R. Bentley."
(3.) With imprint "Printed for H. Herringman, E. Brewster, and R. Bentley."

Neither the British Museum nor the Bodleian possesses such an extended series of variations. The Bodleian has Malone's copy of the First Folio, with the portrait in its earliest state (without the shadow of the hair on the collar), and one of the four First Folios in the British Museum has the fourth line reading "Histories and" instead of the ordinary "Histories &." The First Folio with the date 1622 instead of 1623, described by Lowndes and other early writers, is now universally admitted to be merely a case of pen-and-ink alteration. It is in the Lenox Library.

Several other slight variations of the title of the Second Folio are recorded. Of the books printed for Robert Allot the Church specimen, the "Coppies" issue, is probably the earliest. The imprint of this issue has "are to be sold at his shop at the sign of the blacke Beare in Pauls Church-yard." In some copies with the second title-page reading "Copies," "Blacke Beare" has an upper-case initial for each word. In some other specimens the three words "at his shop" are omitted. One of the Lenox copies has a unique title-page with "Copies" and "blacke," but with a misprint, "accodring" for "according," and "Impression" instead of "Jmpression."

The companion leaf of the title-page A5,

"Upon the Effigies," was also reset, examples with "Coppies" having the earlier form with "Poet W. Shakespeare," in line 13. In the reprinted leaf this line has "Poet, VV. Shakespeare."

In the case of the Fourth Folio, also, the types of the title-page were twice set, the earlier form having the imprint "are to be sold by Joseph Knight and Francis Saunders." Several signatures in the body of the book were also twice set, as is shown by numerous typographical variations.

Correspondence.

POETRY AND PREPARATORY SCHOOLS

To the Editor of The Nation:

Sir: A recent reading of some 500 English papers for the College Entrance Board has left one conviction, among many confused and sometimes melancholy reflections. This is the belief that the so-called classic poetry of the eighteenth century has particular value for preparatory school work in English literature.

Whatever else the teacher of college English may desire in his freshman student, he hopes, and should expect, to find the power to get the full denotation of the words in a line of verse, and a reasonable proportion of their connotation. He hopes and expects to find in him the resultant ability to grasp all thought of the writer which can be supposed to come within his mental range. This desire is surely not extravagant, provided that one asks for a full comprehension of such a passage as:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates and men decay,

rather than:

> To-morrow, and to-morrow, and to-morrow,
> Creeps in this petty pace from day to day
> To the last syllable of recorded time;
> And all our yesterdays have lighted fools
> The way to dusty death.

But it is not always, or often, realized, as those who give themselves the pain of testing their classes know.

It is not often realized, because before the thought will spring entire from a group of words the boy must be taught to get the precise meaning of each word and the significance of the common allusions; must learn to assemble the whole into the thought which the poet wished to convey. Under the most excellent of conditions this is difficult, under bad conditions it is drudgery.

The best poetry of the eighteenth century should have a very great value for just this work. The verse of Pope, Gray, and Goldsmith is clear, logical, precise. It lacks the highest imagination, but it gains in clarity and precision in measure as it has few profundities, few elusive perceptions of the unknowable, and no romantic and ineffable longings to express. Furthermore, the English language reaches, in these poems, its height of craftsmanship; words are used with consummate skill, and with all the power they can assume and still remain expressive of the normal man, who is content to take the world at its face value. And if this poetry is without the final touch of imagination, nevertheless it possesses to a supreme degree perfection of form and perfect adjustment of means to ends. There is the slight complexity of expression, strangeness of vocabulary, richness of allusion, which must go with a meaning more searching than prose conveys; and this provides a shell upon which young teeth may be sharpened, with the assurance that a kernel will be found inside. But thought and expression are in most cases thoroughly intelligible to a boy in his teens. Take "Macbeth" when you wish to train a boy to get *all* the thought from a sentence, and who will guarantee that more than the general meaning of a passage, with a gloss of modern words for the hard ones of the text, will be the result? Take "The Deserted Village" for this particular branch of his training, and you will find diction that he can know through and through without excursions into historical grammar or obsolete vocabularies, and which, once known, will be as a path to that bridge between mere word-knowledge and genuine comprehension which young students find so hard to cross.

I am well aware that in this argument I have left a flank unprotected. Let me quickly assert that I do not for an instant propose that we shall give no food for the imagination in our schools, that we shall cut out Coleridge, Tennyson, or Shakespeare. By no means. I contend merely that for the large and important part of a literary training which involves a perfect comprehension of the medium of expression we should chiefly employ this poetry of the eighteenth century. Let the teacher use his tools intelligently. Let him teach Shakespeare and Tennyson for values which do not have to be enlarged upon here. Let him do the thorough work which must somewhere be done in words, allusions, collocation, and the complete comprehension of thought, with literature in which neither thought nor language is beyond the grasp of the student.

The suggestion I have outlined above is theoretical in form, but practical in origin. It comes from the entrance papers of the students themselves. A question upon the meaning of a passage in "The Deserted Village" brought forth answers which showed an especially satisfactory knowledge of that text. Questions requiring a statement of methods of study, or reasons for liking a poem, elicited responses which went far toward proving that a minute study of poetry of this eighteenth-century variety gave the desired results without killing interest in the poem.

A little Pope, Goldsmith, and Gray, with scattering poems from other eighteenth-century authors, is already in the entrance requirements for English A. Other poems could, perhaps, be added with advantage in both A. and B. But I am content to propose that more extensive and especially more particular use be made of that which the examiners have already given us.

Henry Seidel Canby.

Yale University, July 20.

REBELLION OR CIVIL WAR.

To the Editor of The Nation:

Sir: In the review of George Cary Eggleston's "The Confederate War," in the *Nation* of June 30, your reviewer says:

> While for legal purposes the struggle is perhaps best described as a rebellion, it was a rebellion of so large and fundamental a sort as to elevate the contest to the plane of a public war, and give to it the character of a war for independence.

The legal status of the Southern States was established many years ago by the Supreme Court in its decisions in the prize cases, so that "for legal purposes" the struggle was, according to the court, a civil war. That is, it was a civil war if we accept the view of those who contended that the States were never out of the Union, or of Alexander H. Stephens, who called it "the war between the States." For those who considered that they were out of the Union, it was a war with a foreign power, the Confederate States of America, or, as Mr. Eggleston terms it, "the Confederate War," just as the war with Spain was called the "Spanish War."

The government at Washington fixed the status of the war in its inception when it proclaimed a blockade of the Southern ports. Although Mr. Seward objected to recognizing the belligerency of the Confederacy, yet when the blockade was proclaimed and the foreign representatives inquired on what ground, he was compelled to reply that it was on the ground of belligerency. Their reply was that he could not recognize belligerency at sea and refuse it to land operations. His position was, of course, untenable.

That the Southern States were recognized as belligerents in the full sense by the Washington government is evident from the fact that there was an exchange of prisoners all during the war, captured troops were paroled—a whole army of them, after the fall of Vicksburg—and at the conclusion of the war there were no trials for treason or rebellion. It is a rather fantastic use of the term "rebellion" to apply it to a war with a people who, for four years, maintained a representative government in complete administration, with its President, its Congress, its Legislatures, and its courts, as well as its diplomatic agents abroad. I imagine the term is used now rather from ignorance or prejudice or for purposes of invective—even for that it is getting a little stale.

BOOKS AS TOOLS.

To the Editor of The Nation:

Sir: In the record of the proceedings of the American Library Association in the *Nation* of July 21, reference is made to the address delivered by Prof. Charles Hubbard Judd of the University of Chicago School of Education, on "The Library and the School." The professor said he wished the present study hours in the class-room could be changed to library hours when pupils, under the guidance of a school librarian with a wide knowledge of books, could be led away from the thralldom of text-books and could learn to use books as tools. What Professor Judd has here called attention to is precisely what many others interested in the proper and full development of the free public library system in this country have felt was needed to make our libraries of more practical use to everybody, and particularly to those who carry on the work of the world. Somehow, in spite of all the attention given to technical detail in the management of public libraries—or perhaps because of it—those who should make daily use of the

books in these institutions do not do so. The library as a workshop does not appeal to those men and women who might make the most of its advantages. In few schools are books handled as tools, and our librarians generally have not yet awakened to the great possibilities that lie within their reach. Perhaps this explains the curious lack of liberality on the part of the municipal authorities in too many sections of the country toward the local library. They do not think it pays.

In our big business houses, both wholesale and retail, we see that those in charge of them have gradually revolutionized the methods of the past in dealing with the public. Business men—and men of as true genius as is to be found in literature and art—have educated the people to a different system of trading, enabling them to buy a better article for less money and on fairer terms than were ever dreamed of by the merchant of the past. There are those who believe the same revolution will yet be worked out in the library world, when men of sufficient imagination and executive ability take hold of this institution and develop it in the big way that has marked the growth of American commercial life.

WHISTLER'S BIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: The letter which you published from Mr. Arthur Studd (*Nation*, July 7) is misleading. Whistler, in his lifetime, authorized us to write his biography and, when, later, we were dragged into the law courts by Whistler's executrix, this was completely proven and the authorization was upheld on every point by the British High Court of Chancery. The Metropolitan Museum, in the Introduction to its Catalogue of the Whistler Exhibition, states the facts correctly. Mr. Studd's letter is an endeavor to misrepresent them to your readers.

McMASTER'S HISTORY OF THE UNITED STATES.

A History of the People of the United States, from the Revolution to the Civil War. Vol. VII. By John Bach McMaster. New York: Appleton. $2.50 net.

Two subjects of high interest virtually fill the seventh volume of Professor McMaster's "History," the social situation of the country in 1840 and the war with Mexico. Exactly ten years, 1841-1850, are covered in the narrative, and those ten years formed a turning point in the nation's history. The slave power exerted its greatest force of aggression, and seemed to have attained its desire; but in so doing it raised influences that in the end were to conquer by overthrowing that power, and wiping slavery from the land.

The account of the measures leading up to the war with Mexico is admirably told, and gains much by the use of the rich manuscript sources that have come within the reach of the student in recent years. The story is retold with greater detail, and the relations of the leading actors in that political struggle are not a little changed by the new material. The main lines remain as they were, and there is nothing that would alter the generally accepted view of the justice or injustice of the war, and the interested motives of Polk for beginning it. Jackson unwittingly allowed himself to be used as a cover for the annexationists, and on the plea of military necessity came out positively for annexation; in so doing he defeated the Presidential hopes of Van Buren. A little coterie of Southern statesmen succeeded in overthrowing the plans of one of the shrewdest political managers of the day, one supported by all the weight and prestige of the idol of the Democratic party. Not only did they defeat him in a convention that was intended to meet, and as a matter of form nominate him, but they reduced him to an impotence so great that he could not so much as command the nomination of the member of the Cabinet from his own state. Mr. McMaster might have touched upon the exclusion of Van Buren from Polk's confidence, and the very tardy and not entirely sincere peace offering which was made to the ex-President in the form of the English mission. It is unfortunate also that the diplomatic correspondence of the Texan republic was not published in time for use, as there is much in it to modify general statements on the position of Texas and its true relations with European Powers, on which Jackson so largely based his conclusions.

Polk regarded his election as a mandate for annexation, but found that action had already been taken by Tyler looking towards the admission of Texas into the union under a resolution of Congress. Here again some recently published letters of Polk add something to the case as stated by McMaster. Tyler had sent Donelson to Texas to induce her to give up her independence and become one of the United States, electing to act under a resolution passed by the House, and not under another of the Senate. Although the campaign had been fought on the question of annexation, Polk reached Washington and took the oath of office without having come to a decision under which resolution he should act. Having learned what Tyler had done in the matter, he was content to send a messenger to Mexico, but matters had then gone too far for such treatment. Out of Polk's attitude or hesitation on March 4, grew a controversy which he felt keenly, as it involved the charge that he had given pledges that were unwarranted before taking office. He had no opinion at the time—certainly a singular position for the Executive at such a crisis.

On the course of negotiation, propositions, and hostilities Mr. McMaster's chapters are crowded with interesting detail, sometimes so full as to be a little confusing. He brings out with admirable force the fact that when war did come, the people were not confused by any moral questions over the rights of Mexico or the extension of the slave power. They took their cue from Polk's message, and thought only of the "aggravated and multiplied wrongs to which our country has been subjected by Mexico during a long series of years." The papers dwelt much upon the faithlessness, falsehood, and insolence of Mexico, and on her refusal to pay claims or negotiate upon the subjects in dispute. From that it was a simple step to assert that Mexico had invaded American territory, and, as the war proceeded in favor of the American arms, to increase the demands for territory and compensation, until it seemed as if no moral issue could possibly have been involved. After peace came the rise of the free soil party, the agency for once more recalling the people to certain dangerous aspects of national tendencies.

The Oregon question and the Clayton-Bulwer treaty were also events of this time, and are treated with great fulness. In seeking to show what opinions the people held on those political questions, Mr. McMaster gives a summary of many newspaper articles, taken from different parts of the country. The result is confusing, because there is no standard for measuring the influence of those respective journals. It is the same with the often long summaries of Congressional speeches. Indeed, it is a characteristic of all of McMaster's volumes that he remains impersonal. The so-called leaders seem to be mere figureheads, convenient for an occasional appearance and utterance, but without life and vitality. It would be difficult to gain any idea from these pages of the manner of man Polk, Van Buren, or Taylor was. No attempt at characterizing is made, and no opinion is given by the author upon the careers of these men. The reader would suppose from the account given on p. 505 that Adams had never been of moment in the nation's history.

While political narration loses by this absence of personality, the description of the moral and social condition of the country gains. Here Mr. McMaster is at his best, and the curious and readable information drawn from many sources, from the very unreliable census of the day to the political philosopher, makes these volumes a veritable treasure-house of good things. The visiting foreigners naturally supply a good part of the more definite pictures, for

they had greater skill in presentation and were more impressed by the novelties. As a whole, they do not seem to have been unjust, or to have departed far from the truth. Even as Mr. McMaster pictures them, the modes of travel and of entertainment were exasperating to any who were acquainted with a certain convenience. A journey from Mobile to the Atlantic seaboard required much endurance, while west of the Mississippi the element of tragedy was ever present. The descriptions of cities like Boston and New Orleans show how far the country had advanced since the War of 1812, and the social movements, like the study of Fourierism, the crusade of Dorothea Dix, and the rise of libraries, are extremely suggestive of the workings of moral forces as yet crudely seeking for an outlet. These chapters are good reminders to the reader of the beginnings of tendencies that have become general, and an essential part of the progress of knowledge. For these alone this history deserves high praise.

CURRENT FICTION.

Morning Star. By H. Rider Haggard. New York: Longmans, Green & Co.

It must be said, with all due sadness, that if it were not for the name upon the title-page of this romance, one would incline to dispose of it in short order as a mediocre performance. But for anything by the author of those gratefully recalled treasures of a vanished boyhood, "King Solomon's Mines" and "She," one naturally has a second glance. To the youthful mind, the present story will no doubt possess its merits. It has the spooky quality peculiar to Mr. Haggard's best romances; and it has enough of mere adventure to appease the juvenile thirst for action. To the ear of middle age it all rings a little thin. The heroine is but another of those miraculous females of whom "She" was the great original. Neter-Tua, "Morning Star of Amen," is of course a Queen; royalty is a fundamental virtue of Mr. Haggard's heroines. Her realm chances to be Old Egypt. She is heir of a usurping dynasty. The older line is represented in the flesh by a young Rames, a mere soldier in the royal army, but foster-brother and beloved of Neter-Tua. The author's task is obviously to seat the pair together, after a proper series of vicissitudes, upon the double throne. The chief adversary is one Prince Abi, uncle to Neter-Tua, and himself aspirant to the throne. He is a very bad man indeed, and only gets his deserts. He brings about the death of the Pharaoh, Neter-Tua's father, and, having made the beautiful princess his prisoner, gives her choice between marriage to himself and starvation. She makes the heroic choice, and seems in a fair way to pay the penalty, when it suddenly appears that she is not daughter of the great god Amen for nothing. Supernatural presences supply her board, and presently whisk her away altogether beyond the power of wicked old Abi. Remains behind in her dungeon an avenger in the form of her "Ka," or double, which assumes the part of willing bride to Abi, and shortly brings him to confusion. Meantime the real, or bodily, Neter-Tua wanders upon the track of young Rames, and it is not hard to imagine the upshot of the whole affair. It is a little surprising to find that the veteran romancer is as much given to mingling highflown archaisms and modern colloquialisms in his dialogues as the majority of his successors in the esteem of the romance-reading public.

Anne of Tréboul. By Marie Louise Goetchius. New York: The Century Co.

The besotted self-sacrifice is one of the subjects with which novel readers have ample chance to lose patience. When the father of Anne's unborn child besought her to marry him, when mother and curé added their entreaties, there is pitiful lack of pretext for Anne's making martyrs of herself and family. The knowledge that Yvon loved Aimée was the excuse she offered, but in the face of facts and of her acute maternal instinct the mistake was wholly unnatural, and makes of the story a vain show. The Breton coast, the traditions of the fisher-folk in their work, their play, their dangers, their penances, are not without the familiar Breton picturesqueness. No story of the sea by one who knows the sea can be entirely uninteresting. But the strained and motiveless motive is enwrapped in so much verbiage of an awkwardly Gallic English that the manner does not redeem the matter. What is meant to be a pathetico-tragico-idyl is in fact a bit of rococo sentiment overloaded with nondescript language.

The Godparents. By Grace Sartwell Mason. Boston: Houghton Mifflin Co.

A very pleasant little story; slight of its kind, but excellent in that kind. It has been recently declared that the reign of the short story is nearing its end: that the new form of fiction is to be neither the tale nor the extended novel, but the three-part story—a story, that is, of such length and quality as to enable it to appear in three consecutive numbers of a popular magazine. "The Godparents," though we do not know that it has found that form of publication, appears to be of about the right length and type to fit this new measure. It is rather an expanded short story than a condensed novel. Some ten years before the story opens, two young people have rather carelessly stood godfather and godmother to the child of a friend. The friend has died, and the boy is growing up neglected and unruly. He is nominally in the care of his grandmother, but she has not long to live, and, like the boy, is under the virtual rule of a designing housekeeper. Almost on her death-bed, she summons the godparents to do their duty by the boy. The man gives up his work, and fairly browbeats the woman into giving up her pleasure, in order that the boy's life may be saved. Needless to say, the godparents are both unmarried, and destined to be brought together on the field of duty. To tell the truth, the author herself is so much interested in their progressive philandering as to find difficulty in keeping the boy in the foreground. To begin with, he does not seem to be in such a fatally bad way. He refuses to have anything to do with the reforming pair, so that the ease of their task may not part them. He takes to the woods so that they may pursue him and carry on their acquaintance among the romantic surroundings of the camp and the trail. He becomes amenable just as soon as it is desirable to wind up the whole episode. But let us not bruise the butterfly, which is, as we have said, a pretty example of its species.

A Disciple of Chance. By Sara Dean. New York: Frederick A. Stokes Co.

"Travers" may be recalled as a story laid in San Francisco at the time of the earthquake—a story in some ways crude, but with a vigor belonging to its direct conception of a modern action in a modern scene. We half suspect that "A Disciple of Chance," by the same author, is an earlier book. Its origin is literary, its structure artificial. The curtain rises upon a company of elegant eighteenth-century gamblers amusing themselves with hazard in White's Coffee-house. Horace Walpole and George Selwyn are among the number. The host is a certain Earl of Yerington, who shows, one by one, all the qualifications of the romantic hero. He is one of the finest gentlemen of his time, and a good fellow besides; a favorite with both sexes, master of the smallsword, and quondam conqueror of the greatest of England's professional bruisers. Add that his blood is of the oldest, his face of the handsomest, and his fortune being gallantly flung away at the gaming-table and elsewhere, and you have the finished type. His crowning folly is to wager his life against the guess of a titled enemy that he will be a ruined man within a specified time. After a good deal of rather stagey and artificial adventure, he is saved from ruin and the ensuing duty of suicide by the always acceptable expedient of marriage with an heiress. But, of course, the expedient is the novelist's, not the hero's. We must hope for another "Travers" rather than another story of this conventional and merely tolerable cast.

GREEK RHETORIC.

Dionysius of Halicarnassus: On Literary Composition. Being the Greek text of the *De Compositione Verborum*, edited with introduction, etc., by W. Rhys Roberts, Litt.D. (Cambridge), Hon. LL.D. (St. Andrews), Professor of Classics in the University of Leeds. New York: The Macmillan Co. $3 net.

This volume for the first time makes fully available for a reader who knows the elements of the language, whether distinctively a Grecian or not, the most important work of one who is classed by Jebb as the "best literary critic of antiquity," and to whom G. Saintsbury assigns "no mean rank as a critic" without limitation of time. The best previous edition for general use, leaving aside the bare Teubner text by Usener in 1904, was that by Schaefer, with a Latin version and variorum Latin notes, published in 1808. But a fairly good classical scholar might fail to appreciate at its true worth, in a wholly antique dress, a treatise which approaches the subject from a point of view very different from the modern. Even the vocabulary, while it looks so classical, employs distinctive terms in senses varying so subtly from the classical that one may, unless he has given special attention to the later rhetoric and literary criticism, be more struck by what seems queerness than by its penetration and good sense. The very title illustrates this. "De Compositione Verborum" is clear enough after reading the treatise, but hardly before; "On Literary Composition" starts one right. Whoever is interested in the theory of criticism, including every teacher of literature, should place this work from the age of Augustus with the "Poetics" of Aristotle and the anonymous treatise mis-named "On the Sublime," perhaps of the first and perhaps of the third century of our era. Different as they are, these are the three ancient theoretical works in their field most worth attention; they "confirm our belief in the essential continuity of critical principles, in the existence of a firm and permanent basis for the judgments of taste." It may be mentioned that the latest in date of the three has also been published in a similar style by Professor Roberts, and the volume is now in a second edition.

The editor's work is admirable for technical scholarship, for breadth of view, and for literary skill in the difficult task of translation. An ample introduction gives the setting, a lucid explanation of what the author's subject includes and what it does not include, discussion of his sources and literary references, and an adequate account of recent writings connected with the treatise. It is pleasant to note that American work is generously recognized. The text is independently constructed and accounted for, with full acknowledgment for the work of Usener. A graceful yet wonderfully accurate translation faces the text; excellent explanatory notes at the foot of the page contain, among other good things, abundant illustrations from modern authors as well as ancient. Thus, opening at random to p. 146f, we find illustrative quotations from Quintilian, Virgil, Demetrius "On Style" (also edited by Professor Roberts); Demosthenes "On the Crown"; Cicero, Euripides, George Meredith, Shakespeare, Marlowe, and John Thelwall; and these are connected by illuminating comment. Text and translation are followed by a copious glossary, including terms of rhetoric, grammar, prosody, music, phonetics, and literary criticism. This glossary is useful even for specialists in these departments; for others it will be found an invaluable aid, not only to an understanding of this treatise, but for a wide range of reading. Three appendices and a double index close the volume. Appendix B is devoted to illustrations of word-order in Greek and modern languages. The editor's method is simple and telling; he takes four famous Greek passages of prose and adds French, German, and English versions of well-known translators for direct comparison. Thus the opening lines of Plato's "Republic" are accompanied by the versions of Victor Cousin, Schleiermacher, Davies and Vaughan, Jowett, and A. D. Lindsay.

The volume is printed in Macmillan's best style, so that form and contents correspond. Altogether it should find a wide circle of readers outside the ranks of professional Hellenists. Would that more of these might in like manner learn to combine literary skill and the love of letters with their learning.

John Lothrop Motley and his Family: Further Letters and Records. Edited by his daughter and Herbert St. John Mildmay. With numerous illustrations. New York: John Lane Co. $5 net.

The most important letters of the historian of the Dutch Republic were published by George William Curtis more than thirty years ago, but a considerable remnant has been in the family archives, and some important letters have in the interval come to light. These, with numerous letters by Mrs. Motley and Miss Lily Motley, now Lady Harcourt, make up a very interesting volume. All the Motleys were good letter-writers, and the wife and daughter kept abreast of all literary and political activities of the head of the family. So this book, though frankly made up of scraps, has a certain continuity, and covers in a glancing fashion the greater part of Motley's public life. There are a number of illustrations including a charming Colonial pastel, apparently an early Copley, of an ancestress, Elizabeth Checkley, and a capital silhouette of Bismarck as a corps student.

While reading this informal memoir one moves in excellent company. At a dinner Mrs. Motley heard Buckle on the subject of the newly devised competitive examinations for the civil service:

> He said that he approved of it, not because he thought it gave the country a chance to be served by abler men, for, on the contrary, it encouraged false learning or cramming, but because it was a democratic movement, having the effect of diminishing patronage. Anything that tended to pull down the aristocracy and weaken the power of government must be a move in the right direction.

It was Mrs. Motley also to whom Theodore Parker said that he hoped the Dutch histories would be "liberal in tone, but not too popular," adding that one reason for Prescott's amazing vogue in America was that he always took the side of queens and kings. To Lord Robbert Cecil Mrs. Motley once said apropos of the civil war: "I must try to convert you Tories to the right views of America," and elicited the characteristic retort, "Well, there is one way to convert us all—win the battles, and we shall come round at once."

Most readers will turn first to the brief correspondence with Bismarck. It affords some tidbits. Bismarck, writing in 1864, had asked his old fellow student if the United States "knew what it was fighting about." The answer was:

> We are fighting to preserve the existence of a magnificent commonwealth—and to annihilate the loathsome institution of slavery. If men can't fight for such a cause they had better stop fighting for evermore. Certainly since mankind ever had a history and amused themselves with cutting each others' throats, there never in the course of all the ages was better cause for war than we have.

The *Junker* Bismarck appears in a spirited and destructive discussion of the legendary *jus primæ noctis*, a bugbear which Motley had admitted into his first volume. Nothing could be more maliciously fine than Motley's quip to Bismarck just before the annexation of Schleswig-Holstein. "Do you remember," he writes, "what the formal old fop of a parson in 'The Antiquary' used to say to Miss Griselda, much to the indignation of her brother, Jonathan Oldbuck: 'Madam, I drink to your inclinations, provided always they be virtuous'? Well, I drink to your inclinations without that proviso." After Sedan, Motley wrote a long letter to Bismarck pleading for moderation. "The more moderate the terms on the part of the conqueror at this supreme moment, the greater would be the confidence inspired for the future, and the more secure the foundations of a durable peace, and the more proud and fortunate the position and character of Unit-

ed Germany." On the margin in Bismarck's writing are the words, "Damn confidence," a phrase which pretty well expresses the spirit of German foreign policy ever since.

Such extracts suggest the various interest of this book. In the preface we learn that all of Motley's descendants are English, and by a bitter irony a grandson fell in the Boer war attempting to subjugate that very race whose love of liberty had been the grandsire's lifelong theme.

Ancient and Modern Imperialism. By the Earl of Cromer. New York: Longmans, Green & Co. 90 cents net.

Whatever the former Consul-General of Egypt might have to say about Imperialism would be sure of a good hearing, and the present essay, expanded from the presidential address to the British Classical Association, is not merely weighty in its analysis, but fortified with numerous historic instances, and attractive in style. One may regret that the distinguished author has been so sparing of judgments in a matter that touches current morals and policy so nearly. In the main, the essay is analytical. The Greeks, he finds, hardly managed to think, and never to act, imperially. The Romans achieved the greatest success of which we know, partly through the simplicity of their aims, partly because the times were propitious. The idea of nationality was weak. They dealt not with nations, but with tribes already impressed by the greatness of the Roman state. On the whole, they gave better administrations than those they destroyed. In late republican times there were "little Romans," anti-imperialists quite like those of England and America.

Into the larger question whether these critics were right Lord Cromer does not enter, though no one can doubt what his verdict would be. The broad issue is, Could the large heritage of law, literature, and civilization generally which Rome bequeathed to Europe have been amassed under other than imperial conditions? We think there are many evidences that the valuable and transmissible part of the genius of Rome had no imperial implications whatever. On the other hand, the glamour of the empire unquestionably lent authority to the spiritual testament of Rome. It should be added that the processes of empire have rarely been conscious or rationalized. The Romans and English alike merely meet political troubles and seek markets in piecemeal fashion. No empire, unless it be Napoleon's transient fabric, ever grew otherwise than by rule of thumb. One would be glad to know if Lord Cromer takes this fatalistic view of the matter, or whether he believes that aggressive politics, and even trade, may eventually be moralized and rationalized. Such is the hope of those who venture to criticise the forward tendencies of trading nations.

Examining the conditions of modern empire, Lord Cromer notes the growth of national feeling and of antipathy based on color, "a plant of comparatively recent growth"; the impossibility of imposing a single speech upon alien civilizations, and finally the lack of a single ideal of dominion. In this matter of the logical discrepancy between absolute rule oversea and free institutions at home, between pro-consulates and self-governing colonies, Lord Cromer is refreshingly frank. He approves of the South African settlement, and advocates indefinite tutelage for India. He fails, however, to go to the root of the matter ethically. He assumes that England must rule India indefinitely, or let the land slip into chaos. This is probably true, but the moral issue lies deeper. Has a nation a right to its own form of chaos, if it honestly prefers this to an orderly rule imposed from outside? Morally we feel the right of any country to its own form of misgovernment is incontestable, if it can be shown that no other nation suffers serious inconvenience thereby.

Naturally a great administrator may be excused from discussing these burdensome underlying principles. Yet we regret such reticence, for nobody could bring a fairer or more experienced mind to the subject than Lord Cromer. He gives no comfort to the transcendental and pietistic arguments by which imperial policy is often defended. He sees in the movement not the hand of Deity, but commercial expediency, the fear of other forward-moving nations, and the necessity of dealing some way or other with conditions bequeathed by the past. This opportunism is characteristic of a most judicious study. The relative success of the Romans he attributes largely to their extraordinary opportunities. Among modern imperial nations, he finds England has neither uncommon qualifications nor noteworthy defects. All foreign overlords are impartially hated. The ingratiating qualities of the Russians, for instance, are grossly exaggerated, as is the alleged inflexibility of the British. Where England has failed she has failed not as British but as Western. We fancy imperialists will draw little comfort from this historic parallel. It shows that the current imperial policy lacks clear-cut political or moral warrant; that it is pursued under gravely increasing difficulties; that it often brings new misfortunes to the countries it professes to benefit, and finally that imperialism failed to perpetuate itself under far more favorable circumstances. Such conclusions are not expressed in a study which is mostly expository. They are, however, fair inferences from the data presented.

Principles of Political Economy with Some of Their Applications to Social Philosophy. By John Stuart Mill. Edited with an introduction by W. J. Ashley. New York: Longmans, Green & Co. $1.50 net.

Professor Ashley has put the economic world in his debt by this edition of Mill's great work. He has taken the final text of 1871, and has traced the various changes which were introduced in the six revisions which separate it from the original text of 1848. Many of these changes are illuminating as showing the fluidity and unfinality of Mill's thinking. The editor has supplemented the text by what he modestly terms a Bibliographical Appendix. It is much more than this, however, for it provides in compact form a complete apparatus for bringing up to date the study of the more important moot questions contained in the Political Economy. Thus under the note upon the wages fund doctrine is reprinted the gist of Mill's recantation of that error in the *Fortnightly Review* for May, 1869. Admirable also is the selection of essential statistical matter containing the gist of such movements as price-variations, fluctuating wage-levels, and declining birth-rates. Nothing is better adapted than this vitalizing kind of editing to prevent a literary and scientific masterpiece of a by-gone generation from becoming merely the happy hunting ground of the professional commentator and eventually the victim of the specialist. It is not the least of the work's merits that a thousand pages of good clear type are compressed within two covers without producing a bulky volume.

In his entertaining introduction of twenty-five pages, Professor Ashley, with commendable restraint, has limited himself to pointing out the three intellectual streams which met without ever quite coalescing in Mill's economic thinking. The dead hand of his father's narrow utilitarian logic always held in fee Mill's mature striving for a new point of view. The adhesion to Comte's social philosophy never permeated Mill's economics, though it broadened its scope as the sub-title to the work indicates. Mill could never find the sociological missing link—the unfound science of "ethology"—to bind his own economics to the Comtean philosophy of the sciences. The third strain was the humanitarian thinking of his wife, for whose intellectual powers, it seems likely, Mill always entertained a chivalric over-estimate. Professor Ashley's segregation of the three unblended elements only point old Roscher's dictum anent Mill—"zu wenig aus *einem* Gusse."

A re-reading of Mill is a happy corrective of the too prevalent state of economic Pharisaism which dismisses the system as logically "a ruin." In what modern work on economics shall we find

in future times the poignant elemental note to which Mill occasionally abandons himself? It is as though he was filled with a revulsion at the whole spectacle of the crowded trampling of the market, and would sound a protest in favor of something deeper and nobler. As a single instance, take his final comment on "The Stationary State," the bug-bear of his professional brethren:

A population may be too crowded, though all be amply supplied with food and rai ment. It is not good for man to be kept perforce at all times in the presence of his species. A world from which solitude is extirpated is a very poor ideal. Solitude, in the sense of being often alone, is essential to any depth of meditation, or of character; and solitude in the presence of natural beauty and grandeur is the cradle of thoughts and aspirations which are not only good for the individual, but which society could ill do without.

Notes.

A reprint of Arnold's "Celtic Literature" is soon to be issued by David Nutt; also "Three Unpublished Plays of Peacock" and "Monumenta Historica Celtica," by W. Dinan.

Thomas Y. Crowell & Co. announce a new book by Dr. Lyman Abbott, entitled, "Seeking After God," also a volume of verse by Charlotte Porter.

A second volume of "The Wonderful Adventures of Nils," by Selma Lagerlöf, is in the hands of Doubleday, Page & Co.

From the same firm comes the announcement that beginning with November, 1910, *Country Life in America* will appear semi-monthly.

Meredith Nicholson's new novel, "The Siege of the Seven Suitors," is to be published by Houghton Mifflin Co.

The autumn announcement of Cassell & Co. includes: Fiction—"Freda," by Katharine Tynan; "The Lovely Mrs. Blake," by Richard Marsh; "Janey Canuck in the West," by Emily Ferguson.—History, Travel, Literature, etc.—"In the Heart of Africa," by Adolphus Frederick, Duke of Mecklenburg; "Australia: the Making of a Nation," by John Foster Fraser; "Napoleon in His Own Defence," by Clement K. Shorter; "Puritanism and Art," by Joseph Crouch; "The Dictionary of English History," new and revised edition, edited by Sidney J. Low and F. S. Pulling; "A First Sketch of English Literature," enlarged, by Professor Henry Morley; "The Story of English Literature," by Christabel R. Coleridge, new and revised edition; "Breeding and the Mendelian Discovery," by A. D. Darbyshire; "The Light Side of the Law," by George A. MacDonald; "The Pocket Reference Library," "Steamships and Their Story," by E. Keble Chatterton; "Dryden's Aenid of Virgil," edited, with an introduction, by Prof. A. J. Church; "The Greek Heroes," translated by Niebuhr, with additions; "Stories of King Arthur," by A. L. Haydon; "Alice in Wonderland," illustrated; "Practical Electricity," new edition, by Ayrton and Mather.

Johann David Schoepf's "Reise durch einige der mittlern und südlichen vereinigten nordamerikanischen Staaten, 1783-84," which has been translated by Alfred J. Morrison, is in the hands of Samuel N. Rhoads, Philadelphia.

The sixth issue of "Who's Who in America" (A. N. Marquis & Co.) has appeared, with its encyclopædia of biographies corrected for 1910, 1911. In the case of a book becoming almost as well known as a dictionary, there is little more for the reviewer to do than announce its regular appearance and the continuance of its growth. The present volume embraces 17,546 biographical sketches, an increase of 1,151 since the previous issue.

It is far from the time when ten-thousand pirated copies of "The Wide, Wide World" sold at a single railway station, yet there are still old-fashioned readers who will welcome the biography of the author. "Susan Warner ('Elizabeth Wetherell')," by her sister Anna B. Warner (Putnam), should in fact make an appeal even to those for whom "Queechy" "Wych Hazel," etc., are merely names. Of Puritan stock transplanted to New York, Susan Warner was brought up in modest luxury, only to find herself, at eighteen, impoverished and virtually the head and the support of a motherless family. Her high-minded but wholly unworldly father was periodically stripped, by less scrupulous people, of the remnants of a shrinking competence. Constitution Island, in the Hudson, off West Point, had been bought in affluent days as a country estate. It served instead as a refuge. Susan Warner, with the aid of the younger sister who writes the biography, maintained an heroic and relatively successful struggle against poverty. At times the little group on Constitution Island knew something like destitution, but desperate need gave power to her pen, and her books gradually won for herself and hers an uncertain ease. She has left extensive journals of the struggle, which are both pathetic and heartening reading. A strong and genuinely mystic religious sense sustained her throughout. Her vision of the world was intense and perhaps correspondingly narrow. One divines in her the passionate incompatibility with averages in life or thought that characterized a kindred if much abler spirit, Charlotte Brontë. Shy, keenly intellectual, and apparently a little suspicious of alien excellence, her quality was attractive. The West Point students were glad to attend her Bible classes. She was a very personal sort of a person. There was a kind of genius in her of which her books are an inadequate expression. Her journals afford authentic and vivid pictures of the afterglow of Puritanism. There is a quaint and homely flavor about her intimate writing which is also, paradoxically, highly distinguished. Miss Anna B. Warner has minimized her office as memorialist, merely knitting together the materials of the biography. Her occasional comment, however, has a fine and rather stately crabbedness which we feel will not displease the generation it compares so unfavorably with her own. Her attitude towards her subject is that of frank idolatry, and she has lavished details of infancy that many will feel to be superfluous. On the whole, though, the book contains a uniquely complete and interesting record of a typical Puritan family. It symbolizes the fading out of many a sturdy Puritan line in which the men have retained only the fineness with little of the efficiency of the stock, while the women have transmuted into a sort of febrile spirituality the vital energy that their mothers gave to the perpetuation of the race.

Frederic Stanhope Hill's "The Romance of the American Navy" (Putnam) is an interesting and instructive narrative which cannot fail to appeal most forcibly to the general reading public. The term "navy" is used by the author not in its strictly technical sense, but "as covering all vessels commanded or manned by American seamen, whether or not their vessels might, at the time, be included in the roster of the colonial or American navy." As a consequence of this broad interpretation, more or less attention is given to the daring exploits of privateersmen, especially in connection with the Revolutionary war and the war of 1812. An attempt is made to cover in a single volume of moderate size the whole history of the navy from the time of the first war with England up to and including the recent cruise of the battleship fleet around the world. As a proper basis for his story, the writer has availed himself of a wide range of both original and secondary sources. The chapters dealing with the civil war assume an added interest by the fact that the author himself saw active service at that time as a naval officer under Farragut and others. The book is liberally illustrated, and, all in all, is a valuable contribution to the literature dealing with our naval history.

Under the title of "Latter-Day Problems" (Scribner), Prof. J. Laurence Laughlin has gathered together "for the lay public" a series of economic studies, several of which have appeared in the *Atlantic Monthly*, *Scribner's Magazine*, and the *Journal of Political Economy*. The first group of chapters bears upon the part which the science of economics should play in providing such analysis of social conditions as may form a stable basis for the effective aid and permanent improvement of the less fortunate classes. The promotion of increased efficiency, or productivity, in the individual laborer is held out to labor unions as a working principle of far greater promise for the raising of wages than the inherently suicidal attempt to corner the labor market by the creation of an artificial monopoly of workmen who are available in any given field. One chapter deals with Socialism, and holds it up as a state of mind rather than a logical system of thought. In its idealistic outreach for escape from the hardships of life, it appeals powerfully to the latent idealism in us all, but its vaguely outlined hopes take no due account of actual and inevitable conditions of human existence. It looks to merely external means, such as the abolition of competition and private property, to create a situation impossible without the production of new and fundamental virtues in human nature. The work of social settlements is criticised, in no unkindly spirit, for a certain lack of definiteness in aim, and for a failure to apply careful economic analysis to the conditions with which the settlement must deal. Chapter vii contributes a vigorous argument against the theory that the physical valuation of rail-

ways presents a fair basis for determining the rates which they shall be allowed to charge. There follows a long and effective argument, perhaps unduly heated at points, against the movement for the guarantee of bank deposits, and the volume closes with an exposition of the advantages of bank issues as compared with a currency of government notes.

In 1882 Prof. Henry Marczali of the University of Budapest, published an authoritative volume on Hungary at the time of the accession of the Emperor Joseph II. This has now appeared in an admirable English translation, with a learned introductory essay by Harold W. V. Temperley, under the title of "Hungary in the Eighteenth Century" (Putnam). It is interesting to contrast recently published volumes on the economic development of modern Hungary with the picture of the country at a time when the great fertile lowlands consisted of uninhabited forests or marshes. It was only after 1740, when the Turkish invasion was no longer dreaded, that a rapid development took place, which, as Professor Marczali points out, "reminds us of the state of things in modern America." But while Maria Theresa encouraged Hungarian industries, a complete change took place under Joseph II, who "viewed and treated Hungary—the home of all that was mediæval, customary, and traditional—according to the hard reason and doctrinaire theories of an eighteenth-century philosophy, alienated the well-to-do classes, and, in particular, exasperated the nobility of Hungary and Transylvania by his reform measures, which curtailed their privileges in the matter of taxation and caused them to patronize foreign markets rather than home industry." The chapters on The Social System, Nationality, The Church, and The Royal Power of the Government of the State, while scarcely appealing to the general reader, will be found very instructive by those in search of first-hand information concerning Hungary. The entire volume, in its accuracy of detail and freedom from errors in the spelling of Magyar names, reflects great credit on author, translator, and publisher.

Miss Adelaide R. Hasse's volume for Kentucky, in the "Index of Economic Material in Documents of the States of the United States," now in process of publication by the Carnegie Institution of Washington, differs in no essential particular from the eight volumes that have preceded it, except in recording certain local conditions that have involved the loss or destruction of official documents. For the first time the editor is compelled to acknowledge that she cannot find the complete file of the journals and reports of a State. Kentucky has suffered from many fires at Frankfort, and many of the Senate and House journals for years before 1807 apparently do not exist. It seems an extraordinary fact that every copy of a printed work of so comparatively recent a date as 1792-1806 should have disappeared, particularly as such journals must have been distributed more or less widely, and were not likely to suffer from intentional destruction. We hope with Miss Hasse, that when the fact becomes widely known further search will bring to light copies of the missing volumes.

Under the title, "Knowledge, Life and Reality" (Dodd, Mead & Co.), Prof. G. T. Ladd has summarized in a single lucidly written volume the system of philosophy which for the last twenty-five years he has been gradually unfolding in a series of more technical and elaborate treatises. Like most contemporary philosophers, Professor Ladd somewhat resents classification; his motto he declares to be: *Nullius addictus jurare in verba magistri;* and he begs his reader not to assign him "to any so-called school." Yet the affinities and the principal sources of his doctrine are sufficiently unmistakable, and the broader traits, if not the details, of it may be most briefly indicated by mentioning its intellectual ancestry. In all that is most characteristic and fundamental in his conception of philosophical method, his metaphysics, and his theology (though not in his ethics), his thought is closely akin to that of the eminent Göttingen philosopher whom, in his earlier days, he did much to make familiar to English readers. Professor Ladd, at Yale, and Professor Ormond, at Princeton, have been, perhaps, the chief representatives of the influence of Lotze upon American reflection; though each has emphasized somewhat different elements in Lotze's system, and has developed and amplified these in a distinctive manner. Both insist that thought deals with a "trans-subjective" reality; both equally insist that this external reality, primarily the object of natural science, is finally conceivable only as "self-like" in its intrinsic character; both, while affirming the necessity, deny the logical ultimateness, of mechanistic explanations of natural processes, and maintain the indispensability of the category of purpose in any rational interpretation even of physical nature; and both deduce from these principles a conception of the world as personal and ethical. No summary description of a philosophy can ever be satisfactory, but Professor Ladd's system might not with entire inaptness be characterized as a cosmic anthropomorphism.

In "Judaism as Creed and Life" (revised edition; The Macmillan Co.) the Rev. Morris Joseph sets forth a liberal conservative view; his position, he says, is midway between the orthodoxy that regards the Talmud as the final authority and the extreme liberalism that would cut the religion loose from the bonds of tradition. The work is largely parenetic in tone—the author's object is to give his co-religionists, old and young, a clearer insight into their faith, and to stir them to enthusiasm for it. He has, he explains, taken the best of Judaism, its ideal religious and ethical side. He gives vigorous expression to the conviction—a type of conviction found in all religious bodies—that his people have the specific religious truth that the world now needs and will ultimately adopt. And so, believing that this result can be secured only by maintaining the integrity of the Jewish people as the bearers of the essential truth, he deplores marriages between Jews and non-Jews—a practice which, as he rightly says, if carried on extensively, would obliterate the Jew as a separate community. Isolation has long been the policy of the Jews; whether the advantage of developing along their own line will compensate them for the loss of closer social contact with their neighbors is a question that time only can solve. The spirit of Mr. Joseph's volume is excellent, and its high moral tone and fine religious feeling may be a profitable influence for others than Jews.

Under the title "Health and Suggestion: The Dietetics of the Mind," Ludwig Lewisohn has published (New York: B. W. Huebsch), a version of Feuchtersleben's "Diätetik der Seele" which stands midway between an English translation reprinted in America in 1858, of which Mr. Lewisohn appears not to be aware, and the adaptation by Mr. Pollak recently noticed in these columns. That is to say, "the present version, though conscientiously faithful to Feuchtersleben's sense, has been almost entirely recast from the point of view of form." The German text has undergone some abridgment, as well as recasting. The resulting version is smooth and readable, but is, as a translation, not so good as Mr. Pollak's, in the cases where Mr. Pollak actually translates. The title seems somewhat misleading. It is interesting to note that whereas the English translator felt bound to protest that "the Christian will find in this book nothing contradictory to, or incompatible with, any part of his faith," Mr. Lewisohn takes satisfaction in aligning Feuchtersleben with the Emmanuel Movement, and quoting Dr. Worcester to this effect.

Some false friend must have persuaded Leander A. Bigger of Kansas that his travel letters were worth printing. No less than four volumes of them, with illustrations, have been published, with the title, "Around the World with a Business Man" (Philadelphia: John C. Winston Company). It is an extraordinary mass of callow comment, misinformation, and misplaced facetiousness. Mr. Bigger discovered, among many similar mares' nests, "etchings," by Raphael and Michelangelo, not to mention a Joseph and Potiphar's wife, by Leonardo da Vinci. The judicious will find many a chuckle in Mr. Bigger's philosophy and observations, but that such stuff should be printed and presumably read is no joke at all.

"L'Inde britannique" (A. Colin, 520 pages, 2 maps, 10 francs), by Joseph Chailley, appears also in an English translation by Sir William Meyer, secretary of the government of India for Finances, who also lent his aid to the original work. The competence of the author is guaranteed by his many studies of European colonies, particularly his authoritative book on Java. Of his present large volume he says: "For twenty years I have been thinking of it; I have worked at it ten years." Whatever may be said of his theories, the authentic revision of his facts gives the highest value to the completed work. He aims at describing the native communities, their government and administration by Europeans; and "British India," while extended to the entire Indian empire, is chiefly treated for the part directly administered by British authorities. Before M. Chailley expounds his own views, he is careful to set forth the history and present status of each question, with a fulness and clearness which have perhaps not been realized before in any single volume. The exposition has one of the merits which have usually attached to the better class of French books until now —an understanding of all that concerns its branch of humanity in time, over and

above the immediate subject. This is one result of the old liberal education, in which philosophy and even poetry counted. A mere administrator's view of caste amounts to little.

The first annual report of the Hamburg Colonial Institute shows that the leading foreign port of the German Empire has begun in earnest, and with every promise of success, to train its citizens for useful lives in the colonies. The German Colonial Office acted in harmony with the local authorities to perfect an organization which should unite practical and theoretical instruction. It works with other Hamburg educational institutions, such as the Natural History and Ethnological and Geological Museums, the Astronomical Observatory, the Botanical and Zoölogical Gardens, the Agricultural station, and the Institute for Ship and Tropical Diseases. Instruction is supplied in geography, public law, the history of the East, the languages of East Asia and Africa, and in hygiene of the German colonies. A hall of public lectures, the gift of a citizen of Hamburg, was made its permanent seat. Teachers were brought from the universities, and work began with twelve instructors, and local schools increased the number to thirty-five. Hamburg supplies its city library of above 600,000 volumes, and its commercial library.

Liberal provision for the expenses was given by both from the public treasury and large gifts from its citizens. Instruction in Eastern languages is made prominent, and both for the native German students and for those coming from German colonies, opportunity is given to study German industries in the busy centres of their growing activity. The report contains a detailed account of the large number of lectures given in two terms, October to March and April to August; there were more than 1,100 students and hearers, 16 diplomas were awarded after examination, and among those in attendance were merchants, judges, lawyers, army and navy officers, land owners, engineers, and officials. The Colonial Institute supplies a Bureau of Correspondence for answers to inquiries on specific points in colonial life, business, and interests. It acts as intermediary between German manufacturers and colonial consumers, and equally between the colonial producers and German and other possible purchasers. All this has been done by a wise union of local and imperial forces. Why cannot our universities thus join the Washington authorities and give the officers and settlers of our colonies like opportunity for training?

Science.

Ants, Their Structure, Development, and Behavior. By William Morton Wheeler, Ph.D., Professor of Economic Entomology, Harvard University; Honorary Curator of Social Insects, American Museum of Natural History. New York: The Macmillan Co. $5 net.

It is safe to say that no entomological work of higher qualities than this, perhaps none of equally valuable qualities, all things considered, has recently appeared. Whether one regards Professor Wheeler's work from the standpoint of the systematist, the anatomist, the ethologist, the psychologist, the naturalist philosopher, or the bibliographer, one is struck by the complete and easy grasp of his subject, and by the painstaking labor and erudition herein shown. Even in the selections from authors chosen for chapter mottoes, which range through Latin and Greek writers, and German, French, and English literature, one marks the facility and felicity of his mastery of his theme.

Perhaps there is no insect—not even the bee—so well adapted by its natural endowments to attract and hold the interest of men as the ant. As Professor Wheeler remarks in his opening chapter:

> This interest is aroused by an undeniable resemblance to our own condition. Reflection shows that this resemblance cannot be superficial, but must depend upon a high degree of adaptability and plasticity common to man and the social insects; for in order to live in permanent commonwealths, an organization must be not only remarkably adaptive to changes in its external environment, but must also have an intense feeling of coöperative forbearance and affection toward the other members of its community.

Professor Wheeler has here touched the keynote of the last book of his colaborer in myrmecology, Dr. McCook's "Ant Communities, and How They Are Governed," which appeared only a few months before his own, and with which, perhaps, one is likely to compare it. There are, however, but few points of contact and comparison, except in descriptions of the habits of such interesting species as the agricultural ants of Texas and the American plains, the cutting ants, the honey ants, and the mound-making ants of the Alleghenies. In these points the two authors confirm each other. Otherwise, they move independently through their chosen fields. Professor Wheeler's is the more detailed and technical work, covering a far wider field of science. Dr. McCook's is perhaps the more popular as a whole, although much of Professor Wheeler's book is well adapted for general reading.

The excellency of Professor Wheeler's book, which differentiates it from other publications on myrmecology, lies in the fact that it gives within the compass of one volume a full and thoroughly scientific study of the entire field. Its contents do not betray its title: "Ants, their Structure, Development and Behavior." Moreover, it abounds in new facts in ant life, which are virtually inaccessible to any but the specialist.

Professor Wheeler's "Ants" is illustrated with a fulness that at once attracts attention. There are 279 cuts, some of them full-page and many having several figures therein. The section which treats of the external and internal structure of ants is particularly rich. The photographic reproductions have an especial interest, as they give us glimpses of the ants and their actions as they appeared to the observer himself. The bibliography of the book is in itself a vast achievement, covering apparently everything that has been written upon ants in all modern languages. No scientific author with whom we are acquainted has given quite so extensive a collection of the literature of any single subject.

One would suppose that in a volume of this size (663 pages), the author had exhausted his subject, or at least his own energy. But he promises soon to publish a monograph on the systematic classification of American ants. This will meet a much-felt want among entomologists, and will enable students to know our native ants without recourse to the scattered and often meagre and inadequate descriptions that have served as the taxonomy of North American species.

"Soils and Manures," by J. Alan Murray (Westminster Series, D. Van Nostrand Company), is not a book for the average farmer. It is intended for those with at least a rudimentary knowledge of chemistry, and is in general more theoretic than practical, the reader frequently being left to make his own application of the principles stated. The book is English, and while agreeing in the main with recent American research, deals mostly with English conditions and trade products. We should like to know more of nitrolim, a new compound which, already in wide use in England, has scarcely been introduced here. It is apparently a valuable fertilizer. The book is very thorough and complete, and will be helpful to those who, having the necessary knowledge of chemistry, wish to study the bases of the science of farming.

The Blue Hill Meteorological Observatory, founded in 1885 by A. Lawrence Rotch, and maintained by him now for a quarter of a century, was the pioneer in many valuable types of meteorological study. One of the first stations in the United States to be equipped with self-recording instruments, it is one of only a few in the world to-day where virtually every element is continuously recorded. At no other station has the upper and lower air been studied so long. Among Mr. Rotch's assistants have been W. P. Gerrish, S. P. Fergusson, H. H. Clayton, A. E. Sweetland, and A. E. Wells. The last is still at the observatory, and he and Mr. Fergusson and A. H. Palmer are the present assistants. Local weather prediction was soon inaugurated, and kept up until, in 1891, the United States Weather Bureau began similar forecasts at Boston. Metric units and the international form of publication were first used in this country at Blue Hill; and the earliest measures in America of the height and velocity of clouds by trigonometry and other methods were made there, in 1890-91, and in 1896-97 were repeated, as part of an international system. The first application of kites, carrying instruments to record graphically and continuously meteorological conditions of the upper air, was

made at Blue Hill. These observations brought much fame to the observatory, as well as the subsequent use of cellular kites flown with steel wire and controlled by an original power windlass. This device was afterward adopted by the United States Weather Bureau, as well as by many foreign stations. Researches at high air elevations over the ocean have been made with much success by Mr. Rotch, one noteworthy expedition to equatorial regions being made in conjunction with M. Teisserenc de Bort, from which resulted much new knowledge of clouds, temperatures, and trade winds. Kite flights are made each month at Blue Hill. Freo balloons carrying automatic instruments were employed in this country for the first time by Dr. Rotch during the exposition at St. Louis. In that year and the three following, seventy-six balloons were sent up, and of these seventy-two were recovered. Sometimes their flights have taken them ten miles above the earth, and once a temperature of 111 degrees Fahrenheit below zero was recorded, one of the lowest natural temperatures ever recorded or observed. Such observations, now conducted at many stations throughout the world, are not only of much scientific value, but have an important bearing on aerial navigation. Twenty-five years' homogeneous observations of all the meteorological elements comprise a unique series in America, which it is to be hoped may be continued for many quarter centuries to come.

Drama.

Shakespeare's Roman Plays and Their Background. By M. W. MacCallum. New York: The Macmillan Co. $3 net.

Shakespearean criticism has all too frequently fallen into one of two classes: either the impressionistic sort, sometimes brilliantly suggestive but often including inferences in no way warranted by the text; or criticism so severely accurate and cautious that it fails to reflect Shakespeare's range of imagination and great knowledge of human nature. The latter kind, especially, which prevails for the most part to-day, no one cares wantonly to depreciate. For the past half-century scholars have been laboring steadfastly to win back Shakespeare's own point of view. History, literary history, biography, theology, politics, dramatic technique have all been drawn upon to reconstruct the conditions under which he wrote. The harvest truly has been plentiful, nor have the laborers been few.

The net result of such scholarship, however, has been somewhat disappointing. For Shakespeare has been nailed in the process rather too tightly to his own times; his indebtedness to others and his conformity to the dramatic fashions of that day have in general been allowed to overshadow the transcendent part of him, his genius. There seldom seems room for a study of both, even in the writings of mature, noted scholars: once the magnificent critical apparatus is installed, there is space for but one or two safe shivers of delight at Shakespeare's growing power—always growing, never grown! Meanwhile the uninitiated continue to ask themselves, What was the happy combination of qualities which could create a Juliet, a Desdemona, a Lear, who are so different from characters of other dramas? Whence has come the dignity of a Shakespearean villain or fool? Why Shakespeare's great assurance in handling the improbable? And was his imagination the sort to make for realism in any age?

Fortunately, the way has recently been pointed to this larger kind of criticism, notably by Prof. A. C. Bradley in his book on the four great tragedies, which appeared a few years ago, and now again by the author of the work here to be noticed. Both men employ much the same method, and achieve results of almost equal merit. Both square their utterances relentlessly to the actual text before them, make use of the great, various mass of critical investigation, and yet, unbewildered, interpret with far-reaching imagination. Professor MacCallum's work forms a worthy companion-volume to its distinguished predecessor.

The book opens with an elaborate introduction dealing (1) with Roman plays, outside of Shakespeare, in the sixteenth century, especially with the French Senecans. In the presence of parallel passages the author refuses to become giddy, and concludes that, "the grounds for believing that Shakespeare was influenced by Garnier's 'Marc Antoine' are very slight; for believing that he was influencel by Daniel's 'Cleopatra' are somewhat stronger; that he was influenced by Garnier's 'Cornélie' are stronger still; but they are even at the best precarious." (2) A brief but precise chapter compares Shakespeare's treatment of history with that of several other playwrights, including Schiller, Swinburne, and Tennyson. (3) There is a careful study of Plutarch, Amyot, and North, containing, incidentally, the decision that Amyot translated from the Greek and not from any intermediary Latin version. After such preparation the reader is ready for the thoroughgoing interpretation which follows.

Here, in the main portion of the book, as elsewhere, Professor MacCallum displays great learning and an almost perfect assimilation of this learning. So well has he mastered the sources of these plays and the surrounding dramatic conditions that he gives the impression of being able to follow and to present Shakespeare's actual method of selection and re-creation. In addition, he brings to his work a remarkable knowledge of life, which time and again assists him with reference to perplexed situations.

The results of such an outlook are manifold, though difficult to illustrate in detail. Chief among them is perhaps the writer's insistence on the fact that Shakespeare rarely if ever is so enslaved either to his sources or to the dramatic conventions of his day as to present characters who are not human. A case in point, and an interesting one considering certain recent publications,* is Professor MacCallum's interpretation of Julius Cæsar. His words will bear quoting at length:

> The Cæsar, the first of those Cæsars who were to receive their apotheosis and be hailed as *Divi Augusti,* must in literal truth answer Hobbes's description of the state, and be a mortal god. He must be fearless, omniscient, infallible, without changeableness or shadow of turning: does he not represent the empire? He has to live up to an impossible standard, and so he must affect to be what he is not. He is the martyr of the idea that has made his fortune. He must not listen to his instincts or his misgivings; there is no room in the Cæsar for timidity or mistake or fickleness. But, alas! he is only a man, and as a man he constantly gives the lie to the majesty which the spirit of Cæsar enjoins. We feel all the more strongly, since we are forced to the comparison, the contrast between the shortcomings of the individual and the splendor of the ideal rôle he undertakes. And not only that. In this assumption of the Divine, involving, as it does, a touch of unreality and falsehood, he has lost his old surety of vision and efficiency in act. He tries to rise above himself, and pays the penalty by falling below himself, and rushing on the ruin which a little vulgar shrewdness would have avoided. But his mistake is due to his very greatness, and his greatness encompasses him to the last, when, with no futile and undignified struggle, he wraps his face in his mantle and accepts the end.

In some respects the most successful chapters in the book are those on "Antony and Cleopatra." Every one has felt the splendor and despair of the world of these two lovers; but few, we believe, have felt with the articulate precision of Professor MacCallum its subtly shifting atmosphere and the almost convincing appeals of its myriad moments. He is always judicial, too, even when his sympathy is quickest. One would like, if space permitted, to quote from the author's estimate of the difficult character of Coriolanus, with which the book concludes; for it bears strong witness to the accuracy of Shakespeare's psychology, and to the author's own flexible learning.

*See the letter in the *Nation* of June 2 by Lisi Cipriani, attributing indebtedness by Shakespeare to the "Cesare" of Orlando Pescetti, and the replies to this letter in the following number. Also the interesting article in the current number of The Publications of the Modern Language Association on "Julius Cæsar" by H. M. Ayres, in which it is reasonably shown that Shakespeare probably got the initial cue for his conception of Cæsar from the Herculean Cæsar of several Senecan dramas, who was so well known as to be an almost necessary convention.

Art.

The Art Institute of Chicago opened on Tuesday the following exhibitions: An historical collection of water colors by American artists, lent by Gustav H. Buek of New York. A collection of artists' copies of old masters. A memorial exhibition of paintings by the late William A. Harper of Chicago. The exhibition will continue until August 28.

"A. E. G," the author of "Modern Art at Venice and Other Notes" (New York: J. M. Bowles), will readily be recognized as a young critic whose enthusiasms are Whistler and Aubrey Beardsley. The subjects, beside the long notice of the Venice International Exhibition of 1909, are Of Versatility and Whistler, W. E. Henley as an art critic, Studies in Pictures, by J. C. Van Dyke, and brief appreciations of the young American painters, Maxfield Parrish, Steichen, Glackens, and Clark G. Voorhees. The booklet is handsomely printed, issued in a limited edition, and contains as frontispiece a print after a rare sketch of Carlyle by Whistler.

We have received the third volume of "In English Homes," a large folio of cuts of famous interiors, with running text, published by English Country Life (Scribner importation, $15 net). Among the great houses thus illustrated are Blenheim, Chatsworth, Houghton Hall, Thorpe Hall, and Wolterton Hall, with its admirable tapestries. The letter-press is adequate, but the attraction of the work lies chiefly in its excellent cuts after Charles Latham's photographs. Its appeal is chiefly to readers of antiquarian and genealogical taste, and its destiny is in the main the reception-room table, but decorators will also find the big plates suggestive. Most of the houses described are of the seventeenth and eighteenth centuries, but the furnishings naturally are of various periods.

The collector and decorator are pretty clearly in mind in Francis Lenygon's "The Decoration and Furniture of English Mansions during the Seventeenth and Eighteenth Centuries" (Scribner importation, $10 net). Most of the illustrations represent objects installed in an early Georgian house belonging to a well-known firm of London antiquaries. We have then a kind of reconstruction of the periods more complete than is to be found in private residences of the age. Mr. Lenygon discusses in five chapters the progress of the English Renaissance manner, and then in a dozen chapters treats tapestries, panelling, plaster work, decorative paintings, chimney pieces, lighting of rooms, etc. The book is a large quarto, and many of the plates are separately printed and mounted on granite paper. In general, the work, with its abundant cuts, which include details on large scale, will be welcome to students of the English Renaissance. We must differ at some points with Mr. Lenygon's taste. The furniture of William Kent, for example, seems to us heavy and infinitely inferior, both in design and workmanship, to its Continental exemplars. It seems to us to have the same relation to really fine furniture that most Georgian building has to really fine architecture. In fact, we hope that a certain picturesqueness in the early English styles will not impose itself upon us at the expense of better models.

Francis Bond, author of several works on English mediæval architecture, has produced in "Westminster Abbey" (Frowde) a handsome and useful account of that most interesting of all the religious shrines of England. The fundamental idea of the author is to trace the influence of purely religious and monastic requirements and ideals in the design and construction of the church and in English mediæval architecture generally, in opposition to "the brilliant generalizations of Violliet-le-Duc on the secular origin of Gothic architecture." In the first seventeen chapters the historic evolution of the existing abbey is taken up analytically in considerable detail. The two remaining chapters, comprising 150 pages, constitute a visitors' guide to the abbey and its monuments, and are followed by a list of the abbots of Westminster and indexes of illustrations and of contents. The entire work is well done, written with spirit, and embodying the result of extensive reading and scholarship, and the illustrations are abundant, well selected, and unusually satisfactory. It is likely to be the standard book on Westminster Abbey for general readers, at least for some years to come, and even the expert and the professional student of English architecture will find in it much valuable information and suggestion not otherwise accessible except by wide reading of the authorities listed in Mr. Bond's bibliography of the subject.

According to Aymar Embury II, the author of "One Hundred Country Houses; Modern American Examples" (Century Co.), no less than eleven styles are used among us for country houses, to wit: New England Colonial, Southern Colonial, Classic Revival, Dutch Colonial, Spanish or Mission, American farm-house, Elizabethan, Modern English, Italian, Art Nouveau, and Japanesque. Surely here is a bewildering eclecticism, which reduces itself, however, to a more reasonable aspect when one recalls that at least three of these styles are vaguely Palladian, while only a great doctor could tell the difference between what Mr. Embury calls Dutch Colonial and American Farmhouse. The Dutch, we think, merely built in regions that afforded tractable stone and plenty of brick clay. We have, by our simplified analysis, three styles of American growth, Georgian in more or less classic phases, farmhouse types, and Spanish Mission; and four direct importations, Elizabethan (half-timbered), Modern English, which is after all merely revised Georgian, Art Nouveau (happily rare), and Japanesque, which has commended itself for California bungalows. In a general way the Georgian styles seem to be making most headway, the Elizabethan, which prevailed for a time on account of its overt picturesqueness, is unfit for our climate, and, indeed, possible only through insincere construction. The mission and Italian styles are almost invariably misfits in practice, for the good reason that our conditions require an amount of fenestration quite alien to these types; the remaining styles are plainly sporadic. Mr. Embury has illustrated one hundred houses, most of which must have cost in the neighborhood of ten thousand dollars. Upon these modest structures the architects have worked with enthusiasm, and it will be instructive to the layman to see concretely how much taking thought and working out apparently small refinements count in dignity and attractiveness. The demonstration should convince the would-be home-maker that really the cheapest and most satisfactory purchase he can make will be the brains of his architect. Mr. Embury adds to his century of houses two chapters on gardens architecturally considered, and on the conditions that dictate the plan of a modern house. This in quarto is well-made, though plate paper makes it rather heavy for the hand.

Finance.

THE LATEST BREAK IN STOCKS.

Early last week the decline on the New York Stock Exchange, which had continued with little interruption since the beginning of January, became exceptionally violent, losses of 5 to 10 points in two days being general throughout the market. It was then discovered that the forced liquidation proceeded immediately from an international syndicate, organized by an American promoter, which had conceived the idea of buying control of five railways—the Lehigh Valley, the Wabash, the Rock Island, the Missouri Pacific, and the Denver and Rio Grande—and welding them together into an ocean-to-ocean system. This ambitious exploit was undertaken on the basis of buying, with money borrowed from the banks, something like a million shares at the high prices of last autumn. The subsequent great decline in prices swept away the "margins" of the syndicate; compulsory selling followed; then a highly critical situation for the capitalists involved in the undertaking, and at length a transfer of their holdings, at prices below even those of the open market, to a group of bankers identified with the larger railway systems.

Some recovery ensued on the Stock Exchange, when it was learned that the worst of the threatened disaster had been averted. But in the meantime prices of active stocks had touched a level which was not only 30 to 60 points below the high range of last autumn, but which indicated that much more than half of the entire recovery, from the extreme low prices touched in the Stock Exchange panic of October 24, 1907, had been lost. These are some of the striking comparisons:

	Low this week.	High since panic.	Low in 1907 panic.
Amal. Copper	55½	96⅛	41¾
American Smelting	61⅜	107	61¼
New York Central	105⅛	147¾	93¾
Northern Pacific	112	159½	100½
Pennsylvania	122½	151¼	106½
Reading	130⅝	173⅜	70½
St. Paul	116	165⅛	98½
Southern Pacific	103¼	139⅛	63¼
Union Pacific	152¼	219	100
United States Steel	61¼	94⅞	21⅞

In a community which habitually occupies its mind with the rise and fall of Stock Exchange prices, such a downward sweep in values is an event of profound interest. It is none the less so when every individual is at liberty to construct and make public his own particular theory as to the cause.

If any one undertakes to sift the various theories propounded to account for what may be called the grand movements on the Stock Exchange, he will probably be impressed with the fact that Wall Street always has ready an explanation for a rise, but finds it extraordinarily difficult to explain a decline. A prolonged and violent rise in prices, such as that of a year ago, encounters regularly three satisfactory explanations. The great capitalists are "putting up prices," and their resources are too great for anybody to stop them. Corporations are going to increase dividends, and the market is anticipating that process. Stocks are rising because this is a country of enormous industrial possibilities, and because it is not safe to be a "bear on the United States." Every one at all familiar with the thoughtful exchange of views which goes on across the stock ticker at such times, will recognize these explanations as old friends.

But a prolonged break in stocks is not to be disposed of so easily. The first perplexity one encounters arises from the fact that whereas, when prices were advancing by leaps and bounds, all the eminent Wall Street authorities agreed that the movement was a proper response to underlying conditions, now, when prices are falling, the same authorities declare with similar unanimity that the market gives an absolutely false reflection of the financial position. There is nothing in the situation to warrant lower prices; the decline is inexplicable. From this attitude, it is a short step to the theory that it is "bears," a malicious and unpatriotic tribe, who are doing all the mischief. How they managed to do it or dared to try it, in the face of the impregnable resources of the great capitalists, which were assigned as a cause of the preceding violent advance, is not explained; that is, perhaps, the weak point of the "bear" theory. Others will throw responsibility on "the Government," and that is always easy to do. Occasions are rare when government is not itself doing something which corporation managers dislike, or else preventing the corporations from doing something which they do like.

The reason, no doubt, why these somewhat roundabout theories, and others like them, are so popular in a falling market, is that they evade the more unpleasant inferences which might be suggested. For instance, severe logic would impel the man who had explained last year's 50-point advance by a coming increase in dividends, to ascribe this year's decline to a coming reduction of dividends. But Wall Street and its votaries are not often willing to turn the argument about in this way; and, to tell the truth, it is not always necessary to do so. Prices may have risen violently in response to rumors of higher dividends, and the higher dividends may not have materialized. If, after this, prices go down again quite as rapidly as they had just gone up, nobody need infer that dividends must be lower. Even in cases where a dividend had been increased, it will usually be found—such is the mercurial temperament of Wall Street—that the rise in prices was two or three times as great as the increase in dividends would by itself have warranted.

But the philosophy of such a Stock Exchange reaction as has lately occurred is in reality very simple. Two obstacles stand in the way of the complete success of any continuous movement to put up the price of speculative stocks, and they operate alike when the public at large is speculating, and when the speculation is conducted single-handed by a group of powerful capitalists. One is the possibility that prices may be put so high, through expensive credit operations, that real investors stop buying, leaving the speculators to sell for what they can get. The other is the possibility that the speculators may exhaust in their "bull movement" their own credit facilities and the resources of their banks, thus finding themselves compelled to sell their stocks at a sacrifice to pay their debts.

The first of the two obstacles mentioned is always apt to be encountered when the public or the great capitalists get excited over the unlimited opportunities of a particular enterprise or of the country as a whole. They invariably manage to translate into present-day stock-market prices the value anticipated for a property a decade or so from now, if all their expectations are fulfilled and no accidents happen. But as the prudent investing public is somewhat familiar by experience with the flaws of the "discounting" process and the probability of accidents, it invariably retires from a market which it recognizes as governed by such illusions.

The difficulty from exhausted credit facilities comes more rarely, but has been strikingly familiar in the American markets of the decade past, which have again and again presented the curious phenomenon of the most powerful capitalists in the country misjudging completely the credit resources of the season, and the most powerful banks in the country so tying up their funds in Wall Street loans that strenuous efforts had to be adopted to prevent a money market convulsion. In either case, it will be observed that the forced liquidation and the consequent break on the Stock Exchange are the necessary preliminaries to return to a sound financial position. To what extent the recent prolonged decline in prices, after last year's experiments in a spectacular "bull movement" almost on the heels of a formidable financial panic, is explained by these two familiar aspects of the questions, any one familiar with Wall Street affairs may judge for himself.

A NEW EDITION OF

MARTIN'S THE HUMAN BODY. Advanced Course

By H. NEWELL MARTIN, sometime Professor in the Johns Hopkins University. Revised by Dr. E. G. MARTIN of the Harvard Medical School.

(*AMERICAN SCIENCE SERIES.*) xvii+546 pp. 8vo. $2.50

In this revised edition the spirit and method of the author have been preserved as far as possible. The recent great advances in physiological knowledge, however, have made necessary not only the addition of much new material, but also a great deal of modification and rearrangement of the old material. The Nervous System, for example, has been given an entirely different treatment so as to emphasize the conception of the body as an adaptive mechanism, and the same plan required the bringing together of the chapters on Muscles, Nerves, and Sense-organs. Entirely new chapters have also been supplied on Circulation, Digestion, and the Special Senses. Some of the purely anatomical portions have been condensed so that the new material has not enlarged the book unduly.

Some Remarkable Scribner Books

Celt and Saxon

By GEORGE MEREDITH **$1.50**

This hitherto unpublished novel turns on divergences in character between the Irishman and the Anglo-Saxon; and, though not quite finished, but standing complete as far as it goes, it is worthy to rank with the great author's greatest work.

It gives clear views of English life in town and country, gives strongly individualized characters, English and Irish, some of great charm, and others who, though lacking that quality, catch the sympathy of the reader because so great is the writer's power of making them understood; and, above all, it sets forth in a remarkably human and comprehensive way the attitude toward each other of these two races and the elements that cause it.

A Motley

By JOHN GALSWORTHY **$1.20 net; postage extra**

Mr. Galsworthy is one of the most prominent writers both as a dramatist and novelist in England; the author of "Fraternity," "A Country House," and of that play so successful in England and America, "Strife."

"Pathos and humor, which fill a larger place in life than do hilarity and merriment, are the prevailing note of the book, which might perhaps best be briefly characterized as a book of tears and smiles."—*The Dial.*

"There are 28 stories, studies, impressions—mere literary flashlights—which have such a haunting vividness of intensity that they are as unforgettable as scenes revealed by the glare of lightning amid the thunder and torrent of a storm."—*The Baltimore Sun.*

The American Civil War

By JOHN FROMBY **A Unique Military Study** **$4.50 net**

A concise history of the causes, progress and results of the war; compressed into 486 pages.

One of the two volumes is devoted to maps

Hitherto the large number of independent operations in the war carried on in a wide area have made impossible a history that clearly shows the bearing of different events upon each other. But Mr. Fromby has succeeded in doing this, and largely through the remarkable collection of plans of battle—maps drawn to scales and sedulously tested and corrected; and the only collection of absolutely accurate maps, it is thought, of the Civil War campaigns.

The Indian and His Problem

By FRANCIS E. LEUPP **$2.00 net; postpaid, $2.20**

For four years Commissioner of Indian Affairs

"Mr. Leupp's opening chapters on the native qualities and conditions of the Indian are quite delightful. It is plain that he actually knows the red man—has smoked with him in his tepee and slept in his camp. His description of the Indian household habits and the respective work of the man and woman, his appreciation of the delicate sensitiveness of the red man, of his humor, his grief, his depth of feeling, his serious philosophy—all these reveal exceptional understanding by Mr. Leupp. In short, the survey is one of the most important and most useful treatises of the year."—*Springfield Republican.*

"From near a score of viewpoints Francis E. Leupp has presented that ever-fascinating subject of the American aborigine in his book, 'The Indian and His Problem.' The theme is exhaustively treated through the entire gamut of Indian history and tradition from the discovery to the present."—*Cincinnati Times-Star.*

Privilege and Democracy in America

By FREDERIC C. HOWE **$1.50 net; postpaid, $1.65**

"It should and no doubt will be accepted as an American classic."—*Portland Oregonian.*

"The book is a startling challenge of existing conditions and existing apathy. It should be read by every citizen who hopes for progress."—*Duluth Evening Herald.*

"Mr. Howe's book is an earnest and thoughtful contribution to the discussion of the present social and economic disturbances, of which the increased cost of living is a pressing and obvious manifestation."—*New York Globe.*

"Distinguished by its acuteness of historical observation, its truth of premise, its logic of deduction, and its clearness of diction."—*Washington Herald.*

The Problem of Human Life

By RUDOLF EUCKEN **Third Edition** **$3.00 net; postpaid, $3.30**

Translated by W. S. Hough and W. R. Boyce Gibson

"The book before us is a presentation of the view of 'great thinkers from Plato to the present time,' and demands therefore a mastery of the theme itself, and of the way in which the deepest and most obscure thought of the world has been associated with it. It is not the purpose of this brief notice to follow this long path of light. We wish simply to indicate the comprehensive and intelligent way in which it is pursued, the thoughtfulness with which it has been wrought out, and the reward which it is sure to bring to those who pursue it in a kindred temper."—*The Dial.*

"The work is an impartial and able analysis of the causes of the war, its principal events, and the conclusions drawn from military operations are accurate and trustworthy."—*Boston Transcript.*

WILD OATS By JAMES OPPENHEIM **WILD OATS**

The author of "Dr. Rast" has written a bold and powerful novel whose theme is The Great Black Plague, the most glaring—though unrecognized—danger of society. He approaches the subject with necessary frankness yet reverently and delicately. While the novel may become the centre of hot dispute, none will charge the author with a desire to be merely sensational, for the sanction of authority is given in an enthusiastic foreword by EDWARD BOK of *The Ladies' Home Journal.*

Price $1.20 net.

AMERICANS: An Impression

By Alexander Francis.

A. S. CLARK, Peekskill, N. Y., offers a catalogue of 590 Pamphlets—free.

The Nation.

NEW YORK, THURSDAY, AUGUST 11, 1910.

The Week.

To the people of New York nothing could have been a greater shock than the startling news that Mayor Gaynor was shot Tuesday morning on the deck of the steamer on which he was about to sail for Europe. As we write his life seems not to be in danger. His work in the Mayoralty has been of unique quality, and has been recognized everywhere as of the utmost value in the elevation of the standard of government in all our great cities. The distinctive personal quality, too, that has run through all his acts, has made him a living reality in the minds of the people, and not merely the representative of general principles of action. We trust that not many weeks will pass before he will again be in the full exercise of that extraordinary energy, alertness, and zeal for the public good which have already made his term of office, although still in its beginnings, a landmark in the history of New York city.

From all sides rise voices of Republican distress calling upon the President to cast the Hon. Jonah Ballinger overboard. Mr. Taft, after his custom, keeps his own counsel. By this time he is used to weathering outbursts of public clamor. Just what he thinks of Ballinger it may not be difficult to guess. But neither is it hard to guess what, in his heart of hearts, Mr. Taft thinks of Cannon and Senator Aldrich. Concerning Ballinger, the President is reported as absolutely determined to do nothing to force him from the Cabinet, yet, at the same time, as sitting up nights waiting for Mr. Ballinger to come around and hand in his resignation. We do not believe this is Mr. Taft's attitude, because it is a rather childish attitude for any man to assume. If the President is really anxious to rid himself of Ballinger now, no promise he may have given to the Secretary is binding. Reasons of state will always excuse an honest change of opinion. The truth probably is that, with the Ballinger investigating committee about to present its report, the President honestly feels that the Secretary should not be condemned by anticipation.

The inquiry of the Congressional committee has already fully justified Senator Gore in the position he took in the closing days of the session with regard to the purchase of lands from the Choctaw and Chickasaw Indians. His interposition at that time not only caused the immediate abandonment of a scheme which is admitted virtually on all hands to have been essentially fraudulent, but led to the investigation now going on, which is likely to result in some thoroughgoing reforms. Mr. Gore did not make any charges against Senators or Representatives, still less against the Vice-President; he simply stated that a corrupt offer had been made to him by an agent connected with the scheme, and that this agent had named certain public men as interested in it. It was with evident reluctance that, on the witness stand, he gave the name of Vice-President Sherman as one of these men, and he has since expressed his regret at the necessity he found himself under of doing so; and no man of sense will attach any weight to the dragging in of a prominent official's name by an attempting briber. But the case as a whole looks fully as grave as Senator Gore regarded it in the first place. One of the later phases is the testimony of the venerable chief of the Choctaws, who tells a circumstantial story of an attempt made to bribe him into acquiescence in the scheme by the attorney in charge of it.

Returns from the Kansas primary show that a political revolution has been accomplished in that State. The Republican insurgents have more than made good their promises. In addition to nominating their Governor with ease, they have named six out of eight Representatives in Congress, defeating the standpat members of the Kansas delegation whom Speaker Cannon made such heroic efforts to save. The entire result is an overwhelming popular endorsement of the Congressmen who, with Senator Bristow, spoke and voted against the Aldrich-Payne tariff. Kansas insurgents are now the regulars, and can point to their strong endorsement by the voters of the party as a sufficient warrant for all that they have done or intend to do. And the most gratifying aspect of the victory is the fact that the attack upon the tariff was made upon moral grounds. The fight was not about schedules or revenue-producing capacity or any charge that Kansas had been unduly discriminated against. What Bristow and the others went up and down the State denouncing was the use of the tariff-making power by Aldrich and his political followers and business allies as a means of unscrupulous self-enrichment.

Ex-Gov. Folk of Missouri seeks to recall the Democratic party to its historic mission. He deplores the tendency among Western Democrats to join hands with Republican insurgency to the detriment of their own political organization. Why such a movement should take place is not very hard to see. The Republican insurgents are now fighting against abuses that have been the subject of Democratic criticism for decades. The iniquities of the tariff, the alliance between corporate business and politics, the dominance of the interests at Washington have so intimately passed into the bone and sinew of Republican insurgency as to make the dividing line between Republican and Democrat in many Western States largely a vanishing line. But when it comes to a question of Republicans going over to the Democrats or Democrats going over to the Republicans, can there be doubt which way the drift will be? Democrats have themselves largely fallen into the belief that if any Democratic policy is to be enacted into law it must be done by the Republicans. Under such circumstances, are they to blame if now and then they hanker after the Republican fleshpots; for even Republican insurgents have fleshpots? Are they to be blamed for loitering in the tents of the insurgents, just to catch the rare taste of what success means? Yes, says Mr. Folk, they should be. And he warns the Democracy of the West that it must not follow its policies into the camp of the insurgents; that it must keep to its old rôle of watching and waiting and hoping.

The judiciary elections in Tennessee which resulted in the defeat of the regular Democratic ticket are a severe blow

to the aspirations of Gov. Patterson. The contest, which was one of the bitterest ever waged in the State, resolved itself into a struggle in which the Governor was the real issue, as a candidate to succeed himself. Through his influence, it is charged, the Supreme Court justices who refused to render a decision favorable to the Coopers, the slayers of Senator Carmack, were denied a renomination. Later they were placed on an independent ticket which the Republicans supported, and received a large vote in all parts of the State. The result must be considered another demonstration of the emphatic way in which an American electorate will resent any interference with the independence of the judiciary. From another point of view, it was merely the first blow in the fight against Patterson, which will be settled at the November election. If, as now seems likely, independent Democrats and Republicans unite on a fusion ticket his defeat would appear to be reasonably certain.

All the details that have come out in regard to the outrages near Palestine, Texas, merely make the affair seem the more excuseless and terrible. There was not even an allegation of outrages by negroes; the whole trouble grew out of a dispute about a debt; and then a band of armed white men scoured the region shooting down inoffensive and unresisting blacks wherever they were found, in one instance three white-haired negro men and women being slaughtered as they were keeping watch by the corpse of a murdered member of their family. To the credit of the Texas authorities be it said that they took prompt measures to suppress the bloody outbreak, and to arrest all the guilty white brutes upon whom they could lay their hands. But the fearful thing is that such a massacre could even be conceived of; and that depraved men are cherishing race hatreds which make it possible. We evidently need, North as well as South, to be continually on our guard lest our civilization lapse into barbarism.

In the statement given out at Portsmouth on Saturday, by the railway attorneys, we have a noteworthy sign of the times. For a week sixty-five lawyers representing the railways had been discussing the new legislation affecting their property, and at the end of their deliberations they authorized a report of their conclusions which they frankly admit indicates "a change of attitude of the railroads and of counsel towards government regulation." In a word, the old uncompromising position has been abandoned. The law is not to be contested in any of its provisions, although the attorneys think that one or two of its clauses might be successfully attacked in the courts. Much less is any attempt to evade the law to be countenanced. The whole intention of the railway lawyers, as they explain it, is to work harmoniously with the Interstate Commerce Commission in arriving at a proper interpretation and reasonable application of the new statute, and to seek to obtain from the recently established Court of Commerce a series of consistent decisions that shall enable the railways to know just where they stand.

It is true that the counsel to the railway corporations are not satisfied with the new regulation act. Some things in it seem to them dubious, others actually perilous. They specify the long and short haul clause, the provision that rates reduced to meet water competition must not be restored when that competition ceases, and several other points. But with the certainty that the courts will protect the railways from anything like confiscation, there is every reason why they should in a cheerful and even confident spirit take up the task of obtaining working-understandings with the Commission. It would be over-sanguine to assume that all our railway troubles are now things of the past. The future will doubtless see fresh agitation and new clashes. But those we may face with greater serenity in view of the way in which existing difficulties are being surmounted.

The adjournment of Parliament leaves British politics and the British people in a more quiescent and contented state than they have known for some time. The tone of the day is decidedly cheerful. This is, in part, a natural reaction from the emotional crisis attendant upon the death of Edward VII and the inauguration of a new reign. But other reasons are plentiful. The bitterness of political strife has subsided. After the war over Mr. Lloyd-George's first budget, the adoption of this year's financial bill took place amidst a harmony of uttermost concord. The royal accession oath was modified in much the same spirit of sweet reasonableness. The crucial question of the Lords' veto has been put into the hands of a conciliation conference; and while it is by no means sure that its deliberations will result in a solution of the difficult problem, it is something to have entered on the ways of peace; and in any case the reassembling of Parliament is three months off.

But perhaps the most potent contribution to the average Englishman's peace of mind came only a few days before the adjournment of Parliament, in the form of Mr. Asquith's declaration concerning naval armaments. After a year and a half of semi-hysteria over Britain's imminent loss of the supremacy of the sea and the peril of invasion, the country has been authoritatively informed that the fear has been empty. On the one hand, the German authorities have been really telling the truth concerning their headway in naval construction, and British shipbuilding, on the other hand, has not fallen into the pitiful state of decrepitude which the fevered mind of the Dreadnought maniacs has been conjuring up. The leaders of the Opposition have been forced to acknowledge that no reasonable grounds for apprehension exist to-day, and now have very little left except vague suggestions as to the horrible things that may happen in the future. To the over-taxed British imagination, this relief from panic must be grateful, indeed. With peace at home, and peace abroad and in the colonies, and British trade soaring to new records of prosperity, the British M.P. and his constituent can go about their grouse-shooting and their daily business in exceptional ease of mind.

We are not to have a British Academy just yet, after all. Mr. G. M. Trevelyan, a member of the recently announced "Academic Committee" of the Royal Society of Literature, writes to the London *Times* to deny that "a full-blown Academy" is in contemplation. He states that the committee intend merely to do "certain things which the Royal Society of Literature and the Society of Authors wanted done," but asserts that neither organization "had any intention

of putting us up as 'immortal' cockshies." Indeed, Mr. Trevelyan objects to the entire principle of an Academy in "distinguishing between rival merit." This he thinks is bad for the free republic of letters, whereas fit persons may be chosen to discharge specified functions without exciting either jealousy or ill-will. All the more unfortunate, then, that the humble Academic Committee was made up of the ominous number forty, thus inviting direct comparison with the French Immortals, and also exposing its members to being made "cockshies" of—that is, targets for envious or malicious missiles.

Although the French military aeronauts have as yet blown up no imaginary battleships by dropping supposititious bombs down their hypothetical funnels, they are really doing more than we are to develop the aeroplane's possibilities in naval warfare. Neither Curtiss's nor Harmon's experiments in hand-grenade target-practice are convincing. If bombs are ever to be thrown from aeroplanes going forty miles an hour, they will be thrown by a marksman especially detailed for that purpose on board the aeroplane. It is absurd to suppose that Harmon or Curtiss, working his machine with hands, feet, wrists, and shoulders, is really taking aim when he drops his imaginary bomb from a basket slung about his neck. One man to navigate the airship and one man or more to do the fighting, is the way aerial warfare must go on. And along that way the French are advancing. In France they have given more attention than elsewhere to flights for two and three persons. Military aviators in couples are reported to be following up the great cross-country race now under way, as a matter of almost daily routine. Aerial photography is being steadily perfected. And, as a matter of fact, it is the aviator's camera, rather than his high explosives, that will soonest come into play in actual war.

On top of the Ministerial changes in Germany came the resignation by Prince Hohenlohe of his office as Second Vice-President of the Reichstag. This was taken by the Liberals as a protest by this Conservative against the tendency of his party to make an alliance with the Clerical Centre. However that may have been, it is clear that a readjustment of the relations of the Government to the various parties is under consideration. A new Reichstag is to be elected next year, with the certainty of large gains by the Social Democrats, and the Chancellor is reported to be going over the situation to see where he can hope to assemble the elements of a parliamentary majority. The old Conservative-Liberal *bloc* upon which Von Bülow depended is now impossible, yet a *bloc* of some kind it is believed to be imperative that Bethmann-Hollweg, despite all his ambition to govern above and independently of parties, should somewhere find. For it seems probable that a *bloc* will be formed against him. In the Baden Landtag the Socialists are now in successful alliance with the Liberals in furthering an anti-clerical and anti-agrarian policy, and the suggestion is made that some such working agreement may yet be reached in the Reichstag itself. There it would undoubtedly be very difficult to form and maintain, yet the very fear of it has led to cries of alarm. Thus a Westphalian newspaper declares: "In face of the new political tasks which the economic future of the Empire will impose upon the Reichstag, it would be a crime to perpetuate the quarrel between the parties which strive for the preservation of the state." To meet a threatened combination against the Conservatives and the Clericals, it would have an "economic *bloc*" against the Social Democrats.

Part of the Russian case against Finland consists of the charge that the laws of the Grand-Duchy discriminate sharply against natives of Russia proper. In the eyes of the Finnish law, the native Russian is treated as a foreigner. This is the more intolerable because all over the empire native Finns are on absolute equality with Russians in respect to political and civic rights. Russians resident in Finland, the accusation runs, are not allowed to vote for members of the Diet, although Finnish residents in Russia vote for deputies to the Duma. It is estimated that fifty thousand Russians in Finland are thus deprived of their right to the franchise without being exempted from taxation. By indirect means Russians have been excluded from the Finnish civil service. Russian physicians in Finland may pursue private practice only; they are excluded from positions of any kind under the government. Up to 1891, Russians might acquire real estate in Finland on the same condition as foreigners; but this law holds now only against Jewish citizens of Russia. Such points in the case against Finland are properly made. But they can in no way be held to justify the policy of Russification which is now under way. Finnish discrimination against Russian citizens really emphasizes the strength of the Finnish case. If Russia proper were on a cultural level with Finland, if anything like the same standard of personal liberty and of enlightenment obtained everywhere in the Czar's dominions, Finland's attitude might have been characterized as selfish separatism. But in view of what the prevalent Russian culture and Russian government ideals are, can the Finnish people be blamed for guarding with extreme jealousy those rights which are all the more precious because they are so rare under the Romanoffs?

The country over whose destinies Señor Pedro Montt will preside till September, 1911—the reëlection of a President being forbidden by the Constitution—stands among the three progressive South American republics. With Argentina and Brazil, Chili helps to save the day for Latin-American efficiency, enlightenment, and self-restraint, as against the wretched record of their fellow-republics on or near the Caribbean. Chili has about one-half of Argentina's population, one-fifth of Brazil's, and ranks after Peru and Colombia. But her commerce is four times that of Peru, nearly ten times that of Colombia, and but little less than half that of Brazil. Argentina alone surpasses Chili in her per capita commerce, but save for her nitrate fields—which, by the way, were once Peru's—Chili cannot compare in natural resources with the Argentine Republic. What is most characteristic of Chili is that her achievements, more than those of any of her neighbors, are native to the soil of South America. Immigration into Brazil and Argentina has been on a great scale, and the resultant impetus can scarcely be overestimated. Immigration into Chili is almost negligible; and while foreign capital plays its part there as elsewhere in South America, the Chilian may nevertheless boast that his civilization is autochthonous to a degree unapproached by his neighbors.

THE REPUBLICAN "CIVIL WAR."

The phrase is Senator Cummins's. In his address at the Iowa Republican Convention last week, he spoke of the "clouds of civil war" that now hang over his party. He instantly gave evidence of his readiness to wage this civil war in uncivil fashion, for in calling the roll of Republican Presidents and leaders, including the names of Garfield, Blaine, and McKinley, he deliberately omitted that of Taft. His motive for inserting Blaine was possibly to dispel any calumny to the effect that he and his followers were fastidious reformers. But the reflection on President Taft was as obvious as it was unprecedented. Even the unpopular Hayes used to get perfunctory endorsements from Republican conventions. Not till this year of grace, prosperity, and rancor has it been possible for Republicans in convention assembled to plan an insult to their President, and to refer to him in their platform in a way almost to heighten the offence. Senator Cummins was not so far wrong in speaking of a state of civil war within the party.

Both the Iowa Senators are plainly bitter in their antagonism to President Taft. Some will maliciously account for this by pointing to that plank of the Iowa platform which asserts that the Republicans of that State are "the best judges of the Republicanism of their Senators," and will resent "any attempt to exclude them from the honors and privileges which properly attach to membership in the Republican party." It will be said that "honors and privileges" can mean only a welcome at the White House and a full share of the patronage. But even if this is true, it does not mend broken bones. The situation in the party remains ugly and threatening, no matter what brought it about. When the two Senators from Iowa open war on the Administration, with the majority of the party in their State behind them repelling all overtures for compromise and harmony, it cannot be denied that it is a pretty serious thing for both the Administration and the party.

In Iowa, as in Kansas, it is mainly the tariff that is splitting the party. Yet if one looked merely at the Iowa platform, he might find it hard to say why. The Iowa Republicans renew their solemn professions of faith in the doctrine of protection. They have no patience with any party that questions the "principle." But the application--there's the rub, as it always has been. What the Iowa platform protests against is the fact that, in framing the Aldrich-Payne bill, no attempt was made to live up to the promise of the National Convention to revise the tariff on the basis of the difference between the cost of production at home and abroad. This might seem the choice of a pretty narrow field on which to fight. To determine scientifically the cost of production anywhere is highly difficult. We doubt if either Cummins or Dolliver would undertake the task. Yet they are really shrewd in putting the case as they do, since the promise was undoubtedly made by the Chicago platform and was as undoubtedly broken by Aldrich and the Republican organization in Congress. Moreover, it is morally certain, even without an accurate demonstration of the facts, that the great run of protective duties is far in excess of any possible difference in labor-cost, here and in foreign countries. So that, in this matter, the Iowa Republicans are on strong strategic ground. For what they say on this point, they cannot be successfully attacked; and at the same time all the vague dissatisfaction with the tariff, and the latent discontent with the way in which things have been going at Washington, will yield supporters for their cause, and render it still more formidable and divisive.

In any aspect of the matter, the course of Kansas and Iowa Republicans, now with a proved majority in either State, cannot fail to be most disturbing to the party managers. The fact that they may be able to allege personal and even small motives on the part of the Iowa Senators will not meet the difficulty. It will be generally admitted, we think, that some parts of the Iowa platform have a petty air. For example, it praises the Senators for their efforts in behalf of postal-savings banks, yet withholds all recognition of President Taft, without whose personal and long-continued efforts it is absolutely certain that Dolliver and Cummins would never have had a chance to vote for a postal-savings bill. Yet all this is only incidental. The chief political fact is that an unparalleled break in the Republican party has occurred in two "rock-ribbed" States of the Middle West; that independent and bold criticism of the party management has found free expression in the party primaries and conventions; and that what began as insurgency has now attained the status of revolution.

To deal with this party civil war will tax the patience and the wisdom of President Taft and his advisers. The angry personal differences which have grown up it will probably be impossible to compose, for a long time to come. The political difficulty is also confessedly great, having already destroyed, in the minds of most Republicans, what little hope there was that they might be successful in the November elections. Anything like real harmony and effective united action it now appears impossible to bring about within three months. Yet for the tariff question President Taft has one resource in his hands which may be made later a powerful instrument. If Professor Emery at the head of the tariff board is able soon to place in the President's hands a conclusive demonstration that certain schedules of the tariff are far too high and grossly inequitable, Congress can be urged to reduce them in detail, in accordance with the demand of the Iowa platform, and the Iowa Republicans will be bound to applaud and assist. If, however, the demonstration showed, as it easily might, that the duties on Iowa wool are outrageously high, we imagine that Cummins and Dolliver would be fully as disturbed as President Taft can be now.

SPAIN AND THE VATICAN.

Each day's news makes clearer the real issue between the Spanish Government and the Vatican. When we see an influential newspaper like *El Imparcial* of Madrid, professing itself devoutly Catholic, yet offering the heartiest support to the Prime Minister whom it had before opposed, we begin to understand how strong a national sentiment has been aroused. Spain wishes to be mistress in her own house. It is not an attack upon the Church which is intended, but a vindication of the right of Spaniards to control the religious orders. A sharp distinction is made in Spain between the Church and clericalism, between the secular clergy and the regular. This is nothing new. So long ago as the agitation over the supposedly anti-clerical play by Galdós, "Electra," the author raised the cry, "Do not touch the secular clergy." Even among the monastic orders he was willing to make

distinctions, being ready to tolerate or actually uphold the Augustinians and Carmelites. He contended that only the disquieting and extra-legal growth of monasticism in Spain should be checked.

All political parties and all Ministries in Spain have avowedly been working to that end for some years. The original impulse may have come from France and her law of Separation. Ideas easily leap over even protected international boundaries. The movement against the religious orders, which swept everything before it in France, is also visibly astir in Italy and is at the bottom of the rupture between Spain and the Vatican. It strikes at two things—the teaching functions of the orders and their anomalous economic position, not subject to taxation yet actively competing in certain ways with national industries. The complaint about this is no novelty. About the time of the close of the war between Spain and the United States a Madrid comic paper represented the typical patriotic Spaniard as saying: "If we could only get rid of our monks as easily as of our colonies!"

In the closing chapter of Havelock Ellis's striking book on Spain, published in 1908, were grouped a great many expressions by leaders of Spanish thought regarding the policy which their country ought to pursue in the process of recuperation and upbuilding. Among them it is surprising to find so large a number avowing hostility to the religious communities. What these professors and moralists and publicists have been saying, the Government is now endeavoring to translate into action. It is felt that there are too many ecclesiastics in Spain, who are too unproductive. Sentiment is, of course, divided. To quote Havelock Ellis:

> In one direction there is clearly, among both men and women, a large amount of faith, of religious observance, even of passionate devotion, and sometimes also of intolerant bigotry, the whole supported by a mass of superb tradition, of magnificent architecture and ritual, of ecclesiastical organization and wealth, to-day unsurpassed in any country. But in another direction we have the subtly penetrating influence of Liberalism and Republicanism and Anarchism, of the revolt against the ancient and inert forces which are believed to be impeding the advance of Spain.

It is evident that the way in which the latter tendencies are now declaring themselves is in advocating the limiting and regulation of the religious orders, and in resisting the extreme claims of clericalism in the national life.

The position of the Catholic Church in Spain is guaranteed by the Spanish Constitution. Article xi reads: "The Catholic Apostolic Roman religion is that of the state. The nation obliges itself to maintain its worship and its ministers." That was the historic thing, but the innovation follows: "No person shall be molested in the territory of Spain for his religious opinions, nor for the exercise of his particular worship." It was added, however: "Nevertheless, no other ceremonies in public will be permitted than those of the religion of the state." It is over the interpretation of this last clause that the Vatican broke with Spain. By royal decree, permission was granted to the handful of Protestant congregations in Madrid and elsewhere, as also to the Jewish synagogues, to place on the buildings where they met for worship some indication that religious services were held within. Before the practice had been to banish all such insignia, and to have no public entrance to the buildings, admission being usually by a side-door. Yet there has been no denial that Protestant worship has been "public." When a service commemorative of the Emperors William and Frederick was held in the Lutheran Chapel at Madrid, representatives of the army and the Government and even of the royal family were present. There was nothing furtive about this! And since it is known to everybody that Protestant meetings and schools exist, it does not seem so fearful a thing to permit an announcement that they exist. Yet on this single point, where its right under the Constitution is by no means clear, the Vatican has chosen to send an ultimatum to the Spanish Government. In so doing it certainly appears to have been very badly advised.

From the thickening troubles in lands like Spain and Portugal and France, where it has been established by law, the Catholic Church must look with great relief to the United States. Here it has no special privileges and must be self-supporting, yet it has had a wonderful growth and success. The Vatican has shown itself in times past capable of adjusting its policy to circumstances. Leo XIII advised the Catholics of France to "rally" to the republic. The present Pontiff has shown himself more inflexible—though this may be a tribute to the simplicity and sincerity with which he has carried the ideas of a parish priest to his great office. But he and his counsellors must perceive in time that they need to yield something, even in Spain, to the spirit of the time and the mounting sense of national independence and dignity.

CRIME AND THE LAW.

A judge of the General Sessions of New York, Judge Foster—if correctly quoted in a newspaper interview—is not content with the common humanitarian theory of "the uplift of the individual" as a "primary object" of criminal punishment, but states his view of the working of the law as follows:

> Imprisonment never was and never can be a deterrent to others. For one reason, others do not know the fate of a given convict, except in such conspicuous cases as that of Albert Wolter. And even if they did, no person about to commit a crime ever thinks he is going to be caught, and the possible penalty has no effect upon him.

Very possibly the judge did not say, or did not mean, precisely what these words convey. Nevertheless, the state of mind they indicate is not very different from that actually entertained by a considerable number of persons, some of whom, doubtless, are on the bench; and it is a state of mind that is unwarranted both in fact and in logic, and that is highly detrimental to the interests of society.

One of the sources of the error into which the proponents of this sort of view have fallen is indicated, in a peculiarly gross way, to be sure, in these remarks of Judge Foster's. There is, among those who allege the inefficiency of punishment as a deterrent, a singular lack of imagination—a failure to realize what the system of penal control means in the aggregate. Sometimes they appeal to the statistics of a few months, or a few years, to demonstrate that this or that change in criminal procedure has had no appreciable effect in increasing or diminishing crime, and they infer thence that it would make little or no difference if the whole idea of punishment as a deterrent were abandoned. The logical error of such a view is too obvious to require comment. Whatever may be true of any one particular case, in the long run an impression is produced, and is spread throughout the communinty, which corresponds roughly

with the truth. If swift and adequate punishment is the usual result of wrongdoing, the association of the crime with its punishment becomes an instinctive habit, and, unless the ordinary laws of human nature do not apply in this domain, must inevitably exercise a powerful influence upon conduct.

There is no incompatibility between the idea of reformation and the idea of punishment as purposes of the criminal law. Whatever can be done in the way of reformation and rehabilitation by wise and humane measures, by all means should be done, in and out of prison. The objection to the views of humanitarian extremists is not that they think too much of reformation, but that they think too little of deterrence. Many of them, without expressing themselves with the crude positiveness of the words ascribed to Judge Foster, tacitly assume that reformation is the sole object that can rationally be aimed at in a criminal code. Nothing is more familiar in the literature of their agitation than their analogy of a prison sentence with a hospital. What would be thought, they say, of sending a man to a hospital for six weeks, regardless of whether it would take six days or six months to cure him? The merits of the indeterminate sentence as a practical measure, and probably in a very wide range of cases, are doubtless great; but the analogy is nevertheless radically false. We do not send a man to a hospital as a lesson for others not to get sick; we do send a man to prison as a lesson for other people not to steal, or rob, or forge, or kill. We cannot tell how many people are kept out of prison for every man that is sent into it. We do know that among the millions of men, of all sorts and conditions, around us, there are many thousands who have strong passions, or morbid desires, or defective consciences; many thousands who are subjected to dire temptation or surrounded by terribly trying circumstances. Who shall say what passions now held in leash, what weaknesses now guarded against, what crimes now shrunk from, would have their way but for the tremendous tradition of law—of that law which says that crime shall be punished—which is a fundamental part of the moral equipment of every human being in a civilized community?

THE NEW COLLEGE IN THE WEST.

The plans and purposes of Reed College, the institution to be opened a year hence at Portland, Ore., are of a character to attract considerable attention. And there are at least two points of great interest in the recent interview with the president of the college that is to be.

The first is that the productive endowment of $3,000,000 is to be used exclusively for college work—university work will not be attempted at all. There is a wayside inn near the White Mountains, of which the cards read thus: "What, second-class? Sure! The only second-class hotel in New Hampshire." A college without a university attachment is as rare as a second-class hotel; but President Foster wishes it understood that Reed College is going to be just this, for some time to come at least. The adoption of such a programme means something more than the mere devotion of the whole income of the college to the work of college teaching. It means the elimination of some elements of difficulty that come entirely from the merging of college purposes with university ambitions. That certain great advantages come to college students from the presence of the university work alongside that of the college is undeniable; but that much confusion of purposes has also come from the combination is equally certain. Especially are the excesses of the free elective plan, against which so strong a reaction has now set in, largely to be traced to this source. The working out of a college system in a new environment, with the distinction between college and university emphatically in mind from the beginning, should prove highly interesting and instructive to the whole country.

The second point to which we have reference is closely allied to the first. "The sort of men I am looking for," said President Foster, "must be men, first of all. Second, they must be teachers. Their proficiency as research scholars will rank third in importance with me. In some of our universities, the order of these qualifications appears to have been reversed—to the detriment of the students, I believe." The fact is, of course, that the relative importance of these qualities in college teachers is altogether different from what it is in university teachers. Helmholtz was—with occasional exceptions—a very poor lecturer, but his students got from him what they could not have got from the most perfect teacher in the world; and the same is true of many of the greatest investigators. Sometimes the power of the perfect teacher and the genius of the great investigator are combined in one man, and that, of course, is the best thing possible, whether in college or in university; but in the university, where men are training to be specialists and investigators themselves, the example of the great leader is of far more importance than the instruction of the perfect teacher. In the college it is different, and President Foster's position is well taken. Still, even in the college, there is danger of going too far—or perhaps rather of going in the wrong direction—in the search for teaching quality. To make teaching truly effective in the higher departments of thought, a kind of enthusiasm and insight is requisite that the *mere* teacher can hardly possess—an enthusiasm and insight that come only with hard work in one's chosen intellectual domain. But, on the other hand, it is a cruel waste and injustice to put ardent young men, ready to respond to the appeal of a genuine teacher, under the instruction of the ordinary specialist, without sympathetic quality, without the power of expression, without the vital impulse of the true teacher; and this is what happens in hundreds of cases in our colleges. The new college will do a great service if it sets up a true standard in this extremely important matter.

With a clean sheet before him, the president of the new college on the Pacific might, we would suggest, profitably consider a question which bears on the character of his own functions and which is also intimately connected with that matter of the personal qualities of the professors on which he has laid so much stress. The autocratic college and university president is a peculiar product of America, especially curious as contrasting with the democratic ideals of our political system. But it is not on the basis of an abstract doctrine of democracy that criticism of this one-man-power system rests. The position of a college professor, and even of the younger college teachers, should be a position of dignity, independence, and the fullest measure of self-respect. In most of our colleges we have fallen into the

habit of elevating coördination, discipline, "harmony" in the faculty, to a position of utterly factitious importance. Not these things are wanted—or at least a very little of them is quite sufficient—but dignity, spontaneity, intellectual independence. In no way could President Foster more magnify his office than by belittling it. A college faculty does not need a boss; its efficiency is neither to be attained nor to be measured by the methods that apply to a factory or a department store. If the college needs in its professors real men and true teachers, it must not treat them as wheels in a big machine. There is already a vast difference in this regard between some of our colleges and others; but there is a fine opening for a new institution to show what a college can be wherein the personal domination by the president is abandoned, and in its stead we have a company of gentlemen and scholars working together, with the president simply as the efficient centre of inspiration and coöperation.

POLITICAL CARTOONS.

The death of Edward Linley Sambourne will bring about no striking change in *Punch's* leading weekly cartoon. Because of Sambourne's illness, Bernard Partridge has for some time been doing the pictorial "leaders" for *Punch*, and in his work he has continued the tradition of Sambourne, which the latter ten years ago took over from Tenniel. What this traditional type is in detail we may leave for the technicians to discuss. The average reader in this country will be content to distinguish the *Punch* cartoon as being at the same time much more direct, much more massive, and much more serious than our own native product. Where we sketch and scrawl, the British cartoonist paints. He puts in foreground and background, blocks out his figures, attends to his lights and shades, and, having left no chance for any one to miss the point, repeats it in good-sized print at the bottom of his picture. This justificatory legend at the bottom—we find it in Carruthers Gould as we find it in Partridge, Raven-Hill, and their colleagues—is as characteristic of the English political cartoon as the explanatory legend at the top of the page is characteristic of the English bit of light verse. And it is not the laconic word or two to which our own newspaper artists are wont to resort. It will often be a solid sentence or paragraph couched in the solid style of the British parliamentary reporter. Mr. Owen Seaman is as likely as not to preface one of his delightful bits of satirical rhyme with some such statement as this:

> The Duchess of Abercrombie, speaking on Wednesday last before the Central Council of the woman's Tariff Reform Auxiliary League and animadverting on a statement made in the House of Commons by the Hon. W. Ponsonby Hawkes, to the effect that the female imagination, when applied to matters of finance, is frequently apt to go astray, remarked that woman's capacity for dealing with intricate problems of domestic economy entitles her to serious consideration in the broader field of public administration.

This has all the gravity of an official communication; and even in its lighter moments the British mind seems unable to forget that, as the author of "Pinafore" pointed out long ago, official communications are always unanswerable.

The point need not be pressed too far. One can readily think of cartoons in *Punch* that are exceptions to the rule. No detailed legend accompanies the picture of Britannia mourning over the bier of Lincoln. Text and drawing fit absolutely in the famous "Dropping the Pilot." But these are moments of exceptional solemnity when words would be clamorously out of place. And it is on such occasions of high solemnity that the massive style of draughtsmanship shows itself at its best. But in the ordinary run of political comment, our main characterization will hold. There is little of that light-hearted abandon and stenographic style with which we on this side of the ocean picture the passing of Presidents and the triumph or defeat of large issues and the pressure of serious economic problems. The average Englishman would refuse to put up with the hilarious illumination which our comic artists to-day are shedding upon the question of the increased cost of living. He would resent our newspaper artists' merry war with the Trusts.

Not that the Englishman is incapable of whim or extravagant humor. He has shown it in his cartoons on Woman's Suffrage, which he chooses to take in light fashion. We should find it hard to surpass the rollicking fun of *Punch's* cartoon in which anti-suffrage Cabinet ministers out for an after-dinner stroll are waylaid by militant women who pop up from coal-holes and out of the disguise of sandwich-men and organ-grinders. There is fun in the Ladies' Pageant, where poor Mr. Asquith is represented as desperately dodging the lances of suffragist and anti-suffragist charging each other in modified knightly array. There is a great deal of fun in the picture of the woman suffragist who knows jiu-jitsu and throws one London "bobby" after the other over tall iron fences. But the English cartoonist rarely applies this method to Mr. Asquith in Parliament, or Mr. Balfour on Tariff Reform. Here, apparently, crops out the oft-asserted national feeling that politics and government are serious things which must even be made fun of seriously.

The English artist's simplicity of utterance, as compared with our own, may be either the cause or the result of the much scantier supply of traditional types he can draw upon. Virtually he has two types only, John Bull and Britannia; and of these, Britannia is reserved for only the most solemn occasions. It is John Bull who asks Mr. Asquith how about the German fleet, and John Bull who asks Mr. Balfour how about the duty on corn, and John Bull who quizzes Mr. Haldane on what progress he is making with the reorganization of the Territorials. A stout gentleman named John Bull facing a thin gentleman named Lord Lansdowne reduces a cartoon to very simple terms. And sometimes, when John Bull stands face to face with a gentleman like Mr. Haldane who is himself stout and aquiline-nosed, the absence of variety becomes almost oppressive. Compare with this meagre equipment of the British artist our own rich stock of anthropological, zoölogical, mythological, and technological cartoonist's types. In Uncle Sam alone, we have the full equivalent of John Bull. But in addition, we have the separate sectional types—the Yankee farmer with cowhide boots and tufted chin, and the Southern Colonel and the broad-brimmed Westerner. We have the Elephant and the Donkey and Miss Democracy and the Boss and the Trust and the Ship of State and the Locomotive of Progress and the Full Dinner Pail and the Plain Citizen and the Rough Rider and the Big Stick. And as if that were not enough, we stand ready to seize upon the event and the type of the moment—the aeroplane, wireless, Dr. Cook, Mr. Jeffries. Is it any wonder that our artists can produce com-

binations and effects quite beyond the reach of the English cartoonist?

The question of relative merit does not enter here. If we take up the essential nature and purpose of the cartoon, it may very well be that our superior agility, our great readiness in the whimsical and the allusive, fade before the straightforward give and take of the English cartoon. Directness of address is the prime quality where the object is to appeal to multitudes and at once. Our own best cartoons have been simple. Thomas Nast did not hunt after cleverness. Mr. Davenport's widely-disseminated "He is Good Enough for Me" is extremely simple. Mr. Opper's family of Trust giants leaves little to the imagination. Yet these are the exceptions on our side of the water, even as Mr. Bernard Partridge in his lighter moods supplies the exception the other.

THE CENTENARY OF CAVOUR.

I.

The nineteenth century produced three statesmen of the first rank. One of these, Lincoln, saved a nation; the other two, Cavour and Bismarck, created nations. In many respects, the hardest task fell to Cavour, who combined in a rare degree the patience, magnanimity, and personal charm of Lincoln with the dynamic masterfulness of Bismarck. He possessed besides a suppleness all his own.

Count Camillo Benso di Cavour was born at Turin, August 10, 1810, when the great Napoleon, at the height of his power, ruled Italy; he died June 6, 1861, when Lincoln had been for three months President of the United States. The intervening fifty years witnessed more changes, not merely in the surface of life, but in men's ideals, than any previous half-century. Camillo was named for Prince Borghese, Pauline Bonaparte's husband, who stood as godfather to him. His father's family, the Bensi, had been conspicuous since the days of the Crusades: his mother, a De Sellon, of Geneva, grew up a Protestant and became a Catholic only on marrying Marquis Cavour. So far as heredity counted, Camillo, through his father, was a Piedmontese to the core: but through his mother, he had contacts not only with a different people, but also with a different religion. But heredity and environment do not work automatically; Camillo's elder brother, Gustavo, had the same parents and the same associations; but Gustavo grew up a Conservative with Clerical sympathies, while Camillo Cavour was one of the world's indefectible Liberals, and a model of religious toleration.

Educated at the Military Academy at Turin, with only a second son's expectations, he won repute as a youthful prodigy in mathematics, and at sixteen he received his commission as sub-lieutenant of Engineers. Subjected at home and among his associates to the prevailing doctrines of the Old Régime, how did he come by his faith in liberty? It requires more than heredity or environment to explain that. Although the reactionary Piedmontese government shut out modern political ideas, under pain of death, and a most bigoted priesthood added religious to political blight, Cavour seemed to draw in from every wind that blew his life-giving principles. That is the way of genius.

Love of justice and passion for liberty were born in him. His visits to Geneva, which was then one of the intellectual centres of Europe, helped to form him. There he met men of international reputation, from whom he had tidings of the social and political theories that the next generation would attempt to apply. Before he was twenty-two, however, his career in the Engineers was cut short. Having expressed too much sympathy for the Revolution of July, he was rusticated to the Fortress of Bard; and then, as soon as he decently could, he resigned from the service. At Turin in those days, a young noble had no prospects outside of the army and the court; and Cavour, as a second son, could expect no fortune; but he was too proud and too energetic to waste his life in such idleness as his small allowance might have secured for him. His family, though affectionate always, regarded him as a black sheep; the King and reactionary court looked distrustfully at the young rebel. To escape from this tedium, he offered to go down into the country and manage a farm. No doubt everybody at Turin breathed a sigh of relief when he was buried, for good, as they thought, at Grinzano. In that sleepy old village he seemed as safely beyond the current of historic achievements as Abraham Lincoln seemed then in his frontier town in Illinois. But Cavour, to the surprise of the family, made the farm pay; and in due season, he was promoted to the care of very large estates of Leri. Thenceforward, he was his own master, rich, as riches were counted in Piedmont. Three things, besides material wealth, came to him through his years of virtual exile: an exhaustive knowledge of the agricultural and industrial conditions of his country; training in handling men—not merely the bailiffs and farm-hands, but the merchants and bankers with whom he had transactions; and self-reliance. The experience which would have crushed or embittered many ambitious youths became, thanks to his indomitable will, the fountain of his strength.

II.

He went on several journeys to France and England, where he studied the practical working of government, and especially the new applications of machinery to industry and transportation. He made the acquaintance at Paris of statesmen, writers, financiers, and men of the world. He read profoundly in the literature of sociology and of economics. He wrote essays on these topics, which Swiss and French reviews printed. He discussed the English Poor Laws, Irish Home Rule, and Free Trade, and he marked out a railway system for the Italian Peninsula which should serve both commercial and patriotic ends. As all that the lion eats turns to lion, so all of Cavour's tentative activities during the years of his apprenticeship had a Liberal aim. He promoted primary schools and savings banks, agricultural clubs and whist clubs—and the Government suspected that even the whist club which Cavour frequented concealed a purpose to talk politics.

But Cavour was no conspirator. He abhorred conspiracy, not because it might be bloody, but because it was proved ineffectual. The abortive revolutions of 1820 and 1821, the abortive uprisings of 1830, the abortive Mazzinian attempts of 1834 and 1843, convinced him that Italy could not be redeemed by plots. Once convinced that a tool was worthless, he wasted no time over it; on the contrary, he regarded as criminal those enthusiasts who went on using it. He was the earliest of the statesmen of the first rank to give due weight to evolution; to understand that only training in constitutional methods, for instance, can prove their worth; to insist that Utopia itself could not profit a people that plunged into it without preparation.

Italy then was truly, as Metternich sneeringly described it, a mere "geographical expression," broken up into half a score of petty states. Immemorial traditions, not less than local jealousies and dynastic rivalry, kept her asunder. She required Liberty, Independence, and Unity. The tradition of individualism warred against her Unity; the Papacy, which for a thousand years had depended on foreign support, warred against both her Unity and Independence. The inheritance from feudalism and the Renaissance, shared in common with most of Europe, warred against her Liberty. Over all, loomed the tyranny of Austria. Her revolution of 1848, waged at first by her princes in behalf of constitutional liberty, independence, and a federal unity, failed. Charles Albert, the most earnest and loyal of the princes who fought in that year, declared that Italy needed no foreign assistance. His motto, *L'Italia farà da sè*—"Italy will work out her own salvation"—did great harm; but he was not responsible for the backsliding of the other princes, including the Pope, which led to the collapse of the national move-

ment, and to the Restoration of 1849, in which every Italian ruler except Victor Emanuel, Charles Albert's successor, became the willing vassal of Austria.

III.

Cavour came into public notice shortly before the outbreak of 1848, by founding the *Risorgimento*, the first modern newspaper in Piedmont. Thenceforward he urged on the war against Austria, which, if victorious, would have secured independence to the Peninsula. Liberty, in the form of a parliamentary government, was promised in each state, and if independence could be maintained, the promise would have to be fulfilled. Then the final problem—unity—could be solved by the Italians themselves, without interference from outside. But the calamity of 1849 left the whole Sisyphean task to be undertaken anew: and in some respects it seemed harder, because, besides the permanent opposition of Austria and Reaction, there were dissensions among the Italians, the paralyzing sense of failure, and a belief that the princes had deliberately betrayed the cause. The Pope, too, had formally declared liberty to be incompatible with his Papal authority.

In 1850 Cavour was appointed Minister of Agriculture. "Take care," said Victor Emanuel, "this little fellow will turn you all out." The King's prophecy came true within two years, when Massimo d'Azeglio stepped down from the Premiership and Cavour took his place. From that time till his death, he so far outweighed the other statesmen of Italy—and there were men of ability among them—that he seemed to be a constitutional dictator; "seemed" only, because he had to fight for every inch of progress, and he scorned to resort to dictatorial compulsion. His devotion to constitutionalism was so strong that he insisted on a full discussion in Parliament of each measure he brought forward. Unlike Bismarck, he never "jammed through" his bills, nor by a threat of resigning induced his sovereign to coerce the representatives of the nation.

Briefly, he aimed at making Piedmont a model of self-government—to prove thereby that the Italians were capable of using their liberty. He introduced railways and telegraphs, he promoted agriculture and industries, and by adopting free trade principles—at least to the point of reciprocity—he extended Piedmontese commerce. That, on the material side. On the moral and intellectual, he labored for national education, for the disestablishment of ecclesiastical courts, and of palsying clerical intrusion and privileges; and he upheld freedom of speech. Politically, by coalescing with the Left Centre, he created an invincible party, which believed in progress and national emancipation. Within five years, little Piedmont stood before Europe as the champion of Italy.

But this was not enough. Cavour saw that Italy could never expel Austria without foreign aid. He saw also that that aid must come from either France or England. To secure their friendship and gratitude, he joined them in the Crimean War. That gave him the opportunity, at the Congress of Paris, of solemnly warning Europe that she could expect no lasting peace until the Italians were freed from Austrian, Bourbon, and Papal misrule. From that time forward he hypnotized Napoleon III and compelled that visionary despot to devote the army and treasure of France in behalf of Italian liberty. After the Peace of Villafranca, which, like a bolt from the blue, upset Cavour's calculations, he turned to England, and with consummate skill played England off against France. Thanks to this strategy, he prevented the French Emperor from intercepting Garibaldi's wonderful campaign in the Two Sicilies, and Victor Emanuel's march on Naples. When he died prematurely on June 6, 1861, all Italy, with the exception of Venetia and the shrunken Papal refuge, was free, independent, and united.

The little Piedmont of 1850, crushed by war, almost bankrupt, troubled by doubts, clouded by differing counsels, was transformed in 1861 into the Kingdom of Italy. The magnet of four millions had drawn to itself eighteen millions. If little Portugal in our time should liberate Spain from a powerful oppressor, and should make Spain Portugal, we should have a parallel to the redemption of Italy under Cavour's leadership.

IV.

Many men and many factors went to that result. Mazzini the prophet, Garibaldi the paladin, Victor Emanuel the loyal standard-bearer, exiles and martyrs unnumbered, publicists, poets, soldiers, volunteers—all wrought for the desired consummation. But without Cavour, the end could not have been attained when it was; without him, it might never have been attained in durable form. For he represented Reason. Was it not Oxenstiern who bade his son observe by how little sense the world was governed? If governments are becoming more and more the field of the expert, then Reason will be more and more the attribute of successful governments, and this aspect of Cavour's achievement will command increasing admiration.

The most masterful of Opportunists, he possessed certain fundamental principles from which he never departed: therein lay his strength. He would go round an obstacle if he could not dislodge it; he would wait; he would concede in non-essentials: but he never compromised where, as he said, honor was at stake. By honor, he meant allegiance to those principles which were the breath of his life. At twenty-two, he wrote that he even dared to dream of waking up some morning as the Prime Minister of the Kingdom of Italy. Nothing that he did in the intervening years contradicted that dream.

So his life-work is remarkably homogeneous: one step leads to the next, and all move toward the goal. We do not feel with him as we feel with Gladstone, and other eminent statesmen of the second class, that his later career was a refutation or denial of his earlier. And yet, few nation-builders have been more persistently misrepresented than Cavour was. On his entrance to public life, his opponents insinuated that he was a reactionary in disguise. Caricaturists drew him with the queue which symbolized the *codini*. Enemies inflamed the mob against him by declaring that he was cornering the grain market, and the mob attacked his house and hoped to lynch him. Mazzinians painted him as the abject tool of Napoleon III, when, in fact, the Emperor was a marionette in his hands. If he had heeded Mazzini and not persuaded the French to embark on the war of 1859, Italy could not have been united; and yet to-day Radicals repeat the old calumnies that Cavour loathed the idea of unity, and strove only to aggrandize Piedmont. His almost life-long ordeal of unpopularity and libel—we must go back to the vilification poured out on Washington and on Lincoln for parallels—simply fortified his resolution. He never considered how any act that he deemed necessary would affect his popularity. Cavour insisted on monarchy as the cornerstone of Italian unity, because the Italians were not then ready for a republic—nor are they now. Every advance won by his policy brought unity nearer: yet his enemies declared that he opposed it! Fanatics in Germany have laid a similar charge against Bismarck; and there was a time when Abolitionists denounced Lincoln for not proclaiming that his first purpose was to free the slaves.

Of Cavour's master-strokes in statesmanship, his Crimean Expedition has long been regarded as unequalled. But his decision to invade Umbria and the Marches in 1860 involved an immensely greater risk. So his winning Napoleon III over at Plombières; his forcing the war with Austria, in spite of the hostility of all Europe; his foresight in assuring the liberation of the Duchies and Emilia, even after he himself had resigned; and his collusion in the Garibaldian expedition—these, not to mention earlier achievements, stamp him as a master. He had audacity, suppleness, tact, and swiftness: and he never gave up. If his Matterhorns were impregnable on the south, he scaled them on the north.

Outside of Italy—in France, in England, in Germany, and in America—the wisest judges have long assigned to

Cavour a place among the highest. Not only did he accomplish great things with small means; but he worked in concerns which must always touch civilized men. He established freedom from ecclesiastical tyranny, which always corrupts both Church and State; he believed that mankind are capable of indefinite improvement, and that it is the business of government to secure this to them; he trusted liberty. His guide was Reason—Reason sensitive to the deepest emotions, Reason inspired by the noblest ideals. Civilization pendulates between hope and despair. On the back-swing, there is a scramble to Conservatism; old creeds are revamped; the Jesuit, ecclesiastical or political, walks abroad unchallenged. But Cavour was the child of one of humanity's great moments of hope; himself the embodiment of that disciplined and indestructible optimism which ever and anon knocks at the heart of the race and bids it up and forward. Such a man works not for his own people only, nor for a single epoch, but is a precious possession of mankind forever.

VI.

I cannot close this brief survey of Cavour's intricate and amazing career without referring directly to the man himself. Small in stature, with large head, blond hair, spectacled blue eyes—half closed on account of near-sightedness—rosy cheeks, and smiling lips, he looked at first glance the good-natured country banker, rather than the consummate statesman. He was the easiest of men to approach: equally at home with monarchs, and with the peasants on his rice plantations. Everybody testifies to his charm. That somewhat rigid soldier, La Marmora, writes at a time when he had personally broken with the Prime Minister: "Cavour is the most *seductive* man in the world." Madame de Circourt, to whose salon at Paris the élite of Europe flocked, told Nigra that even when Cavour first called, an unknown young man from remote Piedmont, she recognized in him the "most magnanimous soul" she had ever met. Magnanimous, he truly was. He allowed no personal dislike to prevent him from seeking the coöperation of any one who could help Italy. He thought so little of personal considerations, indeed, that his enemies could not credit his disinterestedness. He lived up to his maxim that in politics, nothing is so futile as rancor. His buoyant nature made men forget the burden that he carried. His gift of playful irony—like Lincoln's humor—brightened even the most tragic crises and enabled him to relieve the tension of many a gathering storm in the Chamber. He turned aside much rhetoric with a genial laugh.

It is a commonplace to say that he was Machiavellian. Statecraft in his time was not always candid; it is not candid in our time; neither is war, nor business, nor society; and even in daily intercourse with our intimates, we are not always candid. Life might become intolerable, if we were. I say this not to palliate deceit, but as a reminder that we must not Pharisaically misjudge statesmen. We must learn how the methods they employed compared with the standards of their time. What surprises me more and more, after many years' acquaintance with Cavour's writings and speeches, is their downrightness, their frankness. This and their lucidity go together. He did, in fact, as he jokingly remarked, deceive the diplomats of Europe by simply telling the truth. His reticences, his evasions, even his deliberate deceptions, will be excused, so long as a general in battle or as the ruler of a state is justified in acting by a code which he would as an individual be condemned for using.

Cavour's wit, his large good-nature, his insatiable interest in life, his simplicity, made him the best of companions. The younger men who served under him came to love him as a father. When he died, one of his lieutenants, La Farina, wept, not for the loss of the chief on whom his own fortunes depended, nor of Italy's mainstay, but for the loss of his best friend. La Farina was no sentimentalist; nor were many others who, like him, shed tears. In Cavour's later years, the people of Turin, having divined his character, lovingly nicknamed him "Papa Camillo." So his nearest counterpart among modern statesmen was plain "Father Abraham" to his countrymen.

William Roscoe Thayer.

NEWS FOR BIBLIOPHILES.

In the spring of 1909 Alfred W. Pollard of the British Museum spent a few weeks in Providence, R. I., and the result of his work now appears in a catalogue of the collection of early-printed books which were brought together by Gen. Rush C. Hawkins and deposited in the library building erected by him there to the memory of his wife, and called the Annmary Brown Memorial.

Gen. Hawkins, now past eighty, is one of the collectors of the past generation. In an introduction to the catalogue, he tells of buying his first book, a "Life of William Wallace," when nine years of age, with the first considerable amount of money he ever possessed. In 1851, he says, "the attending of book-auction sales became a favorite habit," his first collections being in history and literature. In 1855, "without any further purpose than possibly the gratification of passing curiosity," he bought his first fifteenth century book, and this purchase "proved to be the forerunner of a pleasurable occupation, destined to continue through life."

His early aim was to acquire a copy of the first book from as many as possible of the first printing presses set up in each of the two hundred and thirty-eight towns in which printing had been established before 1501. The collection was thus undertaken with one particular object in view: "to perpetuate the memory of the first printers of the fifteenth century and their work," which Gen. Hawkins has, he says, "always regarded as being the most important in its result of any labor ever performed by any one set of workers." The books were almost without exception bought abroad, "less than twenty items in the whole collection" having been purchased in the United States. Gen. Hawkins gives 1884 as the year in which he gave up miscellaneous collecting, afterwards keeping more closely to his chosen line. His general library was sold at Leavitt's in March, 1887, and the catalogue comprises upwards of 2,500 lots. This collection covered almost every branch of literature, and contained upwards of a hundred incunabula.

In 1884 he published a volume: "Titles of the First Books from the Earliest Presses Established in Europe before the End of the Fifteenth Century," compiled primarily, we may presume, as a guide to his own collecting.

The collection as described in Mr. Pollard's admirable catalogue consists of five hundred and forty-two books printed by about 300 different printers in 144 different towns, and in the case of 119 of these towns books from their earliest presses are included. The size of the collection is not important, but its completeness, as exhibiting the development of the art of printing, is remarkable. Besides the description of the books themselves (and these descriptions are, needless to say, bibliographically perfect) Mr. Pollard gives us much other information about the work of the early printers. The arrangement is chronological by countries, towns, and printers. At the head of each town is given in a few lines a succinct general note about the printing done in the town, and a similar, but often fuller, account of each of the printers represented, and his work. There is also a special note about each of the books and whatever is of interest about the copy described. This information is of great importance, as the study of incunabula has been revolutionized since the publication, in 1893, of the late Robert Proctor's "Index to the Early Printed Books in the British Museum." For example, we quote Mr. Pollard's statement in regard to a recent discovery:

> A group of books in a Roman type with a peculiar form of letter R (whence the name "the R-printer" for their anonymous producer) can now be assigned with practical certainty to Adolf Rusch of Ingweilen, who married Salome, daughter of Johann Mentelin, and seems to have worked simultaneously for his father-in-law and for himself. From an inscription in a copy at Basel of his edition of the Rationale of Duranti we know that Rusch was at work at least as early as 1464, and he was thus the first printer to use Roman type. In 1470 Rusch seems to have told a customer at Nordlingen Fair that he himself was the printer of two books in Mentelin's types (the Terence and Valerius Maximus), but it seems safer to take this as evidence of the position which Rusch held in Mentelin's business than to interpret it as meaning these books were not printed in Mentelin's office.

The Hawkins collection does not contain even a leaf of the Gutenberg Bible, and indeed throughout the great books, which sell for thousands of pounds at sales, the books

which are the glory of such libraries as those of Mr. Morgan and Mr. Hoe are conspicuous by their absence. But the strength and notability of the collection lies in another direction.

We may note here that the Library of Congress has recently acquired, as custodian only, the similar collection of incunabula brought together by the late Hon. John Boyd Thacher of Albany. Mr. Thacher's collection, formed during more than fifty years, is on somewhat the same lines as the Hawkins collection, but is even more extensive. No catalogue of the Thacher collection has been printed, but in a letter written a few months before his death he said of it:

> What is my collection? It is composed of representatives of incunabula of the fifteenth century presses, and this congregation is greater in number than that of any other collection except the British Museum and the Bibliothèque Nationale—and if the proper comparison be made, it will not fall short there.

And at the same time he stated that he owned incunabula from 564 separate presses.

To Mr. Pollard's Catalogue of the Hawkins books is added a supplement giving a list of incunabula in the library of Brown University and the John Carter Brown Library, both collections being housed within a few hundred feet of the Annmary Brown Memorial building.

The volume, a quarto of about four hundred pages, has been printed at the University Press at Gen. Hawkins's expense. Ernest Dressel North of this city is the agent for the sale of copies.

Correspondence.

"GREAT AND GREATER BRITAIN."

To the Editor of The Nation:

Sir: Your recent review of "Great and Greater Britain," by J. Ellis Barker, alias Otto Elzbacher, was very satisfactory, especially for its tone of good-natured badinage, which is the proper treatment for such a book. Your reviewer, however, made one slight mistake. J. Ellis Barker has at length got into "Who's Who," in the last edition for 1910, which your reviewer apparently has not seen. For three years, since I became thoroughly convinced of the charlatanism and unreliability of Mr. Elzbacher, I have searched in vain for information about his training, until I saw this year's "Who's Who." There I learned that he was born in Cologne and was privately educated.

Your reviewer very properly comments on the remarkable fact that in the last Budget campaign the two intellectual leaders of the Tory party in the public print were J. Ellis Barker, "made in Germany," and the renegade Home Ruler, J. L. Garvin, an Irish boy who left school early to go into journalism. Indeed, some trustworthy correspondents have said that Garvin had more influence in fomenting bad blood against Germany, and in goading on the Lords to the rejection of the Budget, than any other Tory leader, even Mr. Balfour.

But the antecedents, training, and unscrupulousness of J. Ellis Barker have an important interest for Americans as well as Englishmen. Last January a thoroughly trustworthy Washington correspondent reported that Senator Lodge had persuaded the Senate to reprint J. Ellis Barker's "101 Points against Free Trade" as a public document, and it is certain that this thoroughly misleading and false document is now being distributed free at the expense of the government as Republican campaign literature.

This circulation of Mr. Barker's partisan brochure is another example of partisan peanut politics on the part of Senator Lodge. This document has been completely discredited by Chiozza-Money's crushing reply, and dissection of Mr. Barker's falsehoods and fallacies. I do not believe that partisan literature on either side should be circulated at government expense; but, if Congress does that sort of thing, let it give both sides a fair hearing. Fortunately, in the autumn campaign we are to have a thorough discussion of the iniquities of the present high tariff.

Mr. Chiozza-Money's reply to each point can be obtained by sending five cents to the London *Daily News*. It would be an education in logic and the tariff question if every earnest voter could study these two pamphlets side by side. The result, I am inclined to think, would be an increase in the votes for a reduction of the tariff, and a decrease in the honest, intelligent, supporters of Senator Lodge in Massachusetts.

George L. Fox.

Seal Harbor, Me., July 28.

INK AND MANUSCRIPTS.

To the Editor of The Nation:

Sir: It gave me great pleasure to read in the letter of my friend, Mr. Ford, in your issue of July 21, that mine in your previous number furnished him amusement, as, I am assured, it has so many other readers—but at the expense of the ink rules of the Massachusetts and Pennsylvania Historical Societies! Doubtless Mr. Ford, as editor for the former organization, is allowed the use of ink when he needs it, as are those employed by the society here; otherwise it would not be so amusing. Knowing well his excellent rules while in the manuscript division of the Library of Congress, where, as he says, the rule "is lifted as occasion requires, and so falls under the discretion of the guardian." I was astonished to learn that he had not carried them with him to Massachusetts. It is not too late yet.

Indeed, had Mr. Ford read my letter with his usual care—not in vacation—he would have seen that the Congressional Library rule is the one thing I plead for. Let those two great institutions adopt that flexible rule, and there would be no occasion for this letter. As to his statement about the universality of inflexible ink rules, let us see: Dr. Jameson of the Carnegie Institution writes that the use of ink was refused to one of his staff, a man of wide experience, in but one institution in this country. Prof. Charles M. Andrews of Johns Hopkins states that in his work for the Carnegie Institution throughout England not an institution refused him the use of ink under proper conditions. Dr. Jordan of the Historical Society of Pennsylvania tells me he saw the "pencil-pen" in use in Germany, even in the manuscript rooms, and granted me the use of it in editing manuscripts here during the past year. A letter of Librarian Brigham of the American Antiquarian Society, now before me, says: "In general, I should say that most of the libraries and depositories in Europe and America allow the use of ink to those who might come under the class of special investigators."

Mr. Ford cites an instance of injury to manuscript. We could all cite some, but is one going to abandon all railway travel because a wreck somewhere has cost many human lives? Doubtless the Congressional Library has had accidents, also, but that does not prevent it from having, for special investigators of known reputation and serious purpose, a rule that "can be lifted as occasion requires." And let us hope Mr. Ford will transfer that enlightened rule to Massachusetts and cease to be a bad example for Pennsylvania. Mr. Ford would hesitate to say that 75 per cent., or any major proportion of the serious special historical investigators of Europe and America are unworthy or unfit to be trusted to use ink in work with his treasures; but that is precisely what the rules of his society and that of President Pennypacker proclaim upon the housetops, and these gentlemen need not be surprised that it is at last vigorously resented; not by a sweeping indiscriminate censure of all historical societies, but only of the two particular distinguished offenders. Let them enforce ink rules against offenders only, and they will receive the hearty support of all who do not offend. It is absurd to intimate that the world of historical scholarship has not as great concern for its treasures as any society can possibly have. The efforts of many of them in this direction compare favorably with those of any official of historical collections.

Swarthmore, Pa., July 25.

WORK ON HISTORICAL RECORDS.

To the Editor of The Nation:

Sir: In a letter, printed in the *Nation* about a year ago, I called attention to the movement on foot to fill in the gaps in the historical records of America by recourse to European archives, and also mentioned the proposals which had been made for coöperative effort. It may interest many of your readers to know that during the past year substantial progress has been made in this worthy work. In December last, Dr. Rowland of the Mississippi Department of Archives and History reported before the meeting of the American Historical Association in New York city that the sum of $2,000 had been contributed by the Historical Societies of the Mississippi Valley States for the work of preparing a calendar of documents relating to American history in French archives. He stated that Mr. Warren G. Leland, already employed in Paris in research for the Carnegie Institution, had been engaged to superintend the work on the calendar, and to provide for it such expert assistance as he might find necessary.

August 13, when the steamer Minneapolis leaves the harbor of New York, it will bear with it the American deputation to the "International Congress of Archivists," which meets in Brussels August 28. This deputation includes Mr. Gaillard Hunt of the State Department in Washington, Dr.

Dunbar Rowland of Mississippi, and Mr. Warren G. Leland, named above. These gentlemen, appointed by the American Historical Association, will all read papers. C.

Jackson, Miss., July 28.

"SOUTH" AND "SOUND."

To the Editor of The Nation:

Sir: Without questioning at all the value and interest of the consideration of "altered quotations" that Mr. Baker proposed in his letter to the *Nation* of July 21, may I suggest that perhaps Hazlitt's reading of "south" for "sound" in "Twelfth Night" is not his own *alteration?* Hazlitt probably memorized the passage from a text not earlier than that of Pope. As Dr. Furness states (Variorum edition of "Twelfth Night," page 9), the "change of 'sound' to *South* maintained its place in the text without question for nigh a hundred and twenty years, from Pope to Knight" (? 1840). The concluding pages of the Variorum note, containing Dr. Furness's personal contribution to the discussion of the reading, are interesting in connection with the "mixed figure" in the reading "sound," the poetry as affected by that reading, and the probable acceptance of "sound" by future editors.

May I call attention to a slip in Dr. Rolfe's letter in the *Nation* of June 30, page 651, column 1? For "the first American edition (1857)" we should read, of course, "the first American edition (1859)."

It may be remembered that to the four readings of the passage in "Merlin and Vivien" that Dr. Rolfe referred to in the paragraph I have just indicated, I added a fifth in my letter in the *Nation* of June 3, 1909. John Edwin Wells.

Hiram College, Hiram, O., July 23.

A CORRECTION.

To the Editor of The Nation:

Sir: I appreciate thoroughly the interpretative phrases which—with the space at his command—your reviewer (*Nation,* July 14) gave to certain contributions of mine to "The Younger Choir." But I should like to protest against an impression quite justifiably gained from those contributions in their present printed form. Both poems ("The Celebrants" and 'Christmas on Fifth Avenue") were, without my permission or consent, mutilated by the editors of "The Younger Choir." Each poem consists of two parts: one analytic, one synthetic; one descriptive, one philosophic. The editors of the anthology in question, however, saw fit to print only the first part of each poem, thus giving both (as your reviewer justly observed) an appearance of glaring impressionism in method, and, I may add, of socialistic tendency, utterly alien to my habits of thought and work.

Ludwig Lewisohn.

Charleston, S. C., July 26.

FACSIMILES OF THE GUTENBERG BIBLE.

To the Editor of The Nation:

Sir: The note referring to the facsimile reproduction of the forty-two line Gutenberg Bible (*Nation,* July 28) might have been ampler.

Two facsimile reproductions of this edition are under way—one by the Insel-Verlag in Leipzig and one by Hubert Welter in Paris. The Leipzig reproduction, prepared under the direction of Geheimrat Dr. (*not* Professor) Paul Schwenke, will consist of 20 copies on parchment at 3,000 marks each and 300 copies on paper at 700 marks (850 marks bound). This price for the edition on paper will later be raised to 900 marks. The Paris facsimile will be in two folio volumes of 1,282 pages. Of this 250 copies will be offered at 750 francs each until September 30 next, after which the price will be 1,000 francs. Roscoe Ham.

Brunswick, Me., July 31.

Literature.

A HISTORY OF RELIGION.

Orpheus: A General History of Religions. By Salomon Reinach. Translated by Florence Simmonds. New York: G. P. Putnam's Sons. $3 net.

Orphism, says M. Reinach, contained elements common to all religions, drawn from the depths of human nature and nourished by its most cherished illusions, and a little book intended to summarize religions and their histories could not invoke a better patron than Orpheus, poet, musician, theologian, mystagogue, and authorized interpreter of the gods.* In this somewhat fanciful title the author expresses his conception of the unity of religions and the essentially poetic nature of religion; but his work is a summary rather of facts than of principles. Taking Voltaire as his model of narrative style, in his survey of his large field he has cultivated successfully the arts of condensation of material and epigrammatic terseness of expression. The result is an attractive sketch—a skilful presentation of details, with many acute remarks and happy characterizations, clear and vivacious. The division of the text into short numbered paragraphs gives the author freedom to pass easily from one point to another; and, though there are occasional errors of statement, his descriptions, considering the vastness of the field he goes over, are in general remarkably accurate. The style he adopts is not without its inconveniences and dangers: the rapidity of the narration, the great array of detached facts, may become wearisome and confusing to the general reader; and the effort at brilliancy sometimes leads to unwarranted generalizations or superficial judgments. His wit occasionally passes the limits of good taste; he disposes thus, for example (p. 33) of the question as to the relation between the code of Hammurabi (23d century, B.C.) and the little code in Exod. xxi-xxiii (8th century, B.C.):

> The Babylonian code is anterior by six centuries to the date assigned by tradition to the Mosaic code; if, then, this latter was dictated by God to Moses, God must have plagiarized from Hammurabi. Such a conclusion seems, with very good reason, inadmissible to the most universal of German savants, the Emperor William II; in a famous letter addressed to an admiral, he decided that God had successively inspired various eminent men, such as Hammurabi, Moses, Charlemagne, Luther, and his grandfather, William I. This opinion found general acceptance in court circles.

Here a serious historical question is settled by a witticism, and the Emperor is lugged in *vi et armis.*

The introduction points out (following Mannhardt, Frazer, and Robertson Smith) that the basis of much of later religion is to be found in the ideas and usages of savage life. Myths are properly described as largely explanations of ritual. Totemism is identified with the worship of animals and plants and regarded as universal—a view that cannot be brought into harmony with the ordinary definition of totemism and is not supported by recent investigations. The cult of beasts and their connection with gods plays a prominent part in early religion and mythology, and is treated at length by such writers as Andrew Lang and Mannhardt and their followers. M. Reinach's discussion of this point is one of the least satisfactory parts of his work. Impressed by the religious importance of beasts, he leaps to the conclusion that gods were originally animals—Romulus and Remus, Silvanus and Dis Pater were wolves, Athene an owl, Aphrodite a dove, Artemis a bear, Demeter and Persephone sows, Orpheus a fox, Samson a lion, later identified with the sun. But the fairly well assured result of modern observation of savage religion is that the early god is a supernatural anthropomorphic headman, charged with the oversight of the interests of the tribe; and the association of a beast with a god is to be explained as due to a collocation and combination of two independent cults. If the dove was sacred to Aphrodite, this was not because the goddess was originally a dove (she was doubtless originally a patron of fertility), but because her cult coalesced with that of a local divine bird, and the lesser was subordinated to the greater.

Though he allows himself small space for the description of non-Christian cults, M. Reinach has succeeded in giving a clear statement of their main features. The appended bibliographies suggest that he has read widely and well. He deals at greatest length with the "Hebrews, Israelites, and Jews" (these names marking successive periods); the chapter devoted to them is a good outline of Old Testament criticism and a sympathetic sketch of Jewish history since the destruction of Jerusalem. What we miss in his treatment of ancient religions is an exhibition of the development of the religious thought. The material for such a sketch in the great re-

*The original French edition of this book was noticed briefly in the special correspondence of the *Nation,* April 8, 1909.

ligions is abundant, and M. Reinach is at home in the history of Israel, Greece, and Rome; yet he fails to set forth the social and intellectual movements that produced the successive phases of the Hebrew and Greek cults. True, his principal object is to give an intelligible account of the outward phenomena of the religions of the world—he does not propose to himself a philosophic analysis; but even so, it belongs to the essence of his subject to refer, however briefly, to the ideas that have controlled the course of human religious history.

His main interest is in the history of Christianity, to which nearly half of his volume is devoted. His desire—a most worthy one—is to give French youth a rational explanation of the part that organized religion has played in European life. It is all very well, he says, to exclude religious instruction from the primary schools; but, he adds, "the adolescent pupils of the colleges and higher schools know nothing of the Pentateuch, the Prophets, and the Gospels, the origin and evolution of dogmas, save the historical errors taught in the catechisms or the equally pernicious absurdities dear to the free-thinking orator of the wine-shop." This ignorance he thinks deplorable, and he has written this book to guard educated youth both against the unhistorical methods of mere apologists and against the vaporings of unscientific self-sufficient rationalists. This task he has performed with admirable skill; his work is probably the most piquant history of Christianity that has ever been written. It moves from the beginnings to Justinian, to Charles V, to the Encyclopædia, and to the present-day swiftly, clearly, and without hurry. The origin of the New Testament books; the work of Paul, Augustine, and the great Councils; the growth of the monastic orders, and the development of ritual, ceremonies, and dogma; the rise and decline of the temporal power of the Papacy; the Inquisition; the Protestant movement and the Jesuits; mediæval and modern sects; Mormonism; the Salvation Army; Christian Science; the rise of the spirit of free inquiry—all these topics are interwoven into the author's continuous narrative, which reads like a prose epic. M. Reinach has his own point of view—he is an adherent of no form of organized religion; but he respects his rôle of historian, and for the most part confines himself to setting down historical facts without obtruding his religious opinions. He is not indifferent, but he endeavors to be fair in his judgments. He is indignant over the abuses that crept into the Church, but he recognizes the services rendered by the Church to mediæval society. He is no friend of the Jesuits, but he thinks it to their credit that they "developed the useful science which takes note of the shades and degrees of acts no less than of thoughts, and judges them chiefly by their motives"; he denies that they taught the doctrine that the end justifies the means, and calls Sanchez and Suarez liberal and liberating moralists, who, however, unfortunately "lightened the chains of the human race in order to subdue it the better"; he admires Luther without concealing his faults; while he is in sympathy with the spirit of Arnauld and the other Port-Royalists, he quotes with approval Loisy's remark that the Church had outgrown Augustine; he holds that Voltaire's famous word, *écrasons l'infâme*, referred not merely to superstition, but also to Christianity—but on this point there are differences of opinion.

M. Reinach observes that he here gives for the first time a picture of religions in general considered as natural phenomena, and nothing more. He is not quite right in this supposition, but it is true that heretofore Christianity has not been included formally in manuals of the history of religions. From the point of view of the historian there is no reason why Christianity should be thus isolated—the facts of its development may be described without inquiring into the question of supernatural origin. M. Reinach has given these facts in outline with clearness, so that the reader has an instructive general view of the religious element in our society on its external side. It has not entered into his plan to set forth the historical relation between Christianity and other great religions, especially the Jewish and the Greek. Brief indications of this relation might easily have been inserted, and they would have added no little to the value of the book for the public for which it is intended. But the volume, in its present form, fills a gap in the current religious historical literature, and will be welcome to many to whom the larger histories of Christianity (which are often cumbrous and lacking in clearness) are not accessible.

CURRENT FICTION.

Enchanted Ground. By Harry James Smith. Boston: Houghton Mifflin Co.

We suspect that this story will prove, if not a "best" seller, a very good one. It has many of the qualities which make for popularity—a strong vein of sentiment, a flexible and kindly humor, a plot directly concerned with a pair of young lovers, and a vigorous style. It is far and away the best thing Mr. Smith has done—better than the amusing and sometimes moving short stories which he has contributed to the magazines, better than the delicately conceived but not too robustly executed Cape Breton idyl, "Amedée's Son," which represented this writer's first attempt at the novel form. The theme here is nothing more nor less than the theme which most American novelists have been for some years trying to handle—the struggle of aspiring youth toward its ideals, among the forces of good and evil which encompass him in the life of the modern metropolis.

The Philip Wetherell of this story is a young architectural draughtsman, still among the rank and file in a city office, but full of promise. He has been separated for a year from his betrothed, Georgia Rayburn, a fine, strong, but morally rigid New England girl. The story begins on the very eve of their reunion—a reunion which the man does not foresee. In his loneliness and longing he falls, at the eleventh hour, under the spell of a woman who is in every way the anti-type of his betrothed: the foreign wife of an absentee American husband, not a wicked woman, but irresponsible. The relation between Philip and this woman is not in all ways ugly. Each has a real, if not deep feeling for the other; and they are drawn together by the uncompromising attitude of the virtuous member of the trio. In the revulsion from his first lapse, Philip confesses freely to his betrothed, and is by her cast off as unclean. The experience of the succeeding months through which we follow him leads to a renunciation of his unworthy passion for the sake of two other persons who have come quite casually into his life. Poor Katrinka, the temptress, is removed from the scene, and, in due course, Indignant Virtue, convinced of its unco' guidness, softens toward the repentant one. The means whereby she is convinced might easily be called melodramatic; the whole novel, for that matter, might be dismissed as sentimental. But the fine youthful enthusiasm and the fine manly vigor of the narrative forbid its being disposed of in any such easy way. If a little suspicion of the extraneous and the artificial may attach to the "La Bergère" group and its whimsicality, if we incline to rate the humorous relief of their presence in the story as on the whole uncalled-for, the main story is treated with unusual dignity and charm of mood, and with what may fairly be called distinction of manner.

The Perjurer. By W. E. Norris. New York: Brentano's.

There is an order of English fiction which deals with the social-matrimonial experience of the upper classes in a mood at once reverent and confidential. It admits us, for the nonce, to the company of our betters—fellow-mortals, and, therefore, subject to error, but still worthy, by virtue of their rank and breeding, of more than ordinary consideration. It is an order of very ancient ancestry, and it is destined to survive for untold years. If we have never quite succeeded in acclimating it in this land of the free, that is not because we have not tried our best; and it is to be supposed that there is still among us a

grateful clientèle for the imported article. Mr. Norris's work belongs to this order. He accepts the thing as it is, but keeps a weather eye upon its imperfections. The British social institution as a whole seems to him a good thing in the best of obtainable worlds, and property seems to him the keystone of that institution. The American commentator is constrained to harp continually upon this foible of the Britisher because it is so continually thrust before him by the over-seas chronicler. John Bull has been unmercifully belabored for his hypocrisies of late, but it is something to his credit that among them is not numbered the pretence that money is an inconsiderable thing. But the deliberate marriage for profit is still a comparatively rare thing over here: it is pretty much confined to the ornamental class which has somewhat painfully imported its notions of marriage, as well as its other notions, from abroad. The notions remain exotic.

The perjurer in question is a retired colonel of the Guard who finds himself upon the verge of old age, a bachelor without occupation, an old man of the world who is tired of the world's game. The certain degree of connoisseurship he can boast is not high enough to absorb him, and gambling is his only keen pleasure. So he meets in Venice a young Englishwoman for whom he conceives the first major emotion of his life. She is ripe for a younger mate, and it only remains for the Colonel to prove the dignity of his love by a supreme self-sacrifice which compromises his social position, and renders him a perjurer in his own eyes. The peculiarly un-American morality of the affair lies in the fact that his sacrifice is executed in order that the girl may marry the good-for-nothing heir to an earldom, whom she does not love, but whom she feels bound to marry so that he may recover and squander the property which the Earl (her uncle) has very sensibly left to her!

At the Sign of the Burning Bush. By M. Little. New York: Henry Holt & Co.

The Church in Scotland is in a bad way, if this book be a fair picture. But then, when one comes to think of it, according to the story, humanity is in a bad way. A faultier, more disheartingly cheap set of folk it would be hard to find than the clerics and their parishioners who figure in the Glasgow and environs of this book. The writer is evidently suspicious of all who have not lost faith in forms and creeds. "People laugh at everything that isn't heresy or Socialism nowadays," is a speech put into the mouth of one of the least commendable characters. Yet it is a fair résumé of the book's argument and the writer's attitude. The hero, Mackenzie, declares his affection for the church, but practises defiance of every code and convention, using kind-heartedness as a substitute for principle. To prove one amiable, bubble-bursting man an apostle of light—as it were to make a theological holiday—a score of others are butchered, convicted of lack of either sense, dignity, character, or of all three. "That is not always cant in another which would be in ourselves," said Lowell, long ago. In this portrayal of a certain class of Scotch society there are innumerable clever touches, but they are lost in tedious detail and treated in a gasping, hysterical manner. One good, square sense of sin would be a blessing.

A Village of Vagabonds. By F. Berkeley Smith. Color Illustrations by F. Hopkinson Smith, and Pen Drawings by the author. New York: Doubleday, Page & Co.

Mr. Smith has inherited much of the sprightly picturesqueness of style which has made his father's writing popular. The Gallic setting is a favorite with both, and the sketch-story, depending for its charm on its local color and rapidly outlined characterization, is the most effective medium of both. There is an odd air of belatedness about the present group of sketches. "Bohemian" is a favorite word with the writer, and the flavor of his book is that of the Latin Quarter literature which flourished twenty years ago; though we believe that delectable if slightly incredible haunt of genius and beauty is not once named in these pages. A painter, more or less disguisedly the author himself, buys a "house abandoned by the marsh" in a remote Norman village, and goes to live there. He is told that it is a "lost hole of a village of *sacré* [*sic*] vagabonds," and he is apparently ready to accept the description on acquaintance. But his notion of a vagabond is of a person who does not live the conventional life of the boulevards. In "Pont du Sable" he finds such intermittent dwellers as Tanrade, famous composer of Parisian ballets; Blondel, an equally Parisian journalist; Alice de Bréville, a lady of fashion destined for Tanrade, and the local *curé*, who is all that a *curé* should be—an assiduous sportsman and boon companion as well as a father to his people. A few peasants—servants, poachers, fisherwomen, and the like—are effectively disposed in the middle distance; but the exiled Parisians are the chief figures, and their love affairs, their benefactions, their days of sport—above all, their meals—are our chief concern. Every bottle is cobwebbed, every one cries "Voila!" and "Chic!" upon the smallest provocation. Every woman is classified as "blonde" or "brunette." ". . . Ah, you dear little women. You who know just when to give those who love you a friendly pressure of the hand, or the gift of your lips if needs be. . . ." It is the kind of thing one highly valued when one was a sophomore; and the sophomoric taste is, we suppose, a pretty stable thing from decade to decade.

A FAMILY HISTORY.

The Livingstons of Livingston Manor. By Edwin Brockholst Livingston. New York: The Knickerbocker Press. $10.

America has no great number of truly aristocratic families, and to very few could that enviable characterization be so rightfully granted as to the Livingstons. Theirs has been an aristocracy not only of wealth and station and social position, but of distinguished service to the country and of intellectual achievement. The members of the family have been eminent not only as lords of a manor, as efficient officers in the colonial wars, worthy representatives in the colonial legislature, and powerful leaders in political factions, but their members have attained a prominence in our national history—Robert R. Livingston as the diplomatic principal in the Louisiana Purchase and as patron of the inventive genius of Robert Fulton, and Edward Livingston as the jurist who constructed the famous Livingston Code. This history of the Livingstons of Livingston Manor is a more than ordinarily interesting book of its kind. It is on the whole well written, and the scholarship is above the average which is devoted to the history of an author's own family. The research is never exhaustive, but it is intelligent, and the author is fair-minded enough not to conceal unpleasant facts about his ancestral heroes. A case in point is the chapter on Robert Livingston and Capt. Kidd, which tells frankly the whole story of Livingston's unfortunate choice of Kidd to command the Adventure Galley, sent out by the government to suppress piracy in the Indian Seas, and his high-handed demand for the £10,000 bond by which he was held for the success of the ventures of the Galley. Of the same nature is the faithful relation of the harsh treatment of the Tories by Gov. William Livingston of New Jersey and Washington's rebuke of his measures.

The author's knowledge of the periods through which he carries the family history is not wide enough to prevent his falling into some errors. A good example is the passage (p. 220) wherein he undertakes to explain why only one of the three Livingstons who were members of the Continental Congress signed the Declaration of Independence. The reason given in the case of Robert R. Livingston is that he was absent from Congress on August 2, when the Declaration was signed, but since eight or ten other members, who were absent

at the same time, signed later when they were present, there was nothing to prevent Livingston from doing the same. Again, the author seems unaware that Gordon's history is not regarded as an authoritative work written by one who was present and who saw what he chronicled. The deadly parallel column has shown clearly Gordon's dependence upon the *Annual Register*. A too limited acquaintance is shown with the literature of the American Revolution: only the older histories by Bancroft, Frothingham, and Judge Jones are cited, whereas many books and studies which would have been of the greatest use to the writer are clearly unknown to him. In the chapter on the American Pocket Borough the studies of C. L. Becker in the history of political parties in New York (1760-1776) would have saved Mr. Livingston some serious misunderstandings, and would have furnished him with much valuable matter.

The achievements of the family are on the whole modestly related, and only occasionally is the tone boastful. One such instance is the epithet given Robert Livingston, as the man who "gave immortality to Fulton," and another is the assertion that at the surrender of Burgoyne eight Livingstons held commissions in the victorious army. "It is doubtful," the author remarks, "whether any other family can show as many members commissioned officers in the American army on this eventful occasion." Very properly, the book contains a number of refutations of popular slanders against the fair name of the Livingstons. One of the most interesting is the refutation of the slur by John Adams upon William Livingston for his absence from Congress on the occasion of signing of the Declaration of Independence (p. 223). It is clearly demonstrated that Livingston did not sneak away, as Adam imputes. The factional quarrels between the Livingstons and the Clintons are related in an even-handed way in the chapter on the political history after the Revolutionary War, and, in general, the enemies of the Livingstons are not delineated as villains. While the author's attention throughout the whole book is kept riveted on the Livingstons, there are so many letters, records, and other documents containing matters of interest to the general historian, that the work is well worth the attention of students of the colonial and revolutionary times and of the early days of the republic. There are some fifty excellent illustrations, an elaborate genealogical table, and a fair index.

The Ascending Effort. By George Bourne. New York: E. P. Dutton & Co. $1.50 net.

With a singular eloquence and conviction Mr. Bourne pleads the validity of what he calls "taste, conscience, or the racial force." This is a power that operates in that large reserve of personality which is not occupied in the mere struggle for existence. Taste presents to the aspiring, to the relatively free part of us, a finer range of choices based on human as opposed to natural selection. We survive by rather small adjustments that only enlist our versatility in part; we really live only on condition of wisely regulating what may be regarded as our surplus energies. To them taste constantly supplies matter worthy of their interest. Taste and conscience are one in dealing with what is supererogatory in the animal man, one also in their attachment to immemorial human tradition.

Art is merely our personal, in a higher sense temperamental, adjustment to selected experience. It never means, with Mr. Bourne, a product, but always a process. The tug of the oar in the water, the appropriation of a sunset, the doing of an act of heroism—all are for him art, all phases of the dynamic of individual expression. And here he brings a handy distinction: This glow from selected experience is the sole subject of art, its only thinkable reason. The subject matter is the particular medium through which the glow is communicated. Criticism of the subject of art is always necessary, criticism of the subject matter is usually superfluous or implied in that of the subject. The idea is very clearly illustrated from Flaubert's "Madame Bovary," the repellent subject matter of which unduly occupied the French courts.

Art and science differ more in material than in temper. Art dictates fine choices among our simple and primary ideas, science imposes fine choices among our secondary and complicated ideas. Science does not need art, but without it is powerless practically to benefit mankind. Art may make men expect and ardently desire the benefits of science:

> Science has no need that the arts should do its work for it. It is perfectly able to teach its own truths to those who are prepared; but it is unable to prepare us, unable to make us desire to hear. And this is the trouble throughout the civilized world. The nations consist of individuals ill-developed in their faculties of choice understanding; people who do not care, and, in fact, are unable, to take the steps recommended by science. Such is the singular pass to which our "practical" outlooks have brought us. . . . Choice recognition and exact theorizing are both to be exercised in the interests of the national conscience. To be constantly on the watch for beauty; to criticise the realities that come and pass, and to question the theories that affect to account for them, is the way of all progress, and art is serviceable because it aids us to be on the watch for beauty. Ugliness, whether in form or color, in conduct or policy, in fashions or feelings—ugliness and dulness and unhappiness and want of sympathy should always be suspect: whenever they occur their necessity should be questioned.

Such extracts represent imperfectly the temper of a delightful book. Its contribution of theory is very slight; essentially the doctrine is merely a restatement of the transcendental æsthetic and ethic of Kant. What is remarkable is the winning presentation of old truths. No one who follows Mr. Bourne to the end will rest comfortable in the conviction that the life of art is a sort of elegant trifling very suitable for the daughters of the rich, but unworthy the attention of grown men and women.

The First Great Canadian: The Story of Pierre Le Moyne, Sieur D'Iberville. By Charles B. Reed. Chicago: A. C. McClurg & Co. $2 net.

In bringing together for the first time the scattered incidents in the life of Iberville, Dr. Reed has completed a task that was well worth the doing, and has performed it exceedingly well. He has succeeded in keeping to the happy mean between the dry-as-dust historian and the historical novelist, and has given us a narrative that is both accurate and readable. The life of Pierre Le Moyne, the "Cid of New France," was, indeed, one to fire the imagination, and it is singular enough that at a time when the book market is flooded annually with every kind of rehash of worn-out themes, a subject so fresh and inspiring should have remained virtually untouched. Dr. Reed first introduces us to the remarkable family to which Iberville belonged: to his father, the original colonist, Charles Le Moyne, who came out to Canada in 1640, and, among many other notable achievements, obtained an unrivalled influence over the crafty and ferocious Iroquois; and to his famous brothers, Jean Baptiste de Bienville, who, after an adventurous career in the North, became Governor of Louisiana; Charles Le Moyne, Baron de Longueuil, who became Governor of Canada, as did his son after him; Joseph de Sirigny, who attained high rank in the French navy, and died Governor of Rochefort; and Antoine de Chateauguay, who was associated with Iberville and Bienville, both in Canada and Louisiana, and was afterward made Governor of Cayenne. Nor does this quite complete the tale of the Le Moynes; three other brothers met early deaths fighting for Canada in the Indian wars.

Of Iberville himself we have a more detailed account. Dr. Reed traces his adventurous career from his schoolboy days in Canada, his training in the French navy, and his first expedition to Hudson Bay with De Troyes in 1686, to his death in 1706, at the moment when he had completed ambitious plans for raiding the British colonies from Virginia to Massachusetts. Into these twenty years were crowded such achieve-

ments as have rarely fallen to the lot of any single man. On four different occasions he made successful expeditions against the English on Hudson Bay; he defeated a much superior English fleet, off Port Nelson, in 1697; seven years before that he led the successful expedition against Schenectady; he captured St. Johns, and laid waste the coast settlements of Newfoundland in 1696, and the same year forced the surrender of Pemaquid. Two years later, "tired of conquering the Bay of Hudson," as he wrote the King, he obtained permission to establish a colony at the mouth of the Mississippi, where he could find full scope for both military and diplomatic genius in withstanding the English on one side and the Spanish on the other. Contrary to the predictions of jealous friends at court, he succeeded in this constructive work as conspicuously as he had in his destructive exploits in the north, and laid firm and sure the foundations upon which his brother Bienville afterward built the colony of Louisiana.

Dr. Reed's book is altogether a notable contribution to the literature of early American history.

Notes.

A translation of "Don Quixote" by Robinson Smith, containing in the preface a comparative study of this work, is to be published in September by Routledge.

Some time in October Dr. Postgate is to retire from the editorship of the *Classical Quarterly*.

The drama to 1642 will be the offering of the fifth and sixth volumes of "The Cambridge History of English Literature," to be issued in this country by the Putnams. The early religious drama has been assigned to Professor Creizenach of Cracow; to Professor Cunliffe of Wisconsin early English tragedy; and to F. S. Boas early English comedy. Professor Baker of Harvard has taken the university wits; Prof. Gregory Smith, Marlowe; Shakespeare is treated chiefly by Professor Saintshury, but a chapter dealing with Shakespeare on the Continent is written by Professor Robertson. Thus far Volume V. The assignments in Volume VI are as follows: Ben Jonson to Professor Thorndike of Columhia; Middleton and Rowley to Arthur S. Symons; Beaumont and Fletcher to G. C. Macaulay; Dr. Koeppel writes on Massinger; Professor Vaughan on Tourneur and Webster; Professor Neilson of Harvard on Ford and Shirley; Harold Child on the Elizahethan Theatre; Professor Manly of Chicago has taken the children of the Chapel Royal; F. S. Boas, university plays; J. Dover Wilson the Puritan attack upon the stage. Dr. A. W. Ward's portion is Thomas Heywood, and certain social and political aspects of the Elizabethan and Stuart age.

Dr. Charles W. Eliot's new book, "Durable Satisfactions of Life," is announced by Thomas Y. Crowell; also the following: the Rev. George A. Andrews's "What Is Essential?"; a collection of addresses on "The Unity of Religion," delivered at Mount Morris church last winter by Friedrich Hirth, A. V. Williams Jackson, Justin Hartley Moore, Rabhi Joseph Silverman, Professor Fagnani, and others; "Rambles in Spain," by John D. Fitz-Gerald; "Rhymes of Home," hy Burgess Johnson.

Little, Brown & Co. announce a "Modern Criminal Science Series." The first of the series which will be published in the autumn, is "Criminal Psychology," by Prof. Hans Goss of Graz, Austria. It will he translated hy Dr. Horace M. Kallen of Harvard, will contain a special preface for American readers, and an introduction by Prof. Joseph Jastrow of Wisconsin.

The work will he followed later on in the season by "Modern Theories of Criminality," hy C. Bernaldo de Quiros, of Madrid. The translator is Dr. Alphonse de Salvio, of Northwestern University; an American preface to accompany the translation has been prepared hy the author, while W. W. Smithers of Philadelphia, chairman of the translation committee of the American Institute of Criminal Law and Criminology has supplied an introduction. Other volumes to follow, commencing in 1911, include "Crime, Its Causes and Remedies," by Cesare Lombroso; "Criminal Sociology," by Enrico Ferri, Professor of Criminal Law and Procedure in the University of Rome; "The Individualization of Punishment," by Raymond Saleilles, professor of Comparative Law in the University of Paris; "Penal Philosophy," by Gabriel Tarde, late Magistrate in Picardy, France; "Criminality and Economic Conditions," by W. A. Bonger, Doctor in Law of the University of Amsterdam; "Criminology," by Raffaelle Garofalo, late President of the Court of Appeals of Naples; and "Crime and Its Repression," by Gustav Aschaffenburg of Cologne.

Mosher is preparing for the autumn the Venetian Series, which includes: "Siena," by A. C. Swinburne; "Italy, My Italy: 12 Lyrics," by Robert Browning, and "Dante at Verona," hy D. G. Rossetti. In the Vest Pocket Series: "Lyric Love," hy Robert Browning; "A Defence of Poetry," hy Percy Bysshe Shelley. In the Lyric Garland: "London Voluntaries," by William Ernest Henley; "The Riding to Lithend," by Gordon Bottomley; "Lyrical Poems," by Percy Bysshe Shelley. The Golden Text Series contains: "Love in the Valley," hy George Meredith; "Thyrsis and the Scholar Gipsy," by Matthew Arnold. Miscellaneous: "A Vision of Giorgione," by Gordon Bottomley; "Passages from the Philosophy of Herbert Spencer," chosen by Clara Sherwood Stevens; "Under a Fool's Cap: Songs," by Daniel Henry Holmes; "Plato's Apology of Socrates," by Benjamin Jowett; "Salome: A Tragedy in One Act," by Oscar Wilde.

The two little volumes containing "Letters of Hawthorne to William D. Ticknor, 1851-1864," cannot be said to add much to our knowledge of the illustrious writer, or to be in themselves very interesting. They are welcome, nevertheless, as anything from or about Hawthorne must be. The relations of author and publisher were particularly close and personal in this case, and if these letters, which were written chiefly during Hawthorne's consulship at Liverpool, seem plain and matter-of-fact in comparison with the Notebooks for the corresponding years, it is probable that in some ways they give a truer picture of the real man than is to be obtained from his more deliberate self-portrayal. For one thing we get here the likeness of a man who was by no means devoid of political shrewdness and interests. The business of his office he seems to have conducted ably, though with an occasional lapse into injudicious charity to rogues. His heart was set on laying up a fortune sufficient to enable him to retire and write at leisure, and he has bitter comments on the action of Congress which would cut down his income. Nor does he show any of those signs of morbid unsociability which was so characteristic of his life at Concord. He can drink heartily with his friends and smoke their cigars, and he can also lecture a drunken D.D. with astonishing vigor. But if he shows himself practical, he shows himself equally moody. In one letter England is all to his heart and the very thought of returning to America fills him with dismay; in another he hates all Englishmen and all their ways, and longs for his dear New England. In one thing, however, he scarcely varies—his detestation of blue-stockings. Almost always, when he has to mention one of this tribe, his language becomes acrimonious. They are "scribbling women," " a d—d mob of scribbling women," etc. Other literary judgments worthy of note are his frank confession: "I dislike poetry," and his estimate of Whittier:

> Whittier's book is poor stuff. I like the man, but have no high opinion either of his poetry or prose.

The volumes are beautifully printed by the Marion Press for the Carteret Book Club of Newark, N. J., and the edition is limited to one hundred copies. The letters are the property of W. H. Arnold, and the brief introduction is furnished by J. C. D [ana]. This is the first publication of the club. If other unprinted material, as valuable as this, is in the possession of its members, and its printing is always as tasteful as these two volumes, all booklovers will pray for its long life.

"Resources, an Interpretation of the Well-Rounded Life," by Stanton Davis Kirkham (Putnam), goes over the classic territory of Intellect, Spirit, Love, Society, Solitude, Nature, Travel, Music—in short, compasses most of the Emersonian repertory. The author's contribution of thin ideality is probably sufficient to refresh these subjects for persons whose reading is limited. A eulogy of the sea, here reprinted, is a fair specimen of what to expect from these essays. Let it serve as incentive or deterrent:

> Consider the sea, how companionable it may he, for it is alive, and has moods of its own. But he who loves the sea will find it as changeahle as woman and as inexplicahle . . . The changeful sea! It is now opalescent and ethereal, a dream ocean; anon cold and hard in white-capped beauty; leaden and terrible it reveals how thin is the veil that covers here, as in us, the primeval savagery.

Those who open Charles Morley's "London at Prayer" (Dutton) in the hope of edification will not be wholly disappointed. But it is better to take it for what it is: namely, brilliant and sympathetic journalism upon the subject of religion. From the Abbey and the Catholic Cathedral of Westminster, to St. Paul's, through the services of the Salvation Army, Jesuit missions, syna-

gogues, hidden kirks, and Quaker meeting-houses, our guide conducts us, keeping ever a sensitive eye to the picturesque. Much of the effect of these sketches lies in the skilfully deployed contrast of these various humanitarian endeavors with the remorseless background of great London. Among the most engaging studies are those of song rehearsal at the Foundling Hospital and prayer at the Charterhouse. Mr. Morley's attitude apparently is that of sentimental adherence to all aspiration Godwards, but he does not deny himself the cunning arts of the literary embroiderer. His book touches readily the chords of humor and pathos, is very easy reading, and is reinforced by a number of good sketches by well-known English illustrators.

Autobiographies generally begin well and end tamely. "Marion Harland's," which is published by the Harpers, is no exception. Wholly charming are her recollections of child life spent in upland Virginia and in Richmond. It was a society in which the young people indulged chivalric intimacies, and engagements were never announced. Miss Hawes followed a usual custom in distributing P. P. C. cards from the family coach the day before she became Mrs. Edward Payson Terhune. An aunt who declined to promise to "obey" was satisfied by the qualification, improvised by the clergyman, "to obey in all things consistent." Religion was not the pall it was in New England, but to modern notions its front would seem forbidding enough. There was a school mistress who gave out the word Hell to be spelled and defined, then dwelt upon the theme. "Hell?" she iterated in accents that conveyed the idea of recoiling from an abyss. "Ah—h—h? I wonder which of my little scholars will lie down in everlasting burnings?" At fourteen Miss Hawes was an author. Her first story, "A Marriage from Prudential Motives," was published in *Godey's Lady's Book*, pirated in England, translated into French, then retranslated into English, in which form it was reprinted in America and became the occasion of a copyright suit. Her first novel, "Alone," was printed in her seventeenth year, succeeded well, and eventually brought her the acquaintance of writers whose pale and waning immortality rests on the "Literati" of that Poe whom they misliked.

But "Marion Harland" is really best known for her apostolate of good housekeeping, and in later years as the spiritual counsellor at large for a multitude of newspaper readers. Upon this later activity it would be amusing and perhaps profitable to dwell. There is a certain grotesqueness in a civilization that rests on the rejection of the confessional and all therein implied betaking itself to the neurologist and the salaried dispenser of advice. We note this paradox without wishing to misjudge a function that Mrs. Terhune has filled with patience, sympathy, common-sense, and an unusual measure of culture. The vicissitudes of health and illness, work and travel, of a clergyman's wife, are no doubt unconsciously recorded for this large audience of disciples.

Readers not under this fealty will hardly linger over the later pages. All that concerns the old South is delightful, though the shadows of the picture are omitted. A most eerie ghost story, associated with the Hawes house at Richmond, negro anecdotes of a relishable flavor, reminiscences of Everett, Bayard Taylor, and others, a vivid suggestion of the heartbreaks occasioned by the rebellion—these are some of the valuable features of this friendly record. A characteristic story of John Randolph is the following: Randolph once asked a neighboring planter who was dining at Roanoke if "he would not take a slice of cold meat upon a hot plate" As Juba, Mr. Randolph's body servant, was at the guest's elbow with the hot plate, the gentleman thought he was expected to say "Yes," and, fearing to anger the choleric host, took the plate, accepting the offered cold meat. Whereupon Randolph swore savagely at him for a "lickspittle" and "coward." "You dare not speak up to me like a man!" he snarled. "I asked the question to see what you would say." Again, a negro story is worthy of circulation. In the centre of a great outdoor meeting stood a pitifully small coffin, and the dominie expatiated on the general theme of mortality:

"What is any man, bo'n of woman, my brethren? Up ter-day wid de hoppergrass, and down ter-morrow wid de sparrergrass! Like de flower ob de cornfield, so he spreads hisself." Returning to particulars, the officiant touched the pathetically small box with his foot and said: "As fur dis t'ing:"—rising on his toes in the energy of his contempt—"as fur dis 'ere itum—put de t'ing in de groun'. It's too small fer to be argyin' over."

We liked too the deferred funeral service—a frequent practice up country—that was decorously attended not only by the afflicted widower but by the successor of the relict with an infant child. Admirers of "Marion Harland" will wish the book longer, admirers of Mrs. Terhune will regret that brevity is not among her literary virtues.

In "Early Rhode Island, a Social History of the People," by William Weeden (Grafton Press), one may find some 365 pages of facts, social, economic, political, and personal. Mr. Weeden has got "busy as a moth over some rotten archives," but we cannot forbear wishing that he had taken seriously his own invocation in the preface, "Let us try to comprehend the social life of our forefathers!" The utter lack of any organization of the facts, or effort to interpret their meaning, or to display the evolution of social or economic institutions makes the book of little use except to the specialist, who will find in it a store of raw material. Even a certain chronological advance from chapter to chapter is disturbed by some puzzling aberrations. It is the work of an antiquarian rather than of an historian. There is a great amount of interesting human material, but the subject changes with such amazing rapidity that the mind wearies in the chase. Selecting two pages (226-227) at random, we note that the paragraph subjects change from surveying to the public lottery, to the ferry, to the population, to privateering, to an expedition against Louisburgh, to the fire service, to commerce. The eleven chapters of the book have little more unity. They treat of the founding of Rhode Island and Providence, "The colony and Town of Providence, 1648-1710," "Kings County, the Patriarchal Condition, 1641-1757," "Period Under Charter of Charles II," "The Commercial Growth of Providence, 1711-1762," "Newport in the Eighteenth Century," "The South County," and the book closes with a chapter on the Revolutionary Period and one on the Union to 1790. To all this confusion is added the confusion of involved English. It is very unfortunate to have performed such a large task of research, and then to have left the results almost a mass of débris. The book has a fair index, which adds greatly to its usefulness.

In books on Italy one expects enthusiasm, rhetoric, badly printed Italian, defective scholarship, and again enthusiasm and rhetoric. The formula holds for Max Vernon's "In and out of Florence" (Holt) with the exception that after a brief preliminary flight the rhetoric drops into a sensible chattiness. The book tells the tale of villa hunting, sightseeing in Florence, and excursions as far as La Verna, Pisa, and Lucca. There are many illustrations after stock photographs, with a sprinkling of cuts redrawn from the author's snapshots. The book, saving its scrappiness, some wrong attributions of pictures, and rather stale bibliography, has no harm in it, and some amusement. Over those who think of sojourning in Florence it may exercise a mild evocative charm, but there seems to be really no good reason for adding it to half a dozen similar volumes in the field.

The date gardens in some small oases at the northern edge of the Sahara are described in the *National Geographic Magazine* for July, by Thomas H. Kearney, who visited them to procure palms for the orchards established by the Department of Agriculture in Arizona and California. His account of the methods of cultivation, harvesting, and shipping the more than one hundred distinct varieties of dates from nearly a million trees is instructive and entertaining. "The Story of the Los Angeles Aqueduct," told by Burt A. Heinly, is a description of a most interesting piece of hydraulic construction, which is now in progress in this country. The manner in which water is to be carried two hundred and fifty miles across a desert and beneath the Coast Range, in a tunnel nearly five miles long, is graphically described with the help of numerous illustrations. Not only will water be supplied to the city when the work is completed, probably at the end of 1912, but 200,000 acres of land will be irrigated and power for lighting and running mills will be provided. A trip in Guatemala, a country comparatively unknown to travelers, is pleasantly narrated by Miss Edine F. Tisdel. She found signs of a bright future in the growth of the cities, the rapid extension of railways, the wonderfully fertile soil, and, above all, in the interest the government is taking in education. "There is a school house in every village."

The July number of the *American Journal of International Law*, just issued, opens with the full text of the address of Senator Root as president of the American Society of International Law, delivered in Washington at the annual meeting of that society on April 28. It discusses the theme, the Basis of Protection of American Citizens Residing Abroad. Facilitated by modern means of travelling, multitudes emigrate to foreign countries, so that without any sinister intent they create complications; and the situation is rendered more perilous because, especially in the United States, natives of other lands obtain naturalization apparently for the purpose of

maintaining residence elsewhere and there enjoying the protection that attaches to American citizenship. The magnitude of this evil may be realized when it is considered that not long since it was estimated that there were in Turkey seven or eight thousand natives who in some way had acquired citizenship here, and had gone home, where they could call upon the American embassy for assistance whenever they thought they were not properly treated by the local government; and at the time of the Algeciras conference it appeared that a similar situation existed even in Morocco. Obviously, this condition was intolerable; and the United States government has determined—and embodied its decision in rules and an act of Congress, March 2, 1907—that when a naturalized citizen departs and remains in the country of his origin for two years or in some other country for five years, such withdrawal and absence shall create a presumption that he has renounced the citizenship he had acquired.

To this same issue Roland B. Faulkner contributes a carefully prepared paper on our relations with Liberia; outlining the chequered career of that republic, both before it declared its independence in 1847 and formed a Constitution, and since. The new commission to this country was appointed in 1908, from the feeling that France was absorbing her territory and Great Britain her government. Our government has also appointed a commission to Liberia, and Mr. Faulkner summarizes the results of that commission's study of the problem. George W. Davis's paper on the United States Sanitary Commission and the Red Cross organization is important, tracing the history of that movement and its practical results. With some suggestions from Crimean history, it practically began with the United States Sanitary Commission, of which Dr. Bellows was president, organized in 1861 and operating in field and hospitals during our entire civil war. Mr. Davis thinks the first Geneva convention would have failed of results had not the practicability of the plan been demonstrated on a colossal scale by facts from our experience there presented. The opening address of Professor Lammasch, president of the Arbitration Board sitting at The Hague, on the Fisheries case arranged for by treaty negotiated by Ambassador Bryce and Mr. Root, though short, indicates the appreciation, by that board, of the weighty matter to be decided. Herr Lammasch declares that all the members have read the vast array of proofs presented, including documents that antedated the American Revolution and including, of course, the Treaty of 1818, but have refrained from forming a conclusion until they shall have heard the arguments of counsel. The most elaborate article is a translation, from the French of Professor Schelle, of a paper on the slave-trade in the Spanish Colonies of America. Spain did not monopolize this trade; she left it largely to others; and this article explains how that happened. The *Assiento*, the Spanish public law term for every contract made for public utility between the government and private individuals, is explained and considered, and the history of the traffic traced. The editorial comment is unusually rich in its record of events making for world peace-meetings.

An important literary undertaking in Germany is the complete critical edition of Wieland, conforming to the Weimar Goethe edition. It appears under the auspices of the Prussian Academy of Sciences (Berlin: Weidmann). Prof. Franz Muncker of Munich, in a preliminary review of the first two volumes, in the *Zeitschrift für Deutsches Altertum und Deutsche Litteratur*, has called attention to the extraordinary labor which is being bestowed on this monumental edition. Thus, the "Prolegomena," by Bernhard Teuffert, contains a chronological index of no less than 1,258 of Wieland's writings. Volume I comprises the youthful productions of the poet up to and including 1752; Volume II his versions of five Shakespeare dramas. The latter volume and its successors will be particularly welcomed by literary historians; for the merits of the Schlegel-Tieck translation of Shakespeare, extraordinary as they are, have too long overshadowed, at least in popular estimation, the service which Wieland rendered. In Goethe's words ("Rede zum Andenken des edlen Dichters, Bruders und Freundes Wieland"):

> To undertake a translation of Shakespeare in those days was indeed a bold task, the feasibility of which was questioned even by literary men of wide culture. Wieland translated freely, caught the sense of his author, omitted what seemed to him untranslatable.

Benno Rauchenegger, Bavarian humorist and playwright, died last week in Munich. He wrote the farce "Jägerblut," for which he is best known, and a number of other pieces in the Bavarian dialect. He was born in Memmingen in 1843.

The death is announced, in his eighty-second year, of William May Thomas, English author and journalist. He was at various times on the staffs of the *Daily News* and the *Academy*, and wrote for the *Athenæum* and other periodicals. Among his books are "Poetical Works of Collins with Memoirs" (Aldine Poets), "When the Snow Falls," "Pictures in a Mirror," "Life and Works of Lady M. W. Montagu," "and "A Fight for Life."

Science.

BIRD BOOKS.

How to Study Birds: A Practical Guide for Amateur Bird-Lovers and Camera Hunters. By Herbert Keightley Job. Chicago: A. C. McClurg & Co. $1.50.

Notes on New England Birds. By Henry D. Thoreau. Arranged and edited by Francis H. Allen. Boston: Houghton Mifflin Co. $1.75 net.

Our Search for a Wilderness: An Account of Two Ornithological Expeditions to Venezuela and to British Guiana. By Mary Blair Beebe and C. William Beebe. New York: Henry Holt & Co. $2.75 net.

Mr. Job's previous books are devoted chiefly to descriptions and reproductions of his remarkable bird pictures. The present volume, though it contains similar features, embraces for the most part the wider field indicated by the title. A more sensible and informing discussion of the kind we have never seen. The three chapters, Identifying Birds, Where to Find Birds, and Learning Birds' Songs and Notes, show Mr. Job to be an exceedingly keen and experienced observer, with just as keen descriptive power. They furnish much information concerning the size of birds, their form, and manner of flight:

> The chimney swift moves its wings quite rapidly and continuously, with intervals of gliding, and they are shaped long and narrow throughout. . . . The swallow's wings are pointed and broader at the base than the swift's, nor do they move quite so fast or so irregularly. . . . The meadowlark, with short, rounded wings, flutters and sails alternately. . . . Most of the sparrows have a quick, continuous flight, with rapid wing-beats, and short pauses, but some, like the goldfinch, go by jerks, rising and falling in deep undulations, usually calling as they fly. . . . The woodpeckers also have a wavy flight, but they are larger, and can readily be distinguished. . . . The cuckoos have a rather steady, gliding progression, and a very noticeable length of tail. . . . The blackbird walks, as do the larks, starlings, pipits, ovenbirds, and water thrushes, while the robin, sparrows, and others, usually hop.

All of these generalizations are accurate—except that we should say that the robin *runs*, rather than hops—and each describes a pronounced and easily observed characteristic.

Equally sensible and helpful are Mr. Job's suggestions for identifying birds' songs. "Just as one can infallibly recognize Chopin's 'Polonaise Militaire' or the Wedding March from Lohengrin as soon as the first notes are sounded, so does one the 'conk-a-ree-e' of the red-winged blackbird or the rollicking melody of the bobolink." He wisely refrains from emphasizing the assistance of "word-mnemonics" in identifying calls or songs, nor does he insist too strongly upon the practical helpfulness of attempting to liken bird songs to familiar musical phrases, though it is his own pretty and not altogether fanciful conceit that the "wood thrush calling from out the gloaming" suggests "the opening appeal in Weber's 'Invitation to the Dance,' and again the sweetly solemn thought of Handel's 'Largo' from Xerxes." Incidentally, it may be remarked, some very ridiculous efforts have been made to reduce bird songs to words, notably Bryant's bobolink poem, with its absurd "spink, spank, spink" line; or, still worse, the choleric diatribe attributed by somebody else to the same bird: "Tom Noodle, Tom Noodle, you owe me, you owe me, ten shillings and sixpence"; "I paid you; I paid you"; "You didn't; you didn't; you lie; you thief!" Nobody ever heard a bobolink use such language as that even about his debtors.

Some of the other chapter titles which serve to show the scope of the book are: The Spring Migration, The Nesting Season, The Autumnal Flight, Knowing the Winter Birds, How to Find Birds of

Prey, Following the Water Birds, and a very sane discussion, Bird-Study for Schools, which all school teachers will do well to read, ponder, and digest. Of the illustrations, almost all are of actual value for purposes of identification, and many of them are really beautiful pictures; the most remarkable being the portrait of a pair of great blue herons on their nest. The two birds are shown standing, one a little behind the other, their heads pointed the same way and even their bills almost parallel. A more effective group could not have been obtained, if the birds had been carefully posed; the camera was so skilfully focussed that the detail of the plumage is clearly shown. Unless Mr. Job's temper is all that his name suggests, however, he must have "said things" when he saw his photograph of the flicker clinging *head downward* to a tree-trunk, which was the result of a blunder by the person who inverted the plate in the page form.

Readers of Thoreau, who happen also to have some acquaintance with New England birds, will be prepared to find Mr. Allen's compilation, "Notes on New England Birds," a contribution to literary history, rather than to ornithological literature. The text of the book has been drawn from the fourteen volumes of Thoreau's "Journal," and from six of his formally prepared works—"A Week on the Concord and Merrimac Rivers," "Walden," "The Maine Woods," "Cape Cod," "Excursions," and "Miscellanies"—and reproduces presumably all of his recorded observations of birds. Mr. Allen warns the reader that Thoreau "never became an expert ornithologist," because "he was too intent upon becoming an expert analogist," and because "it better suited his genius to trace some analogy between the soaring hawk and his own thoughts than to make a scientific study of the bird"; also because "he lacked many of the helps that to-day smooth the way for the beginner in bird study," such as good books (for he had only Wilson's and Nuttall's ornithologies), and finally because, after abandoning his gun, he used only a small spy-glass which was ill-adapted for the observation of small and swiftly moving birds—like warblers and sparrows.

Yet, taking into account all these circumstances, one cannot help feeling a bit surprised by the very clear evidence which this book furnishes, not only of the incompleteness of Thoreau's knowledge of the birds which he had ample opportunity to observe, but the inaccuracy of some of his observations as he set them down. To begin with, the index of the present volume shows that about 140 different species of birds are treated specifically or incidentally in the text. But this is rather less than half the number of species to be found in New England, while probably not less than 250 species were Thoreau's neighbors or visitors during the two years he lived on the shore of Walden Pond. Strangely enough, he seems not to have known at all such characteristic birds as the yellow-breasted chat, the crested flycatcher, the house wren, the red-breasted nuthatch, the night heron, the orchard oriole, the yellow-billed cuckoo, the pine finch, the golden plover, the black-bellied plover, the piping plover (which breeds on the New England coast), the Virginia rail, the least, and semi-palmated sandpipers, the bald-pate and blue-bill, and various other birds which many amateurs, who get into the woods or alongshore only occasionally, identify readily.

Of the incompleteness or inaccuracy of his observation, there are many illustrations. He speaks of the "white spot"—it is really a distinct *bar*—on the wing of the nighthawk, and though he mentions frequently this bird's peculiar cry, he does not remark that it is usually accompanied, while the bird is flying, by a curious flutter of the wings and a little dash upward; nor does he seem to have noticed the bird's strange habit of perching *lengthwise* along a limb or fence rail. He describes the male scarlet tanager as having black *wings* only, whereas its tail is also black. Evidently he was very familiar with the chickadee, yet he records having heard "for the first time" on March 10, 1852 (that is, in his thirty-fifth year), the bird's "phœbe note," which it sounds constantly in the spring. Of course, he must have heard this note many times before. The most curious of all his actual blunders, however, was his failure to distinguish the hermit thrush from the wood thrush, for it is clear from entries in his "Journal" that he supposed the widely different songs of these birds to be the efforts of one singer. Not only are the songs very different—the hermit's being much the more elaborate, and, to the present writer's ear, the more beautiful performance—but the birds themselves are quite as different in both appearance and habits.

These evidences of very careless observation are the more remarkable in the light of other notes in his works which bespeak keen eyesight and a knowledge of birds that is considerable. For example, he gives quite an accurate and expressive account of the great blue heron's manner of feeding, and his observation of the seven hawks he mentions is in the main correct, though he seems not to have known that the Cooper's hawk and the sharp-shinned hawk, because of their industrious destruction of game birds and song birds, are not entitled to the admiration which he expresses for hawks in general. In spite of these sins of omission and commission, however, Thoreau saw much and sympathetically, and it is very well worth while to have this intelligently edited compilation of his notes.

Mr. and Mrs. Beebe's handsomely made and richly illustrated volume, "Our Search for a Wilderness," is an entertaining and substantial contribution to the literature of South American exploration. Mr. Beebe, who is curator of ornithology at the New York Zoölogical Park, is the author of "The Bird, Its Form and Function," a work of first-rate importance, and of other good books about birds. Though some of the chapters in the present volume are written by one of the authors alone, the work was chiefly done in collaboration. It describes three private expeditions, the first (in 1908) to the caños north of the Oronoco Delta and the country about Pitch Lake (La Brea) in Venezuela; the second (in 1909) to the interior of British Guiana, including excursions to the gold mines at Hoorie in the northwest, and on the Little Aremu, in central Guiana; and a third trip to the savanna region further south. The exploration of the Venezuelan caños was made from a little sloop of twenty-one tons, manned by an old Spanish captain, a cook, and a crew of three. In this sloop Mr. and Mrs. Beebe sailed from Port of Spain, Trinidad, to the Gulf of Paria, and thence into the swampy jungles, "The Land of a Single Tree"—the mangrove. Of this remarkable region the authors give an excellent description, not only of the avifauna, but of many other forms of animal life, and also of the great diversity of vegetable life. "Throughout all this great region," they say, "there is not a foot of solid ground. In one place we pushed a tall shoot some eight feet in height straight down through the mud, and it went out of sight. A man falling on this mud, out of reach of aid, would vanish as in quicksand. So the wild creatures of the mangroves must either swim, fly, or climb. No terrestrial beings can exist here." In the Pitch Lake country they found many interesting birds (the cassiques, palm tanagers, sulphur-breasted fly-catchers, chachalacas, yellow woodpeckers, etc., of which they got good pictures), and also much remarkable insect life, including several species of ants, and especially the extraordinary hunting ant. The description given of a foray of these ants is as vivid and instructive as Thoreau's famous account of the ant battle he witnessed. An especially interesting chapter is Mrs. Beebe's contribution, A Woman's Experience in Venezuela, wherein are mingled, in a lively and readable style, not only careful observation and good description, but the products of a very alert sense of humor. The appendices supply a classified list of the birds mentioned, a list of the native Guianan birds, and an alphabetical list of the birds described; there is also a good index.

The *Journal of Geography*, which was for-

merly edited by Prof. R. E. Dodge, will in the future be under the supervision of Ray Hughes Whitbeck of the University of Wisconsin, and will be published in Madison, Wis.

A summary and companion volume of Dr. Theal's "History of South Africa," intended to serve chiefly as a text-book, will be issued soon by Swan Sonnenschein; it will be called "The Yellow and Dark-Skinned People of Africa," and will deal, in particular, with the ethnography of South Africa.

The American Association for Study and Prevention of Infant Mortality will meet in Baltimore, November 9-11.

The death of Dr. Charles Jewett, president of the Medical Society of the State of New York, and of the Medical Society of the County of Kings, and one of the oldest and best-known practitioners in the State, occurred last Friday at his home in Brooklyn. Dr. Jewett was born in Bath, Me., in 1839; was graduated from Bowdoin College in 1864, and received his master's degree three years later. After completing the course at the College of Physicians and Surgeons in 1871, he began to practise medicine in Brooklyn. He lectured for years at the Long Island Collegiate Hospital, and is said to have been the first American surgeon to perform symphyseotomy. He was a member of several scientific societies, a contributor to the leading medical text-books and periodicals, and the author of "Essentials of Obstetrics" and "Manual of Child-Bed Nursing."

It is reported from Revelstoke, B. C., that Dr. Charles H. Shaw, professor of biology in the University of Pennsylvania, was drowned in Kinbasket Lake on Tuesday afternoon, while conducting one of his annual trips in the Northwest in the interest of botanical research. Professor Shaw, a man not forty, was for five years professor of biology at the Medico-Chirurgical College, from which he resigned to go to the University of Pennsylvania.

Drama.

Charles Frohman is extending his operations in England beyond London, and is preparing to send a company on a tour of the provinces in "The Arcadians," and another to Australia and New Zealand in the same musical comedy. He has also completed arrangements for the introduction into France of a number of American plays, which are to be adapted by MM. de Caillavet and de Flers for the Paris stage. Among the plays will be William Gillette's "Electricity" and Augustus Thomas's "The Other Girl."

"The Piper," by Mrs. Lionel Marks, which received the prize of £300 given by Otho Stuart, was produced on July 26 at the summer festival at Stratford-on-Avon, by Mr. Benson. There was no lack of warmth in the welcome extended to the play. The theatre was packed, and the applause vigorous and sincere. When the play was over Mrs. Marks was publicly presented with the prize in a silver box, among those present being Sir Charles Wyndham. Commenting upon the play, the London *Times* said:

It was impossible to see the play without enjoying its spirit, its frequent beauties, and the poetry which (fortunately, perhaps, for the effect of a first performance) does not lie wholly in the rhythm of the blank verse and the author's diction. From the point of view of construction, "The Piper" is by no means perfect. The play is episodical. There is continuity of idea, but it is not expressed in continuity of action. Even supposing that the "book" had been treated with the most scrupulous fairness by all the players, there was not that identification of speech with action which, with a practised dramatist, keeps the action developing with every speech; and Mrs. Marks is certainly daring in her treatment of the technique of act-endings. But there was enough movement, poetry, and beauty in the play to tide over the places where the demands of the stage were neglected. Mrs. Marks's attempt to rationalize the Piper's powers, to show that, after all, the only spell is love, were not entirely successful, but wise men will remember the idea and forget the weak spots in its statement.

This year's festival by the Berlin Deutsches Theater Company in the Künstler Theater in Munich, began August 1 and will last until the end of September. Among the plays given will be the first and second parts of Goethe's "Faust," "Hamlet," "The Taming of the Shrew," "The Merchant of Venice," "Julius Cæsar," and "Orestes."

A new theatre, the Imperial, built upon Occidental lines, will be opened in Tokio, Japan, in January, and, according to those who have seen the nearly completed exterior, it is likely to be on a par with any in the world. European methods are to be carried still further by Mr. Kawakam and his wife, better known to audiences as Mme. Sada Yacco, who began producing plays with women in the place of men in the female rôles. At first the innovation was bitterly opposed, but it gained favor, became known as the "Shinengeki," and has come to stay. An evidence of the changed attitude is seen in the plans for this new play-house, which is to have a special actresses' school attached to it. What is more, the students of this school are far from being waifs and strays. They are, with scarcely an exception, the daughters of prominent families, and after graduation will be allowed to play only in the Imperial Theatre. Most of these young women began their training under the supervision of Mme. Sada Yacco, and are now being taught by the celebrated actor Baiko.

Art.

ART IN BERLIN.

BERLIN, July 12.

The smaller summer shows at Berlin are mostly of impressionistic flavor. One can hardly visit an exhibition of modern German art without finding evidence of the influence of Vincent Van Gogh. In the Berlin Secession, prominence is given to a typical landscape of the peculiar Hollander. At first sight it is a most uninviting subject, merely a railway embankment and over-head crossing, but it reveals the artist's persistent attempt to endow the inanimate with bodily functions. Van Gogh would have us believe that telegraph poles live, and that sand embankments breathe. In the Berlin Extra-Secession, it is also patent that he is one of the gods of the Neo-Impressionists. Of course, we should expect to find followers for him among his own countrymen. In a small exhibition at the galleries of Paul Cassirer are some half-dozen canvases, from the hand of Von Brockhusen, that might easily be ascribed to his predecessor. In the same collection it is interesting to note the work of C. E. Uphoff, which exhibits evidence of a similar influence. It is also noteworthy that the method of vibrant-points is no longer favored, except for certain effects. A technique of much longer strokes has almost universally replaced it. The Spanish artist, Sorolla, also comes in for his share of imitation. Max Liebermann exhibits a couple of scenes of naked boys sporting in the surf; but there is something more than rivalry with the clever Spaniard in these canvases; they are very spacious. Max Slevogt shows that he has attained a certain mastery over the modern method of handling landscape, but his canvases are almost all duplicates of one another. The exhibition is concluded with a small selection of the works of Renoir, Pissaro, and Sisley. Taking advantage of this opportunity for comparisons, one would say that the artist now sees more quickly than ever before. It is the preservation of the slightest fraction of a second that he gives us. It is as if art were keeping abreast of the development of the camera and the speed of its shutter being constantly increased. MR. M.

Dr. Robert Eisler of Munich has published an elaborate work which he entitles "Weltenmantel und Himmelszelt." It is in two large volumes and contains an almost bewildering mass of learning. The central idea of the work is to trace throughout antiquity and down to the Middle Ages the symbolism of the heavens in works of art, and in all manner of designs from seal cylinders to coronation cloaks. The value of the vast body of material thus brought together is unquestioned, and there is scarcely a page which does not contain an ingenious suggestion. In fact, a general criticism to be passed upon the work is that it contains too many suggestions which impress one as ingenious rather than sound. So, to give a single example, to connect the famous *Mithra* with a doubtful Babylonian word *Mudra*, and this with the Greek *Mitra*, is to build an uncertain hypothesis upon a still more uncertain foundation. On the other hand, his explanations of many curious and hitherto obscure designs on all kinds of objects represent a real addition to our knowledge of ancient and mediæval symbolism. In his footnotes he runs over the entire scale of Greek, Roman, and Oriental literatures, and frequently passes down through the Middle Ages to quotations from English, French, Italian, and German classics. Nothing seems to have escaped his sharp eye, not even an obscure note in an out-of-the-way article in some technical journal. The book is fully illustrated, and the

collection of pictures, many of them very rare and not accessible, adds to the value of the work. A tolerably complete index enables the reader to find without much difficulty any special point that he may be looking for. It might have been well if Dr. Eisler had, in an introduction, summarized his views and the results of his researches so as to present a general survey of the subject to those who have not the time or the ability to study the entire work. (Munich: Beck.)

That he has discovered the site of the ancient shrine of the Paphian Aphrodite at Rantidi, in Cyprus, is the astonishing announcement of Dr. Max Ohnefalsch Richter, the German archæologist, made in a three-column letter to the London *Times*. The discovery, which according to Dr. Richter occurred last May, was largely the result of chance. Shepherds, living at Rantidi unearthed a number of stones bearing such curious looking characters that they thought to traffic in them. One of the stones came thus, indirectly, to the hands of Dr. Richter, who not only recognized the syllabic inscriptions, as certain others had done, but inferred at once that stones of such antiquity must have come from the neighborhood of the lost shrine. A hasty journey was then made to Rantidi by Dr. Richter and a German friend, where additional proof of a similar kind was gathered. Their argument, given at great length, is not entirely convincing.

Edward Linley Sambourne, chief cartoonist for *Punch* since 1901, died Wednesday, August 3, at the age of sixty-five. He was educated at the City of London School and at Chester College. His first drawing appeared in *Punch* in April, 1867. The books which he illustrated include: "New Sandford and Merton," 1872; "Our Autumn Holiday on French Rivers," 1874; and Charles Kingsley's "Water Babies," 1885.

Finance.

READJUSTING A FINANCIAL POSITION.

Up to the closing week of July, the financial community's attention was directed exclusively to the Stock Exchange. It kept its hand on the pulse of the stock market, and the question which primarily interested it was, would the decline in stocks go on, or would something stop it? Something stopped it—so far as concerned the uninterrupted downward movement—on Wednesday, July 27. People variously ascribed the halt to news that an overloaded syndicate had been saved from complete disaster; that the drought in the corn belt had been broken; that the Steel Corporation's quarterly statement showed better earnings than had been expected; that large financial interests had concluded that prices were low enough to warrant buying. But along with the sigh of relief with which Wall Street greeted the check to the prolonged liquidation, attention was now diverted to the question, what "readjustment" lay ahead in other directions than the Stock Exchange.

The bad elements in this part of the general situation, which led experienced observers to predict trouble even when Stock Exchange prices were at the top, last December, have long since become familiar. They were the country's manifest overproduction in copper and iron, the enormous overhanging mass of new securities with no market on which to place them, the pretty plain evidence that bank loans had been expanded out of reasonable proportion to reserves, the distressing cotton trade situation, and the abnormal reversal of our balance of foreign trade in merchandise, creating the first series of "import balances" witnessed in thirteen years. Looking back, anybody can see to-day how such a combination of adverse influences was bound to bring a halt in the movement of expansion, in and out of Wall Street. Now, however, after the six months' Wall Street liquidation, the question is, how far have we straightened things out again?

Some of the past week's announcements, in the industrial field, have thrown a little light on the question. Overproduction in iron has been met by a drastic cut in output. February's output was high record; in March, it was reduced 1 per cent., in April 2 per cent., in May 7 per cent., in June 2 per cent., in July 8½ per cent., total curtailment between February and July being nearly 20 per cent. The price of iron, meantime, has fallen some 12 per cent.

This is something of a readjustment, but it is partly offset by the consideration that July's output was still beyond the highest monthly product of any year except 1907 and a few months of 1906; and the fact that the trade is all but at a standstill, and that prices continue to fall off, suggests that the readjustment process may not yet be complete. As for the copper trade, the country's monthly output, which had far exceeded consumption during every month since January, and which had also been steadily increasing, was reduced in July some 9 per cent. But consumption also decreased in July, and the unwieldy stock of unsold copper actually increased, though the rate of increase was smaller than of late. Here, too, the trade movement hardly indicates that readjustment is complete.

The question of the market for new securities is hard to read. Heavy reduction in the price of stocks releases capital, and thus should indirectly help the bond market. But the relief is slow, for the reason that the first effect of such a Stock Exchange movement is to unsettle confidence and thus discourage buying of bonds as well. Of its eventual good results, there can be no doubt.

Stock Exchange liquidation has released enormous sums in New York bank loans; combined with large remittances of reserve money from the West and moderate import of gold from Europe, it has increased the surplus bank reserve, at New York city, from less than $9,000,000 at the opening of July to $52,000,000 at the end of the first week in August. This is a very large surplus; it far exceeds the figure reported at this date in any of the sixteen past years save 1908 and 1904—two other years of Stock Exchange liquidation. But against this stand the compiled returns of all the country's 7,000 national banks under the Comptroller's call of June 30, published a few days ago, which not only showed the wholly abnormal increase in loans, within a year, of $394,000,000, but also disclosed the fact that $375,000,000 of this increase occurred in the West and South, where cash reserves, in the meantime, had practically not increased at all. Apparently, this means that readjustment on the interior markets was not yet complete.

The export and import trade in merchandise will go some distance towards settling the question of our command over foreign capital. The June trade statement showed an increase in exports over 1909 and a decrease in imports, turning last year's "import excess" for the month into an export excess. But the export balance was still very much the smallest for June since 1897, and it is perhaps the most interesting problem of the hour how far our grain and cotton exports can help to expand the autumn movement. A 12,000,000-bale cotton crop, as against a 13,800,000-bale crop in 1908, and a 657,000,000-bushel wheat crop, as against a 737,000,000-bushel crop last year, were two of this week's trade estimates. The wheat showing is disappointing, and although the cotton promise is better than the past year's 11,300,000-bale yield, it is still short of what the trade could use. One would have wished for a better forecast in both quarters, when larger crops would have been so serviceable, both to home industry, railway traffic, and the export trade.

But if this review of visible conditions is not over-cheerful, it remains to say that the country has found its way out on other similar occasions of the sort, and similarly without the help of "bumper crops." There was a season of readjustment of this sort in 1903, when the wheat crop turned out 100,000,000 bushels below 1901 and the cotton crop ended the season disastrously. Yet the "export balance," which stood in July at the unusually low figure of $9,300,000 and in August at $7,500,000, rose in October and November of that year to almost the largest figures ever recorded for those months. In 1896, when the country was recovering from a similarly unpleasant industrial position, the wheat and cotton crops ran short again;

yet in September, the $6,700,000 import balance of the year before was transformed into a $34,000,000 export excess. Financial history tells us that the secret on each of those occasions was such vigorous reduction of inflated prices for the commodities of trade in general, that imports at once returned to normal proportions, while exports, despite the unpropitious harvests, rose to almost forgotten heights. These are the problems which will confront the markets during the next two or three months.

BOOKS OF THE WEEK.

Cabot, E. L. Ethics for Children: A Guide for Teachers and Parents. Boston: Houghton Mifflin. $1.25.

The Valley of Aosta

A Descriptive and Historical Sketch of an Alpine Valley Noteworthy in Story and in Monument

By FELICE FERRERO

8vo. With colored Frontispiece and 39 Illustrations and Maps. $2.00 *net.*

The beautiful Italian valley that runs up into the Alps from a point not far to the north of Turin, and finds an outlet into France on the west, and into Switzerland over the St. Bernard Pass, is little known to the American tourist. Yet it is one of the most interesting parts of Italy, abounding not only in beautiful mountain scenery, but in mediæval castles, and roads and bridges of Roman construction that carry the imagination back two thousand years or more. They are known, however, to Felice Ferrero, who has written lightly though learnedly on the subject, and has got together some capital photographs to illustrate his text.

G. P. PUTNAM'S SONS, NEW YORK & LONDON

Books of Travel for Summer Reading

QUIET DAYS IN SPAIN

By C. BOGUE LUFFMAN. *Price $2.00 net*

There are plenty of books about Spanish churches, Spanish pictures and Spanish history, but few which get near the daily life of the people and show us Spanish customs and character as they are to-day. Mr. Luffman has braved the conspicuous lack of physical comfort which is characteristic of the country and given his readers a very intimate and delightful view of modern Spanish life.

FINLAND AS IT IS

By HARRY DE WENDT, F.R.G.S. *Price $1.50 net*

Finland is a progressive and comfortable little country, the very opposite of Spain, and the author of the present book assures travelers that they will find the Finland trip as delightful and economical as it is interesting. The Finns are all born artists, lovers of education and their native land, and such cordial haters of Russia that this sentiment has become a prominent feature of the national life. This book will tempt tourists to leave out some better known places and substitute Finland in their itineraries. The trip can be done in two weeks, but the author gives warning that most people will want to stay longer.

Introduction to the Study of The Greek Dialects

By CARL DARLING BUCK.

"The book is marked by painstaking and minutely accurate scholarship, lucidity of exposition, and skill of arrangement, coupled with Professor Buck's unsurpassed art of judicious slighting. For a long time to come it will form by far the best introduction in any language to the study of the Greek dialects—equally useful for comparative purposes as for a purely philological help to gain an adequate knowledge of the literary dialects."—Hanns Oertel, Professor of Linguistics and Comparative Philology, Yale University.

GINN AND COMPANY, Publishers

The Week.

Senator Aldrich gave what looked like an effective reply to the charges made by Senator Bristow a month ago. In it he deals first with the nature of his own rubber company and its relation to the price both of crude rubber and of manufactures of rubber. As to the latter point, his statement is of the most absolute and sweeping character. "Neither the Intercontinental Rubber Company," he says, "nor any of its subordinate companies has ever had the slightest interest, direct or indirect, in the manufacture of any article covered by the change in rates on rubber manufactures in the paragraph alluded to, or otherwise; and neither the Intercontinental Rubber Company nor any of its subordinate companies has ever had any part in any combination, agreement, arrangement, or understanding with any company or person with reference to any manufactured product of rubber or the price of any such product." Coming specifically to the tariff aspect of the question, we need not dwell on that part of Mr. Aldrich's reply which points to the absurdity of ascribing the enormous advance in the price of crude rubber, from 70 cents in 1902 to $3 in 1910, to an addition of five per cent. made to the United States duty on it in 1909. The real point in Mr. Aldrich's statement is his explanation of how the change from 30 to 35 per cent. came to be made. This was done, it should appear, in order to make the rate in the paragraph covering manufactures of India rubber conform to that in several other paragraphs, all of which called for 35 per cent.; it being stated by Appraiser Sharretts that this difference led to constant doubt and controversy, since the goods taxed at 35 per cent. were often partly of rubber, thus leading to "the almost hopeless task of determining which of the materials was the component of chief value."

Senator Bristow's prompt rejoinder to Senator Aldrich must make the latter regret that he yielded to party pressure and went into the controversy at all. It is not that the Kansas Senator is in his reply either convincing or wholly ingenuous. On the question of the advance in the price of rubber, as affected by our tariff, he has really no answer, and is vague or evasive in the whole matter of the relations of Aldrich's crude-rubber company to manufacturers of the finished article. But for popular Western consumption, there can be no doubt that Mr. Bristow's retort will break the force of Mr. Aldrich's statement. That is to say, the Kansas Senator rings the changes on the assertion that the Aldrich corporation is, in effect, a Trust paying huge dividends. According to the facts, and Mr. Aldrich's own admission, it is a "holding company." That is enough for Bristow. He will keep on throughout the campaign denouncing the Rhode Island Senator as the head of a concern which both oppresses the people and is obnoxious to the laws. He will point out that President Taft's Attorney-General has declared the need of proceeding against and destroying the device of holding companies such as the Intercontinental Rubber Company. He will declaim day after day about Senator Aldrich's suspicious business associations with Ryan and the Guggenheims. This is not a very fair or convincing form of argument, but it will go excellently on the Western stump; and in the prolonged rough-and-tumble debate to which Bristow now challenges Aldrich, the latter is not at all fitted to engage.

We presume that many cynical smiles will be caused by the petition of railway employees asking President Taft and the Interstate Commerce Commission to permit an increase in freight rates. It will be said that this is too transparently a suggestion by the railway managers themselves. Indeed, it is virtually admitted that they prompted the movement for such petitions, which are now being extensively signed in various parts of the country. But this should not prevent fair-minded men from considering the plea on its merits. The employees say with much force that the increased cost of living compels them to ask for higher wages, and plausibly add that the only way of permanently swelling the fund out of which they are paid is to advance the charges for transportation. But they seem dimly aware that they may be accused of reasoning in a circle, for they try to get on a straight line by roundly asserting: "We know that the transportation rates have *nothing* to do with the increased cost of living." If they know that, they know more than seven men that can render a reason. And their general argument that it is the established American system to have "fair profits and good wages" for all has obvious fallacies lurking in it. If prices and wages are raised uniformly, nobody is any better off than before; while if some are getting more for their goods than they ought to have, or are receiving artificially high wages, then somebody is imposing undue burdens upon somebody else. A particular demand, like that of the railway men, may seem amply justified; yet if the thing is made universal its defence is merely the old defence of governmental and other extravagance—namely, that it "puts money in circulation."

Partial responsibility for the failure of the Weeks Appalachian reservation bill to become law is laid by the editor of *American Forestry* at the door of President Taft. The bill was passed in the House, though by a vote which showed that only the force of public sentiment compelled action. It was in the Senate that the advocates of conservation expected the smoothest sailing; and it was as a result of overconfidence that the measure was allowed to drag on till the last days of the session when the Senate, under pressure from the White House, had all it could do to put into effect other important bills. The Weeks bill is to come up for consideration in the Senate next February; and for this occasion the friends of conservation urgently call upon the President to use his influence against the pernicious activity of Senators Burton and Newlands, in whom the supporters of the bill discern their most dangerous foes. Whatever may be the truth about the Senators from Ohio and Nevada, there can be little doubt that Mr. Taft, with the weighty measures of

his programme well disposed of, will give his attention to this long-delayed piece of legislation.

It seems at first sight odd that the Negro Independence League should not be more impressed by the Ohio Republican platform. The League stands up for the rights of colored men, under the Constitutional Amendments, and the platform speaks solemnly of the purpose of the Republican party to see to it that those rights are made secure. Unfortunately, negroes have memories. They are able to recall that the Ohio platform of two years ago made the same deliverance; that something to the same effect even got into the national platform; yet that nothing has been done. It is possible, too, that negro leaders remember the moving words about the wrongs of their race which Mark Hanna used to write in Ohio platforms, along with the announcement of a firm intention to guarantee our colored citizens in all their rights under the Constitution. But when Hanna was asked the reason for such a declaration, he calmly replied that the only reason was the existence of 25,000 negro voters in Ohio. The Negro Independence League can hardly be blamed, therefore, if it waits to see if Ohio Republicans are any more sincere this year.

As the Congressional committee looking into the Indian land scandals goes on taking conflicting testimony in Oklahoma, with no end of hearsay evidence admitted, one longs for a more vigorous cross-examination of the witnesses. A model might be found in the apparently immaterial question with which an Irish lawyer once began the cross-examination of a handwriting expert. "Where's the dog?" he asked. "What dog?" returned the witness. "Why, the dog which the judge at the last assizes said he would not hang upon your evidence." A similar incredulity might well be expressed in the case of Hamon, the former Republican committeeman, and others who have testified before the committee. But while there is all this confusion and inconclusiveness, as respects various men accused, one point remains absolutely clear. It is the outrageous nature of a system which induces and even compels the Indian wards of the government to pay huge sums to claim agents for what ought to be done for them officially without charge. This is the main question to which the public ought to stick, whatever happens to the charges of personal corruption.

Chicago was in festal array last week in honor of the conclave of the Knights Templar, who, to the number of forty thousand, filled the city streets with the blare of martial trumpets and forests of ostrich plumes and acres of gold braid. The American fraternal organization still constitutes, in the eyes of the visitor from abroad, one of the great national mysteries. Here is a democracy possessed with a passion for plumed hats unprecedented in history, and here is a people, supposed to be the most intensely laborious on earth, that can spare time for an entire week of delightful and more or less childish pageantry. Our enormous popular congresses and conventions, Knights Templar, Odd Fellows, Elks, Eagles, Christian Endeavorers, Epworth Leaguers, supply unmistakable evidence of the nation's prosperity. But they really do lend color to the charge that we are by no means so busy as we pretend to be. There are nearly twelve million members of fraternal organizations in this country. Allowing for duplications, the figures still confirm our title as a nation of "joiners." In that elemental sentiment of brotherhood there is something very admirable, indeed. But in the annexed fondness of grown-up men for tinsel and drill one might find new justification for the saying that all great men are children at heart.

The action of the Burlington Railway authorities in removing Dr. Eliot's famous five feet of classics from their library cars involves no reflection either on the classics or on the Burlington Railway. Serious reading at their best, Dr. Eliot's books should never have been subjected to the railway test. The mission of the literary classic is that of an ever-present companion to whom one may turn when the proper mood arises, and not till then. The classic is read and should be read only when the desire for it arises; it should be the object in itself. It is only degrading it to make it a mere instrument for whiling away the dreariness of a long journey on the cars. To each end its proper means. To put Marcus Aurelius in the same class with big, black cigars and auction pinochle as alleviators of railway tedium is to do honor neither to Marcus Aurelius, nor to literature, nor to common sense. If literature with "snap" and "go" in it is ever in place, it certainly is on a fast express between Chicago and the Pacific Coast.

A notable career in the field of philanthropy and social endeavor terminates with the death of Robert Treat Paine, president of the American Peace Society. There is poetic justice in the fact that the last moments of this veteran of international peace should have been cheered by at least three separate impressive testimonials to the growing vigor and potency of the great cause. At Stockholm the eighteenth International Peace Congress closed its sessions the other day. London has just witnessed the twenty-sixth Conference of the International Law Association. Most impressive of all, perhaps, at The Hague an entire phalanx of distinguished counsel have been arguing with extraordinary minuteness and earnestness the case between the United States and Great Britain over the Newfoundland fisheries, admittedly the most important question that has as yet been submitted for judicial arbitrament at The Hague.

It is easy enough to sneer at the sentimentalists who would bring peace into a world of struggle, and to point out that international peace congresses are usually the prelude or the postlude to sanguinary wars. But, at bottom, it is not the advocates of the abolition of war who are the doctrinaires and dreamers, but their purely practical opponents. If there is any one thing that stands out clearly in the history of the last ten years, it is the growth of the international peace habit, with deepening of the world's yearning for peace. Sanguinary wars and timid peace congresses have brought disappointment and temporary disillusion, but it is a testimonial to the vitality of the peace idea that it should appear with undiminished vigor after every disappointment and every setback. Where ten years ago a solitary—and strangely incongruous—voice for disarmament spoke up in the Czar's palace, to-day the limitation of armaments is a subject of thought and discussion in every chancellery of Europe. It is in the permanency and universality of the interest which now

attaches to the subject of international peace that we find the clearest indication of its strength.

With the death of Miss Nightingale, the world loses not only a great spirit, but one whose contributions to modern medical science many will be tempted to rank alongside those of Pasteur and Koch and Lister. Antiseptic surgery has revolutionized practice; but Florence Nightingale founded the nursing profession, and thereby made possible the great hospital of to-day and the present rational care of the sick. For if "pre-Nightingale" conditions—so the histories of nursing describe the time previous to her activities—had prevailed, antiseptic surgery would have been deprived of half its potency. Prior to her demonstration that women must be trained for nursing as for everything else, any woman, old or young, sensible or foolish, dissolute or decent, was thought able to nurse, even though she was wholly lacking in experience. It was the Crimean war, of course, that made Miss Nightingale's revolution possible, just as it gave her the opportunity not only to demonstrate her own heroic qualities, but also to show that executive ability and the power to manage others, to organize vast enterprises, to decide momentous questions with calm resolution, are not solely attributes of the sterner sex. Indeed, in a combat in which of all human events women are supposed to have the least interest or right to appear, the "Lady-in-Chief," as Miss Nightingale was called, speedily developed a wisdom in action and a power that made the public rank her with the field marshals.

If the general public thinks of Miss Nightingale only as a war heroine, all those who have studied nursing know that the lasting benefits of her life are to be found in nursing schools and in her writings. Her "Notes on Nursing; What It Is, and What It Is Not" is still declared by historians of the nursing profession to be an "unrivalled monograph"; an "immortal classic." Certainly no nurse to-day should undertake her profession without reading this remarkable work. Besides her strictly professional writings, her summary of her Crimean experiences and her lucid paper on the "Sanitary State of the Army in India" were state documents of the highest rank. At all times her pen and her voice have been at the service of every humane cause. The English attempts to "regulate vice" have met with the severest castigation at her hands, and through her efforts and those of Josephine Butler many odious laws were repealed. An ardent woman suffragist, she never failed to urge women to enter any profession or calling that attracted them, but not because men followed that livelihood. "You want to do the thing that is good, whether it is suitable for a woman or not." Suitable for a woman nobody in military circles deemed her venture to Scutari. Thanks to it and to her own beauty of spirit and courage we have a calling for women supremely their own—and, we are tempted to write, supremely beneficent and ennobling.

France has come to be so distinctly looked upon as the classic home of stationary population that the tendency has been to overlook the only European nation that has experienced actual depopulation during the course of the nineteenth century. That nation is, of course, Ireland. In 1841, the population of that island was 8,175,124. Within ten years it had dropped to a little over 6,552,000. The succeeding decades showed no such enormous decrease, but the ratio was high enough. For the ten-year periods up to 1901 the average annual loss of population was, successively, 75,000, 38,000, 23,000, 47,000, and 34,000. With the turn of the century, a notable change came about. Figures laid before the House of Commons by Mr. Birrell just before the adjournment of the present Parliament showed that in 1902-3 the loss was about 18,000. In 1903 came the enactment of the sweeping Wyndham land purchase bills, and from that year till 1908 the annual loss was, successively, 11,000, 11,000, 3,000, 11,000, and 6,000. The year 1908-9 was a red-letter year in Irish history. In that year, there was an actual increase of 115 souls in the population of Ireland. The draining process of sixty years had been checked. There has been some difference of opinion as to the degree of success that has attended the latest phase of British land policy in Ireland. That it has been beneficial, no one has seriously denied. Even allowing for possible annual fluctuation, there can be no doubt that the outflow of population from Ireland has been stopped. And more eloquent commentary than this need not be asked for.

From Norway comes the report that this summer American tourists have flocked to that country in unprecedented numbers. Probably the new railway from Christiania to Bergen, which skirts glaciers and traverses vast snowfields, has had much to do with this. The English already swarm in these newly opened lands, but, unlike the fugitive Americans and Germans, they choose some spot which specially appeals to them and settle there for the season, thus getting a chance to become acquainted with the people as well as with the scenery. Of these people, however, if we may believe Knut Hamsun, those only are worth becoming acquainted with who have not been affected by the tourist traffic. The Norwegian peasantry used to include some of the best blood in the country, and even the ordinary peasant was more like an American farmer than like the peasant of other European countries. All this, writes Hamsun, in *Verdens Gang*, is changing. "The country," he says, "has been transformed into a ridiculous duplicate of Switzerland; we have made of it one vast hotel for foreigners; we can now pay for coffee, but we have lost our contentment, our peace of mind; we have become a nation of waiters, with hat in hand." Hamsun is also wroth because the Norwegians, unlike the Swedes and Danes, are always asking themselves: "What will these foreigners think of us?" "Let them think what they please!" he cries defiantly.

Before their war with Japan, the Russians had built several imposing structures in Port Arthur and laid the foundations for many more, including those for a stately cathedral. Those foundations have remained as they were, and the city has been left half-deserted. A great change is, however, impending. The Japanese have found a rich treasure in the Fushun mines, near Mukden, which yield over 5,000 tons of coal daily. The port of Dairen (formerly called Dalny) is too small to handle all this freight; on stormy days it is almost impossible to load or unload cargoes. It therefore occurred to the authorities that Port Arthur might be converted into a commercial harbor, and as such it was opened not long ago.

SWAPPING HORSES IN MID-STREAM

What Lincoln said it was highly unsafe to do, the Republican managers are visibly attempting. In an Associated Press dispatch from Beverly bearing all the marks of being officially inspired, we read of "the elimination of Mr. Aldrich" as now one of the settled purposes of the Administration. The "readjustment plans" are so framed, we are informed, as to "treat whatever influence Mr. Aldrich may have had with the President as a thing of the past." In the same dispatch the positive announcement is made that Secretary Ballinger is to resign about September 15. The date seems to be chosen in order that he may first receive a "vindication" from the majority of the joint committee of Congress, which is expected to make its report shortly after September 5. Mr. Ballinger will then, it is said, find it necessary to withdraw from the Cabinet to attend to his law practice. The Administration, in the further process of eliminating the already eliminated, will see to it that Mr. Cannon be definitely notified that he cannot have another term as Speaker. The first step is taken in a remark of the President's: "I have not heard that Mr. Cannon would be a candidate." Thus is the bowl of hemlock offered to "Uncle Joe"!

The really surprising thing is that this apparent purpose of the Administration to meet the insurgent Republicans rather more than half way should have been declared at this time. One would say that it should have come either much earlier or considerably later. Just now it looks very like changing generals and re-assigning troops while under a heavy fire. It necessarily makes the impression of vacillation and uncertainty, which is as bad for the morale of a party as of an army. Bismarck said that a responsible statesman had often to make a difficult choice among rival policies, and could not always be sure that he was right, but could at least be sure of this, that it was better for him to stick to his course than to hesitate and wabble.

It is upon this appearance of unsteadiness in the President's political attitude that people are fastening attention. Mr. Taft went through the session of Congress with no love for the insurgents. If he bestowed no great amount of affection upon Cannon and Aldrich and the regular organization, he at least gave them his confidence. It was by their help that he hoped to "get things done"—and, of course, he did get a great many of them done. But after the large success which he won for his legislative programme by means of the regulars, his now offering the chief of them revolvers and daggers with which to commit suicide cannot fail to seem astonishing.

In any such sudden move as the Republican leaders are now contemplating, there is always danger of being misled by mixing up political analogies with military ones. From an army point of view, it may be advisable to remove two or three division commanders even when a battle is under way. If the plans have been demonstrably wrong and the generals incompetent, a change in both cannot be too speedily made. In any event, the troops are there under orders, and can be made to fight whether facing east or west. But how completely all this breaks down in politics! A political general summarily relieved of his command may take half his men with him from the field; those who stay may begin firing at each other, instead of at the enemy, and shoot their new officers in the back—that is "knife" them at the polls. And while soldiers will loyally obey, even when ordered to charge at Cold Harbor, there is no way of making voters cast their ballots at the word of command, or being sure that they will not cast them for the other side. In a word, the military theory of a compact and well-disciplined force led by officers all of one mind, has no application to politics, where the question is of majorities, often conglomerate, and how to get them.

All this is so elementary that it is hard to believe that the friends and advisers of the Administration can be under any illusion about the immediate effect of the party "readjustments." These are, in part, a tacit confession that the party is in a mess. But if that is true with the election only ten weeks away, there is no probability that any reorganization, however drastic, undertaken at this day will help matters. More heartburnings will be created than allayed, while existing jealousies and antagonisms will be intensified. This is so patent that we are bound to infer that the hopes of the Administration are fixed upon next year and the year after, rather than the coming elections. The conception seems to be of a political realignment which, whether it will be of any avail or not in saving New York and Ohio and a Republican House, will put the party in better shape for the future—above all will bring about the support of the Administration by that gentleman at Oyster Bay, whom Wordsworth seems to have had in mind when he wrote of one

> Endued as with a sense
> And faculty for storm and turbulence.

CONSERVATION UNDER FIRE.

Since the Ballinger hearings there has been manifest a strong effort to discredit the policy of conservation. It has taken many forms. In some of the New York papers it shows itself in the shape chiefly of sarcastic flings and loose general assertions of the failure or the futility or the injuriousness of what has been done by the conservationists. More generally, however, there is *pro forma* admission of the principle of conservation together with complaint that it has been carried too far. The call for a conference of Western Governors, for example, which is taking place this week, is of this nature. "We of the State of Washington," says Gov. Hay, "have no quarrel with the principle of conservation, but we feel that it is high time to get down to a practical business basis in carrying out the principle." Mr. Jacob H. Schiff, who has just returned from Alaska, declares that "the demand for conservation is good enough, but it must not go so far as it does at present." Secretary Ballinger, speaking at Portland, Oregon, last Friday, tells us that "the demagogue, the fanatic, the sentimentalist, the faddist, are crusading under the banner of conservation." Senator Guggenheim, in an article in last week's *Independent*, ascribes to the conservationists the obstruction of Alaskan development through an utter failure to understand the conditions which must be met. All these attacks attribute to the conservationists a spirit of indiscriminate obstruction, an utter disregard of the needs of the present in favor of the visionary claims of a remote future.

There may be a grain of truth in these criticisms. Yet they are an extravagant exaggeration. This is emi-

nently the case in the matter of the Alaska coal lands. The critics of the conservation policy speak of the necessity of exploitation by strong corporations if the coal fields are to be developed; and they either leave the matter there, or at most go on to say that under existing law this is impossible. In either case, they place the responsibility upon conservationists. But the law which limits the taking up of coal lands in Alaska to small holdings dates from the time when the conservation policy was still to be heard of. One of the first indications of that policy was given in President Roosevelt's forcible presentation of the necessity of a change in the law so as to permit exploitation on a large scale. It was precisely for this purpose that an act was passed by Congress reserving the coal lands not already taken from the workings of the senseless and illogical 160-acre plan, the idea being to permit corporations, by laws later to be enacted, to enter these lands in an open, above-board manner; only, the people were to receive a proper share of the returns. Has any conservationist opposed such legislation? Has any anti-conservationist exerted himself to bring it about? No one would welcome it more than Mr. Roosevelt or Mr. Pinchot, or any of the leaders of the conservation movement. What the other side have been interesting themselves in is not remedial legislation, but the expediting of claims more or less tainted with fraud. Development along proper lines the conservationists are eager to have; what they do not want is the old bad way of exploitation without system, without regard to the nation's permanent interests, and very often in flagrant disregard of actual law.

One thing, however, should be clearly and courageously admitted by the advocates of the conservation policy. The demands of immediate business advantage may conflict with the requirements of a firm and far-sighted national policy. Conservationists are not, of course, blind to this, and are not trying to keep national resources from being used. But the whole conservation movement rests —and we must never forget it—upon the fact that the pursuit of immediate profit has resulted in such frightful destruction, such wiping out of unique advantages and opportunities, that thinking men for decades have been agreed in regarding it as a reproach to the national intelligence and the national character. Mr. Roosevelt's merit lay not in discovering this state of things, but in powerfully urging it upon the attention of the country.

It must be constantly borne in mind that in this, as in all matters where individual or local interests are arrayed against public or national interests, the natural gravitation is toward the side on which the interest is most acute and most selfish. In favor of conservation, there can be marshalled only the forces of public opinion and unselfish public service; and these can never be expected to work with the same persistence and continuity as the rival forces. Let there be the tiniest breach in the defences, ever so slight a lapse of vigilance or determination, and the enemy will be sure immediately to make the most of it. In this matter of conservation, the first steps inevitably consisted in guarding against attack the things to be conserved; the measures necessary to be taken for the further management of them required a certain amount of time to mature. Out of this situation, the representatives of individual and local interests eagerly construct an impeachment of the whole policy as one devoid of practical sense. They must not be allowed to make this caricature of the truth pass current. It is only in the vulgar and sordid sense of immediate enrichment that the claim of practicality can be made for the old way of dealing with our mineral and forest resources; the really practical plan is that which the conservation movement aims at, and which, if courageously upheld, it will attain.

PERILS AND DUTIES OF EXECUTIVES.

The attempted assassination of Mayor Gaynor has inevitably revived queries which were in everybody's mouth at the time of the murder of President McKinley. Cannot our high officials be securely guarded from such perils? Is there no way of making the penalty for crimes of this sort so fearful as to prevent them? Should not even criticism of those in responsible position be forbidden as leading to crime? To these questions the answer has to be in the negative. Despite all the precautions that can be taken—and every precaution ought to be taken continuously—it remains true that exposure to the stroke of an assassin has to be set down among the permanent risks of men prominent in public life. As King Humbert coolly said, after his first escape from attempted murder, such things are among the hazards of the trade. The Mayor himself not long ago remarked to a friend who remonstrated with him for going about unguarded, that no one but a lunatic could desire to harm him, and against lunatics it was impossible to be always protected.

The truth that there is in this should not lead us to overlook the other truth, that our chief executives ought to keep near them men skilled in the detection of criminal impulses. The fact that protection cannot be made absolute is no reason for not making it as full as possible. Secret service men are not able to make the life of a President perfectly secure, but they can greatly diminish the hazards; can, as they repeatedly do, turn away cranks and megalomaniacs and half-cracked haunters of men in high office. Moreover, the practised eye of a detective may often perceive a danger invisible to others. More than one person appears to have seen for an instant the revolver in the hand of Gallagher, but had not the instinct of a detective to leap to prevent its use. The argument is conclusive for guarding our Mayors and Governors and Presidents as closely as possible. It is, no doubt, disagreeable for them to feel that they are always under surveillance, but it is their duty to put up with it. They must not shut their eyes to the fact that, in the modern world, dim obsessions leading to crime are at work in many brains. They owe it both to themselves and the public to be on their guard, even though they are fully aware that the peril cannot be wholly removed.

In the case of Mayor Gaynor, the vengeful spirit which led to the murderous attack upon him puts sharply before us the peculiar risks of an official who seeks to render government honest and efficient. Here was an employee discharged for ample cause, brooding over his fancied wrongs, nourishing his resentments and desire for revenge until it took this horrible form. But any executive who determinedly sets about cleaning up the public service, enforcing economies, resolutely cutting out the deadwood, dismissing the incompetent and the crooked, is certain to provoke a great amount of this lurking ill-will. In pri-

BURLINGAME PUBLIC

vate business we have long had instances of assault and even murder by men who have lost their jobs and thrown themselves with insensate fury upon foreman or manager. Such a thing, it is now clear, must be reckoned with in the public business also. It serves to show anew what qualities of resolution and of devotion to duty and even of heroism a conscientious executive must bring to the doing of his work. There is nothing theatrical about it; no waving of banners or marching to the imminent deadly breach; but just a stern and persistent application of sound principles to the service of the people, day by day, even though, as we now see, the rage and malice which such a course arouses in evil natures may lead to criminal acts of personal vengeance. All this gives one a more vivid idea of the possibility of heroes of peace. An executive engaged in the seemingly humdrum work of reform may really be taking his life in his hands every day, and offering it freely to his country. He does not think of this himself; it is well for him that he should not think of it; yet no one with the stuff of a man in him would hesitate to do his full official duty even if he knew that, as a result, assassins would be dogging his footsteps.

We speak of the assassinations of public officials in the United States as "political," yet strictly they are not. Even the murder of Lincoln was so only in an indirect way. The doing to death of Garfield and McKinley was not a political crime in the sense that the assassination of the Czar or of Russian chiefs of police, for example, is such. That is to say, the murderous attempts upon the lives of American executives do not argue a passionate and desperate sense of outrage, a wild fury of hatred of the political system as such. No open-minded foreign historian would ever think of pointing to the assassination of three American Presidents within fifty years as an indication of political upheaval or even of social unrest. There is implied no mad resistance to despotism, no frenzied hope of striking terror into those in power and leading them to change the whole plan of government. American crimes of this kind are correctly to be set down in the chapter of accidents. We deplore them, but we do not need to be plunged into patriotic shame by them. They are among the perils which our executives have to confront, but they do not by themselves argue something rotten in the state, and they certainly have no power to sway an honest official from his duty.

PRIVATE SECRETARIES OF PUBLIC MEN.

The position of private secretary to a man in public life has been longer established in England, and has meant more, than in this country. There it has been a recognized stepping-stone to political or governmental promotion. Lord Rowton would never have been the figure he was but for having served so long as Disraeli's private secretary. To mention the names of two living men, of greater eminence, who began as private secretaries to statesmen, we may remind our readers that both Lord Milner and Lord Cromer served in that capacity. It would be hard to match those three names from the list of American private secretaries. Colonel Hay could, of course, hold his own with the Englishmen, though his work for Lincoln at the White House was not the direct means by which he rose to become Ambassador and Secretary of State. From him we have to drop to Mr. Cortelyou, who has now gone into business, and to Mr. Loeb, whose future is as yet on the lap of the gods—though his friends are saying to him, as to another Macbeth, Glamis thou art, and Cawdor; and shalt be——?

It is easy to see why private secretaries have not with us risen so often or so high as with the English. In the first place, political success has not here depended so much as it does in England upon training. Any man might at any moment get any office. Nominations have been made in such mysterious ways as to give point to Webster's sneer at Taylor, that if he could be named for the Presidency, no man was safe. But a stronger reason lies in the fact that private secretaryships have in the United States been so often disposed of as "plums." This method has been employed especially by Congressmen. When you penetrate into Senator Sorghum's office you will probably find that his private secretary is a son named Dolce Farniente Sorghum, while Miss Sacharissa Sorghum is assistant. Somebody else, of course, does the work, but they draw the pay. So long as nepotism or political influence governs such appointments, we cannot expect to find the average private secretary displaying the knowledge and special aptitudes which promise that he will go far.

At the same time, a growing importance is undeniably attached in this country to the work of private secretaries of men in high office. It springs inevitably out of the increasing amount of public business pressing upon their chiefs, and out of the heightened need for some one to control the way in which it shall be presented, to apportion the great man's time, and to decide who shall see him and what his engagements shall be. One night last week there was a dinner in London of the Parliamentary private secretaries. They had some good stories to tell of their profession and of their varied adventures, and one letter, said to be authentic, was read which illustrates our present point. A constituent who had written to his M. P. earnestly desiring an interview received the following from the member's private secretary:

> Dear Sir: I am desired by Mr. —— —— to say that if the matter is important he will see you at the House on Thursday next at three, but if it is *really* important, I think you had better come to me direct.
>
> Yours faithfully, —— ——, private secretary.

A private secretary whom his political superior implicitly trusts has a chance to possess great power. Not only has he to keep the latter's calendar, supervise his coming and going, sift out those who are to be admitted to his presence, while turning away the others, but he has very much to do with the form in which a great deal of routine business is laid before his chief. In other words, he comes with the details of it all arranged to his own mind, and with a decision practically made up in advance. "Here is another letter," he will say, "from Jobson about that supply-contract; I suppose I am to write him as before that you are not yet ready to award it?" It is this power of gentle insinuation that is lodged with the private secretary, this real control under the guise of deferential suggestion, which causes so many eager or despairing men to crowd into the room of the private secretary and beg him to "lay it before the old man." They go upon the unacknowledged but really weighty motto: "Let who will have the favors to dispense provided that I may be on good terms with his private secretary."

If the functions of the private secre-

tary have become more important, certainly the appreciation of him has become more warm. How deep is the indebtedness which many an executive feels for the man who has stood at his elbow, not only to give advice and carry out orders, but to save from worries! The relation is often one of great intimacy. When the fullest confidence is justified and given on either side, the result is a sort of mixed pride and dependence which brings two men as closely together as any experience in life. No wonder that private secretaries of Mayors and Governors and Presidents are sometimes thought of as a privileged class, who have to be "taken care of" when the term of public office ceases. Their employers, on such occasions, may well contend that they are but giving back something of the care that has so long been taken of them.

ON READING BOOKS THROUGH.

In the face of the unending stream of new books which pours from the press, and of the marvellously cheap editions of "standard writers" which crowd the shelves of department stores, it is difficult to believe that Americans are not a reading people. Books, like other commodities, are produced because there are customers to buy them; and while some, doubtless, are bought merely for display, on the theory that it is a good thing to have books in the house, the larger number are bought to be read.

In one respect, however, the reading habit is developing in a way which does not bode well for either culture or popular education. We refer to the apparently growing disinclination to read a book through. From the summer girl who skims the pages of the latest novel "just to get the story," to the lawyer searching for authorities, or the university student gathering material for a thesis, there seems to be a widespread impression that books, especially those of the larger or more serious sort, need not be read from cover to cover, but are quite sufficiently known when one has dipped into them for this or that bit of information, or glanced at their contents for a general notion of what the author has to say. Historians, of course, must have their introductions, novelists their descriptions of scenery, philosophers their summaries of previous systems; but it is rather old-fashioned to think of reading carefully all this stuff; and, besides, it takes time, and there are a great many other books to be examined.

There are, of course, vast numbers of books which are worthy of no more attention than this, as there are others whose main value lies simply in the facts which they chronicle. Readers, too, differ so widely in their powers and needs that no uniform rule can be applied to all. But the practice of skimming, or of using nearly all books as though they were encyclopædias or dictionaries, entails a peril both intellectual and artistic. It is almost certain to do the author an injustice; and even an author may fairly ask to be treated with respect. A really good history or biography, for example, is something much more than a collection of materials. It represents the writer's conception of a great period or a notable career, and his effort to treat it as a whole; and we may no more neglect a part of it than we may wash out certain details of a picture and still have a work of art. Similarly with books of speculation, theory, or exposition; if they are anything more than a mere recital of facts or conclusions already familiar, their statements on particular points are likely to be of limited value unless we observe how they fit into the larger treatment of the subject as a whole.

Illustrations of the neglect of which we have been speaking are readily to be found. A copy of Morley's three-volume "Life of Gladstone," picked from among the discarded duplicates of a circulating library, shows the first volume thumbed and loose-leaved, the second only moderately worn, and the third virtually as good as new. Three recent doctors of philosophy of one of our oldest universities, specialists in English history, economics, and philosophy, respectively, confessed without apparent chagrin that they had never read the whole of Green's "Short History" or Adam Smith's "Wealth of Nations," or Mill's "Logic"; and this notwithstanding that their theses showed bristling bibliographies in which these several works were cited. In the field of history, particularly, the use of the so-called "library method" of instruction, emphasizing the use of many books rather than the thorough study of a few, seems positively to have discouraged the reading of anything save "extracts" and "selections"; while more than one contemporary reference manual for history classes shows little beyond such scrappy and unsatisfying indications as "On this topic read Macaulay, Vol. III, pp. 195-207."

One cannot help suspecting, also, that in this perversion of the reading habit we have a partial explanation of the mediocre literary quality of much contemporary scholarly writing, and of the overwhelming preponderance of monographs and special studies. To write a learned work which shall also be readable would be, in the eyes of more than one American scholar, little short of a crime, a sort of overt act of treason to science; while to attempt a definitive treatment of a large subject is to disregard the demands of "accuracy," and bow before the altar of literary effectiveness. Moreover, to read a book through requires a distinct measure of mental concentration and intellectual repose, joined to artistic interest; qualities in contrast to the feverish concern for details and for rapid publications which has come to beset the path of learning. Yet we are confident that he who always has at hand some large and worthy book, and who sets himself patiently and cheerfully to the task of reading the whole of it, is laying a sounder foundation of culture than he who ransacks his hundred authorities for bits and scraps. For the books which, surviving the competition of time, still stand as landmarks of intellectual progress, are those which unite learning with artistic completeness and literary attractiveness; and such books are not to be mastered, or their nutriment assimilated, save by reading them as a whole.

FRENCH HISTORY.

PARIS, August 5.

"La Révolution et l'église" (Armand Colin: 320 pages—3.50 francs) and "Le Club des Cordeliers" (H. Champion: 400 pages, 8vo.—7.50 francs), both by Albert Mathiez, are important researches at first hand in the history of the French Revolution. It is not without passing significance that their author is president of the Society of "Etudes Robespierristes." An attempt has been made to set down all writers on such subjects either with Aulard, who accepts the Revolution as far as Danton, or with Taine, who rejects it altogether. M. Mathiez promises to rank with both,

but he stands with neither; he is sometimes between the two, he advances sometimes as far as Robespierre himself. Like the others, he has prejudices and that misunderstanding which is due to ignorance, not of documents, but of the ideas of other people; nevertheless he struggles for independence in his judgments. He recognizes that "the historian ought not to question the past in formulas of the present." Even in contemporary history, terms common to all have not the same meaning in different religions and parties. In this vital respect, the documentary methods of M. Mathiez are less dangerous than those of Professor Aulard. His citations are regularly full enough to enable the reader to judge for himself whether they have been rightly interpreted.

The general interest of the questions is plain, if only for the light they shed on France of our own day. No historian has been more assiduous than our author in lining up the past with the present. He treats in successive chapters the *philosophes* and the separation of Church and State; the publishing of early Revolutionary decrees by the clergy in Church; Robespierre and the de-Christianizing process; the legal status of religions and the civic cult under the first Separation; Theo-philanthropists and the Directory; private, public (and clandestine) worship; and the eve and morrow of Bonaparte's Concordat of 1802. Robespierre's fear that the anti-religious policy of the Revolution might alienate the United States, and the danger of the Genêt affair, which Paul Mantoux has just treated completely, come up by the way (pages 92, 93, 117).

M. Mathiez acknowledges that the ten years he has given to his subject "have not been sufficient for him to take complete possession of it." He is very certain that churchmen are not better qualified for the study of such religious history than those whom he calls "laïques" (he seems to mean, not "laymen" in the English sense, but un-religious and non-Catholic "neutrals," such as French free-thinkers demand for school teachers). He emphasizes the difficulty for "priests" or "ecclesiastics" to "enter into the minds of the Church's enemies or of simple *laïques*"; and he adds that "even in the Church priests are only a minority." To prove this incompetence, he begins from the fact that the priest will be "a convinced believer." This at once rules out from the writing of history concerning the Church and religion not only priests, but all sincere Catholics.

In defence of his own position, M. Mathiez adds with a show of temper: "The point of view of the faith is at bottom irreconcilable with the point of view of science. . . . Unbelievers, it appears, are incapable of comprehending ecclesiastical things and of speaking about them without hatred. The reader will say whether I merit the reproach, which makes one smile when uttered by ecclesiastics." To this use of words with a tendency like "ecclesiastic" may be added "mystic cults," "mysticism," to express "religions" and "religion"—an instance, constantly recurring among certain recent French writers, of what Professor Abbot of the City of London School classified for his students of rhetoric as "technical slang." If history is ever to approximate to truth, if the reader is ever to be free from the danger of being caught unawares by controversy where he thought to find history, it will be necessary to start from a less one-sided principle. Unbelievers and believers are regularly in equal ignorance of what others than themselves, living or dead, think and feel in actions that concern religion; and history concerns itself with actions.

In common with most French writers M. Mathiez supposes that the sovereignty of the state is absolute, that all human activity falls under political control, and that all this is compatible with "entire liberty in entire equality." Americans have constantly to examine, in reading such works, how far this can be made to square with our own fundamental principle of government limited by written constitutions, and, in particular, with our "religious liberty," for this is the traditional formula which for us takes the place of the French separation of Church and State. Roman Catholics, naturally, will deny our author's constant supposition of the state's right to impose on them a civil constitution of their clergy, as was the case during the Revolution, and a civil organization of their religion itself, as in the present Separation law. And they may rightfully reproach him with ignoring consistently that essential of living Roman Catholic faith—the unity or communion of faithful with priests, priests with bishops, bishops with Pope—which everywhere, and not in France only, hinders every political attempt to set up a nominally Roman Catholic religion separate from the Roman Catholic church. This fundamental error, with the echo of present passions too fresh to enter into impartial history, has to be corrected by the reader, who wishes to profit by the very valuable and new historical material presented in the various chapters of the book.

The considerable volume on the Club of the Cordeliers is not open to the same criticism and is of yet greater value to the general student of the time. It is composed of the writings and acts of the Cordeliers and the documents of the Champ de Mars trial, exactly reprinted, with concise explanations and notes by M. Mathiez:

> The Cordeliers played the chief part in the events which occurred from Louis the Sixteenth's flight to Varennes until the massacre of the Champ de Mars. They really took the direction of the democratic movement; and it was no fault of theirs that the monarchy was not overthrown in the month of June, 1791, at a time when France was still at peace at home and abroad. To study the democratic and republican agitation after the flight to Varennes, the best outlook would seem to be from the Club of Cordeliers. From this central point, the deeds of the personages and the motives of their actions must appear more distinctly than from any other.

Among the personages, Lafayette intervenes significantly; if not the "icy pedant" of Carlyle, he had certainly meddlesome, schoolmasterly ways, which showed no understanding of what was happening around him. The book has a good index.

"Le Comte d'Artois et l'expédition de l'Ile d'Yeu" (H. Champion: 165 pages—2 francs) is a little book of "errors in history" about the future Charles the Tenth. It is the rehabilitation, perhaps exact, of one who neither then nor later when king showed himself able to recover a cause lost beforehand. This episode is at most another indictment of the "politique égoïste" charged against England by atavistic Royalists. "La Conversion et la mort de M. de Talleyrand" is an account of this once disputed event by one of the five witnesses, the historian Baron de Barante. It is now brought out by his grandson on the occasion of the recent decisive publication of a contemporary letter of Talleyrand's niece, the Duchess de Dino, to the Abbé Dupanloup, who received the death-bed retraction. The enigma was not really so great as it seemed, for others swept away by the Revolution retained their early faith in the bottom of their hearts. Its importance in history comes only from the light shed on a generation hard to understand amid Revolution and counter-Revolution.

"Nos Libertés politiques" (A. Colin: 470 pages—5 francs), by Maurice Caudel, professor at the Ecole des Sciences Politiques, is not a history; but it treats historically questions which are fundamental in French history and which English readers have to know, if they are to understand the revolutionary changes going on among Latin countries. M. Caudel begins with the fact that the problem of political liberties, which, in England and America, has been met, has not yet been solved in France; and he explains why, in France, the difficulty is so great. The idea of the state under the Old Régime, its strength and weakness; the first effort to change with the Rights of Man in 1789; confidence in legislative bodies; the results in the succeeding Revolutionary crisis; the second effort, and weakness of liberties from 1815 to 1870; the reconstruction, in the constitution of the republic in 1875, and the persistence of arbitrary government by the legislative

body, with the citizen's weakness, are all duly studied.

"Révolutions de la Perse" (A. Colin; 368 pages—4 francs), by Victor Bérard, is perhaps the completest exposition yet made of new Persia in geographic space and in succession of time. It begins, summarily, with the witnesses and facts of the late revolutions. Next, it situates at length this new Persia which is "neither a state nor a nation" nor even a "monarchical federation," but rather "a royal herd of wandering peoples with a few isles of sedentary population." To the empire of the Turk Kadjar dynasty, whose power revolution is so violently limiting, 325 pages are given. The story of the revolution reaches to May of this year. There is a good map from Vidal-Lablache, but the table of contents is not full enough for a work of so much value for reference. M. Bérard has long been an authority on the political bearing of Mohammedan states. For him Persia has become a centre of the world's politics. Unless Russia and England keep on uniting their interests in Central Asia by respecting the territorial integrity of Persia and the Shah's authority, the balance of power in Europe itself will be overthrown. He believes that England is heedful; he is not so sure of Russia; and he finds for Persia, as was certainly the case with Turkey, a safeguard against the German advance.

"La Crise anglaise" (A. Colin; 287 pages—3.50 francs), by Philippe Millet, has more importance than the intelligent and entertaining account of an English electoral campaign, which the author followed day by day, in London and in country constituencies, as correspondent of the Paris *Temps*. He is competently equipped for the practical studies he presents of the Constitutional reform which is now uppermost; of the financial problem which is too often neglected; of the land question; and of free trade and tariff reform—"religions," as he terms them—with their bearing on France and incidentally on the United States.

S. D.

NEWS FOR BIBLIOPHILES.

In a recent number of *Notes and Queries* Col. W. F. Prideaux tells of his discovery of an undescribed small octavo edition of "The Deserted Village" of Oliver Goldsmith, having the imprint "London: Printed for J. Barker, Russell Court, Drury Lane."

There seems to be no limit to the number of contemporary editions of this famous poem. On the 26th of May, 1770, the first edition was published, a quarto printed in large type, with imprint "London: Printed for W. Griffin, at Garrick's Head, in Catherine-street, Strand, M DCC LXX.," and with an engraving by Isaac Taylor, showing the watercress woman telling her sorrowful story to the pilgrim leaning on his staff. Of this first edition copies also were printed on thick paper, of which there was one in the Rowfant collection. Before the end of the year 1770, five other quarto editions, called on the half-title, "Second Edition," "Third Edition," etc., to "Sixth Edition," were published.

There also appeared three small octavo editions, all having the identical imprint and date of the first quarto, but differing in minor typographical particulars. These three editions are without the vignette on the title-page, having only a small built-up printers' ornament.

Considerable stress has been laid upon the fact that in one of these three little octavo editions the word "hand" is misprinted "head" in line 37:

"Amidst thy bowers the tyrants head is seen,"

and it has been claimed that these octavos antedated the editions in quarto. In a rather exhaustive comparison of nine 1770 editions printed in *The Bookman* for February, 1901, the present writer took that position. He wishes now, publicly, to express his present belief that the first quarto was the actual first edition, and that, while the small octavo editions are extremely interesting bibliographically, they have, none of them, any actual first edition value.

Now comes Col. Prideaux with another small octavo edition, undated, with an entirely different imprint, and with a badly executed vignette "Mutlow & Woodman, sculpt." on title, which, as it is reversed, is undoubtedly a copy. Further, his specimen has also the misprint "head" for "hand" in line 37. Goldsmith himself altered several words in the second quarto edition, and these changes were followed in all later editions. As the small octavos with Griffin's imprint, as well as the new one bearing Barker's name, all followed the text of the first quarto, we may be certain that they (or the first of them, at least) were printed from a copy of that edition. Professor Masson says that during that latter half of 1770 "the lovely village of Auburn was in all men's fancies" and that "passages of the poem were in every mouth." It seems most probable, therefore, that the many editions illustrate the demand for the book, and their scarcity is due to the slight character of the little pamphlets and to the fact that they were so much read.

That we have not yet reached the end of our reckoning of editions is shown by the fact that in a catalogue of James Tregaskis, a London bookseller, just issued, there is offered another undated edition described as a small octavo and with the imprint "London: Printed for the Booksellers in Town and Country." The catalogue does not give definite particulars but has this note: "The excessively rare pirated edition made instantly on the success of the first issue of the poem, and following all the points of the first issue, which were altered in the later issues."

The poem was at once reprinted in Dublin by J. Exshaw, and Anderson in his bibliography of Goldsmith gives a "second edition" Dublin, 1770. This is the only small octavo edition given by him, for 1770, though we now know that not less than seven such editions were printed.

A facsimile reprint, from types, not photographic, of John Gutenberg's forty-two line Bible, printed in Mainz between 1450 and 1453 is in preparation by the Insel Verlag. Leipzig. It is to be a copy with reproductions of the miniatures and illuminations of the example, printed on vellum, in the Berlin Royal Library. A supplementary volume, by Dr. P. Schwenke, director in chief of the Berlin Library, will accompany the facsimile. It will contain reproductions of existing fragments of earlier printing by Gutenberg, which show, as far as can be done, the earlier stages of the art. It will also contain a detailed description of existing copies and a facsimile of the original binding. Three hundred copies are to be printed on paper, price £35 sewed, or £42 10s. bound, and a few copies, not more than twenty, on vellum, price, unbound £150.

"A Bibliography of American Books relating to Prints and the Art and History of Engraving," prepared by Howard C. Levis, has just been printed at the Chiswick Press in an edition limited to 150 copies. Mr. Levis says that the list was originally prepared at the request of M. Gustave Bourcard of Paris, for inclusion in his great work "Graveurs et Gravures, France et Etranger" (Paris, 1910). As here printed it is likely to prove useful. Collations are given for many important titles, and cross-references are frequent. The frontispiece is a portrait of Washington printed from an original block engraved by Alexander Anderson.

Correspondence.

THE NEED OF A NEW HUMANISM.

To the Editor of The Nation:

Sir: The July number of the *Atlantic Monthly* contains three essays on education which might well be read and pondered by every teacher in the country. I refer to Mr. Brooks Adams's "A Problem in Civilization," Prof. E. A. Sisson's "An Educational Emergency," and Mr. John Jay Chapman's "Learning." Though evidently written in entire independence of each other, these essays fit together almost as if their authors had collaborated. Mr. Adams is concerned with the lack of training in the power to discriminate and correlate which he finds in our schools. This power, he points out, is becoming absolutely essential, not only to the development, but to the very life of our civilization. Professor Sisson's criticism is based on the lack of training for character. He remarks that we are the only civilized nation in the world which provides no definite moral education for its school-children, and compares with our negligence in this respect the elaborate system of moral instruction provided by France, a country where, as here, religious instruction in the public schools is out of the question. It is evident that these essays deal with different phases of the same problem. The lack of training for power to discriminate and correlate involves and includes the lack of training for character. Training for character necessarily means training in discrimination and correlation. It is thus on the human, rather than on the purely intellectual, side that both these writers attack our educational system.

The third essay, Mr. Chapman's "Learning," cuts deeper than either of the others, inasmuch as it indicates more clearly the real cause of these weaknesses. Mr. Chapman is concerned particularly with another weak point in our schools and colleges—the lack of idealistic and imaginative train-

ing. This also is a fault on the human side; and in pointing out the cause of it, Mr. Chapman puts his finger on at least one cause of the other weaknesses, as well. In a word, the cause is the neglect of the human element in our training. The people are demanding from the schools and universities, and the schools and universities are encouraging them to demand, what has been called "training for efficiency"—a term which, in practice, means training for money-making and worldly success. It means, at least, the subordination of everything else to this one thing. It has meant the crowding out of the old humanistic study of the classics, which resulted in no immediate cash values, and the substitution for it of various courses of study which do result in such values. But for the discipline of imagination and character, which the old study of the classics gave, the new education offers no substitute. I say advisedly the *old* study of the classics; for the new "scientific" study of the classics is as far from humanistic as the study of the parasites of insects is.

I do not mean to assert that the neglect of Latin and Greek is in itself the cause of those grave failures in our system which the *Atlantic* essayists point out; I do believe that our overemphasis on the scientific and practical side of education, and the resulting neglect of the human side, is directly and primarily responsible for these failures. Of this neglect, the passing of Greek and Latin and the "scientific" method of studying literature are only striking symptoms.

A true humanism has for its aims the study and the development of character; the cultivation of the powers of discrimination and correlation; the training of the imagination, and the strengthening of the spiritual vision. One method of approaching these ends must necessarily be the study of history and literature from the human, not from the scientific, point of view. Perhaps another will be the inauguration of some such scheme of moral instruction as Professor Sisson desiderates. The present state of affairs is well summarized by him in a single sentence:

> It almost seems that we live to-day on a sort of second level of barbarism; for just as the barbarian lives in bondage to the material world of nature, so we tend to fall into the bondage of the material things of our own creation.

HOMER E. WOODBRIDGE.

La Jolla, Cal., July 29.

DRAVIDIANS AND CAUCASIANS.

To the Editor of The Nation:

Sir: The fact that I have maintained that the Dravidians are Caucasians, in my "History of Caste in India," has been noticed and criticised in the *Nation* for July 28. Reference to this statement unaccompanied by the general criticism of the science of ethnology in my book is likely to cause some misunderstanding. By that statement I did not mean that the Dravidians are descended from the supposed Caucasian stock. I consider that the present physical similiarity and dissimilarity are a distinct question from the question of descent. I have held that the Dravidians are Caucasians only in the sense of similarity, not of descent. I may also add that the appearance of the anthropologic data published by the government of Madras (in Thurston's "Castes and Tribes of Southern India," Madras, 1909), which reached America after my book was published, would compel me to reconsider my statement. SHRIDHAR V. KETKAR.

Cornell University, August 6.

A FRIENDLY WARNING.

To the Editor of The Nation:

Sir: A recent discussion in the *Nation* on the pronunciation of Latin might well have brought up a wider review of a serious situation. As for the primary question, any of several reasons make a return to "the English method" unthinkable.

There *is* no "method" in our chaotic English spelling. Practically all other languages give to the vowels, a, e, i, the sounds heard in la, re, mi, while in English the commonest sounds, and even the very names, of these letters are utterly eccentric. The first step, in beginning any foreign language, with English-speaking pupils, is to get the names and sounds of the vowels right. I am inclined to advocate, first of all, several weeks' study of the Italian element in English, largely musical terms rightly pronounced. But Latin, above all, the accepted gateway to Greek and Oriental languages on the one hand, to Romance on the other, must be rationally treated from the first day. American pupils, generally, never grasp the fundamental idea of an alphabet; a sign for each sound, a sound for each sign; and they are wretched linguists.

Within three or four decades a radical reform has been measurably accomplished. A generation has arisen accustomed, if not reconciled, to rightly spoken Latin. Another somersault, a backward one at that, might be suicidal.

The word is deliberately chosen. There is real hostility, a serious attack is in prospect, against the position of Latin in the secondary schools. The Hellenist, whose cause is lost there, begs his Roman brethren to take warning betimes. Greek, in the popular regard, is sinking toward the position of Hebrew; it has already met Spanish on the rise. An examiner remarked the other day that not one youth out of ten who are looking to Yale now includes Greek among his preparatory studies. And yet, until this year, it has enjoyed a substantial handicap there. Such exceptional advantages it will not long retain anywhere. In the women's colleges few have ever entered on Greek, and a waning minority even elect it. Most liberal colleges already offer beginners' courses, which are by no means popular. Soon in very few schools will there be even such a survival, for the sake of the future theological student or others. Certainly the "dead" languages can not recover the seven out of sixteen unit-courses which they used to hold in the ordinary four-year preparation for college. Hellenism may yet regain its full honor as the true source of liberal culture, of literary form, and of the plastic arts. The fight for the intellectual life itself is not to be given up. But in the schools Greek foresees no revival.

Latinists should already be alert on the defensive. On the extreme hostile left, President Schurman is reported as denying the need or especial value of *any* language save the vernacular! There are said to be instructors in English, teaching undergraduates of at least one great Eastern university, who themselves never studied either Greek or Latin. I believe an American innocent of classicism cannot know aright his own vocabulary, nor the nature of language itself, nor fairly realize that intimate dependence of the present on the remote past which is, perhaps, the chief lesson of philosophy. Whatever comfort be distilled from statistics by such incurable optimists as Dean West, it is to be hoped Latinists will awake to the peril, will unite—the last thing scholars learn to do—and make practical effort to keep alive this great taproot of all serious historical, legal, and of course linguistic study. To this end the good will of the general public, and even of the schoolboy, must be fairly won and held.

Poor as is the wage, slight the social or political influence, humiliating even the tenure, of the average college professor, yet it would be easy to name a dozen well-known Latin specialists who are securely settled in honorable chairs, with decent salaries, and some leisure for service to the general cause. What is their output?

First, probably, a new or revised elementary grammar, very likely an accompanying primer, striving to blaze an ever more direct path to the delights of Cæsar. This to dominate, and exploit, the fitting schools, of whose denizens the learned professor may know more or less.

Meantime, the gateway into college—that is, theirs, the classical gate—has long been defended, not to say, barred, by three mighty *aggeres* that must first be wearily climbed; three large masses of Latin, originally intended for adults, two of which, even in the clearest English versions, are all but wholly uninteresting, the third largely incomprehensible, to average schoolchildren of this century. There is moderate cause for gratitude in the "options" just devised; save one. Some schoolmasters remembered that there was one Latin author who would make even Orgetorix and Ariovistus seem human by comparison; now Sallust is restored to them. If any piece of prose be more dismally unfit to rouse an echo of interest, in an unspoiled youthful reader, than is his "Catiline," it has not swum into our ken.

But in Aulus Gellius, Seneca, Pliny, Apuleius, yes, in Livy and Cicero alone, are materials which, simplified, or even wholly recast, might be moulded into reading-books truly progressive, interesting, and valuable. The creation of such a book or books should unite the best energies of all the best Latinists; it should not be controlled by any mercenary or commercial consideration. Schoolmen cannot take the initiative, because, even in the intercollegiate examinations, the colleges have a preponderant power.

Again, the classical scholar often insists that his specialty is most helpful, all but essential, to the best English style. What books, what essays, do our most fortunate brethren put forth, to illustrate by example the results of this beneficent influence? As an assistant on the big Warner "Library," the present writer had often to turn as he might the genially satirical edge of Charles Dudley Warner's favorite remark, to the effect that the typical professor has so "buried himself in books that he can bring

forth nothing interesting or intelligible to the reading public." But is not Mr. Warner (and Cicero) at least half-right? Must not the tree be judged largely by its ripe and edible figs or the lack of them? One Latin masterpieee has been served up, in recent years, as a special tribute to Amerlean taste: Petronius's "Trimalchio"! Oecasionally a graceful essayist revisits the Sabine farm. It suffieeth not.

There is, however, still a third possible audience. I do not reeall meeting a single busy professional or commercial American, not a teacher, who really "kept up" his Greek. With Latin it certainly need not be so. Nearly every college man has a pleasant reeollection of Horace if not of Virgil. The voeabulary is so upheld by English derivatives that it is mostly retained in the memory. Every large-minded pleader or orator can draw real benefit from Cicero's "Pro Murena," the "Pro Cluentio," and particularly the "Philippics," against Antony. Every clerie may seek inspiration from Augustine if not from Seneca; Tacitus, again, as a master of style can teach eaustic force, pictorial vividness, and brevity, to the cleverest modern essayist. All these can be made sufficiently easy, or can at any rate be made to yield large instruction, for men of middle or riper age, once fairly imbued with Latin; but only in one way. They all require translations, at once truthful and readable, preferably on parallel pages of large-print library editions.

But if the competent comfortably-settled specialist be seornfully indifferent to all save elementary text-books on the one hand, and pursuit of reeondite special problems of dialectology, syntax, etc., on the other—verily he shall dree his ain weird. But those that come after may suffer.

Literature.

OUTLOOK OF THE YOUNG TURK.

The Fall of Abdul-Hamid. By Francis McCullagh. With a preface by His Excellency Mahmud Shefket Pasha. With 10 Illustrations and a map. London: Methuen & Co.

Nothing probably, among all the new experiences with which the student of the East must deal when he actually comes face to face with his subject, is so perturbing as the close semblance of an organized conspiracy of misinformation of which he, sooner or later, becomes conscious. For a time—it may be long or short—he asks, is told, and is satisfied; but there is a day when he realizes that ninety per cent. of that copious and confident information cannot possibly be what it pretends. In very many cases he can reach no conception why his informants are so full of misinformation: they can have no interest in so misleading him. But gradually he learns that Orientals, with a large proportion of Europeans and Americans who have lived long in the East, have, on one side, no feeling for agreement with fact, and, on another, have as great an abhorrence as nature of a vacuum. Before emptiness of knowledge they are like children and grasp at anything with which to fill out the void. Of course, if they really know and have no interest in substituting something else for what they know, they will give facts. But when they have no facts, they will certainly give something else. And in so doing, be it remembered, they have first deceived themselves. This may seem like a railing accusation, and there are certainly exceptions, but those who know the East know this, too, to their sorrow.

In consequence of this it is of primary importance in the East to reach the men who know and to pay no attention to any one else. And no one really knows who is not actually on the spot, in contact with the occurrence. Another link in the chain brings such uncertainty that the prudent observer will avoid all such evidence. Now, Mr. McCullagh's book, compared with others dealing with the second Turkish revolution, has this peculiar value, that its writer fell most luckily into the very centre of events and into contact with the people who were making that decisive bit of history. From the middle of the picture he tells of occurrences at which even so privileged an onlooker as Sir William Ramsay—see his "Revolution in Constantinople and Turkey"—could only guess. With this of necessity went a certain disadvantage. During the days of panic and apparent chaos from the mutiny of April 13 on, only two parties in Constantinople can have seen clearly the trend of events. The promoters of the mutiny are dead, exiled, vanished, and from them no sound has come or will come, while those leaders of the Young Turks who saw their way through and finally brought their country out, can hardly be expected to give a perfectly unbiassed report. Yet we must follow them or nothing, and there can hardly be any doubt that their statement of the case will be very close to the final finding of history. And there can be still less doubt that Shefket Pasha's word on his own actions—and he is one of Mr. McCullagh's chief authorities, quoted immediately some ten times—can be accepted implicitly.

So taking the book as a frank statement from the Young Turk point of view, it is one of quite extraordinary interest and value. Beginning with the opening of Parliament in December, 1908, it traces the resultant situation and its elements—the Committee, Abd al-Hamid himself, the *Ahrar* or "Liberals," the Mohammedan League, the personality of Kiamil Pasha, the returned exiles from Europe and how they behaved, the private soldier and how he took it all—through the general disillusionment to the mutiny. Then the rising of Macedonia, the gathering of troops and the march on the city, its capture and the fall of Abd al-Hamid. In one thing only was Mr. McCullagh unhappy. He does not seem to have been in Turkey at the first revolution, and did not know the great outburst of relief, joy, and brotherhood—that first fine careless rapture—which was so soon obscured. The present reviewer was in Damascus when the revolution broke out, and it was his great good fortune to travel from Beirut to Constantinople with a shipload of returning exiles. The scenes on that boat and thereafter in Constantinople itself were not of a kind ever to be forgotten. To see aged Turkish generals kiss each other with tears on their wrinkled faces, or a Greek priest in full canonicals being led round S. Sophia by a turbaned Muslim verger, and to hear that verger with joyful countenance proclaim, "We are all brothers now; there is no difference"; to march through the streets of Constantinople in a mixed procession of Muslims and Armenians, after a memorial service in the Armenian cathedral for all the Muslims dead under the tyranny; to hear that Greek and Bulgarian bishops in storm-rent Macedonia had embraced with an emotion which, for the time, was evidently real and that the Macedonian question was solved; to know all these things—even though Yildiz lay glittering and silent on the slope above the city, and all were well assured that behind those walls was hidden guile enough to disrupt the fairest fellowship and that the city itself and the country were full of material on which the great Sultan could work—was enough to give the lie for a time to our growing doubts of democracy and to turn us again to the old ringing line, "Freedom makes men to have liking."

But it is with the period of growing discouragement, uncertainty, and fears that this book begins. The brilliant opening of the Parliament is described, but the atmosphere then had promise of storm. The sordid intrigues of the different communities had begun, and the unity of the Ottoman Empire no longer seemed so easy. And the opposition which had developed was not healthy. The non-Muslim elements of the population were not honestly taking up their part of the burden and learning to live and let live, sunk in the people as a whole. But, clinging tenaciously to that community-existence in which the Turks so long had separated them and ruled them, they were even, with now almost incredible blindness, looking back to the rule of the Sultan as better than that of the committee which would make them Ottoman citizens—Turks as they would say—and while it gave them rights would also impose duties. The debates over the school-law, over language and over army-service all brought out this irresponsibility; and a mush-

room press, especially in its Greek forms, added conscienceless venom to the strife. On the Muslim side, too, doubt had entered. It was one thing to be relieved of the terror of the Sultan—and that had weighed with more persistent pressure on Muslims than on Christians—but it was another thing for the foundations of Islam to be shaken. And there is no question that for a time things moved too fast for prudence. Women threw back their veils and even had a club-house; a school was started for the education of girls; the Young Turk officers and leaders were notoriously irreligious—on the voyage to Constantinople, the present reviewer saw only one man saying his prayers. In the army, there were special difficulties. Officers raised from the ranks by Abd al-Hamid, and always his especial tools, were steadily retired. The army had to drill as it had never drilled before. When prayer-time came in the midst of duty, prayers had to be neglected. To become immersed in prayer has always been a way in Islam of avoiding unpleasing tasks. The attempt was even made to keep the hodjas out of the barracks, and the soldiers were warned that they should pay attention to none save their officers and Allah. Exactly what and how great a part—it may here be thrown in—the clergy of Islam, to use a convenient term, played in the great reaction, is very obscure. Multitudes of the inferior ranks were undoubtedly used by the fomenters of the mutiny, but many of the higher clergy worked with the committee. In S. Sophia itself, a series of sermons was preached to prove that parliamentary government was not inconsistent with Islam, and the Shaikh al-Islam made no difficulty about issuing the *fetva* of deposition. But that the Ulama took no steps against the mutineers, even seemed to join them and certainly advised yielding to their demands, was only to be expected. Islam has always admitted the sacred right of insurrection and even lays it as a duty on the individual to deal personally and immediately with any infraction of the divine law. In Turkey this has often taken the form of *émeutes* by the army, and the official Ulama, in Turkey and elsewhere, have always shown themselves ready to accept the *de facto* governments which have thence resulted. A final source of instability lay in the thousands of spies and unnecessary government employees who were thrown out of occupation by the revolution.

Out of all these and from the necessity of some form of parliamentary opposition sprang the so-called *Ahrar*, or Liberals, and the Mohammedan Association. The first was a miscellaneous crowd of critics of the methods of the committee, fairly honest but without essential coherence or definite ideas except an inclination towards decentralized government. The second was simply a palace conspiracy. Both, first or last, were the well-used tools of Abd al-Hamid. And so, probably, not even the *Times* ever made such a mistake as when it backed the Liberals with all its influence, while the English support of Kiamil Pasha was a good example of English obtuseness in foreign policy.

Of all this perplexed situation Mr. McCullagh gives an excellent and clear account. His sources were authoritative and he used them discreetly. Again and again he cites information given directly not only by Shefket Pasha and other Young Turk leaders, but also by Kiamil, Mukhtar, and Hilmi Pashas. In this way, from the very words of the latter, their demoralization and collapse when the conspiracy broke out are vividly contrasted with the swift decision of the march of the avenging army. Plainly, a dictatorship was needed and an amply adequate dictator was there. Perhaps the most striking of these bits of decisive information is Shefket Pasha's contradiction of the tale that his entry into the city was hastened by any information as to an impending general massacre (p. 50). He did learn on the morning of April 23—and only so far is that tale true—that the First and Second Army Divisions would not take the oath of allegiance, and he therefore hastened to anticipate their further action (p. 212). With this should be contrasted, and the contrast will be found luminous for "facts" in the East, the apparently perfectly authenticated story told by Sir William Ramsay, on pp. 83, 162, and 183 of his book cited above. Of course, not everything that the Young Turk leaders say is to be accepted implicitly, but it is significant that virtually all their positions and statements have been gradually confirmed by the development of events. It has become plain that the choice from the first lay between the Committee and the old Absolutism. And now again, as at first, they are face to face with the same problem. Can they keep the Parliament going through the motions of a constitutional government and also preserve public order for twenty years while an educated generation is growing up? That means a system of schools and a system of gendarmerie like the Canadian Mounted Police, and both are being worked out. But, further, can they hold the army for twenty years? For that is the kernel of their problem, as it was the kernel of Cromwell's. In fact—but *absit omen!*—the analogy between the position of the Committee and that of Cromwell when he was trying to rule through a Parliament is of the closest.

On the closing scenes down to the final passing of Abd al-Hamid to Salonica and his imprisonment there, Mr. McCullagh is vivid, and apparently, to judge by his sources, trustworthy. The account of the military operations is derived from *Streffleurs Militärische Zeitschrift*, picked out with color from his own experiences. He is no Orientalist of the schools, but a journalist of experience, common-sense, and conspicuous good luck. In gratitude for a valuable and entertaining book, we need not lay against him that he regards Beirut, the Lebanons, and Damascus as belonging to Arabia. The illustrations are negligible, but the map of the investment of Constantinople is clear and useful.

CURRENT FICTION.

Whirlpools. By Henryk Sienkiewicz. Boston: Little, Brown & Co.

The popularity of "Quo Vadis" with the English-reading public was due largely to the fact that it interpreted with a certain Slavonic intensity, but without strangeness, a theme of common interest to all Christendom. The subject was worthy of the great canvas employed. There was a vigor about the whole performance which distinguished it absolutely from the machine-made historical romances upon which we had even then been over-fed. One of the most shadowy periods of human history was made to live; if the light thrown upon it was somewhat garish in places, that was a fault of which we did not incline to make too much.

"Whirlpools" has little of that largeness of effect, unless to the novelist's compatriots. As an interpretation of the modern Polish life and character, both individual and national, it lacks to the alien eye both force and definition. The dominant mood is elegiac, plaintive even. One finds the whole matter in a nutshell in the final chapter, a sort of epilogue in the form of a soliloquy by one of the characters:

> Whirlpools? Whirlpools!—and of sand! Sand is burning the whole of Poland and transforming her into a wilderness, on which jackals live. If this is so, it would be better to put a bullet in the head. We are lost past all help? That is untrue. . . . If it is so that we prefer to suffer than renounce Her, then where are the jackals and where is Her destruction? So She lives in every one of us, and in all of us together, and will survive all the whirlpools in the world. And we will set our teeth and will continue to suffer for Thee, Mother, and we—and if God so wills it and our children and grandchildren—will not renounce neither Thee nor hope.

This extract displays the clumsiness and even illiteracy to which the translation frequently declines—a quite unnecessary obstacle between author and reader. It is a pity that the publishers, who have issued translations of Sienkiewicz's former novels, should not have taken more pains with their choice of translator in this instance.

Apart from its national character, as a study of Polish society and politics,

the story has the familiar Slavic characteristics. Sienkiewicz, like the Russian novelists, has to deal with human types very unlike our own. To the Anglo-American mind there is a touch of the uncomfortable, the mawkish, the nightmarish, in the mental and emotional processes of the Slav. His talk and action seem to us tinged with a meaningless excitement which barely falls short of hysteria. We are tempted to turn our eyes away from the extravagance of his gestures, to stop our ears against the shrillness of his voice. He is so odd, so childish, so different from ourselves in the thing we value most, manner, that we easily overlook the fact of the deeper bond between us. "Whirlpools" has to do, after all, with the same problems of human nature that our own novelists are perennially busy with. The plot has a certain novelty. A young Polish gentleman has in his student days seduced a peasant girl. She disappears from the neighborhood, and he forgets her. She is a good girl, is adopted and educated by an English family, and returns to Poland a beautiful and accomplished lady. She has always really loved her seducer. He now falls in love with her as an English maiden, and when he offers himself she tells him frankly who she is. You perceive the plight of the easy sentimentalist, his revulsion, his condescension, his eventual intolerability. He kills her pure love for him, and she wisely casts him off before marriage has set a seal upon their common misery. In her character, in that of the little violinist Marynia, and in that of Dr. Szremski, lie sufficient excuse, from the Western point of view, for an otherwise not agreeable or easily intelligible story.

Ailsa Paige. By Robert W. Chambers. New York: D. Appleton & Co.

> The butler made an instinctive movement to detain him, but he flung him aside and entered the drawing-room. . . . Light from great crystal chandeliers dazzled him for a moment; the butler. . . .

In this familiar strain begins the latest romance of a writer whom we have been wont to hail as the most popular among that always popular class, the chroniclers of the pseudo-fashionable. One phrase of his, read long ago, the present commentator has never forgotten; it has stuck in his memory as a sort of haunting refrain, expressive of a whole department of current fiction:

> The luncheon was very informal: there were only three footmen.

In short, the novels of Mr. Chambers have seemed qualified to afford to a certain constituency precisely the same thrill, the same glow of momentary contact, if but in fancy, with exclusiveness and luxury, with butlers and diamonds and motor-cars and costly wear—which is less adequately supplied by the Society Column. Consequently it is a surprise, and, to the reader who disdains vicarious Sybaritism, an exhilaration, to find the butler and his analogues quickly and permanently abandoning the foreground in the present story. He is, after all, an ante-bellum butler, who never dreamed of luxury as we understand it now.

Mr. Chambers must have credit, in this instance, for a serious piece of work. Only the passing generation which in one sense or another assisted at the great conflict of the sixties can judge how far he has caught the spirit of the time. One common and perilous element of the civil war romance he has deliberately, and, we think, wisely omitted. No great historical personage stalks or pratties through his pages, no Gettysburg or Chancellorsville is detailed as minute fact. On the other hand, there is much description of fighting, and some portions of the narrative seem more liberally blood-smeared than necessary. But it is right that the brutal and tawdry aspects of war should be presented as well as the heroic and romantic aspects, and the lay reader gets an impression of fairness of balance in these strange elements. The "love interest" in the story concerns chiefly a Northern pair, a sweet young widow and a reckless man about New York town. He has a tragic and mysterious, and, to tell the truth, foolish reason for fancying he cannot marry her. He is, in fact, the true ladies' hero, dark and domineering and armed with a secret sorrow. The pair have their troubles, but there is nothing in them for the experienced novel-reader to distress herself about.

"Skid Puffer." Stories collected by Francis F. French. New York: Henry Holt & Co.

The first part of this book is a collection of dialect sketches drawn from scenes in the region of the great Kankakee Swamp. The stories, which have been selected and edited by an earwitness to many hundreds told by young Skid Puffer about old Abe Puffer and all the Puffers of Pufferland, date from the time when bear tails, the long, hanging bear tails of the Puffer bears, blazed a path into the swamp for the ancestral settlement down to the day of Skid himself. Abe, though gone to the "gret silens," lives boisterously in Skid's stories. "Two things Pop was mighty good in, elocutin' at the literary an' flingin' out foreign words, some as he knowed by sight and others by soun'." The Pufferland dialect is contrived to try the stoutest heart, yet it sits well on Puffer stories of refractory hens and unbroken colts; of pumpkins that yearling shoats can hide in, of winter weather when a teacup of water thrown in the air would rattle down in a million icicles, and snow—if you was mighty quick about it. If you wasn't it would freeze solid and bust the cup right in your hand.

After many pages like this, Skid moves on from the swamp, and a story sets in, of lost parents and a found son, of friends acquired, of civilization achieved, and of old injuries avenged in thrilling adventure in Mexican deserts. The verbosity of the tale is excessive, even when Col. French speaks in his own person; and at no time may the story boast of any recognized style or form. Yet it is pervaded—after the introductory horse-play stories—by a single-minded naïveté which half disarms criticism—a naïveté wholly in keeping with the development of the hero, who is a faun-like son of nature, without wile or guile, till chivalry makes of him an avenger. We leave him with his education and his first adventure accomplished, and we are promised a sequel.

The Twisted Foot. By Henry Milner Rideout. Boston: Houghton Mifflin Co.

In spite of its wild improbability, this story of life and love and adventure in unfamiliar islands of the South Sea succeeds in holding the attention of the reader from the beginning. The author is not a delineator of character except in the most elemental way, and he has only just succeeded in making his hero, David Bowman, sympathetic by endowing him with superlative manliness and straightforwardness. The other characters: Mary Arnot, the winsome heroine; Mary Naves, the travelling singer of big heart and small mind, and the Sultan Sri Rama Vicrama, at once annoying boy and attractive man, are conventional, almost commonplace.

Mr. Rideout has, however, a peculiar descriptive power. This finds free play in a rich setting of lonely sea, volcanic island, and tropic forest. The same quality makes out of an ordinary story of action and excitement something of a work of art. The descriptions are strongly reminiscent in style of Lafcadio Hearn; intimate, vivid, they are often marked by the application to nature of human terms, as if one art were expressed through the medium of another.

INTELLECTUAL PIONEERING.

A Writer of Books in His Genesis. By Denton J. Snider. St. Louis, Mo.: Sigma Publishing Co. $1.50.

This autobiography is the early record of an eagerly intellectual life. Mr. Snider has written commentaries on Shakespeare, "Faust," the "Divine Comedy," and the "Iliad." His poems include an epic, "Homer in Chios," and metrical essays in every genre. A novel, a history, books on psychology, ethics, sociology, and metaphysics are com-

prised in his bibliography of thirty-five numbers. His total gains from literature are twenty-five dollars, the proceeds of a newspaper assignment once given by Eugene Field. In order to maintain this disinterested pursuit of letters, Mr. Snider has followed the calling of schoolmaster, lecturer, and teacher of private classes. To his many pupils whose lessons were the basis of these many books this autobiography is dedicated.

It is one of those books that baffle a reviewer. Familiar with Hegel, not to mention the world poets, the author writes in an ungainly fashion, which still is not without color and energy. Throughout there is a kind of paradoxical blend of superiority and commonness. How can the man who in his early 'teens discovered the *Spectator* and became an Addisonian, in his late seventies "recollect of" youthful experiences? In fact, aside from the historical import of these reminiscences, to which we must return, their chief suggestion is of the enormous disproportion between education and culture in the career presented and in the Middle West, whose greatness is the secondary theme. The insatiable intellectual curiosity of such a man, his sheer expenditure of mind, his broad attainments, ought, it seems, to have produced more memorable results, and the examination of such a career must teach us something about the conditions of intellectual pioneering in the Middle West. Such chronicles, in comparison with those of the material pioneer, are scanty. Mr. Snider's recollections will furnish vivid material for an as yet unwritten chapter of the history of the mind.

From youth the author felt the passion of the intellect. He left Mount Gilead, O., more than commonly well trained in the classics, made a stage at Iberia College, where his vocation as a writer declared itself, and by sixteen was a student at Oberlin. That college was a religious foundation. What scanty culture it could afford it produced not to the use of man, but to the glory of God. Established as a reaction against that Unitarian movement which had gathered up so much of the intellectual energy of the land, Oberlin held aloof from the main movements of the fifties. Out of the thousand students, says Mr. Snider, there were two or three who read Emerson andCarlyle, and adds: "Of Emerson I doubt if a single professor had any sympathetic knowledge, or if he had, he kept it silent." Over the college presided the minatory figure of President Finney, an evangelist of such power that, fearing his own effect upon his audiences, he sometimes dismissed them. "You, dear pupil," he would preach, "have done nothing but sin in getting your lessons this week without God's grace—nothing but sin in your study of Greek and Latin." Such appeals made young Snider unhappy, but the lad remained unrepentant and sinned with a vigor that the modern college president would welcome. Beside the little stint of the "Odyssey" required, he read the remaining books. Herodotus he read entire in the Greek, Thucydides likewise, following the Peloponnesian war with the poignant living commentary of a Union that seemed to be crumbling. In short, young Snider passed from Oberlin to camp and field, with an education in classical and modern literature such as not one American college student in a thousand ever acquires.

The war left him in permanently impaired vigor, but after various experiments he took up life anew in St. Louis, serving long as a teacher of literature and moral philosophy, and finally emerging into the relative independence of lecturing and writing unremunerative books. At St. Louis he found the company his soul craved. There was the Philosophical Society clustered about the versatile incomer, W. T. Harris, soon to be the founder of the *Journal of Speculative Philosophy*, and about the Titanic Brockmeyer. Who was Brockmeyer? He was one more of those abortive Titans who will emerge only when the true *Kulturgeschichte* of the Middle West is written. Disgusted with the world, he had been for a time a sort of carnivorous Thoreau, a Thoreau handier with the rifle than with the pen. As a lawyer and politician in St. Louis he shocked and dazzled his neighbors by talk that ran from the Rabelaisian to the Hegelian. In his study of Hegel's Logic he enlisted a number of friends. About this philosopher and about Goethe he knew and could tell fundamentally inspiring things, which somehow evaporated when he tried to write them down. For the sheer stimulus of his company Mr. Snider read law in Brockmeyer's office, and heard him dispatch with equal gusto an Hegelian paradox and a disgruntled ward-heeler. Brockmeyer, in the cosmic sense, Mr. Snider celebrates: "The German Renaissance of the last century, the greatest spiritual movement of recent Europe, was tapped at its fountain-head just by our Brockmeyer, and was made to flow in a lively stream at our St. Louis as centre, where it impregnated strongly an American element." Alas, like many another rill from notable source, this water, too, has slipped away under the bridge. Except for searchers in the old files of the *Journal of Speculative Philosophy* and readers of this autobiography the vivid Brockmeyer has vanished in the backward and vast abysm, whereas the unexuberant Thoreau easily imposes upon posterity those voluminous journals the gist of which posterity already had in his books. The case is a parable. In a fluid civilization not even genius manages to crystallize itself in viable form. Of the Philosophical Society the most substantial heritage is perhaps the rather cloudy metaphysics and criticism of W. T. Harris, who to do as much had to return to his native East, and Mr. Snider's interpretations of the "World Bibles" and of the universe itself.

It seems as if in new communities nothing first-rate in the arts can be produced. The artist needs a society that understands him, and on occasion can ridicule him, needs the association of his peers. It is significant that the few provincial painters of Italy who achieved greatness had to betake themselves to such centres as Florence and Venice. No expenditure of ingenuity and intellectual effort, apparently, will replace that subtle and evanescent influence which transpires from a settled civilization. In pioneer regions the mantle of prophecy is conferred too generously, the mutual appreciation of a small coterie brings a premature complacency, the incense of the lecture-room prevents the harsh but formative workings of criticism.

Such prophets as Mr. Snider, then, are in a sense sacrificed to the honor they receive so unhesitatingly in their own country. Frequently they display an ability that in better surroundings would carry them far. As pioneers of a culture that is to be they deserve all credit. If they are, for their own advantage, unduly perturbed by the heady life about them, at least they keep it working if crudely in ideal directions. There is, in short, an apostolic dignity about men of Mr. Snider's sort that comports oddly and pathetically with their ineffectualness as artists and the somewhat Bœotian cut of their priestly robes.

We have space only to mention the quite extraordinary interest of Mr. Snider's war experiences. He started in a camp of drafted men. In that and another camp he was clerk to the commandant, and thus knew the entire business of the command. Of the sordid details of desertion, mutiny, and bounty-jumping he gives a vivid account. He helps one realize the infinite shifts and patience that went to the making of the conquering army, also the profound demoralization that the war worked upon the baser part of the community. Naturally, history has set forth chiefly the heroic aspect of the war. It is well, however, that the darker truth should also be told, and the reader will find it in Mr. Snider's pages in its ugly palpitating reality. For months on the Tennessee skirmish line under Rosecrans Second Lieutenant Snider comported himself well. In fact, he has always risen with alacrity to the emergencies of the material and intellectual life. One sets down this varied chronicle of his early days with a curious feeling of

sympathy in which admiration is tempered by just a suspicion of pity.

Gli Americani nella Vita Moderna osservati da un Italiano. By Alberto Pecorini. Milan: Fratelli Treves; New York: Francesco Tocci. $1.25.

Signor Pecorini has made an exhaustive study of modern American life based largely on government and State reports and abounding in statistics which are cleverly interwoven with the text. His residence is Springfield, Mass., a city which, if not quite typical, at least represents us far better than the turbid cosmopolitanism of New York. Signor Pecorini's admiration goes out especially to our women, to our religious tolerance, and public schools. Beyond all previous foreign observers, he emphasizes the importance of religion as a social bond; believes, in fact, that it is an indispensable cohesive principle. The institutional church meets his fullest approval. He congratulates us also upon maintaining a single standard of sexual morality for men and women, without perceiving that the penalties for departure therefrom are very unequally applied. Labor, army and navy, imperialism, agriculture, immigration, the race problem, education, the Indian, sport, the press, literature, and art are all intelligently treated. On the whole, the book is more interesting as a readable compendium of information than as a criticism after the model of Tocqueville and Bryce.

Signor Pecorini seems rather the economist than the social philosopher, and he envisages the more grandiose features of our civilization rather as a literary chronicler than as an analyst. Very amusing and, in the main, just, is his horror of New York. To him it is a gigantic impersonal Moloch systematically immolating its victims. Of course, familiarity would blunt an impression that is, after all, only slightly exaggerated. As for art and literature among us, they are negligible. Such an opinion from an intelligent and cultivated foreigner is significant, even though only a half truth. In his chapter on the press Signor Pecorini regrets the impossibility of a high-class literary review like the *Nuova Antologia*, but seems to be ignorant of such approximations to that ideal as the *Atlantic*, *North American*, and *Forum*.

On the race problem our author takes the Southern view, and is inclined to regard all negrophiles, from the Abolitionists down, as doctrinaire meddlers. His own prophecy of ultimate amalgamation with white immigrants from the Mediterranean countries shows at least that his Southern sympathies do not include invincible race prejudice. Somewhat pathetic are the chapters on Italian immigration. The crowding of this sociable race into city slums is regarded as for the present inevitable. The Italian cannot stand the isolation of pioneer agricultural conditions in a foreign land. Of the various bureaucratic and philanthropic endeavors to aid Italian immigrants no very high opinion is held. A suggestion that free scholarships in the Italian universities for Italo-American boys might produce a link between the two cultures is worthy of consideration. Certainly, intermediaries are necessary, since the Italian who is quite readily absorbed into the rough and tumble of our political and industrial life is almost excluded from the moral tradition both of the land he has left and of that which he has adopted. The schools, of course, do much, but rather tardily and with insufficient emphasis on the moral side.

Here and there Signor Pecorini's usually accurate and well-considered pages suffer from information misunderstood or drawn from ephemeral or untrustworthy sources. For a second edition we offer the following suggestions: Vineland and the Norsemen, so far as our territory is concerned, are mythical; Lincoln was not "stabbed," but shot; college athletic teams do not receive food and a stipend; Zangwill is not an American writer; the English race was not amalgamated in the fifteenth and sixteenth centuries (some loose philological statement seems at the base of this error). Nor is it true that only preferred stock is sold on the New York Stock Exchange, while common stock is relegated to the curb. Members of the Knickerbocker Club have been not invariably or even usually millionaires. Milking machines are still exceptional. The vast growth of museums was worth a paragraph. Our wealthy art collectors are treated with a sentimental scorn that acquaintance with the better of them would correct. Such blemishes are of small importance, and are noted only as evidence of the closeness with which we have followed Signor Pecorini's interesting discussions.

Bygone Days in Chicago: Recollections of the "Garden City" of the Sixties. By Frederick Francis Cook. Chicago: A. C. McClurg & Co. $2.75 net.

There was no need for the introductory note in which George P. Upton stands sponsor for these war-time recollections. From the very beginning, Mr. Cook's narrative stands out as an entertaining account of a most interesting period and setting. As an old newspaper reporter, the author has kept the ornate fluency which is one of the signs of the trade. But he shows also a zeal for searching beneath the surface of things which is not one of the traditional gifts of the reporter. He philosophizes, in the acceptable meaning of the term. His tone now and then verges close on cynicism. At times he aims to be judicially aloof. At all times there is a really astonishing passion for getting at the inner working of events and of motives.

What is perhaps the most significant portion of the book concerns the attitude of our foreign-born population towards the civil war. The immigrant element at that time was about equally divided between Germans and Irish. The former had been driven from Europe by reasons political; the latter by reasons economic. The former represented a "superior class," the latter "an inferior one." The Germans entered farming or the advanced industries. The Irish, North and South, formed "the lowest white strata in the active labor market." Our author here expounds his rather grim view of the laws that mark race and class feeling. "Whatever the aversions," he says, "of the highest towards the lowest in the social scale, they are seldom comparable to the unreasoning prejudice, often rising to blinding hate, that manifests itself in the lower ranges towards those regarded as a grade below them." Between two classes in immediate juxtaposition, no benevolent haze intervenes, no perspective operates to lend enchantment to the view. Among the "comfortably circumstanced" people of the North, native-born or German, there grew up before the war a strong sympathy for the slave which invested him with a "halo more or less of a misfit." If the Irish working class showed a tendency in the opposite direction, the thing was due "to a variety of causes, but also in no small degree to that primitive instinct which demands for its satisfaction that somebody be kept in his place to be looked down upon."

Abolitionist and Copperhead, also, receive due attention in Mr. Cook's narrative; but nearly always he is at pains to show that men's motives and conduct in those critical days were seldom as sharply differentiated as party names would imply. And here the writer speaks from interesting experience, having been associated with all four of Chicago's leading daily newspapers during the war period. In the composing-room of the anti-slavery *Tribune*, he found little enthusiasm for the negro. "On every hand, there was explicit denial that the war was waged with any special intention to free the slaves—that concomitant of the struggle being almost invariably alluded to apologetically as an incident entirely beside the real issue." On the semi-secession *Times*, the majority of compositors "would have been denounced as rebel sympathizers." But many shades of difference were apparent:

> When with Republicans these pseudo-sympathizers might be fierce denouncers of the war and all that it stood for, but in presence of extremists of their own kind they would so double on their tracks as to land almost squarely in the Union camp;

and often such a query as "What has become of Jack, or Billy?" would be answered in the song-slang of the day, "Gone for to be a sojer." . . . It is almost a pity that this Copperhead pudding was never subjected to the test of eating, by a Southern invasion of the North. In such an event, I make no doubt, not one in a score would have felt other than dismay and sprung to the defence with the readiest "Black Republican."

Finally, in explaining the extraordinary part which was played by song during these dark days, in the North, Mr. Cook indulges in a bit of folk psychology that is not without appeal. The North, he points out, far more than the South was in need of an external stimulus to keep its resolution to the appointed task. The South fought for such concrete objects as the defence of its homes and for very self-preservation. The North was guided by sentiment, and sentiment fed on song. Frank and Jules Lumbard, brothers, were noted public singers before the war. After hostilities began, they organized their famous war quartet, without whom no Union rally within the State of Illinois was complete. It was the Lumbard brothers who first sang George F. Root's "Battle Cry of Freedom" before a great crowd in Court House Square, Chicago. They regarded their work as a mission, rather than as a livelihood.

Anthology Society. Journal of the Proceedings of the Society which conducts the *Monthly Anthology and Boston Review*, October 3, 1805, to July 2, 1811. With an introduction by M. A. De Wolfe Howe. The Boston Athenæum.

The first impression made by this book is one of surprise that it should have been considered worthy of publication. For it is the apparently trivial record of the meetings of a club of young Boston men in which such entries as the following are not infrequent: "After supper, wit and burgundy came in abundance, but our duties were not forgotten." Upon closer examination, however, and especially after reading the genial preface by Mr. Howe, an interest is aroused which grows until one feels grateful to the trustees of the Boston Athenæum for affording us a more than passing glimpse of what Josiah Quincy characterized as "a true revival of polite learning in this country after that decay and neglect which resulted from the distractions of the Revolutionary War."

This revival may be said to owe its origin to the Rev. William Emerson, the father of Ralph Waldo, who sought the aid of some friends as contributors to an anthology which he had undertaken to edit. In October, 1805, fourteen in number and including five ministers, they constituted themselves into a society which should be responsible for the magazine, the title-page of the last volumes of which bore the words, "Edited by a society of gentlemen." The present publication is the secretary's journal of the proceedings, the original manuscript having been presented to the Massachusetts Historical Society by the last secretary, the historian George Ticknor. At the weekly meetings, ending with a supper, the contributions to the *Anthology* were read and discussed, then accepted or rejected by a yea and nay vote, and works for review and articles for the various departments were assigned to the different members. One of these departments, to which constant reference is made, is the "Remarker," written by the members in turn and given chiefly to moral reflections and literary criticism with the intention "either to instruct or entertain." Another is the "Silva," described as "a repository for curious remarks on men and manners, and literary fragments and novelties."

The secretary's journal is not a mere formal record of the business transacted, but a pleasant, humorous account of each meeting such as one would write to a friend. The object of one meeting, for instance, was "to take into consideration the state of our world and to devise ways and means to continue it in motion." At another a piece of poetry was read. "One line was bad. The President tried to 'tinker it,' but could not succeed. It was, however, accepted." That scientific subjects were treated is shown by the following entry: "Mr. Tudor read a philosophical disquisition on the purring of cats, which was accepted." But regarding it seriously, the reader of the journal will find references to nearly every English work of importance of that day, often with most illuminating comments. Well-known names in our history appear and at times in strange relations. "An excellent poetical communication from J. Q. Adams at Washington was approved." This was "on the discoveries of Captain Lewis" in humorous vein. And "the Secretary read a communication from Mr. [Daniel] Webster on the French language, which was accepted." Webster afterwards became a corresponding member.

Though the Anthology Society had a comparatively short life, its influence is felt to-day. At the third meeting it was voted "that a LIBRARY of periodical publications be instituted for the use of the society." To this action Boston owes the Athenæum, whose usefulness not simply to the city but to the country at large cannot be overestimated. Then four years after the dissolution of the Society, one of its most steadfast and active members, William Tudor, jr., aided by some of his associates, launched the *North American Review*. Taking all things into consideration, there can be no hesitation in affirming that the gathering of those young men on October 3, 1805, was "an epoch in the intellectual history of the United States."

The work of the editors has been most carefully and painstakingly done. In addition to the Journal there are lists of members, of contributors to the magazine, of works mentioned, and a most exhaustive index. The attractiveness of the volume is increased by several portraits, including one of the first president, the Rev. J. S. J. Gardiner, D.D., rector of Trinity, and his successor, the Rev. John T. Kirkland, president of Harvard, and some interesting pictures of the quaint old places in which many of the meetings were held.

Notes.

"Letters to Several Persons of Honour by John Donne"; "Famous Importers," by Bram Stoker, and "Cowboy Songs," edited by John A. Lomax, are some of the announcements of Sturgis & Walton Co.

Henry Holt & Co. announce "Darwinism and Human Life," by J. Arthur Thomson, and Logan G. McPherson's reports on "Transportation in Europe."

Among the forthcoming publications of L. C. Page & Co. are: "The Whistler Book," by Sadakichi Hartmann; "The Lands of the Tamed Turk," by Frederick B. Jaekel, and "Hellfire Harrison," by Wallace D. Wattles.

A new issue of Stevenson's "Treasure Island," edited by F. W. C. Hersey, is in the hands of Ginn & Co.

"The Effect of Protection on the Standard of Life in Germany," a pamphlet, is to be issued for the Cobden Club by Cassell & Co. The same firm plans to publish "Breeding and the Mendelian Discovery," by A. D. Darbishire.

Additions to "Everyman's Library" which will be made in September include: Huxley's "Lay Sermons" and "Select Lectures," in one volume, and Lord Dufferin's "Letters from High Altitudes."

Frédéric Lollée's life of the Duke of Morny is to be brought out in an English translation by Bryan O'Donnell.

Richard Savage is to be succeeded in October as secretary and librarian to the Trustees and Guardians of Shakespeare's Birthplace by Frederick Christian Wellstood.

"King Edward VII as a Sportsman" is the title of a book which Longman & Co. are preparing.

Early in September the John Lane Co. will bring out "The Cradle of a Poet," by Elizabeth Godfrey, and "Atonement," by F. E. Mills Young.

Herbert & Daniel of London announce a forthcoming collection of "Essays" by J. A. Hobson.

"The Life and Times of Miguel Hidalgo y Costilla," by Dr. Arthur Howard Noll and A. Philip McMahon, will be brought out in September by McClurg & Co.

The Abbey Co. of Chicago, which has acquired all rights in "the Abbey Classics," will add to the series in October Whittier's "Snow-Bound." By this company will

also be published "A German Christmas Eve," an episode in Heinrich Seidel's "Leberecht Hühnchen." The translation has been made by Jane Hutchins White.

James Pott & Co. make the following announcement of autumn books: "A Chateau in Brittany," by Mary J. Atkinson; "The Dauphines of France," by Frank Hamel; "Nooks and Corners of Old London," by Charles and Marie Hemstreet; "Privateers and Privateering," by Commander Edward P. Statham, R. N.; "A Corner of Spain," by Walter Wood; "Louis XVIII," by Mary F. Sandars; "In the Days of the Georges," by William B. Boulton; "English Palaces—Canterbury," edited by R. S. Rait; "English Palaces—York," edited by R. S. Rait; "The Marriage Ventures of Marie Louise," by Max Billard: English version by Evelyn, Duchess of Wellington; "Old Continental Towns," by Wallis M. Gallichan; "The Origins of Popular Superstitions and Customs," by T. Sharper Knowlson; "The Walls of Constantinople," by Capt. B. Granville Baker; "The Cathedrals and Churches of Belgium," by T. Francis Bumpus; "The Cathedrals and Churches of Northern France," by T. Francis Bumpus; "By the Waters of Italy," by Norma Lorimer.

"Sir Walter Scott, Studied in Eight Novels," by the Hon. Albert S. G. Canning (New York: Wessels & Bissell), is about the sort of analysis and slight comment that a university extension lecturer would employ. "Guy Mannering," "The Antiquary," "The Black Dwarf," "The Heart of Midlothian," and others, including the almost unread novel, "The Surgeon's Daughter," are the topics. It is hard to see why "St. Ronan's Well," which is one of Scott's serious attempts at the true novel of manners, should not have been included. The book is easy reading, but it is strange that any one who has read the eight novels should want them dished up in this summary fashion. Ours, however, is a tabloid age, and Mr. Canning's capsules are as palatable as any.

Frederic Rowland Marvin, the author of "The Excursions of a Book-lover" (Boston: Sherman, French & Co.), evidently reads widely and keeps a well-stocked commonplace book. His method may be illustrated from the essay called Ethan Brand. Ethan Brand naturally recalls Empedocles, whose fate is matched by half a dozen modern instances of men who have cast themselves into furnaces. Hereupon follows a disquisition on suicide. Interesting collections of material are the papers on Book Dedications and on the Physician and his Work. Shakespeare's Bones again is one of the better essays. It is suggested that the famous doggerel epitaph was intended to keep the body from the common destination, the charnel pit, and that the authorities of Holy Trinity could if they would tell us of the condition of Shakespeare's sepulture. There is a hint that the story would diminish the myth, and, naturally, revenue, and a challenge in the name of science to make a thorough investigation of the tomb. Other subjects are Books, The Men of Genius, Holographs—for which the author's collection is drawn on, and At Last the Silent Majority. The best that can be said for these rambling essays as a whole is that the material is often interesting and the treatment good in spots. Mr. Marvin lacks the lighter qualities of the born essayist, and shows no especial tact in compilation. As exercises in the intimacy of a literary club these papers would be most acceptable; they seem to us devoid of wider appeal.

The gratitude every scholar feels at the appearance of any new series of reprints is tempered, upon examination of the first two issues of "The John Rylands Facsimiles" (published at eight shillings, sixpence, for the two, by the library of that name in Manchester, England), by a hope that future additions to the series may show somewhat less of provincialism in the editing. The first of these facsimiles is from the Rylands copy of the "Propositio Johannis Russell," printed by Caxton about 1476. Henry Guppy, Esq., the Rylands librarian, provides an introduction dealing comprehensively with Caxton's career, as well as Lord Russell's, in a style suited to the meanest capacity. His principal contribution is the information that Caxton was a man of simple piety, under whose government the English merchants in Bruges, then one of the most dissolute cities in Europe, resided in the strictest celibacy. This phase of Caxton's personality has not, it is believed, before been noted by those who have studied the documents having to do with his career. It is appropriate that this characteristic should be announced by the custodian of the still unrivalled collection of Caxton's work, brought together at Althorp by Lord Spencer, and now in the Rylands Library, which continues to be largely under the control of the late Mrs. Rylands's spiritual advisers. It is particularly noteworthy that Mr. Guppy should have arrived at his deductions without consulting, according to his own statement, any of the publications of Gordon Duff, his predecessor as librarian of the Rylands collection, and the author of the Caxton Club's "Caxton," as well as of the Catalogue of Mr. Morgan's Caxtons.

Readers of American civil war history who have found it difficult either to understand the relation of one campaign to another, or to get a clear view of the war as a whole, will welcome "The American Civil War," by John Formby (Scribner), an English writer and military critic. For purposes of study and exposition, Mr. Formby divides the theatre of war on land into five districts, and treats the campaigns or other operations in each district year by year, including at the end of each year a survey of naval operations also. Numerous cross-references, looking backward as well as forward, show where each portion of the narrative connects with what has gone before, and where it is resumed; footnotes call attention to contemporary happenings in other districts; and chronological tables in parallel columns sum up the yearly progress. Appended to the longer chapters are biographical sketches and critical estimates, the latter general and sympathetic rather than technical, of notable commanders on the Union and Confederate sides, with a note of such as retire from the stage at the period in question. The defect of the plan, of course, is that a particular story is not always carried to completion in one place; the account of Cushing's sinking the Albemarle, for example, is begun on page 301 and resumed and finished at page 353. In no other work of equally moderate extent with which we are acquainted, however, can one so readily ascertain what was going on in the field at any given time, or observe the contrasted course of the war in, say, the East and the Mississippi valley at the same period. Mr. Formby has apparently not aimed at literary distinction, and his accounts of battles and sieges will be read for the information they contain, and not because they stir the blood. The maps, which fill a separate volume, have the rare advantage of being, with three exceptions, drawn on uniform standard scales, one for campaigns and the other for battles; an arrangement which shows far better than words the comparative magnitude of different operations. The maps are specially indexed, and there is also a good index to the text.

With a picture fronting every fifth page of text, Charles E. Roche's dainty little book, "Things Seen in Holland" (Dutton), makes an attractive pocket companion for either the fireside reader or the actual traveller. The author knows some Dutch and is able to tell us what the personal and place names, rhymes, mottoes, and street cries mean. His impressions are fresh, for his visits have been made within the days of the Princess Juliana. He has read well "The American in Holland," and appreciates the cis-Atlantic point of view at many points. He explains why the Dutch Santa Claus has a black boy, the saint's man Friday, to distribute his presents to the children; not at Christmas time, but on the ancient date, December 6. The negro is an importation from New Netherland. It is hardly correct to say that during the late war with Spain the sympathies of the Dutch people were pro-Spanish and against the Americans. This was true only for a brief period before the outbreak, chiefly among the manipulators of the money market, and was soon over, turning into warm appreciation of the American policy. Mr. Roche knows the various microscopic social differences between Vollendam and Marken and never once writes "Van" Tromp. He surpasses most Englishmen in accuracy of observation and quotation, and this almost without a trace of "a certain condescension of foreigners."

The inception is announced of two Western periodicals which are to devote themselves to the problems of the Mohammedan world. One is *Der Islam*, edited by Dr. C. H. Becker of Hamburg, and published in Strassburg by Karl J. Trübner. The other bears the name of *Orientalisches Archiv, Zeitschrift für Kunst, Kulturgeschichte und Völkerkunde der Länder des Ostens*, edited by Dr. Hugo Grothe of Munich, and published by Karl W. Hiersemann of Leipzig. One of the most informing works on the struggle of Islam and Christianity in the East is that of Pastor G. Simon, himself a missionary for eleven years in Mohammedan Sumatra, entitled "Islam und Christentum im Kampfe um die Eroberung der animischischen Heidenwelt," and published by Martin Warneck of Berlin.

To the attractive Court Series of French Memoirs (Sturgis & Walton), M. Méras has added two more volumes—a good abridged translation of the "Recollections of Léonard, Hairdresser to Marie Antoinette," and a reprint of Grace Dalrymple Elliott's "Journal of My Life During the French Revolution." Both are in a way

amusing, but are pornographic rather than seriously historic. Léonard, by well recognized tonsorial skill and Gascon assurance, won, according to his own accounts, a more than confidential position with ladies of Marie Antoinette's court. The Queen herself seems to have had perfect confidence in his discretion; he shared the secret of the flight to Varennes, and preceded the royal family by a few hours, carrying instructions and a marshal's bâton for Bouillé. An account of the court of Versailles from a hairdresser's anglo of vision is not without amusement and value, if due allowance be made for the author's boastful and fertile ingenuity. To be sure, his alleged recollections, not published until after his death in 1819, were promptly disavowed by his family as "rien qu'un tissu de mensonges" concocted by others for commercial gain; but such a disavowal, made after the Bourbon restoration, may be due to political motives. Grace Dalrymple, after an education in a French convent, made a great impression when she returned at the age of fifteen to her father's home in Edinburgh. Sir John Elliott, a wealthy physician, older than her own father, was so struck with her beauty that he made her an offer of marriage, which was accepted by her with the same inconsiderate haste with which it was proffered. Being speedily freed from this unsuitable match by a divorce, she became successively the mistress of such famous men as Lord Cholmondeley, the Prince of Wales, and the Duke of Orleans (Philip Égalité). She went to Paris about 1786 and lived through the scenes of the French Revolution. Her "Journal," which deals only with the period of the French Revolution, and not with her earlier life, was composed, it is said, in England in 1801, at the express request of George III, and was carried, as it was written, sheet by sheet, to Windsor by the physician who attended both Mrs. Elliott and the King. Being written confessedly seven or eight years after the events it relates, it is in no proper sense a "journal," and it is often exaggerated, misleading, and even self-contradictory. It throws some light upon conditions in Paris, and upon the private life of the ill-fated Duke of Orleans, but is of slight historical value for the general events of the French Revolution.

Florence Nightingale, the heroine of the Crimean war, and the founder of the modern system of army field hospitals, died last Sunday in London, at the age of ninety. Her mind seems early to have turned in the direction of hospital work. Influenced somewhat by the medical books in her father's library, but more especially by her conversations with Elizabeth Fry, the reformer of conditions in English prisons, Miss Nightingale began to make a systematic inquiry into the regulation of hospitals. She carried on her studies in Germany and France, taking active part in nursing. It was not, however, until after the outbreak of the Crimean war, in 1854, that her genius was really exercised. When all England was aroused by the reports of the unsanitary conditions in the hospitals at Scutari, Florence Nightingale, with the consent of Sidney Herbert, then at the head of the War Department, went with her little band of nurses to the front, and assumed her noble mission. After her return, the British people, out of gratitude, presented her with $250,000, and Queen Victoria herself gave her a magnificent jewel. More recently, she was decorated with the English Order of Merit. The Honorary Freedom of the City of London was granted to her on March 16, 1908. Not only her active service but her publications have brought her distinction. They include: "Notes on Hospitals," "Notes on Nursing," "Notes on the Sanitary State of the Army in India," "Introductory Notes on Lying-in Institutions," and "Life or Death in India."

The Rev. William Benham, D.D., since 1885 honorary Canon of Canterbury, died recently in London at the age of seventy-nine. The list of his works contains: "English Ballads"; "The Church of the Patriarchs"; an edition of Cowper's poems; a new translation of Thomas à Kempis's "Imitatio Christi"; "Cowper's Letters"; "How to Teach the Old Testament"; "A Short History of the Episcopal Church in America"; "The Dictionary of Religion"; "Rochester Cathedral"; "Mediæval London"; "Old St. Paul's"; and, as joint author, "Life of Archbishop Tait."

Drama.

The Acharnians of Aristophanes: The Greek text revised with a translation into corresponding metres. Introduction and commentary. By Benjamin Bickley Rogers, barrister-at-law, Sometime Fellow and now Honorary Fellow of Wadham College, Oxford. New York: The Macmillan Co. $3.25 net.

The Knights of Aristophanes. (Same as above.) $3.50 net.

The publication of this translation of "The Acharnians" is a noteworthy event. Mr. Rogers (introduction, p. li) says:

> Although there are still four plays—the Clouds, the Wasps, the Peace, and the Lysistrata—to be brought into this edition, yet the translations of all four have been published, so that this volume will complete the translation of all the extant Comedies of Aristophanes.

It need cause no surprise that an English barrister-at-law should choose this labor of love as his avocation, but it is remarkable that his successive translations have challenged the attention of scholars by the accuracy of the renderings, and have won the admiration of all readers for the felicity of the spirited verse. Even the famous translations by Frere must yield the first place. In the "Thesmophoriazusæ," published in 1904, Mr. Rogers, it is true, departed from his plan of printing translation and text on opposite pages, and, instead, printed a free translation at the end. He explained this by a note: "The greater part of this translation was composed from memory, when the translator had no copy of Aristophanes at hand." That such a *tour de force* should have resulted, as the author himself insists, in a translation in which "hardly a line represents the exact meaning of the original," is not so amazing as that he should have been able at all to reproduce from memory the substance and spirit of the comedy. We might wish that he would yet re-translate the "Thesmophoriazusæ" with the same care that he has bestowed upon the other plays, but we have in such a paraphrase from memory convincing proof of his peculiar fitness to deal with his favorite author.

The matter in the introduction, commentary, and appendix to the present play cannot here be discussed in detail. But Mr. Rogers everywhere shows wide reading, and, far from accepting without challenge the opinions of other editors, is ready to give fresh views of his own. The following reference to Thucydides, for example (see introduction, p. xxxi, reinforced in the commentary) indicates his breadth of interpretation:

> The great historian recognized the historical Comedies of Aristophanes, of which the Acharnians, the Knights, the Peace, and the Lysistrata are the only surviors, as being like his own History, a κτῆμα ἐς ἀεί, a possession for all time, and in composing his own work kept steadily in view the deep impression which those comedies had made upon the Athenian people.

It seems a little surprising that Mr. Rogers, even though brought up in the older traditions—it was more than forty years ago that he translated "The Peace"— should refer so nonchalantly to the "stage" and the "the boards of the Athenian theatre" without a word of comment upon the discussion about the very existence of a stage in the days of Aristophanes. In lines 408-409, where Euripides is wheeled out by means of the *eccyclema*, Mr. Rogers has the courage to insert his interpretation in the translation by use of the legitimate, but somewhat blind, word, "pivot":

> (Dionys.) But pivot. (Eur.) But it can't be done. (Dionys.) But still. . . .!
> (Eur.) Well then, I'll pivot, but I can't come down.

The metres of the original are fairly described on the title page as "corresponding" to the Greek. Some of them, indeed, are an exact rendering, in so far as we may speak of an exact transfer into English. Even where there is a change of metre for merely a single line, Mr. Rogers is careful to follow the original. In the choric parts he, of course, betakes himself to freer lyric verse, but often manages a close approximation. The Cretic verses are indicated by an ingenious use of capitals and of interior spacing as well as by sporadic interior rhymes, sufficient to guide the ear without running too much risk of breaking up the long lines into a series of one-stress verses. Thus in vv. 299-301:

> No delay! Thee to slay We'll immediately begin.
> No debate! Thee we hate Worse than Cleon's self, whose skin

I'll erelong Cut to shoes For the worthy Knights to use.

The regular dialogue metre, the iambic trimeter, is rendered by the conventional English five-stress iambic. Probably few English readers would desire or, at first, be content with a reproduction of the six-stress iambic. But it would have been interesting to see how so skilful a translator would have managed the real equivalent of the Greek. Browning in his "Fifine at the Fair," has naturalized this unpopular measure by the help of rhyme. Rhyme could hardly be tolerated in translating Greek dialogue, as it would, *inter alia*, often unequally yoke together lines disjoined by the sense. But Mr. Rogers, if any one, might have managed, by overlapping caesura, or otherwise, to prevent the lines from breaking each into two three-stress lines. To the common objection, that English ears revolt against the two extra syllables, the reply might be urged that, to ears accustomed to the Greek trimeters, the line is deficient without this extra "foot." And, if the closest approximation to the original is the real desideratum, mere procrustean habit need not stand in the way of any experiment not actually inconsistent with the genius of English verse.

Of the translation itself little, except in praise, need be said. The renderings of the difficult original are entertaining and often even sparkling. Above all, they are close to the Greek. So uniformly faithful, indeed, is Mr. Rogers to the original that it is hard to see why he occasionally leaves out some essential phrase, like (v. 282) πᾶς τὸν μιαρόν or (v. 1228) ὦ πρέσβυ. That the transfer of puns is labored and often requires a footnote is not really a serious defect. We are not as much concerned about the puns as the parodies, and, above all, the lyric element in Aristophanes; and in both of these Mr. Rogers is admirable, although in "The Acharnians," his lyric verse is not laid under contribution as it is, for example, in "The Frogs." Some of the made-to-order compounds are blind or forced, like "syco-Phasian" (v. 726), where "sycophant" has not been introduced into the previous line; "verdict-bite" (376) hardly takes hold of the imagination; and a coined word like "seekrian," used three times in 595 and 596, fails to be intelligible and serves only to annoy the reader. On the other hand, "bemiry-slushified" (382) is intelligible, and is in line with the Aristophanic *pro tempore* compounds. The Shakespearian "enshield," to translate ἐνασπιδώσομαι (368), indicates careful selection. His use, following Tyrrell's and Billson's versions, of Scotch and Irish in the Megarian and Bœotian dialect scenes, is an obvious device to an inhabitant of the British Isles and successfully reflects the dialectic differences in the original.

The translation of the "Knights," although published subsequently to that of the "Acharnians," takes its place as earliest of the plays. The two are now also published as Vol. I of the six-volume series, each containing two of the eleven comedies of Aristophanes, with the "Menæchmei" of Plautus, and an index, added to Vol. VI. What we have said of the translation of the "Acharnians" applies in general to that of the "Knights," but the puns and plays upon words, it may be noted, are better managed in this play, *e. g.* (ll. 278-9):

. . . contraband of war he takes
For the Peloponnesian galleys, frapping
them with—girdle-cakes.

At ll. 454-6, indeed, not content with the original, Mr. Rogers gives us a three-story pun:

And with those entrails beat him,
And strings of sausage-meat, and try
Meet punishment to mete him.

In the "Knights" he also accepts the occasional chances for his more serious lyric effort, *e. g.*, ll. 581-589:

Holy Pallas, our guardian Queen,
Ruling over the holiest land,
Land poetic, renowned, and strong,
First in battle and first in song,
Land whose equal never was seen,
Come to prosper our Choral band!
Bring thou with thee the Maiden bright,
Her who greets us in every fight,
VICTORY!

The virtues, in short, of these translations are many and great, and all minor criticisms seem like hypercriticism in welcoming a version so spirited, readable, and accurate of an author whose text bristles with difficulties for the translator.

Art.

TURNER'S GALLERY.

LONDON, August 2.

More than half a century has passed since Turner bequeathed his pictures and drawings to the nation, but it is only now, with the opening of the new Turner wing at the Tate Gallery, that they have been brought together into one almost complete collection and arranged with some show of appreciation for the value of the bequest. "The nation buried Turner with threefold honor," Ruskin said years ago; "Turner's body in St. Paul, his pictures at Charing-Cross, and his purposes in Chancery"; and the saying is not merely witty, but true. Buried, his pictures and drawings were at the National Gallery in more senses than one. The walls of the Turner Room upstairs were disastrously overcrowded; to the Turner Room in the basement few save the enthusiast ever penetrated. It was left to a private individual to make possible the exhibition of Turner's works as Turner wished them to be exhibited. To the late Sir Joseph Duveen the nation owes "Turner's Gallery"—the gallery for which Turner stipulated in his will, though the question has been raised as to whether the site chosen for it comes equally within the requirements he exacted. However, the Tate, or the National Gallery of British Art, to give it its official name, is a branch of the National Gallery to which the pictures were to go, and at this late day there is no use pointing out the mistake of having placed it so far from Trafalgar Square and in such an out-of-the-way corner of London; the interest for us is less in the legal interpretation of the will than in the manner in which advantage has been taken of the finest opportunity ever yet given for the exhibition of any one master's work. Not Velasquez in Madrid, not Rembrandt in Amsterdam, not Hals in Haarlem, is so fully represented as Turner is now in London, after his long years of waiting.

The Turner wing is built at the back of the Tate Gallery, of which it has become a part. One large and one smaller room for paintings, and three still smaller rooms for water-colors and drawings, are on the main floor, while below, in the basement, are four more rooms of a fair size for paintings and water-colors both, and a hall where a few designs and plans are hung. The largest room of all is pleasantly spacious but high out of all proportion, with a heavy barrel-shaped roof. The light is consequently poor. Worse still is the scheme of decoration, astounding nowadays when the value of restraint in these matters is almost everywhere appreciated. Nothing could be more gaudy; even the National Gallery at Vienna, as I remember it in its first fresh gorgeousness, was quiet in comparison. For the background to the paintings is a Venetian brocade of a sharp, vivid red, so dazzling that I can see no excuse in the suggested explanation that it was the background used by Turner in his own gallery in Queen Anne Street. This may be, but Turner's ceiling must have been comparatively low; the ceiling here is immensely high, which makes all the difference. Time in London works wonders, and fog and smoke and grime quickly tone down the crudest and most glaring colors; but so great a stretch of even dingy red brocade will be, if less glaring, scarcely more beautiful. Those walls which have been treated with greater reserve and less deference to Turner, and covered with a coarse-grained Japanese gold paper, are at least neutral in character, and therefore inoffensive.

With so many rooms at his disposal, the keeper, D. S. MacColl, has found the hanging a simple matter. He has been able to place almost all the paintings on the line with a margin of wall be-

tween, instead of piling one above the other and fitting them into a sort of mosaic puzzle, as in the old Turner Room at the National Gallery, and the result is that never have they been seen so well before. By showing only a certain number of water-colors and drawings at a time, changing the collection at intervals, no overcrowding is necessary in this section either.

What Turner might think of the choice of pictures and drawings shown is a question. It cannot be denied that in this particular, the conditions of his bequest have not, even now, been over strictly adhered to. For two of his pictures, the Sun Rising through Vapor and Dido Building Carthage—the painting which he said he intended for his winding sheet—he demanded a place between two Claudes at the National Gallery, where they were to prove to his disappointment, could he have foreseen it, the superiority of the Claudes. This wish has been respected, though, just at this moment, the Turners do not hang between the Claudes, but on either side, and, in one case, with another picture separating them; an arrangement which may be temporary, however, as, what with the building of new rooms and the rearrangement of others, the present state of the National Gallery is somewhat chaotic. To those who have long been familiar with the Gallery, it will come also as a surprise to find the four pictures transferred to the British Section, where they are hanging in the Turner Room. For there is still a Turner Room, though not now the old well-known one, but the room adjoining, where the Landseers and Wards once were. In saying this, I am explaining just how Turner's wishes have been disregarded. His intention was that all the pictures of his gift should be included in Turner's Gallery, but, no doubt that he may retain a place among the masters of the world, fifteen or sixteen pictures, some of which are landscapes belonging to his early period and some brilliant Venices belonging to the later, have been kept in Trafalgar Square. A number besides are still scattered about in provincial galleries. Again, the inference is that Turner was disposing of finished work alone when he made his bequest. But many unfinished paintings are hung, one series having a good-sized room devoted to them especially, and the unfinished drawings and water-colors are more numerous. Whether he would have countenanced the public and permanent exhibition of all of them, it would be difficult for the present generation to decide, but at least their value to artists and students is assured. For people who understand, nothing could be more suggestive than to pass from the rooms of masterpieces upstairs to one of the basement rooms filled with a series of fairly large landscapes that date back to a time when he had not outgrown the influence of Gainsborough and the Dutch landscape men, and that were sketched in boldly and vigorously and then abandoned. It is suggestive, too, to compare with the elaborately completed work, those little sketches in water-color or pencil or chalk that were the preliminary notes for them.

The work has been hung with due regard to historical and biographical sequence as well as decorative effect. The large gallery contains the large masterpieces that belong, mainly, to the early and middle periods, while he still accepted the then recognized conventions of landscape, and before he had developed from them a formula of his own. Here are the Calais Pier and the Shipwreck, with their dramatic conception and composition, their splendid energy, so well subordinated to the traditions he had inherited; here are the melodramatic Hannibal Crossing the Alps through the storm that Turner had watched and noted at Farnley, and the ingenious Apollo Slaying the Python, both characteristic of the reverence for historical and classical motives, for the "grand manner," still cultivated in landscape as in subject pictures when Turner set out upon his career; here are one or two of the anecdotes in the manner of Teniers and the little Dutch masters, or inspired, some contend, by the success of Wilkie; and here, in the centre of honor, is the great masterpiece of all, Crossing the Brook, which, for dignity of design, harmony of color, serenity of atmosphere and feeling, has in its own way never been surpassed by Turner or any other painter. In the adjoining, smaller gallery are the canvases which were discovered but a few years ago, rolled up out of sight in the cellars of the National Gallery, and of which I wrote so fully at the time they were first exhibited at the Tate. Once more, as in the room first allotted to them, one marvels at the indifference or indolence of the authorities, who for years kept buried in the cellars such little masterpieces of atmosphere and movement and light as the two or three versions of Yacht Races in the Solent, such a revelation of the tenderness and mystery of night at sea as The Evening Star, such a riot of color and sunshine and gorgeousness as the Interior at Petworth, in which Turner seems to have anticipated the modern Impressionists and delighted in demonstrating to them how easily and supremely he could forestall them and beat them in their own game. It is an astonishing performance, the more so because in most of the interiors which Turner now and then painted he preferred to adhere to Dutch models, even to Rembrandt, as was seen in a very curious picture by him contributed to this year's exhibition of Fair Women arranged by the International Society at the Grafton Gallery. In the same room with this newly-discovered series several examples of his late manner long familiar to visitors to the National Gallery have their place, dominating them all The Fighting Téméraire and Rain, Steam, and Speed—the Great Western Railway, in which Turner showed that he, the artist, had eyes for the grandeur and romance and picturesqueness of those then modern inventions and innovations which Ruskin, his prophet, never ceased to denounce. The regret is that Turner did not occupy himself more with subjects of this kind than with the canals and lagoons of Venice, which, to be honest, he did not see as truly and sympathetically; that is, if we can trust to the evidence of the paintings as they exist to-day. There are artists of younger generations who have understood still better the beauty of rain, steam, and speed, but it was Turner's triumph that he could understand it at all when railways were as yet a novelty and landscape was hidebound by tradition. The paintings downstairs are of lesser interest and importance. The more complete are not to be counted among his unqualified successes. Some of the later examples seem to have suffered from the effect of time and his own failure to safeguard himself against it; most of the earlier would not be of very special interest if Turner had not painted them, though in one or two there is a suggestion, a premonition, of the beauty that Corot was ultimately to make his own. The unfinished series to which I have referred belongs mainly to about 1807-1808, the period of several of the very fine canvases in the rooms above and of the Winds and the Sun Rising through Vapor at the National Gallery, but I cannot say that any of these landscapes reveal more unmistakable marks of genius than the unfinished oils of many of his contemporaries might; to a far greater extent than in his finished pictures of the same date he appears to have been restricted by his deference to prevailing standards and conventions, and it is not unlikely that he realized it, and for this reason never carried them further. They should teach a much-needed lesson to the young student of to-day by reminding him that deference to tradition is the most solid foundation to independence and originality in an artist. Had it not been Turner's habit to hoard his notes and sketches, sometimes the slightest, it would be puzzling to say why this series was preserved by him.

On the whole, a better selection of water-colors might have been made. Some fifty or sixty of the finest done in Italy and Switzerland, along the French rivers and in England, are still in the National Gallery as I write, though, in face of the chaos through which it is passing, I should not venture to say that this means they will be there to-

morrow. Others that the enterprising intruder into the basement at Trafalgar Square may remember there of old are already at the Tate, and have been added to from the nineteen thousand and so which came into the possession of the Government after Turner's death. The drawings in various mediums and including the studies for the Liber are a record of a busy life which has never been told as it should, perhaps, because there was so little in it, except work, of which to tell. The very excess of material in this section necessarily proves a drawback. It can be no light matter to select from almost twenty thousand examples, even though Ruskin and his successors have sorted and catalogued them.

A new edition of the catalogue of the Tate Gallery has been published just in time for the opening of the Turner Wing. It contains, in addition to a sketch of Turner's life, an account of his bequest and its administration from the moment of his death until now. It also gives a complete list of the works he bequeathed, explaining, by appropriate references, which of these are at the National Gallery, which at the various provincial galleries. The pictures are described, the measurements given, important facts in connection with them stated, and important references to them quoted. N. N.

Finance.

A FINANCIAL SYMPTOM.

The curious chapter in our international trade, which began with the $7,200,000 "import excess" of June, 1909—the first disappearance of the monthly export surplus in a dozen years—seemed to have culminated in the $19,200,000 import excess of last March. That was the largest excess of the period, running considerably beyond the inward balances of June, July, and August, 1909, or of February, 1910. It was felt, when the March trade statement was given out, that the abnormal phenomenon would not be seen again. Prices were slowly relaxing on the great commodity markets, which was the way to correct a situation mainly created by the fact that our prices were out of joint with the rest of the world. Credit markets were simultaneously contracting, thus apparently removing the machinery through which forestallers, speculators, and even plain producers were holding back goods from market so as to sustain the artificial prices. As a matter of fact, the foreign trade situation did begin to improve at just that time. There was, to be sure, another "import excess" last April, where there had been none a year before; but the April excess, $853,000, was a trifle compared with the $19,200,000 of March. Moreover, in May came an export excess of $11,200,000, against a similar excess of only $7,200,000 in May, 1909, and finally, June showed $8,100,000 export surplus, where the same month in 1909 gave an excess of more than $7,000,000 to the imports. In other words, the merchandise balance seemed definitely to have turned.

This present week, however, the Government has published a report on the country's foreign commerce in July—which calls for some reflection. The month has brought us back again to an "import excess," which is $2,800,000, or only a few hundred dollars short of that of a year ago. It will possibly be suggested that the dwindling agricultural exports of the month were responsible for this. In point of fact, however, the July exports as a whole actually increased $5,000,000 over 1909; it was imports again which did it. They rose nearly $5,000,000 over a year ago, and except for the very abnormal year 1907, they exceeded the July imports of any previous year in the history of the country. When, moreover, one figures out results for the seven completed months of the year to date, he finds that, as against the $372,000,000 excess of exports for the period in 1908, and the $67,000,000 of 1909, the present year has an export excess of only a beggarly $1,600,000.

This is a very remarkable exhibit, and it is quite impossible to ignore its importance as a symptom of the day. It is not necessary to revive the obsolete "mercantile theory" to assert that, when our annual excess of exports over imports has for decades been utilized in offsetting heavy annual dues of our own to Europe, it cannot be cut off for half a year without in some way affecting the country's position on the international money market.

No one has ever been able to determine with any approach to exactness the various items in this "economic balance" between ourselves and the outside world. Fifteen years ago, a very thorough investigation by the head of a well-known New York international banking house calculated that the annual payments due from the United States to Europe, wholly outside of merchandise account, were no less than $350,000,000, of which nearly one-third was for money spent abroad by American tourists, while something less than one-half was for remittances against European holdings of American securities or European investments in other American fields. Since 1895, American securities held abroad have in the aggregate been reduced and with them the annual "coupon payment." But foreign expenditure by American tourists and by American residents in Europe has been enormously increased; not only do two or three times as many Americans go abroad now as then, but each of them, on the average, spends two or three times as much. Even assuming the $350,000,000 "invisible balance" then reckoned to be still in force, the "visible balance" of $251,000,000 on merchandise export account for the calendar year 1909 would fail to meet the bill, and a further decrease of $65,000,000 for the first seven months of 1910 would hardly help the matter.

Our import trade is undoubtedly bound to grow, with the rapid expansion in the country's population, but our export trade grows with it. The salient fact at present is an increase in imports, wholly out of proportion to the export increase, and the explanation of this fact, after allowing for some $13,000,000 decrease in the seven months' cotton exports—due to last year's deficient crop—is that prices have been held so high in the United States as to arrest our export trade, where we had enough to spare for the outside world, and simultaneously to expand abnormally our import trade, because we were the most profitable market in the world on which to sell. If the resultant situation is unnatural—as it seems to be—then it should certainly appear that the only immediate remedy is reduction in such prices.

ORDER FROM YOUR BOOKSELLER THE BIG NEW NOVEL

"THE LEAD OF HONOUR"

By Norval Richardson

From Page's List

"It will take its place among the greatest American novels of the day," says the *Boston Herald*.

"Mr. Richardson has given us a capital story, which is well worth the perusal, and we congratulate him upon the measure of success attained," says the *Boston Transcript*.

READ IT AND YOU WILL THANK US FOR HAVING RECOMMENDED IT TO YOU.

With frontispiece in full color from a painting by Frank T. Merrill. Cloth, $1.50

JUST READY

"COMRADES OF THE TRAILS"

By G. E. Theodore Roberts

Author of "Hemming, the Adventurer," "A Cavalier of Virginia," "Red Feathers," etc.

A story of adventure and hairbreadth escapes—full of dash and fervor! "A veritable breath of the 'big woods' blows through it, and it will hold adventure and nature loving readers spellbound."—*Chicago Record Herald.*

With six full page illustrations, decorative end leaves and minor decorations by Charles Livingston Bull. Cloth, $1.50.

"BOHEMIA AND THE CZECHS"

The Geography, History, People, Institutions and Cities of the Austrian Kingdom, Together with Accounts of Moravia and Silesia.

By Prof. Will S. Monroe

Author of "Turkey and the Turks."

Readers in general, and travel lovers in particular, are certain to enjoy Prof. Monroe's new work, the first descriptive and authentic volume on Bohemia issued in English. *With many illustrations, cloth, boxed, $3.00*

RECENT ISSUES

"MY HEART and STEPHANIE"

Continuing the adventures of MISS FRANCES BAIRD, the heroine of the detective story of that name.

By Reginald Wright Kauffman

"We found the heroine of this absorbing and exciting story admirable, and were delighted with the surprises that she furnished us all along."—*New York Sun.*

Cloth, illustrated, $1.25

"A CAVALIER OF VIRGINIA"

By G. E. Theodore Roberts

Author of "Comrades of the Trails," etc.

"One certainly feels a wish to personally thank the author for this clean, breezy and bracing story."—*Simmons Magazine.* *Cloth, illustrated, $1.50*

"HOUSEBOATING ON A COLONIAL WATERWAY"

By Frank and Cortelle Hutchins

An account of a summer lazed away on a cruise up the James River and some of its tributaries on the lovable and lubberly craft "Gadabout," with frequent visits to the historic old Jamestown Island.

Illustrated from photographs taken specially for the book. Cloth, decorative, boxed, $2.50.

"SUSAN IN SICILY"

By Josephine Tozier

Author of "Among English Inns."

"Miss Tozier's book is full of humor, vivid descriptions of the land and the people and keen observations of the Sicilian characters, which she has studied with sympathetic appreciation."—*Boston Globe.*

Attractively illustrated, cloth, decorative, $2.00

"THE BOSTON MUSEUM OF FINE ARTS"

A Descriptive and Critical Account of Its Treasures, Which Represent The Arts and Crafts from Remote Antiquity to the Present Time.

By Julia deW. Addison

Author of "Arts and Crafts in the Middle Ages," etc.

"To all readers of America's progress in the acquisition of art treasures of the world, this book will be an interesting volume of reference."—*Chicago Examiner.* *Profusely illustrated in duogravure. Cloth, decorative, boxed, $3.00*

ONE OF THE BEST SELLING BOOKS IN THE COUNTRY

L. M. Montgomery's

"KILMENY OF THE ORCHARD"

By the Author of "ANNE OF GREEN GABLES" and "ANNE OF AVONLEA"

"This story is as refreshing—and perhaps more stimulating—as a drink from a cool spring set back from the novel reader's dusty road."—*The Independent. With four illustrations in full color from paintings by George Gibbs. Cloth, $1.25*

Educational.

New York, Tarrytown, Box 760.

Hackley Lower School (Boys 9 to 13)

Situated on an elevation of 500 feet above the Hudson River, twenty-five miles from New York City. Modern facilities for thorough school training with every natural advantage for healthful home life. Prepares for Hackley Upper School. For catalog and illustrations, address

HAROLD F. AVERY, Director.

THE FISK TEACHERS' AGENCIES.

EVERETT O. FISK & Co., Proprietors.

2 A Park Street, Boston — 1505 Pa. Ave., Washington
156 Fifth Ave., New York — 414 Cen. Bld., Minneapolis
203 Mich. Ave., Chicago — 611 Swetland Bld., Portland
405 Cooper Bld., Denver — 238 Douglas Bld., Los Angeles
319 Hyde Bld., Spokane — 2142 Shattuck Ave., Berkeley

Send to any address above for Agency Manual.

BRYN, MAWR, Pennsylvania.

The Misses Kirk's College Preparatory School

Preparatory to Bryn Mawr and other colleges for women. Small classes supplemented by careful individual instruction. Teachers all thoroughly familiar with Bryn Mawr requirements. Tennis and basketball. Twelfth year opens Oct. 5, 1910.

ALBANY TEACHERS' AGENCY

Supplies schools of all grades with competent teachers. Assists teachers in obtaining positions. Send for Bulletin No. 20.

HARLAN P. FRENCH, 81 Chapel St., Albany, N.Y

NEW YORK LAW SCHOOL Day School, 174 Fulton St. Evening School, New York city

"Dwight Method" of instruction. LL.B. in two years. LL.M. in three years. High standards. Send for catalogue. GEORGE CHASE, Dean.

BETHLEHEM PREPARATORY SCHOOL.

Bethlehem, Pa. Prepares for leading colleges. Catalogue. H. D. Foering, B.S., Prinelpal.

Four Plays of Menander

Edited with introductions, notes, critical appendix and bibliography, by EDWARD CAPPS, Professor of Classics, Princeton University.

Price $2.50.

An edition adapted to the needs of college students, making available to them for the first time the works of Menander. The text is that of the manuscript found at Aphroditopolis in 1905. The editor has restored the missing and mutilated portions according with the consensus of opinion of scholars who have made a special study of Menander.

NEW YORK, THURSDAY, AUGUST 25, 1910.

The Week.

President Taft's letter to Mr. Griscom is calm in tone, but is a terrible exposure of trickery and bad faith on the part of the men who have set themselves up as managers of the Republican party in the State of New York. Chief among them is Vice-President Sherman. He is entitled to the first prize for demerit. From the detailed statement of the President, it is clear that Mr. Sherman attempted to deceive, first Mr. Taft and then the public; that he suppressed a telegram from the President which would have put a wholly different light upon the matter coming before the State Committee; that he intrigued with Barnes and Ward and Woodruff behind the President's back; and that his subsequent effort to make it appear that he was spokesman for the Administration was an impudent and false pretence. Whatever may be hereafter thought of him as a man, his reputation as a politician is ruined. He is about to start on a campaigning tour in the West, where it was announced that he would interpret the President's views. But the country now knows what is the President's view of him.

There can be no doubt that Chairman Griscom is right in saying that the action of the State Committee can now easily be reversed. It is not yet settled whether Mr. Roosevelt's "engagements" will admit of his acting as chairman at the State Convention; and we may feel pretty sure that, if the signs are plain that the New York Republican campaign is to be a losing one, the "fortune's champion" of Sagamore Hill, "ever strong upon the stronger side," will not put himself at the head of it. Yet in any event there is certain to be a great change of front at the State Convention. The progressive element of the party, with both Roosevelt and the Administration on its side, will be able to decide what the platform shall be and what sort of candidate shall be chosen. President Taft's explicit endorsement of some form of direct primary will make it inevitable that the party—unless it wishes to be buried a thousand fathoms deep—will come out for it unmistakably. In general, the President's letter is a great source of strength to the decent Republicans of New York. The Ward-Barnes-Wadsworth-Woodruff plans have been smashed. The way is now open for a vigorous rally by honest Republicans, and for a campaign which is not foredoomed at once to defeat and disgrace, as any campaign directed by the disreputable machine crowd would surely have been.

Gov. Hughes's investigators into the charges of the fraud in the Adirondack land purchases are plainly "getting warm." At the first session, George N. Ostrander described the methods by which the Raquette Falls Land Company, in which he was associated with ex-Congressman Louis W. Emerson, paid $217,000 in dividends on $200,000 of capital in four and one-quarter years. In 1906, the company sold to the State for $152,314, land which it had purchased five years earlier for $84,814, a profit of more than $63,000, not to speak of the sum of $26,000 received from the "Paper Bag Trust" for timber sold from the tract. The Pickhardt tract on Schroon Lake, which was bought for $3.65 an acre, was sold eleven months later to the State for $7.25 an acre. This land, it appeared, had been offered to the State by its former owners at about half what Ostrander got for it. But the forest purchasing board, of which Commissioner Whipple of the State Forest, Fish, and Game Department and Speaker Wadsworth were members, refused the offer, although they later accepted one from Ostrander at the enormously increased figure. This bit of Republican prosperity Ostrander gratefully acknowledged by regular campaign contributions to the Republican party. At a later session, it developed that Ostrander had put his name to Whipple's notes for $20,000. Of course, this had nothing to do with the fact that Commissioner Whipple was a highly influential factor in recommending what lands should be bought by the State.

In practice, it is never easy to separate the sheep from the goats, and this holds good for the segregation process now under way within the ranks of the Republican party. There are regulars and there are insurgents, but there are also more or less timorous wanderers between the camps. On the progressive side it has been necessary to coin the term "near-insurgents." On the standpat side one daily paper finds it possible to speak of Representative Mann of Illinois as "an unusually independent regular." The phrase suggests infinite gradations. From regularity to independent regularity, from independent regularity to unusually independent regularity, from unusually independent regularity to almost chronically independent regularity, from almost chronically independent regularity to near-insurgency, from near-insurgency to insurgency—here is an entire spectrum of party color, where but a short year ago was only the single unbroken ray of Republican white light. At present, indeed, it is scarcely right to speak of factional lines within the Republican party; but here and there and everywhere fissures and gaps and leads are opening up, as in the ice-field in spring, to the sound of much grinding and groaning.

Senator Lodge has again satisfactorily explained away all the tariff misunderstandings. We expect, therefore, to hear no more insurgent mutterings in Massachusetts, particularly as the Senator has used a new argument that will close every mouth that might have opened to give voice to tariff discontent. He denounced, it is reported, "any effort to strike at the tariff now when any revision will necessarily be done according to the old, unscientific method." The inadequate report before us stupidly fails to tell us how Mr. Lodge rehearsed his long years of protest against the old, unscientific methods of tariff-making and regularly denounced to Massachusetts audiences the result thereof. Surely all our readers will remember his heated outbursts against the Dingley and McKinley tariffs because of the manner of their construction, even though they have slipped our minds. But Mr. Lodge did not confine himself to straightening out the tariff. He quelled rebellion in his own camp by squelching Joseph Walker, the Speaker

of the Massachusetts House, who has just declared himself a "Progressive." Mr. Lodge announced that he disliked any classification of Republicans. He said he objected to the term "insurgent" or "progressive" or any other adjective that might be chosen to split the Republican party into factions. "This is no time for division," he went on; "it is time for union. I want to see the Republican party large and united, not small and divided." Then, like the defeated candidate for the Gubernatorial nomination in California, and Timothy L. Woodruff, he declared that he could see no evidence in his State of any insurgency whatever. Of course, with Lodge, what he cannot see does not exist.

President Schurman's address at the Silver Lake Assembly last week on representative government is taken, not unnaturally, as an attack upon direct nominations. What he actually opposed was direct legislation by the people—that is, the initiative and referendum—but he incidentally grouped the direct primary with it. His speech should really have been delivered in Oregon. It was not strictly applicable to anything that has been seriously proposed in New York. If an educated man is to discuss politics at all he ought to show that his education has given him the power to discriminate between things that differ, but that is precisely what President Schurman did not seem to do. There is no inherent antagonism between direct nominations and the system of government by representation; indeed, the latter may be made to work better by means of the former. In none of the bills for the direct primary urged at Albany is there a clause or syllable looking to the abandonment of representative government. Their entire aim was simply to make it more truly representative.

One characteristic of the progressive movements in most of the Western and Middle Western States is well illustrated in the heated primary contest in Wisconsin. It is the tendency of many Democrats to be more interested in progressive success in the Republican party than in their own. Natural sympathy is responsible for part of this drift. Where Republicans are in the majority, there also exists the desire to have a hand in the selection of the men who have the best chance of being elected. In Wisconsin, it has led to a classification described by Senator La Follette as "fair-minded Democrats," who for years have been in the habit of supporting him in both primaries and elections. Democratic leaders, hampered by this constant defection, are this year earnestly striving to keep their followers in line. One of their moves has been to name two opposing candidates for United States Senator in the hope that a warm party contest may prevent Democrats from supporting La Follette against Cook, his standpat opponent. They have shown their resentment in their bitter attacks on Judge "Ben" Lindsey of Colorado, who, in a tour of the State, has been urging Democrats to stand by La Follette. They are fearful, too, of the operation of the "20 per cent. law" which will prevent their having a party column on the ballot in November, if they do not in the primary poll 20 per cent. of the vote cast by them at the last Presidential election. Meanwhile there are no indications that Wisconsin is weakening in its allegiance to progressive principles, or its loyalty to La Follette. Bristow of Kansas has been speaking to audiences that for size and enthusiasm compare well with those in his home State. And Cummins, Clapp, and other progressives are coming to the support of the man who was once "the only insurgent in the Senate."

California insurgency won a sweeping victory in last week's primary. The nomination of Hiram Johnson, the insurgent Republican candidate for Governor, by a large plurality and of three insurgent Congressmen shows how deep was the feeling against the regular party organization. No seat has been won from an insurgent, and everywhere some seats have been taken from the standpatters. National issues were involved in the contest, Johnson having openly avowed his sympathy with the Republicanism of Dolliver and Cummins and La Follette, but the main fight, after all, was against boss domination and corporation politics in California. "Smash the bosses!" was Johnson's constant appeal to the voters, varied by denunciations of the long-standing and pernicious activity of the Southern Pacific in State affairs. The result not only is a great triumph for independence in California, but is symptomatic of the way in which the fountains of the great deep are being broken up in the Republican party all over the country. Insurgency has now fully reached the status of successful revolution. It can no longer be sneered at; it must seriously be reckoned with. Even at Beverly this is now distinctly perceived. And the smashing of the California bosses by means of the direct primary helps to explain why the New York bosses dread it as the devil does holy water.

On the Republican side in the Nebraska primary, the result was practically a drawn battle between insurgents and regulars. The renomination of Senator Burkett is described as the victory of a standpatter, but he is not that in the true sense; while his opponent, Mr. Whedon, who called himself an insurgent, had a record which made that term misleading if not ridiculous. But the chief political significance of the primary in Nebraska lies in the complete defeat which the Democrats administered to Mr. Bryan. All the candidates whom he favored were beaten, and all the policies which he advocated were rejected. The whole is a terrible blow to Mr. Bryan's prestige in his own State. We do not say that he cannot recover from it, or that he will, as some hastily conclude, give up his political activity and go to live on his Texas ranch. It still remains true that, as he defiantly says, his "health is very good," and as long as people will listen to him he will supply the energy and the voice. Yet it cannot be doubted that this Nebraska defeat, coming on top of other proofs of his waning influence, must make him less of a power in his party. In Ohio, for example, his attack on Judson Harmon, of whom he has displayed obvious signs of jealousy, is not cutting any figure in the campaign. "Bryan is fading," said a Republican politician regretfully, thinking of all the benefits which the Republicans owe to the Democratic leader.

The official publication a week ago of the new football rules contains no changes which had not already been foreshadowed. Restated as they are, they prove anew the sincerity of the efforts made to reform the game. Primarily, the dangerous flying tackle is

done away with; a player must hereafter have one foot on the ground when he tries to stop the runner carrying the ball. Another source of danger, the pushing and pulling of the runner by his team-mates after he has been stopped by an adversary, is strictly forbidden. By this it is hoped to avoid the piling up in a heap of twelve or fourteen or more men. It was in such a clash that Byrne, the West Point player, was killed. The new regulations as to the forward pass should also make for greater safety, while the shortening of the game by ten minutes and its division into four periods of fifteen minutes each should prevent the exhaustion of the players—at least, in any such degree as in the past. The intervals between the first and second periods and third and fourth periods are to be three minutes, while the fifteen-minute rest in the middle of the game remains. The proof of the pudding is in the eating. When the rules have been well tried out we shall know whether the improvement is sufficient to have really "saved" the game. The chief evils of intercollegiate football—its commercialization, its breaking up of college work, and its destruction of academic ideals—remain, of course, unaltered by the refinement of the play.

British free-traders are deriving great and just comfort from the recent anti-tariff demonstration by the farmers of western Canada. It is on broad imperial grounds that the British protectionists have based their main argument. To hold the empire together, it was necessary to give the colonies what they want, and the thing the colonies chiefly wanted was a British tax on food, with preference for the colonial product as against the foreigner's. And now comes the greatest of the British colonies, and, through the mouth of a very influential section of its people, announces that it will have nothing of the blessings of protectionism. To a delegation of Saskatchewan farmers, Sir Wilfrid Laurier spoke his mind the other day: "Protection is a great wrong and makes millions dishonest with one another." And elsewhere: "If I had my own way, I would have a free British tariff. Britain is my model, not only for history, not only for government, not only for public life, but for political economy." To us here it would be interesting to know to what extent this movement among the farmers of western Canada is part of the great upheaval that is now traversing our own West.

French Congo has never shared in the sinister reputation of King Leopold's Congo. Here, as elsewhere in Africa, a spirit of enlightenment and a humaneness possibly above the average have characterized French administrative policy. The latest step forward in the Congo is in the direction of ultimately doing away with the concessionary companies in possession of monopoly rights over large areas. The system has not proved a success. Out of forty companies organized, eight have gone out of existence and a majority of the others are in feeble financial condition. Eleven of these have lately amalgamated into one, under government authorization. In return, the duration of their franchise has been cut down from twenty years to ten, so that in another decade the French Congo will be virtually on a basis of equal commercial privileges for all. The government's action has met with general approval. The French press cites the example of Senegal, the Gold Coast, the Ivory Coast, Dahomey, and Nigeria, all of which are thriving under a non-monopolistic system.

A writer in the *Nineteenth Century* who has returned to England, after a careful study of German economic conditions, sets forth at length the "Revolt against Protection in Germany." In many of its aspects, this article reads as if it might have been written originally about our own situation, and adapted merely by the changing of names and places. Thus the outcry there is not only due to the discovery that the tariff is the mother of Trusts, which now number no less than 385, but also to the rise in the cost of living. It is a battle, declares the writer, Mr. Æneas O'Neill, not merely between the classes and the masses, and between the consumers and producers, but also between the industrials and agrarians. More than that, there is strife even in the protection camp between the small fry and the large producers. Not only is the whole electorate discussing the present unhappy situation in connection with Germany's grave financial difficulties, but the Reichstag has been heavily bombarded by those business men who are anxious to have duties lowered or abolished.

Those who believe in the "economic interpretation" of history—and of current events that are history in the making—will find water for their mill in the financial aspects of the struggle between the Vatican and the Spanish Government. According to the explanations of a "Spanish Liberal" printed in the London *Times*, it is the economic side of the case that is the strongest argument in behalf of the policy of Prime Minister Canalejas. It is not merely that the cost of the religious establishment is heavy, being nearly one-twentieth of the entire national budget, but that the exemption of the religious orders from taxation enables them not only to acquire valuable lands and houses, but to enter, with great advantages on their side, into competition with various industries. It is said to be a growing jealousy of such privileges, on the part of Spanish peasants and artisans, which makes them ready to support the Government in a way in which they would not on a purely religious question. But the Catholic bishops, too, are quite aware of the force of economic appeals, and in their joint protest to Premier Canalejas, which was, of course, published for the people to read, they declared that "the real public opinion of the country is asking . . . first of all the cheapening of the necessities of life, so that the condition of the workingman may be less precarious, bitter, and intolerable."

The Emperor Francis Joseph celebrated his eightieth birthday under auspices more cheerful than those that have favored the Hapsburg house for many a year. To-day there is little of anxiety for the preservation of the Austrian realm which, twenty years ago, or even ten years ago, it was customary to regard as dependent upon the life of Francis Joseph alone. Nor is there much more alarm over the danger of dismemberment at the hands of the Hohenzollern. The Austrian Pan-Germanists have been in chastened mood in recent years. Their influence has not been what it used to be, since the time that Austrian subjects were given universal suffrage; by this gift Francis Joseph has probably done most to insure the future of his realm.

FUMBLING WITH A MORAL ISSUE.

The "party of moral ideas" is in sore trouble; and of this the root lies in the fact that it is confronted by a moral issue and does not know what to do with it. All the uncertainties and divided counsels and angry recriminations and fears of party disaster which are to-day afflicting the Republican leaders and filling Republican voters with dismay, arise from the expulsive force of a moral idea now mightily stirring the hearts of the people. The issue was slow in shaping. Its beginnings might be mistaken for that rashness or ambition on the part of the authors of "new agitations," of which the philosophic Italian historian speaks. But all doubt about the solidity and permanence of the movement has long since passed away. We have now seen the new moral idea sweep State after State, breaking up the old party organization, retiring one chief after another whose position seemed impregnable, bringing new men to the front, and demonstrating its power in a thousand ways. Yet the party leaders continue to speak of it with amazement and pain or indignation. They call it hysteria or lunacy. The professed guardians and champions of moral ideas do not recognize the biggest moral idea in the politics of their day when they meet it.

In concrete form, this fresh moral impulse first showed itself in Congress nearly two years ago. In its earliest manifestations, it took the shape of a protest against the domination of the House of Representatives by a tyrannous and selfish and politically corrupt machine. It struck boldly at the Cannon-Tammany alliance. If that was not an immoral thing to be hit hard by every honest man, then there never was one. Later came the tariff framing and the tariff debates, in the course of which principles got utterance and positions were taken which clearly portended the coming revolution, and left no doubt that its energy was essentially a moral one. When ten Republican Senators openly broke with their party organization and their Administration and voted against a bill which had been made a party measure, solely on the ground that it contained provisions abhorrent to their moral sense, it was plain to the most unobservant that a new force had been let loose in our politics. And it was a force, too, which struck deeper than party or expediency and went down to fundamental questions of right and wrong. Nothing but the strongest kind of moral compulsion could have led the insurgent Republicans to come out and renounce the unclean thing. Politically, their course seemed hazardous in the extreme, but they were as willing as our ancestors to pledge their fortunes and their sacred honor to what they believed to be truth and duty.

In those days of the origin of the quickening movement, President Taft and his advisers might be excused for having remained puzzled and hesitant. They could not then tell whereto this thing would grow. Prudence would counsel caution and delay in taking sides. Even at the time, however, there was no justification for not having a fairer view of the motive of the dissident Republicans. To lump them all together and insinuate that they were actuated simply by personal hostility or ambition, was a huge political blunder. Whether that is acknowledged or not, the day has passed for continuing in the mistaken policy. The Western primaries have shown that a moral ferment is at work in the Republican party which has got to be reckoned with. The moral issue has now demonstrated that it is backed by votes. The abstract principle has become intensely practical. What is the President, the "titular leader of the party," as he describes himself, going to do about it? A moral issue antagonized is certain to be fatal to the man who opposes it. If the political history of our country proves anything, it proves that. But it may be almost as disastrous for a statesman to fumble with a moral issue.

The opportunity for the President is great, but he cannot wait too long before seizing it. Recent developments have shown that he regards the insurgent movement to-day with far greater seriousness than last winter, and that he perceives its significance more correctly. But so far little has been done except in the way of "placating" the Western Republicans; removing obstacles to their return to party allegiance; getting rid of those who have been stones of stumbling and rocks of offence. This is well enough, so far as it goes; any other course would be political folly. But mere palliatives and half-way measures will not do. The whole spirit and purpose of the new moral agitation must be both understood and heartily entered into. Men have been saying, despondingly, as Benjamin Jowett did fifty years ago, that they feared they should not live to see another "great national enthusiasm." But this fresh breath of life, coming into the air of politics long gone sordid, promises just that thing. Republican leaders, however, must wake to it. They must not go on speaking of this new moral determination as a "Kansas craze." The really insane people will be themselves if they do not read aright the signs of the times.

Never was there a more unmistakable call for true leadership. Lecky said of Chatham that, with all his faults, he at least succeeded in idealizing the national politics. That is the high work awaiting the man who can now put himself at the head of this new inrush of moral questions in our commercialized politics. As yet the movement is unorganized. It stands for a great aspiration rather than a definite programme. But it awaits a virile leader who has the imagination to perceive its vast possibilities for good and the courage and zeal to give it free course in our national life, so that moral ideals may again stir the enthusiasm and call out the devotion of citizens who have only disgust for politics without principles and politicians without a soul.

OUR NAVAL WASTE.

The recent sale of the gunboat Hornet for the ridiculous sum of $5,100 is a clear illustration of the wasteful methods of the government. Just twelve years ago, the Hornet, then the yacht Josephine, belonging to Mr. P. A. B. Widener of Philadelphia, was purchased for $117,500. After some active service in Cuba during the war, she was for several years used for cruising duty and was then transferred to a naval militia organization. Only twelve years of service sufficed to decrease her value from $117,500 to $7,000 in the opinion of the Navy Department, which finally accepted $5,100. That the Hornet is, however, still serviceable appears from her recent voyage to New Orleans and thence to Nicaragua with a cargo of arms for one of the battling parties in that republic. Evidently, her present

owners obtained a great bargain. They ought to be able more than to recover their outlay by breaking the Hornet up. She is 160 feet long and displaces 425 tons.

Now, when the Hornet was purchased by the Government, she was in the first-class order in which our wealthy men invariably keep their yachts. Her speed may not have been quite as high as represented, but her condition must otherwise have been of the best. Yet twelve years later she is a ruined boat. Nor is this in any way an exceptional case. It is related of the Mayflower, the President's yacht, that as soon as she was taken over white paint was applied to all her costly bird's-eye maple fittings, which was later on in some places removed at heavy cost. For some time past, it has been rumored in naval circles that the Mayflower, too, would soon have to disappear from the navy list, because of her rapid deterioration and the need for such costly repairs as would exceed the limit of 20 per cent. of her value beyond which Congress has forbidden the Department to go in the repairing of any ship. Several other boats of this type have already been disposed of.

Lest it be argued that these were old vessels when bought, it is worth while to examine the longevity of ships expressly built for the Government. Here the most striking fact is that, in 1909, two torpedo boats, the Nicholson and O'Brien, were discarded as worthless, after only seven years of service in time of peace. The Winslow, new in 1897, which fought at Cardenas the next year, is under survey now and will, it is expected, be relegated to the scrap-heap. The cruiser Philadelphia, built in 1890, is on the navy list only because she is used as a receiving-ship, and the same is true of the battleship Texas, completed in 1895, and at the Port Royal yard for two or three years. The Atlanta of the original "white squadron" of 1887 is to be used as a barracks at the Charlestown navy yard, although enormous sums have been spent upon her at various times for reconstruction and repair. The Columbia and Minneapolis, built in 1893, and equipped with triple-screws, will either be sold or made over into transports. The unfortunate steel gunboat Bennington is certain to be condemned this year.

Beyond doubt the Navy Department views with equanimity the disappearance of these costly vessels, because of the progress made by naval science since they were launched. For this reason, a number of battleships like the Indiana, Alabama, Kearsarge, Kentucky, Missouri, Wisconsin, Ohio, and Oregon are now in reserve, several of them without any likelihood of ever seeing active service again. The Dreadnought has made them antiquated and obsolete, although the Wisconsin was completed only in 1901 and the Missouri in 1903. But with all allowance for the necessity of keeping pace with naval progress, no one conversant with the facts will believe for an instant that the government begins to get out of its ships what a private owner would. This is in part due to careless handling, in part to bad repair work at the navy yards. It was to improve the latter, as well as to save money, that the Newberry navy-yard reforms were instituted in 1908, with an improvement in speed and intelligence of effort as a result. But on the Pacific Coast, complaints of inefficient work in the engineering department of the Mare Island yard have led to bitter recriminations and the court-martial of one officer. The shocking number of serious engine-room accidents in the Pacific fleet within a year would have ruined any commercial line operating a similar number of steamers.

The merchant steamer is not, of course, an exact parallel. Yet the spectacle of the Etruria and Umbria crossing and recrossing the Atlantic for over twenty-five years with unfailing regularity, and only one month's overhaul annually, is a sample of efficient operation not to be matched by any naval vessel of which we know. Not only do most of our warships deteriorate as to speed, but the enormous sums spent on them for repairs are out of all proportion to the cost of ships like the Etruria and Umbria, which were finally laid off only because their engines, designed nearly thirty years ago, consumed too much coal from the modern engineering point of view. With Uncle Sam, "everything goes." It is a matter of course that, besides the annual overhaul, there shall be a "renovation" after a three years' leisurely cruise and a "reconstruction" in due course, just as the Department now plans to spend half a million in bringing Schley's flagship of 1898, the Brooklyn, up to date—she is thirteen years old. Finally, those who would reckon accurately the cost of our huge naval establishment must not fail to count in the annual appropriation (about $140,000,000 this year) the tremendous depreciation in the amounts already invested in war-vessels.

THE END OF KOREA.

The formal annexation of the Korean Empire by Japan is announced from Tokio as being imminent. Towards this historic act the policy of Japan has been inflexibly advancing from the moment it first became apparent that victory was with her in the war with Russia. A succession of conventions and treaties, both with Korea and with the European Powers, has marked the transformation within six years of Japanese influence in Korea into virtual Japanese sovereignty; and only one more public act will probably be necessary to make this sovereignty in fact a sovereignty in name as well. Throughout the entire process the Korean government has of course been a pawn in the game. Korea's "treaties" with Japan have been dictated from Tokio, and have been shaped by events taking place outside of Korea. The first of the latter-day agreements between Japan and Korea was signed on February 23, 1904, two weeks after the outbreak of the Russo-Japanese war. In this agreement the Korean government proclaimed its "full confidence" in the government of Japan, whose advice it promised to adopt in the improvement of administrative methods. Japan in turn promised to insure the safety and repose of the Imperial Household of Korea and definitely guaranteed the independence and territorial integrity of the Korean Empire.

Diplomacy henceforth kept pace with the fortunes of war. Japan's grip on Korea was tightened in August, 1904, when the Korean government undertook to place its financial and foreign relations in the hands of advisers recommended by the government of Japan. Then came the decisive battles of the war and the general recognition that Japan's position in Korea was henceforth predominant. The treaty of Portsmouth by anticipation, though in negative fashion, sanctioned what is only now taking place, when Russia acknowledged Japan paramount in Korean

affairs, political, military, and economic. The Russian government engaged itself "neither to obstruct nor to interfere with the measures of guidance, protection, and control which the government of Japan may find it necessary to take in Korea." Less than a month before the signing of the Treaty of Portsmouth, in renewing her alliance with Japan, Great Britain gave practically the same recognition to Japanese claims in Korea. By treaty of November 17, 1905, between Japan and Korea, the latter surrendered the conduct of her foreign relations and agreed to receive a Japanese Resident-General at Seul. Marquis Ito took up his post in the Korean capital in March, 1906, but for all his conciliatory methods could win neither the confidence of the people nor of the court. The intrigues of the latter led to the forced abdication of the Korean Emperor in July, 1907, followed within a few days by a treaty which practically placed Korea under the suzerainty of Japan, to whom the higher administration of the country was assigned. But Korean insurgency continued, and in the summer of 1909 the Japanese government assumed charge of the police and prison administration. On October 26, Marquis Ito was assassinated by a Korean patriot. From that day the speedy termination of what Japan has regarded as an impossible situation, and the outside world has regarded as a disingenuous situation, became a certainty.

There is nothing in Japan's treaty obligations towards any other power that stands in the way of Korean annexation. On the contrary, it has been seen that Russia and Great Britain both gave their consent five years ago, and that the other governments, our own among them, have subscribed to the *status quo* in the Far East, at a time when the *status quo* meant Korea for Japan. The last step in preparation was probably the recent convention between Japan and Russia, which was generally regarded as foreshadowing the annexation of Korea, and with apparent good reason. It is Japan's own pledge to Korea that may be cited against her; the pledge she gave at the outbreak of the war with Russia, to preserve the independence and territorial integrity of the Korean Empire. But it would be overlooking the facts of human nature and of history to imagine that a promise extended at the beginning of a conflict as doubtful of issue as the Russo-Japanese war seemed at first, would be rigidly kept after a triumph so signal and far-reaching as Japan's. It may be that a Western Power in Japan's place would have played the protectorate game more deliberately. Japanese methods in Korea have been severe frequently to the point of cruelty. But allowance must be made for the after-effect of victory and perhaps to a greater extent still for the consciousness of how heavily the victory had been purchased after all, and how necessary it was to strengthen the Japanese position in Korea against the time when Japanese good fortune and Russian incapacity might not fall together.

On the whole, it is best for Korea, for Japan, and for the peace of the world, that what had to happen should happen at the earliest moment. It would be idle to deny that the Koreans under their own Emperor's rule were not a well-governed or happy people. If the Japanese rule has been harsh, it has been largely because Japan has ruled in Korea as a conqueror and by military methods. Annexation may give the Korean the privileges and immunities of Japanese citizenship without burdening him more heavily than he is burdened at present. The peaceful assimilation of a people whose numbers are estimated at anywhere from eight to seventeen millions is a task that is sure to keep Japanese statesmanship busy for many years to come. To that extent it will save us from the world-wide schemes of Japanese aggrandizement which the strained jingo eye discerns in the most insignificant daily event of Tokio politics.

MAGAZINE PRINTING.

Among the many minor arts of the present upon which increasing attention is bestowed is the art of magazine "make-up." The function of the modern "make-up" man differs from that of the older "art editor" in that while the latter was primarily and almost exclusively concerned with the selection of pictures and their reproduction, the former gives a new importance to the work of adjusting the picture to the letter-press, and of establishing a characteristic typographical style—matters that were once regarded as more or less mechanical and left largely to the discretion of the printing office.

This development is to be noted chiefly in the less expensive magazines which, unable or unwilling to provide elaborate and costly color features, are forced to seek freshness and attractiveness of presentation in other and more economical ways. The colored insert does a certain violence to the taste of all who feel that a magazine, like a book, implies a certain principle of unity in its structure. This unity the new movement recognizes, after a fashion, and seeks to turn to proper advantage. To blend pictures with text, to introduce into the latter such decorative elements as may be appropriate, and to break down the hard and fast "office style" so as to draw from the resources of typography itself effects pleasing to the eye—this surely is a worthier effort than the mere multiplication of color sections.

But while the intention is excellent, the working out of the plan is not always satisfactory. With few exceptions, too little advantage has so far been taken of the remarkable opportunity to make the modern magazine a worthy companion to the modern book at its best. The problem presented would be a fascinating one to an artist with a firm grasp on the principles and best traditions of the printing art. For the magazine, with its large double-columned page, is the sole representative today of the earliest printed books. Thus the cultivated art editor has open to him a whole field which is ordinarily closed to the maker of books. The trouble usually is that this grasp upon the principles and traditions of typography is precisely what is lacking. The editor is out of sympathy with his medium. Though this is one of the most rigid and least compromising—for types can be set in only one way—he persists in treating it as if it were one of the most plastic. And when he discovers this lack of plasticity, instead of making a merit of it, as a sensitive artist will always find a way of doing, he seeks to escape from it by unhappy expedients. A striking example of this is the prevalent use of hand-lettering in the headings of articles and stories. Types, even in all the multiplicity of execrable job fonts, do not present a sufficient variety for the taste of the art editor, who, therefore, calls to his as-

sistance the florid fancy of the decorative designer.

Whatever the intrinsic merit of much of this lettering, its use within the magazine violates what is almost the first principle of good "make-up"—which is that type should always be used with type. Even the decoration employed should be as typographical as possible, excellent models being ready to hand in the type-set ornaments of the seventeenth and eighteenth centuries. Much of the decorative material which is now commonly used, and upon which the mechanical methods of reproduction place no restraints of handling, is unsuited to its purpose. This material is usually without "style," and is deficient in that there is small attempt to follow the older designers who sought to echo in their line the harmonies involved in the design of the type itself. For the modern art editor decoration is decoration, and he selects his headpieces, frames, and initials with reference to his own personal taste, rather than to the demands of the particular problem which confronts him. Thus, by way of example, most type faces used in magazines to-day are light in color, with a certain amount of shading; nothing, however, is more common than to see such a page spotted and over-weighted with heavy woodcut ornaments whose popularity persists in spite of the fact that they reflect the spirit of quite another style of typography.

But we would not press our fault-finding. The vocation of art editor is still young, and will doubtless attract in time both editors and designers with a keener perception of the problems involved, and a surer æsthetic taste in the solution of practical difficulties. What, above everything else, is needed to-day is a fuller and more scholarly knowledge of the past. The illustrator should know more of the Dutch painters, and eighteenth century Frenchmen like Chardin, who, although they did not work for reproduction or from a literary text, were none the less illustrators of the life about them, appealing to the same popular taste that is exploited by the modern magazine. And in the same way the decorative designer needs to know more of the historic styles of design and their evolution in correspondence with the changes of typographic style. Even the illustrated book is no new thing, and though it seems useless at present to protest against the triumphant half-tone and wash-drawing, artist and editor alike will find in the French and Italian books of the Renaissance suggestions for the designing of illustrations and the assimilation of these with the text that will go far towards making the magazine of the future a thing of accomplished dignity and beauty, instead of an incomplete realization of a valiant but indistinct intention.

THOMAS CAMPION.

I.

It argues something immortal in Campion that he has survived his revival. We have not now to record the beginning, but the establishment, of his second reputation, which bids fair to prove more durable than the first. In his own time he delighted tuneful lords and ladies with songs for the lute and viol, and they called him "sweet Master Campion," and compared his Latin poetry with that of the Italian neoterics, the then renowned Mantuan and honey-tongued Politian, and among English poets they put him in the constellation with Shakespeare and the chief lights of the day. But when he died in 1620, he passed swiftly into oblivion. His blithe airs were drowned in the ground-swell of Puritan hymns and the roar of Puritan musketry. His art was part of the evanescent grace of a great age in decline—a grace long neglected in the annals of sunken Armadas, beheaded earls, and deposed kings, and irrecoverable by the documentary historian. He was not recalled at the dawn of the last century with Marlowe, Middleton, and Webster—the "giant race before the flood." In spite of Arber's reprints, until A. H. Bullen collected and privately published his works in 1889 he was known vaguely, if known at all, as a misguided opponent of rhyme and an occasional contributor to poetical miscellanies—so, for example, he appears in Ward's "English Poets." Mr. Bullen, who is deeply in love with the lyrical life of those times, recognized in him not an historical curiosity, but a living poet; as such, accordingly, he sent him forth, unencumbered with notes, freed of misleading orthographical quaintness, to make his fortune by his merits, or not at all. As of old, he straightway won the approval of men of taste; he has sung his way into all recent anthologies; and several admirers have published selections from his lyrics.

The edition of Mr. Vivian* now issued represents the serious consideration which Campion has secured, and contemplates a prepared public. The fullest since Bullen's, it is addressed primarily to scholars, and, with the reverence for Elizabethan type-setters characteristic of our times, it reproduces the old spelling. Its special feature, however, is the biographical introduction. By heroic ferreting in parish registers and legal archives the editor has been able to supply the poet with a well-documented father, a more tenuous grandfather, a respectably lengthy maternal ancestry, and, what is more to the point, to supplement at several points the fragmentary outlines of his career. In the zest of discovery, Mr. Vivian displays rather more joy in the law-suits of John, the father, than in the songs of the son, Thomas; but on the whole he has enabled us to add measurably to the weight and humanity of what was before an almost disembodied voice. Unless all signs fail, Campion is not in danger of becoming a shadow again—to quote the haunting last lines of his "Umbra"—

per omne
Tempus perpetuo damnatus luminis exul.

II.

Independent of time as pure lyric poetry may seem to be, the work of Campion gains immensely when it is viewed in connection with his age. Conversely, we cannot wholly revive that age without some consideration of such poets as Campion. That he was a minor and late-remembered singer—a lyrist and not a dramatist—now constitutes not the least of his claims upon our attention; for he compels us to revise our generalizations about the world in which he lived, and to call into our consciousness some of its less familiar aspects. In the popular mind, the "old dramatists" have created the Elizabethan era just as the novels of Scott have created the Middle Ages. Indeed, they have been almost universally received as the legitimate representatives of its spirit. But as with the lapse of time and the accumulation of obscure material we draw nearer to the Elizabethan society, we begin to suspect that the heaven-storming shoemaker's son who trained the cannon of Tamburlaine against the gods, the jail-weary debtor who filled the pouch of Fortunatus with inexhaustible gold, the well-beloved poacher who steered the purple barge of Cleopatra and slew the world's conqueror with a kiss—we begin to suspect that these men and their fellows have somehow tyrannized over the imagination of posterity. By dreaming in great verse of what life denied them, they have got it written down that their sixteenth century was an epoch of wild magnificence, splendid, half-barbarous, incomparably spontaneous, the field of exuberant and leonine passions. They imposed this impression upon a critic so near them as

*"Campion's Works." Edited by Percival Vivian. Oxford and New York: The Clarendon Press. In quoting the English poems I have used Mr. Vivian's edition of 1907 in Dutton's Muses' Library, which modernizes the spelling.

Dryden; they imposed it, naturally enough, upon Voltaire and Taine; and the multitude of "native wood notes wild" which our literary historians discover in that period indicates that they are still imposing it upon us.

The only objection to this simple, popular, and striking view of the Elizabethan age is that it is false. It has all the plausible falseness of a half-truth. It neglects the equally defensible view that the Elizabethan age, particularly during the great dramatic period of the last fifteen years of the reign, was a time of weariness and exhaustion, of far-sought refinements in literature and life, of self-consciousness and skepticism and ennui. If we would see Campion in relation to the literary movement of his day, we should dissociate him from the new popular drama, and think of him as one of the last representatives of the old aristocratic lyrical tradition of Wyatt and Surrey, who, in turn, continue the tradition of Petrarch. We should remember that the poetry written by this line of courtly "makers" was the fruit of a cultivated and artistic social life, that it was not intended for publication, but for private circulation, and that it was regarded as a social accomplishment. In those days the inexorable discipline of the graces was not reserved for women. From Sir Thomas Hoby's "Courtyer," 1561, to Peacham's "Compleat Gentleman," 1634, every youth of breeding was instructed not merely in athletic and soldierly feats and in the solider parts of learning, but also in the "feate of drawing and peincting," "to daunce well," "to singe well upon the booke," "to play upon the Lute, and singe to it with the ditty," "to play upon the Vyole, and all other instruments with freates." Before we lightly speak of the artlessness of their songs we should recall that they were drilled in art from the cradle. We should remember also that they travelled much abroad, and studied in the universities of Bologna and Padua and Paris, and brought home new books, new culture, new fashions, and new vices. So that Roger Ascham, as early as 1570, had to turn aside in his treatise on "The Brynging up of Youth" and castigate the younger generation of Italianate Englishmen: "They mocke the Pope: They raile on Luther: They allow neyther side. . . . The marke they shote at, the ende they looke for, the heaven they desire, is onelie, their owne present pleasure—whereby they plainlie declare, of whose schole, of what Religion they be: that is, Epicures in living, and ἄθεοι in doctrine." And Thomas Nash, at about the time when all Shakespeare's biographers declare that England was feeling the glow of national enthusiasm, cries out that England needs a Peter Aretine to expose her hypocrisy and reveal her deep-seated corruption. On his heels a pack of little English Juvenals begins to snarl out the prelude to formal satire, till one almost feels himself in decadent Rome, and forgets the spacious days of great Elizabeth.

Into this marvellously sophisticated world Thomas Campion was born in London on February 12, 1567, son to Lucy and John Campion, Cursitor of the Chancery Court, member of the Middle Temple, good churchman, and gentleman. After a sound classical training at Peterhouse, Cambridge, he was entered, in April, 1586, at Gray's Inn. For the social activities of his legal fraternity his tastes and talents were eminently qualified; but for the serious study of his profession he had no inclination whatever. In 1591, Mr. Vivian has pretty clearly demonstrated, he joined a small military expedition sent by Elizabeth to the aid of Henry IV. Returning to England in the latter part of the year, he apparently took up his former connections with the Inn, and dallied with his destiny for at least four years longer, rounding off this period with the publication of his first volume of verse, the rare "Poemata" of 1595.

Then, perhaps sobered by diminishing revenues, he bade farewell to folly, turned his back on detested pettifogging, and studied medicine, presumably at one of the continental universities. At some time between 1602 and 1606 he received his medical degree and began to be, as the French say, *un homme rangé*, with manifest pride affixing to his signature, "Doctor in Physicke." He had now put poetry—upon which it was not respectable to live—where it belonged, among the recreations of a gentleman. In 1601 he had allowed his musical friend, Philip Rosseter, to publish a handful of his English songs—words and airs—prefaced, however, by the statement that the author "neglects these light prints as superfluous blossomes of his deeper studies." About 1613 he himself put forth a second collection entitled "Two Bookes of Ayres." His masque for the wedding of the Earl of Somerset and Lady Frances Howard brought him into superficial connection with their devilish and Judas-like murder of Sir Thomas Overbury. As physician he attended Sir Thomas Monson, who was imprisoned in the Tower for alleged complicity in the murder, and, upon the release of that knight, dedicated to him and his son "The Third and Fourth Booke of Ayres." It remains only to mention his technical treatise on music, "A New Way of Making Foure Parts in Counter-point"—which, we are told, long served as a text-book—and the revision of his Latin poems in 1619. On March 1, 1620, this faithful servant of Apollo in the three arts of music, poetry, and medicine died at the age of fifty-three, and, having neither wife nor child, left all his estate, valued at £22, to Philip Rosseter.

III.

The relation of Campion's surroundings, his considerable culture, and his variegated experience to his poetical development are much obscured by the fact that no one but his editors reads his Latin work. This neglect is to be deplored—I suppose its causes will not bear investigation—because it diminishes a slender poet by a third of his substance, and that not the least valuable. *Qui novit iuvenem, noscet itemque senem*, wrote Campion, anticipating the modern critical method; and in his "Poemata" of 1595, the most personal of all his publications, he left us the record of his first contact with the world, the adventure of a stripling from the university with fashionable, wicked, witty London.

The Campion of the Inns of Court period—*dum regnat Cytherœa*—is one of the æsthetic young men who in every age emancipate themselves by culture from the morals, religion, and patriotism of their conservative countrymen. He never strikes the ringing English note of old Wyatt's song of retreat from the iniquities of the courtier's life:

But I am here in Kent and Christendom,
Among the Muses, where I read and rhyme.

He looks out upon London with the slightly cynical Roman realism of an amorous young Epicurean of the latter days of Augustus. He has simplified phenomena by dividing them into things pleasant and things unpleasant. To the latter belong lawyers, medical quacks, braggarts, ugly women, and all manner of bores; these he transfixes on the points of his epigrams. To the former belong good music and poetry, faithful friends, and fair women; these he praises as the solace of a life that comes like water and goes like wind. In pursuit of his loves, he shows a taint of Propertian morbidity; he likes a mistress snatched from many rivals—he envies Paris the jealousy he excited:

O felix cui per tantos nupsisse tumultus
Contigit, et dignum bello habuisse torum.

His attitude toward the supernatural is suggested by four lines, of which this is the gist: "You saw a demon, Berinus; of what sort? It looked like a black dog, you say. Ah, I should say you saw a dog that looked like a demon, Berinus." This, at a time when the devil-dogs of the dramatists were raising goose-flesh among the groundlings, gives us the hint of a rationalizing turn in his nature which his medical preoccupation was calculated to strengthen. The author of the "Poemata" has never, with Faustus, seen Christ's blood stream in the firmament. Much more real to him than the New Jerusalem is that dim, pagan paradise where the shades of all that was fair and valorous in the antique world listen through eternity to the great songs of Homer. As the Virgilian music of his "Umbra" declares,

he is haunted by the memory of lovely ladies, Antiopa, Helena, Hermione, Argia, and Hippodamia, dwelling in the land washed by the waters of Acheron; and he can think of no higher honor for the English beauties, Surrey's Geraldine and Sidney's Penelope, Alice Spencer, Frances Howard, and Queen Catharine, than to send them to wander with their classic sisters in the gardens of Persephone—

Ad tristes devolvitur umbras
Quicquid formosum est, et non inamabile natum.

What echoes these lines awake! Villon's "Ou sont-ilz, Vierge souveraine?" Young Aucassin's defiance: "En paradis qu'ai jë a faire. . . Mais en infer, voil jou aler; car en infer vont il bel clerc, et li bel cavalier . . . et s'i vont les beles dames cortoises." Dante, faint with pity, crying, "Quanti dolci pensier, quanto disio menò costoro al doloroso passo?" Propertius, feverishly eager, pleading with Persephone to spare one fair form for the regions above—"sunt apud infernos tot milia formosarum." Catullus completing the chime with "Curse upon you, cursed shades of Orcus, *quæ omnia bella devoratis*."

IV.

In Campion's English poems, the personal note is generally less pungent. Though the twenty-one songs which are certainly his in Rosseter's collection of 1601, are mostly amorous, it seems as if the hot life-lust of the young Epicurean had given way somewhat to the purely artistic impulse. Their peculiar virtues—simplicity of diction, varied tunefulness, brevity, and complex suggestiveness—arise from the meeting in their author of musical skill with a Latin culture slightly etherealized by contact with English romance. In the liquid lines below, with their shifting movement and their dying fall, the melodist predominates, anticipating the "fleet singing" of Swinburne:

Follow your saint, follow with accents sweet!
Haste you, sad notes, fall at her flying feet!
There, wrapped in cloud of sorrow, pity move,
And tell the ravisher of my soul I perish for her love:
But, if she scorns my never-ceasing pain,
Then hurst with sighing in her sight and ne'er return again.

As composer of airs with which he clothed his words as the body is clothed in the spirit—never intending to send them naked down the wind—Campion gave "the chief place to the grave and well invented Motet, but not to every harsh and dull confused Fantasie, where in multitude of points the Harmonie is quite drowned." And because the voices of the Augustan poets were living voices to him, he shunned the analogous vices of contemporary verse—its facile and far-fetched Platonism, its Petrarchan excesses of amatory servility and conceit, its seedy Euphuism. In a quite literal sense his light lyrics blossomed from his deeper studies. Thus the first stanza of his song, beginning "My sweetest Lesbie, let us live and love," is an almost literal translation from Catullus; but instead of the immortal whirlwind of kisses in which the original expires, he substitutes two stanzas of his own, equal, if not superior in quality to the first. Still more characteristic is a song which sets out on the note of two Horatian odes (*Iustum et tenacem* and *Integer vitæ*) and ends with finding the earth a "sober inn and quiet pilgrimage"—a note that vaguely evokes the Crusades and the perfume of religious romanticism. His power of dissolving the ages in music and linking the present to remote antiquity lends to the best of his love songs a penumbral richness and shadowy depth seldom found in the work of the guild of minor lovers who, armed with a century of sonnets, dash in vain against the marble or the porphyry or the adamant of their ladies' hearts. It is, for example, the subtle mingling of faint Propertian music among the enchantments of chivalry which constitutes, as Pater taught us to say, *la fleur particulière* of this perfect lyric:

When thou must home to shades of underground,
And there arrived, a new admirèd guest,
The beauteous spirits do engirt thee round,
White Iope, blithe Helen, and the rest,
To hear the story of thy finished love
From that smooth tongue whose music hell can move;

Then wilt thou speak of banqueting delights,
Of masques and revels which sweet youth did make,
Of tourneys and great challenges of knights,
And all these triumphs for thy beauty's sake:
When thou hast told these honors done to thee,
Then tell, O tell, how thou didst murder me.

The height of Campion's achievement in this kind is his justly admired "Hark, all you ladies that do sleep!" In this song, music and sweet poetry agree to subtilize the Panic animalism of the "Pervigilium Veneris," under the witching moonlight of Celtic fairyland. I quote but in part:

Hark, all you ladies that do sleep!
The fairy-queen Proserpina
Bids you awake and pity them that weep.
. . . . . .
But if you let your lovers moan,
The fairy-queen Proserpina
Will send abroad her fairies every one,
That shall pinch black and blue
Your white hands and fair arms
That did not kindly rue
Your paramours' harms.
. . . . . .
All you that will hold watch with love,
The fairy-queen Proserpina
Will make you fairer than Dione's dove;
Roses red, lilies white,
And the clear damask hue
Shall on your cheeks alight:
Love will adorn you.

In this mysterious May-night transformation of Proserpina into a sister of her who led the revels in the enchanted "wood near Athens," one feels the special quality of Campion. The verse has not the movement as of mad feet on the village green which one feels in that right English piece of George Peele's "Fair and fair, and twice so fair." It has a certain airy stateliness, as if the fairy queen afar-off remembered Sicily.

V.

Campion would not have been the typical Elizabethan that he was, if, resting in the careless Epicureanism of his spring, he had sung in the wide span of his fifty years nothing but canticles of love. In those days, youths came to their maturity early, and felt often in the prime of manhood the languors of satiety and that "stifled, drowsy, unimpassioned grief" which has preyed on the liver of many a modern romanticist. Long before Coleridge, Campion had discovered that vague dejection which we used to call the *mal du siècle*.

Nor did he escape that deeper melancholy which sought out the best spirits among his contemporaries—the man of action as well as the scholarly recluse—even as the plague sought out their bodies, sparing neither threadbare poet nor prince armored with "intertissued robe of gold and pearl." At no other period in English literature, it seems to me, have men betrayed such a bitter apprehension of the transitoriness of earthly pleasures, such a poignant sense of mortality. It is the reality of this melancholy which edges the sweetness of Shakespeare's sonnets with the sharpness of a sword—"Devouring Time, blunt thou the lion's paws." This melancholy it is, superbly measured and restrained, which informs with high seriousness some of the noblest passages in Bacon:

For if a man's mind be deeply seasoned with the consideration of the mortality and corruptible nature of things, he will easily concur with Epictetus, who went forth one day, and saw a woman weeping for her pitcher of earth that was broken; and went forth the next day, and saw a woman weeping for her son that was dead; and thereupon said, "Heri vidi fragilem frangi, hodie vidi mortalem mori."

Though Campion fell short of three score years and ten, in half a century—to borrow the grave words of Sir Thomas Browne—"a man may have a deep gust of the world, know what it is, what it can afford, and what 'tis to have been a man." In that time, he had seen Sir Philip Sidney fall abruptly in his golden prime, and had brought roses and violets to his grave, and had wept for him, with every man in England. He

had lived to see things which made the death of that bright favorite upon the field of battle seem happy and enviable. He had seen a maligner fate overtake the former darlings of Elizabeth—the sad eclipse of stars whose ascension he had watched—Southampton imprisoned, Devonshire disgraced, adventurous Raleigh and fiery-spirited Essex meditating on the fair sunlight in deep dungeons, and, under the shadow of the scaffold, preparing to bid farewell "to the wide world and all her fading sweets." And I should like to think that these lines—essentially just and manly, yet tinged with a certain bitterness—came to Campion as he looked for the last time upon the ruins of the great hard-hearted Queen.

Where are all thy beauties now, all hearts enchaining?
Whither are thy flatterers gone with all their feigning?
All fled! and thou alone still here remaining?

Thy rich state of twisted gold to bays is turnèd!
Cold, as thou art, are thy loves, that so much burnèd!
Who die in flatterers' arms are seldom mournèd.

Yet, in spite of envy, this be still proclaimèd.
That none worthier than thyself thy worth hath blamèd;
When their poor names are lost, thou shalt live famèd.

When thy story, long time hence, shall be perusèd.
Let the blemish of thy rule be thus excusèd.
None ever lived more just, none more abusèd.

Elizabethan melancholy has three gates: one leads to dreamland, one to church, and one to the noose. Spenser took the first, Campion the second, and Robert Burton, if the rumor be true, took the third. Campion's religion, like his licentiousness, was that of a gentleman. I can find little evidence that he ever felt within himself that fierce civil strife of the earthly and the celestial loves, in which, as his contemporary Southwell says, "peace with sense is war with God." He never repudiated his past with the savage loathing of the converted Puritan, nor underwent any such transformation as changed the garb of George Herbert from the courtier's mantle to the linen ephod. He looked upon youth as the appointed time for gathering rosebuds, and age as the appointed time for gathering rue—each in season. He wrote some fine religious lyrics; as he observes, "Grave age did justly challenge those of me." But he did not scruple to bind them up in his latest books with an equal number of very "light conceits of lovers," and to commend the whole to the reading of a young man. Doubtless he had experienced moods of genuine religious emotion; certainly, at any rate, he understood them imaginatively, and knew how to express them. In the undulous lassitude of the following stanza, I would almost swear, one can recognize the immediate spontaneous movement of the author's mind; here, I am tempted to say, the weary lover of women becomes the weary lover of God:

Never weather-beaten sail more willing bent to shore,
Never tired pilgrim's limbs affected slumber more,
Than my wearied sprite now longs to fly out of my troubled breast,
O come quickly, sweetest Lord, and take my soul to rest.

And yet I hesitate, recalling certain exquisite lines in Jonson's "Sad Shepherd"—for example, "The world may find the spring by following her"—and considering the insurmountable difficulty of relating them, except through the mediation of the artist, to the stormy, loud-mouthed egotist with mountain belly and rocky face, who wrote them. Only so far as religious devotion meant disenchantment with sensual realities and a general sense of the duality of experience—only so far do I feel perfectly confident that Campion looked in his heart and wrote. When he cries out on the world as a "mass of mere confusion," "a false light with many shadows dimmed," a "witch," and a "charmed illusion," he is voicing the sincerest conviction of his age, held by saint and skeptic alike:

All our pride is but a jest;
None are worst, and none are best;
Grief and joy and hope and fear
Play their pageants everywhere:
Vain opinion all doth sway,
And the world is but a play.

This note he strikes with emphasis now and then; but it is not the burden of his song. It is the duty of the courtier, says the old book, "never to be sad, melancholie, or solemn before hys Prince." Campion was chiefly concerned with illuminating the pleasant fiction of life. His place was with the flute-players and the weavers of garlands who move with dancing feet before the embroidered arras, and I do not think he was sure what darkness or what strange dawn lay behind the curtain till the lyre fell from his hands—*deciderat manibus lyra*—in the year when the Mayflower touched at Plymouth Rock.

STUART P. SHERMAN.

NEWS FOR BIBLIOPHILES.

The sixth volume of Charles Evans's "American Bibliography" has just been received by subscribers. This volume covers the period of 1779 to 1785 and records 3,272 books, pamphlets, broadsides, magazines, and newspapers printed within the limits of the present United States, generally with full transcripts of title and with short collations. Newspapers and magazines are treated as serials and entered once only under each year of their publication, the first and last dates for the year being given. The first entry only of such newspapers as continued for more than one year seems to be recorded in the index.

The present volume is of less interest to the book-collector than were the earlier volumes, and in the same way future volumes (Mr. Evans intends to bring his work down to 1820) will contain fewer and fewer books for collectors. It is very important, however, to have this chronological record of imprints, a large part of which is made up of State and government publications. The location of copies of many of the books in one or more public libraries is indicated and in many cases bibliographical notes are appended. Some of these notes show original research and examination of the books described, but others seem to have been copied or rewritten from Sabin's great "Bibliotheca Americana" or other similar sources, which are unfortunately not always trustworthy. For example, Ethan Allen's famous atheistical book "Reason the Only Oracle of Man" (Bennington, 1784) is described as "the rarest of Ethan Allen's publications, as the entire edition, except about thirty copies, was destroyed by fire." A story of this kind once in circulation is likely to be reprinted every time a copy of the book is offered for sale. While some copies of the book may have been destroyed by fire, the volume is no rarer than many books of the period and comes frequently into the market, not less than four copies having been sold at auction during the season of 1909. In a letter dated November 16, 1785, Ethan Allan writes to Benjamin Stiles: "As to my philosophy that you mention, forty of the books are bound, and will be sent to New York to-morrow, 1,500 are printed, and contain 487 [actually 478] pages." Several of Ethan Allen's Vermont pamphlets are, as a matter of fact, much rarer, not to mention the first edition of his "Captivity" (Philadelphia: Bell, 1779), a copy of which sold in the Holden sale last spring for $350. This sale record is perhaps too recent to have been included by Mr. Evans, who gives the "auction value" of the book as $62, the price paid for the Menzies copy thirty-four years ago. In our notices of the previous volumes we have pointed out the almost utter uselessness of the column headed "Auction Values," and there seems no improvement in this respect in the present volume; indeed, this column is, in the great majority of cases, blank.

The fifth and concluding volume of Dr. Thomas Lindsley Bradford's "Bibliographer's Manual of American History," which is in fact the index volume only, is before us, and is a disappointment. The titles of the preceding volumes have promised us "an Exhaustive Index by Titles, and an Index by States." What we get in this volume is a duplicate index, the first by towns or counties, the second by States, and under each State by towns and counties. This duplication was unnecessary, as the second index would have answered every purpose. No one looks for local history of any American town, unless he knows the State in which it is located. The indexes have been prepared solely from the titles of the books, and the compiler has made some curious entries. For example, under Michigan we find one book entered under "Fort Mackinac," four under "Mack-

inac," and one under "Mackinaw." If any author had used the older name of "Michilimackinac" or any of the other fifteen variations in spelling of the name which are recorded, entries would have appeared accordingly.

Typographically, also, the book is open to serious criticism. Headings of towns are not carried over, the headline being simply "Index" on every page, and the name of the State occurs only at the beginning of the list relating to that State.

Part iii of Volume VII of Frank Karslake's "Book-Auction Records," covers the period April to June, 1910, and contains 5516 records of sale. The preliminary matter of this part contains an article on Lincolnshire Libraries, by A. R. Corns, with a frontispiece view of the "chained library" in Grantham Church.

Correspondence.

WORDSWORTH'S "MAIDEN CITY."

To the Editor of The Nation:

Sir: In the last number of *Modern Language Notes*, Mr. W. E. Mead prints an article on Wordsworth's description of Venice:

> She was a maiden city, bright and free.

He goes to some pains to point out in Coryat's "Crudities" an occurrence of the same epithet (*anno* 1611). From Coryat's explanation, "I call it maiden because it was never conquered," he deduces that Coryat "is taking credit for a peculiarly happy phrase that he thought he had been the first—in English, at least—to apply to Venice. Of course, what is possible to one like Coryat, we cannot deny to one like Wordsworth," etc.

Mr. Mead apparently does not realize that he is dealing with, if anything, the most common of commonplace epithets of Venice. Wordsworth certainly never dreamed of being original in "this peculiarly happy phrase," in this "exquisite term." We are quite ready to admit that its inclusion in the poem "was a poetic feat not beyond the reach of Wordsworth's imagination"; and that "he was reproducing—*certainly not* unconsciously—a phrase suggested by an older writer." Hundreds of examples would be available without great effort. Earlier than Coryat's book, I may cite from Celio Magno (1600) an invocation to Venice:

> Tu vergine e reina invitta et alma.

From the still earlier Franco Veronica:

> Questa dominatrice alta del mare,
> Regal vergine pura inviolata.

Andrea Calmo predicts any number of impossible things, eternal darkness, a new flood, before

> . . . mai Venesia si vaga a mario.

And in another warm invocation to the *Donzella* of the salt waters sleeping on the bosom of her old nurse Adria, he prays to God to keep her forever

> Pura casta e santa
> Libera bella zentil e piatosa.

These illustrations were taken from Segarizzi's recent and beautiful publication, "La poesia di Venezia" (pp. 60, 56, 31, 64.). For the artistic and literary history of the phrase, Mr. Mead may consult Medin: "Storia della Repubblica di Venezia nella Poesia" (Milano, 1904, pp. 19-22).

A PLEA FOR BORES.

To the Editor of The Nation:

Sir: Why has no one ever given the physiology of bores? Lamb wrote the natural history of poor relations, of swine, and so on, but failed to communicate one fruitful thought regarding that ubiquitous monster whose one-sided view of the world, whose ignorance of the proportion and perspective of things brands him at once as a bore. Perhaps Lamb refused to hear even the mention of the word, and stopped his ears at the very sound thereof. Yet if, as the philosophers assure us, divination of character is the very lamp of life, surely a man's definition of a bore should be his seal of confession, it should throw the surest light upon his soul, and therefore, I assert, bores have their uses.

I take it, Socrates (though there is no Greek word for bore) must have seemed an insufferable bore in the eyes of many whom he cross-questioned in the marketplace, who doubtless deemed his questions both impertinent and importunate. And when Sydney Smith met Daniel Webster dining at Lord Ashburton's his only comment was an indifferent: "Too slow for our market." This, however, may be partly explained to our American sense by a famous Englishman's remark that: "Americans don't understand what a bore is—a sign, by-the-way, that it belongs to civilization—and their speeches are endless and pedantic, their conversation pompous and extravagant." On the other hand, even if one feels a boundless hatred for the French, they are seldom bores, and can always "make play with a neighbor and make food out of nettles with a little salt and pepper." In Germany the word and even its equivalent is unknown; is that, I wonder, a sign the thing itself is very common?

It should seem that boredom belongs to a certain stage of culture and civilization; perhaps it is a product of luxury, like the gout. It is said people with few ideas do not find that time passes slowly (certainly cows look the embodiment of content), and talkative old women listen to other talkative old women, whom some of us would die of ennui at hearing. Then there is the young man who turns up his trousers, wears high collars, looks at himself seriously in the glass, sings coon songs like the museum barker, dances hideously to the banjo, and most of all, has lacked the sharp edge of parental discipline, but who, withal, is dangerously interesting to girls! —this has been proved in a court of law, however much we may laugh in our sleeves and give voice to amused amazement. Then there are those whose literary food is confined to George Barr McCutcheon and who find George Meredith "slow." To this particular type of bore, one is inclined to mention the three wise men who followed the star expecting to find a king, but—who recognized at once what they *did really* find.

So this subject of bores requires ventilation; it should have discussion and publicity, both for the enlightenment of those whose business it is to decide finally in regard to bores (parenthetically, are bores bored by other bores?—a nice point), and also for the satisfaction of those who want to know whether a neighbor is a clever enemy or only a stupid friend. Ask a man what and who bores him, and *voilà*—you should have the open sesame!

Mary Parkinson.

ENGLISH HISTORY.

To the Editor of The Nation:

Sir: Is not the quality of the teaching of English history in this country in danger of suffering from too close an adherence to the English point of view?

Although the importance of this field is due to its excellence as a background for American history, its popularity as a study as compared with the history of other countries is in great measure due, I venture to believe, to the easy accessibility of its native historical literature. So far as language goes, virtually every London publication bearing upon English history is available the moment it appears. But this pedagogical material from oversea, for which we are so greatly indebted, is subject to various kinds of bias that should be taken into account by American teachers.

First, there is the Londoner's bias. The historical writers live chiefly in southeastern England, including Oxford, Cambridge, and London; and their point of view is unconsciously that of the Londoner by whom all other portions of the British Isles are grouped under the suggestive appellation of "the provinces." We need not ask to what degree he actively dislikes the Welsh, the Irish, the Scotch, or others; it is sufficient to note that he seldom or never visits their countries, and except when their interests conflict with his he is absolutely incurious as to their affairs. English historical writings reflect this characteristic; and, just as until recently there was complaint that American history was written too much from the point of view of Washington to the neglect of the essentials of American development, so is English history to-day written from London with corresponding results.

Closely allied to this geographical bias is a chronological one based on the natural assumption of the present-day Englishman that he, together with his institutions, is a survival of the fittest. Of course, the Englishman has a right to think so; but we of another nation should feel free to believe it possible that in England's past as in that of other countries, perhaps our own, right and might have not always coincided, that the best in the broadest sense has not always survived the strongest. Applying this test, we find that English historical writers, like all others when engaged in writing patriotic history, are prone to neglect the merits of the losing side while enhancing those of the one that survived.

The third bias I would mention is the general overestimate of political history. Freeman's dictum that "history is past politics," has been overworked. Combined with the Londoner's bias, this preference for political history produces a record of court and parliament which, whatever its merits, cannot properly claim to be an adequate record of a people's life-experience. There are other kinds of bias that might well be discussed in a more elaborate consideration of this topic, but these perhaps are the most important, and therefore the most worthy of the teacher's attention.

Stanford University, August 5.

THE 1622 FIRST FOLIO.

To the Editor of The Nation:

Sir: In his notes on the Shakespeare Folios, your "Bibliophile" has the following (*Nation*, August 4):

The First Folio with the date 1622 instead of 1623, described by Lowndes and other early writers, is now universally admitted to be merely a case of pen-and-ink alteration. It is in the Lenox Library.

Some sixteen years ago, when the late Dr. Rolfe was conducting a Shakespeare column in the *Critic*, I contributed a note showing that the apparent date of 1622 is in reality 1623, as may readily be seen by holding the title-page to the light and observing it from the back. The page has been skilfully repaired, and in such a way as to cut off just the lower part of the three, but the entire figure may be seen on holding the page to the light. This note appears to have been widely copied, as clippings from a Chicago and a Minneapolis paper were sent me. Further, so far as I know, my statement has never been challenged. The statement that the Church collection of Shakespeare Folios is the most nearly complete anywhere must naturally be a matter of opinion. The Lenox has four First Folios, differing from one another and all of great interest, and no less than seven Second Folios with varying title-pages, and an eighth title-page, detached, still different from all the others.

It is well to remember, also, that Mr. Lenox had a habit of experimenting with his Folio title-pages so that to-day we cannot be at all certain that they are inserted as he received them.

TOTSCHWEIGEN TOO DEAD STILL.

To the Editor of The Nation:

Sir: In Lietzmann's Commentary on Romans ("Handbuch zum Neuen Testament"), advance sheets of which have been sent out by the publisher, J. C. B. Mohr, it would seem that the customary and perfectly just ignoring of the foreigner is pushed close to the limits of propriety and prudence. Adverting to the text-critical question presented by Rom. 1:7, the author refers to Harnack's article of three pages in *Preuschens Zeitschrift* (1902, pp. 83-6), and to Schmiedel's observation in the *Hibbert Journal* (1903, p. 532), making no mention whatever of the writer of this letter. On turning to Harnack and Schmiedel, if by any strange and unexpected chance Lietzmann's reader should at this point consult them, he will be surprised to find that both are merely generously recognizing and the former summarizing my article on the "Address and Destination of St. Paul's Epistle to the Romans" (*Journal of Biblical Literature*, 1901, part i, pp. 1-21). Harnack, in fact, says (p. 84), "Gewöhnlich beruhigt man sich bei dem Receptus, allein Smith hat Recht, ihn als interpoliert zu erklären"; and again, after stating some of Smith's reasons: "'Εν 'Ρώμῃ ist also für eine sehr alte Interpolation zu halten." Had Lietzmann consulted the original memoir, he would hardly have fallen into the common error of saying: "'Εν 'Ρώμῃ fehlt in einigen Zeugen." It is only 'Ρώμῃ that is wanting, the ἐν is always present. Recognition of the exact state of the case is necessary to a correct understanding of the Epistle itself; *Totschweigen* is indeed clearly indicated for most of the ills that of late so sharply assail the Liberal Theology, but even such a specific may, it seems, be sometimes overworked.

W. B. Smith.

Literature.

A PERSONAL STUDY OF CECIL RHODES.

The Rt. Hon. Cecil John Rhodes: A Monograph and a Reminiscence. By Sir Thomas E. Fuller, K.C.M.G., formerly member of the Cape Legislative Assembly. With portraits and other illustrations. New York: Longmans, Green, & Co. $1.60 net.

Those who remember the heated controversies that have raged round the character and career of Cecil Rhodes ever since the so-called Jameson Raid of 1895 will open with some apprehension any book dealing with his life. They will expect to find in it either the unqualified admiration of a friend or the harsh condemnation of an enemy. When, however, they have read through this book, they will be agreeably disappointed. It is fair and temperate. It does not attempt to conceal or to palliate either the defects that belonged to Rhodes as a man, or the grave errors he committed. But it presents his better qualities with discriminating appreciation, and it does justice to the best side of the ideas that animated him, showing that he was sincere and earnest in his devotion to those ideas.

The author is well entitled to describe Cecil Rhodes as he lived. Sir Thomas Fuller was a leading politician in Cape Colony, and already influential in the Cape Parliament, when Rhodes entered that assembly, in 1881. From that year onward, they were in constant and usually in close personal relations; nor did these cease when Sir T. Fuller became agent-general in England for the Cape, for Rhodes's position as head of the Chartered Company of South Africa brought him frequently to London. South African statesmen have been mostly not only party men, but strong partisans, and, of course, such events as the Raid and the Transvaal War that followed some years later evoked vehement partisanship. But our author writes calmly and reasonably about these events. His moderation, based on a minute knowledge of the difficulties of the situation, might be commended for imitation to some recent English writers of the so-called "Imperialist" school, who have perverted or travestied history in their efforts to glorify the leaders of their party. There is scarcely a word in this volume to give ground of offence to any one who either advocated or condemned the war of England against the Boer republics which began in 1899 and lasted till 1901, and which roused not only such bitter feelings in England, but so much controversy in other countries.

The book can hardly be described as a biography of Cecil Rhodes. It is rather a sketch of the more prominent phases of his public life, its aim being not to recount events, but to explain the part which Rhodes took in them, the motives that animated him, and the spirit in which he went about his work. If there is not very much that is absolutely new to those who have become familiar with the subject, there is a good deal which throws light upon some of the more obscure parts of the story and which serves to make Rhodes's own views and purposes, and the motives behind the purposes, more plain and unmistakable. Doubtless Sir Thomas knows more than he tells. He passes lightly over the relations which existed between Rhodes and the British governments that were successively in power, as well as over the more intimate personal relations in which he stood to his leading South African contemporaries. This is, perhaps, right, because the events are still too recent to let the whole of the facts be disclosed. But we cannot help wishing that one who possesses so much knowledge as Sir T. Fuller does of the underlying circumstances would write a record of what he knew about them which might be published ten, fifteen, or perhaps twenty years hence, when questions that touch persons can be more calmly considered. This is the more to be desired because Rhodes was remarkable for his aversion to letter writing, a trait of character which he shared with his friend C. S. Parnell. So few and so brief were his written communications that when the time arrives for a full and dispassionate biography to be written, the person who writes it will have to rely almost entirely upon the secondary evidence of people connected with Rhodes, rather than on any supplied by his own pen.

Cecil John Rhodes was the son of a clergyman of the English Established Church, living at Bishop's Stortford, a small country town, half-way between London and Cambridge. The delicacy of his lungs led to his going as a youth to South Africa, the dry, bracing air of which freed him from pulmonary troubles, though his constitution never became a strong one. Desiring a university education, he entered Oriel College, Oxford, as an undergraduate. But as his health then still required him to spend the winters of every year in South Africa, the period of residence necessary for the university course stretched out in his case to an unusual length, covering five or six instead of the usual three years. He became in-

tensely attached to Oxford and to Oriel College, and ultimately bequeathed to the latter a large sum of money. While in South Africa, he was drawn by the discovery of diamonds on the northern edge of Cape Colony to the town of Kimberley, and having no regular profession, he threw himself into the acquisition and working of "claims" there. This became the foundation of his fortune, for he succeeded, after long efforts, in consolidating the interests of numerous persons and firms in the diamond diggings into one great incorporated company, of which he became the head, and which, since it was able to control the output of diamonds, was also able to keep up their price and to pay large and steady dividends. Here on the edge of civilization, for the hotter regions to the north were then occupied only by Kaffir tribes, he conceived the idea of pushing British authority forward into the back country, getting ahead of the Transvaal Boers, who were sending out raiding parties with a view to the acquisition of the ranching lands that stretched up to and across the Tropic. He entered the Cape Parliament, and soon became a prominent figure there, not so much by oratory, for he was never an eloquent speaker, as by the reputation he had won as a successful business man and by the impression of an ambitious and forceful personality which he made on every one with whom he had to deal. After a few years the position of Prime Minister came naturally to him, because he was felt to be the strongest man in the colony; and he held that post till the Transvaal troubles of December, 1895. Meantime he had succeeded almost beyond his hopes in getting hold of the whole vast region that lies to the north of the eastern part of Cape Colony and of the two Dutch Republics, the British government having granted a charter to the company which he had formed for the exploitation and control of that territory. Rhodes had by this time become a potent figure in England, where the company was supposed to have a brilliant future before it, and all sorts of people rushed in to take shares. Inasmuch as he enjoyed the support of the Dutch party in Cape Colony as well as of the bulk of the English there, his power seemed to be firmly based. No colonial statesman had perhaps ever before established such a position, or won such fame, not only in the British dominions, but in the world at large.

Then, in the end of 1895, came the abortive revolution in the Transvaal and the entrance into that country of Rhodes's friend, Dr. L. S. Jameson, with a military force of mounted police from the territories of the chartered company, in order to support the revolution which the English residents and some of the Americans were organizing. Rhodes had been a party to both branches of the movement, though he did not intend Jameson to make his invasion at the time or in the way in which that enterprise was carried out. With the Raid, his power fell in a moment. He resigned office, and the Cape Colony Dutch, startled and incensed, turned against him. Four years of tension and suspense followed, and in 1899 war broke out between the British Government and the Transvaal, the latter being backed up by its sister republic, the Orange Free State. Parts of the story of these eventful years have remained dark, notwithstanding all that has been spoken and written about them, and Sir T. Fuller does not attempt to turn on the searchlight. Two things, however, are brought out in his book which ought to be known to the credit of the man who had to bear at least as much of the blame as he deserved and perhaps more. Rhodes, he tells us, frankly acknowledged his own grave error in having a hand in the events of 1895. He did this in a public speech, repeating at Sir T. Fuller's instance a statement made privately two days before to a party of friends. The public speech does not seem to have been properly reported at the time. However, Sir T. Fuller heard the words, and gives them, and they are worth quoting as a candid acknowledgment which ought to stand to Rhodes's credit.

> I do not so much regret joining in an attempt to force President Kruger into a juster and more reasonable policy, when he had resolutely refused all redress of grievances; but what has been a burden to me is that I was Prime Minister at the time, and that I had given a promise that I would not do anything incompatible with the joint position I held as Premier of Cape Colony and director of the Chartered (*i. e.*, British South Africa) Company. On every ground I was bound to resign if I took such a course as assisting a revolution against an officially friendly state; and I did not. I can only say that I will do my best to make atonement for my error by untiring devotion to the best interests of South Africa (p. 209).

And Sir T. Fuller also says (p. 219):

> Mr. Rhodes had nothing whatever to do with the inception of the war of 1899 between the Transvaal and Great Britain. He took no part, directly or indirectly, in the correspondence which preceded the war, between Mr. Chamberlain and the Transvaal government. On his arrival at Cape Town, at a time when the position was very critical, he said emphatically, "I made a mistake with regard to the Transvaal once, and that is quite enough for me—a burnt child dreads the fire. I keep aloof from the whole Transvaal crisis, so that no one will be able to say, 'Rhodes is in it again'" (pp. 219, 220).

Soon after, when the war broke out in 1899, Rhodes went to Kimberley and shared the hardships of the siege with the people of his diamond fields, as he had before gone to Matabele Land when the Kaffirs had risen there, and had helped to bring the insurrection to a close. By this time his health was breaking, and he died in 1902, just after the end of the Transvaal war.

The points which Sir T. Fuller brings out as the most peculiar and most interesting—perhaps also the least generally understood—in the character of Rhodes are his idealism and his width of view. He devoted his life to one great aim, the civilization of South Africa and the uniting of its parts under one government. This, by the necessities of the case, was a British government; but what was first in his mind was civilization and union rather than the mere extension of British dominion. The largeness of the enterprise had fascinated his imagination before he could well have begun to fancy that he, as an individual, would have a chance of carrying it out. How far when he had the chance and was carrying out the project, he continued to be governed by the splendid vision, how far ambition and the desire of fame joined to spur him on in the enterprise, it would be hard to determine, nor does it much matter. In men of such energy and such imagination as he possessed, personal motives and disinterested motives are apt to be mixed and blent. Rhodes saw what was needed. He believed he was the man to do it. He enjoyed the doing of it. He loved the power he had acquired, he loved the fame that gathered to him and the idea that his fame would endure. He is almost the first instance of a great adventurer who attained his aims by money instead of, like Cortes and Pizarro and Champlain and Clive, by force of arms. But he had no desire for money except as a means to his ends. He cared neither for luxury nor for ostentation. He was generous in helping those who sought or needed help; how generous may be learned from Sir T. Fuller's pages; and he spent his own wealth freely upon public objects. He was not very scrupulous in his choice of means, and used methods for maintaining his authority in Cape Colony which scrupulous people condemned, though Sir T. Fuller gives no countenance to the charge that pecuniary corruption was among those methods. His connection with the Raid was not his only dereliction from the highest standard of public duty. But he was loyal to his friends and his causes, and incapable also of the smaller trickeries of politics. Some of the people who surrounded him and whom in his large, easy way he tolerated, brought on his reputation undeserved slurs, which the testimony of well-informed friends like Sir T. Fuller serves to clear away.

Weaknesses he had, personal weaknesses of temper and manner, which are not concealed in these pages. But he had also not only a vigorous intellect, but a large and fine imagination sus-

ceptible to high impulses. He loved nature, he loved knowledge, and was never happier than when reading history or the lives of great men. He was entirely free from snobbishness or the pettier forms of vanity. He was captivated by the idea of the coöperation of the three great peoples of Teutonic origin in the work of civilizing and pacifying the world, and when he devoted a very large sum to the foundation of those scholarships at Oxford University which bear his name, he allotted some to Germany and many to the United States, as well as some to each of the British self-governing colonies. The fact that German sentiment had favored his persistent opponent, President Kruger, in the Transvaal made no difference to his feeling that Germany and England ought to stand together, along with the United States, for the same ideals. Few people, even of those who had contracted a certain prejudice against him from his public acts, came into personal contact with him without finding themselves attracted to a personality so robust and so self-confident, impressive by its dash, its courage, its singular mixture of practical talent with the gift of a larger vision.

CURRENT FICTION.

Celt and Saxon. By George Meredith. New York: Charles Scribner's Sons.

"A young Irish gentleman of the numerous clan O'Donnells, and a Patrick, hardly a distinction of him till we know him, had bound himself, by purchase of a railway ticket, to travel direct to the borders of North Wales, on a visit to a notable landowner of those marches, the Squire Adister, whose family-seat was where the hills begin to lift and spy into the heart of black mountains."

So, as with a series of quiet wavelets, each mounting a little nearer the predestined level, until, with the final phrase, it is fairly attained—so characteristically begins the story Meredith did not live to finish. Characteristic the book is throughout in substance and flavor; but on the basis of what we have of it, there is little cause for supposing that it would have ranked among Meredithian masterpieces if it had been completed. It lacks the spontaneity, the buoyancy, the natural effervescence of the earlier work; there is, here and there, a hint of senile sprightliness difficult for the most willing piety to ignore. One is not sure the fragment should have been printed, with all the obvious imperfections which belong to it as an unrevised and unfinished work; perhaps the truest piety would have put it quietly out of the way. And yet, one's first disappointment weathered, too much of the greater Meredith is discoverable to have been foregone. The human figures in the book are, on the whole, of inferior proportions. Young Patrick O'Donnell hardly emerges from his type, his brother Philip is a romantic sketch, and the fair Adiante, as far as we are here taken, a somewhat elusive rumor. Captain Con, his wife, and his brother-in-law, the Squire Adister, are perilously close to the grotesque. Rich and plebeian Jane Mattock is the one person to warm the heart. But Patrick and Philip and the journalist Rockney are taking shape before, far too soon, they are left wandering in the limbo of half-created things.

Incident and characterization are matters the true Meredithian can very well get on without. If you doubt or tire of the novelist, the essayist remains, unapproachable in our time. "Celt and Saxon" is rich in commentary. The long chapter on "The Great Mr. Bull" is a veritable *tour de force*. "Fancy yourself," is the modest suggestion, "delayed by stress of weather at an inn or an excursion, and snapped up by some gossip drone of the district, who, hearing whither you are bound, recounts the history and nature of the place, to your ultimate advantage, though you groan for the outer downpour to abate. Of Bull, then: our image, before the world, our lord and tyrant, ourself, in short—the lower part of us." Follows a full and unsparing analysis of John Bull's character. He is "a positive shape, a practical corporation." He has no ideals of his country—scorns them:

"Ridiculous Germans, capricious Frenchmen! We want nothing new in musical composition and abstract speculation of an indecent mythology, or political schemes and contrivances and schemes of Government, and we do not want war. Peace is the Goddess we court for the hand of her daughter Plenty, and we have won that jolly girl, and you are welcome to the marriage-feast; but avaunt new-fangled theories and howlings: old tunes, tried systems, for us, my worthy friends."

In this fact our "gossip drone" finds much to account for the barrier between Celt and Saxon: "You may be so self-satisfied as to dispense with an ideal: your yokefellow is not; it is his peculiar form of strength to require one for his proper blooming, and he does bloom beautifully in the rays he courts." And it seems to him that the solution of the problem, the removal of the barrier, must be achieved upon an ideal, rather than a practical plane: "An ideal of country, of Great Britain, is conceivable that will be to the taste of Celt and Saxon in common, to wave as a standard over their fraternal marching." How far the tale, if it had been finished, would have gone toward enforcing this theory, is matter for surmise. The fragment must suffice as a fragment: Heaven defend it from the fate of "Edwin Drood" and "Weir of Hermiston"!

Caprice, Her Book. By Dorothy Senior. New York: Macmillan Co.

This is another example of a mongrel type of book which seems to be making itself particularly acceptable (among the publishers, at least) this season. It might be labelled as the "novelized" familiar essay—that old-fashioned mode of expression having no longer the courage, apparently, to stand on its own feet. The authorship of these pages is, to be sure, a patent invention. Caprice is supposed to be an English girl, who is inspired to keep a random record of her thoughts and experiences at a critical moment of her life. She is capricious, vivacious, facetious, after the somewhat lumbering manner of the female Briton who unbends. She has her solemn moments, her thoughts upon infinity, eternity, and the like. At such times her knack at quoting asserts itself with especial effect. She has Fitz-Gerald's quatrains, "The Princess," and Longfellow's complete works at her tongue-tip, and her paragraphs are plentifully sprinkled with quotation marks. She lives in the house of her married sister; a small nephew and a smaller niece supply the bright sayings and odd doings which appear to be indispensable accessories to this kind of book. The scene is an English village, and there are rural worthies and unworthies upon the casual boards. There are also various couples, wed and unwed, of Caprice's own class, in whose relations she has a minute interest. Above all, of course, there is the young man for whom she herself is destined: he is kept at his distance quite long enough. If it were not for its artificial buoyancy, its too plain effort for brilliancy, the book would do well enough for a summer afternoon.

The Bourgeois. By H. De Vere Stacpoole. New York: Brentano's.

Bohemian Paris is, it seems, an inexhaustible treasury for the Anglo-American romancer. An established cant of the Latin quarter has come into being, and certain properties, human and other, are recognized as eligible for the kind of fiction in question. Fortunately the present story-teller does not conduct us through the worn paths of student-grisette-artist literature. The hero is an American medical student; but he is original in being a minor character of the tale; the stars are Frenchmen, an amusing group, of whom the central figure is one Frisson. This Frisson is an ex-medical student who aspires to be a playwright, and makes a living for himself and a strange parasite by miscellaneous hack-work. The hanger-on, Carabin, is a man of fifty or sixty, for many years an unsuccessful candidate for a medical degree, and a gross rascal by actual profession. His only usefulness lies in his ability to find work for Frisson to do. To this pair comes

the young American, Peter Alabaster; not the omnipotent gamin of the familiar type, but an unsophisticated youth with no vices, who finds himself much at sea in his strange surroundings. Under the tutelage of the Frisson-Carahin group, and of a certain young woman, his education rapidly advances. He has a narrow escape from becoming a party in such a matrimonial fiasco as his father has warned him against. The real interest and merit of the book lie in the picture of the group of down-at-heels Parisians, and particularly of Frisson, an engaging and even heroic figure in his way.

SAINT TERESA THE REFORMER.

Saint Teresa of Spain. By Helen Hester Colvill. New York: E. P. Dutton & Co. $2.50 net.

No saint in the calendar, with the possible exception of Saint Francis of Assisi, has interested non-Catholics so much as has Santa Teresa de Jesus. While most are virtuous abstractions, the saint of Avila is very human. She had an attractive personality and enjoyed society. The gift of humor was not denied her. She had a never-failing fund of common sense, and not a few of the foibles of her sex. She is the greatest of the group of Spanish mystics, yet combined with her spiritual life a business and organizing ability of the first order. As a writer, she is one of the great names in Spanish literature, her autobiography and her "Road to Perfection" being classics. As a reformer within the church, her name is mentioned together with that of Ignatius Loyola. Her genius manifested itself in many ways, but that about her which most impresses is the perfect harmony between her spiritual and her more practical every-day life. According to Miss Colvill, Teresa's latest biographer, it was her great achievement to learn that neither the active nor the contemplative life is complete by itself; both must exist together. That is Teresa's message to a material age.

In her preface, Miss Colvill modestly disclaims all pretence to having discovered new facts or documents relating to Saint Teresa; she has merely a new point of view. The book is addressed to "the sympathetic of every creed," and is "aimed chiefly perhaps at the women who, daily reaching forth unto new spiritual domains, are glad to claim solidarity with the great women who have gone before, and have gained them the land they already possess." And again, she remarks, somewhat naïvely:

> Teresa does not come before us as the ideal mother, still less as the typical ensnarer of men, neither of which ideals is precisely what is in the mind of the advancing women of to-day. She is one of the world's great single women; that one of the virgin saints who seems nearest to us in method and in practice.

In a word, Miss Colvill's point of view is that of the suffrage reformer. We are not asked to admire Teresa the mystic, but rather Teresa the great woman, who in the sixteenth century united to the mediæval raptures of a Jeanne d'Arc the modern practical achievement of a Jane Addams. It is only fair to add that the fears aroused by this preface are unjustified. The book does not degenerate into a tract.

This point of view is after all not so very different from that of Mrs. Cunninghame Graham, who also admired the woman rather than the saint. Mrs. Graham's biography continues to be the best study of Saint Teresa in English, and Miss Colvill's work, though welcome, will not supersede it. Catholics, too, will continue to prefer their own official biographies. Miss Colvill quotes Charcot and dismisses Teresa's visions and miracles as manifestations of hysteria. This alone, in spite of the sympathetic way in which she has treated the subject, will prevent the book from winning acceptance among the faithful of Saint Teresa's church.

The work has been done with admirable thoroughness. Miss Colvill has made good use of the investigations of her predecessors, to whom she generously accords full credit. The elaborate bibliography of the subject which she has compiled attests much painstaking care. If new facts of importance have not been unearthed, it is not from want of effort on her part. She has personally visited every convent founded by Teresa in an effort to glean new material. Her work gains by the local color thus obtained.

The events of Teresa's life are set forth with much minuteness of detail. A less exhaustive treatment would have made the biography more readable, for it is Teresa's personality that interests us, rather than the detailed account of her cloistered existence. Chapter after chapter is devoted to the story of the founding of successive Carmelite convents. This matter might well have been condensed. On the other hand, too little space is given to Teresa, the woman of letters. Miss Colvill here does the subject of her study scant justice. We are told: "Her style is amateurish; ignorant of rules, by no means free from defects, not only of composition, but of grammar and spelling." But could not the same be said of Cervantes, or of almost any other European writer of the sixteenth or seventeenth century; the art of writing finished prose is a thing of yesterday in all the modern European literatures, and a uniform standard of spelling was not to come until two centuries later. Miss Colvill seems to be following Ticknor, who also thought Teresa's style slovenly. Fitzmaurice-Kelly has gone to the other extreme. To him Teresa is "the greatest woman who ever handled pen, the single one of all her sex who stands beside the world's most perfect masters." The truth probably lies between these two extremes. Certain it is that Teresa wrote with admirable simplicity, clearness, and concision. To appreciate what she has done for Castilian prose, it is only necessary to compare her style with that of any of her Spanish contemporaries. She avoided that grandiloquence which has always been the besetting sin of her nation. The characteristic *emphase espagnole* is wanting in her writings. To the nun, adornments of style were as sinful as the vanities of dress. That is probably the secret of her admirable simplicity.

The Fascinating Duc de Richelieu: Louis François Armand du Plessis (1696-1788). By H. Noel Williams. New York: Charles Scribner's Sons. $4 net.

Mr. Williams, who is the author of several interesting biographies of celebrated French women, now undertakes to make us acquainted with a nobleman whose courage, self-command, and general abilities were defiled by the debauchery, craftiness, and absurd extravagance common to his age.

The military life of Richelieu is certainly one of the best parts of the book. The campaigns of the eighteenth century have been so completely investigated by French historians that very little new can be expected from any one writing now. Mr. Williams, indeed, does not pretend to great originality; a conscientious writer, he has studied most of the French works on the reign of Louis XV, and his evident desire is to deal impartially with persons and events. He has a just and sober appreciation of the rôle played by Richelieu at the battle of Fontenoy; and deals properly with the bad faith of the English government after the convention of Kloster-Zeven, since convention it must be called, unfortunately for the fame of Richelieu, who should have made of it a capitulation. He remarks judiciously on the advantages that France might have derived from the brilliant advance of Richelieu on Halberstadt. "This rapid march," he says, "with an ill provisioned and shoeless army was a movement which is generally acknowledged to reflect great credit on the Marshal." The mistake made by the French ministry was to regard Richelieu, the victor of Fort Mahon, as a general capable of leading an army of 100,000 men, under extremely difficult circumstances.

Without duly exalting the character of Richelieu, Mr. Williams shows conclusively that he was not, as Carlyle exclaimed in his picturesque style, merely "a companion of flying table orgies, and a perforator of bedroom walls." It is difficult to judge of past times by our own standards of morality. Possibly, as his subject makes necessary the mention of so many scandals at the court of Louis XV, Mr. Williams might have been a

little more explicit on the fact that if morality was much to seek in the French court, it was so everywhere. And if the high clergy and the court aristocracy were corrupt, the low clergy, the provincial nobility, and most of the people were not. Even at the French court, dialogues as coarse as those found in English dramatic works of the period would not have been tolerated. Neither has our author fallen into the general misconception that the death of Louis XIV was followed by an era of depravity totally unknown before. He calls the movement "a reaction against the religious and political principles of the late king," and this it was. We wish he had a little more plainly exposed the mistake commonly made on this point. Perhaps also the relations of Richelieu with the Philosophical party and particularly with Voltaire might have been a little more fully reported upon, though the duke in his opposition to Madame de Pompadour and Choiseul stood singularly aloof from the Encyclopædists.

Ammiani Marcellini Rerum Gestarum Libri Qui Supersunt. Recensuit rhythmiceque distinxit Carolus U. Clark. Vol. I Libri xiv-xxv. Berolini, Apud Weidmannos.

Americans have published many excellent school-editions of the classics, and some that are more than school-editions, and have made valuable contributions to the interpretation of the ancients; the day of editions "based upon the German" has surely passed. But we have here for the first time the entire remains of an ancient author, edited on the basis of a first-hand scrutiny of all the manuscript material available, a searching and, 't seems to us, conclusive estimate of the values of the different manuscripts and editions, and a judicial consideration of the emendations proposed by scholars from the Renaissance to the present day. Professor Clark undertook the task under the direction of the Berlin Academy; he has been assisted by eminent scholars abroad, mostly by Heraeus, and those lamented masters, Traube and Mommsen, but the inception of the plan and its execution are his own. Opinions are bound to differ as to the readings adopted in this passage or that, but none will fail to admire the combination of independence and conservatism that Professor Clark has shown in dealing with very difficult problems. Whatever further investigation may decide as to details, this edition in its accurate presentation of all the pertinent evidence for the establishment of the text, is final. A novelty in punctuation, which is bound to be followed in future scientific editions of certain ancient authors, is the indication of the rhythmical *cola* which the paragraphs and sentences of Ammianus's rhetorical prose contain. The editor uses a simple comma for the purpose, adding greatly to the enjoyment of the reader who cares for the movement of the clause, as well as for its sense. The second volume, which is promised shortly, will contain elaborate indices and a complete discussion of the manuscripts and their palæographical peculiarities.

Ammianus deserves this care. Despite his artificial tricks of style, his somewhat Græcized idiom, his pretentious excursuses on subjects with which he was ill-acquainted, he has, like his master Tacitus, a keen eye for character, and, in an age of hot contests, a remarkable tolerance of attitude. He was a Greek, but like another eminent Greek of his day, Claudian, a tremendous admirer of Rome; he was a Pagan, but he could praise the virtues of Christianity and censure Julian. Gibbon had the highest regard for this "philosophic soldier," whose testimony he called "unexceptionable," and on finishing the period covered by Ammianus, he declared:

> It is not without the most sincere regret that I must now take leave of an accurate and faithful guide who has composed the history of his own times without indulging the prejudices and passions which usually affect the mind of a contemporary.

Gibbon appreciated the impartiality of Ammianus, but he would have rubbed his eyes had he seen in a famous passage, as it appears in the text of Professor Clark's predecessor, Gardthausen, the name of Jesus associated with Pythagoras, Anaxagoras, and Solon. Gutschmid, tempted by pseudo-palæographical evidence, had read it into the text, and had thus converted the passage to sheer nonsense. His suggestion is not followed by Professor Clark.

Commodore John Rodgers. By Charles Oscar Paullin. Cleveland: The Arthur H. Clark Co. $4 net.

The career of this distinguished sailor, which is now made conveniently accessible, is full of incidents, some thrilling and all honorable. After a brief training in the merchant service, Rodgers accepted a lieutenant's commission in 1798, and took part in the brilliant engagement between the Constellation and the French frigate Insurgente, returning home, after his first naval cruise, in command of this valuable prize. No less than four times he was in the Mediterranean operating against the Barbary powers, on three occasions as commander-in-chief, and nearly always successfully. "Within less than a month, by a proper show of force, Preble and Rodgers had obtained an honorable treaty with Morocco without the payment of a cent for tribute or presents."

Later, as senior officer of the American navy, he was engaged in still more significant affairs. His general order, in 1805, forbidding his commanding officers to permit themselves to be detained or their men to be taken out of their vessels, unless compelled to do so by superior force, was a spirited reply to Lord Collingwood's refusal to give up three seamen taken out of Gunboat No. 6 off Cadiz—a circumstance which presaged the War of 1812. It was Rodgers, too, who commanded the President in the Little Belt affair, an unequal and regrettable incident in itself, but one which somewhat retrieved the national honor so disgracefully impaired when the British fifty-gun ship Leopard attacked the Chesapeake and forcibly removed three American seamen who were alleged to have been deserters from the royal navy; at any rate, the incident made him, for the time, a popular hero. Rodgers was unfortunate enough to win no glorious victories in the War of 1812, although afloat in the President and at times commanding small squadrons. In at least two instances he lost great opportunities through a prudence which subsequent developments proved to have been unnecessary. From a strategic point of view, however, Rodgers's work was important in the extreme—his cruises in the vicinity of the British Islands and elsewhere carried dismay to the enemy's commerce and forced a concentration of its naval strength which cleared the way for our own returning ships. Mahan, in his "War of 1812," recognizes the soundness of Rodgers's professional opinion on this score, and points out the immense value of Rodgers's movements to the general cause. It will be remembered, also, that Rodgers formed and led a contingent of sailors who shared in the successful defence of the city of Baltimore in 1814 against the joint attack of Admiral Cochrane and Gen. Ross, displaying on that occasion the same sagacity and energy which marked his career afloat or ashore.

No officer ever took so large a part as Rodgers in the organization and administration of the Navy Department. He was interested from the first in the creation of a board of commissioners, the establishment of naval hospitals, a dockyard system, the equipment of ships, etc. President Madison offered him the portfolio of Secretary of the Navy, which he declined. The Board of Navy Commissioners was formed by law in 1815 to furnish the Secretary of the Navy with technical counsellors and administrators, a sort of general staff. When he was at their head from 1815 to 1824, and again from 1827 to 1837, Rodgers, as might be expected, left a lasting impress of his character on our store stations.

In appearance he was a muscular, vigorous man, buoyantly alive, brave and modest, capable of deep feelings and strenuous energy; a little above the

average height, with black hair, dark eyes, and shaggy eyebrows, a handsome face, and a look of firmness and resolution. In some respects he reminds one of Lord St. Vincent, being, like this English admiral, forceful and dignified, a very strict disciplinarian, and a capable administrator. At all times and in all places he upheld the honor of the service, and was looked up to as an example of what a naval officer should be. His private life was a model of the domestic virtues and tender in all its relations. He was a truly admirable man. It was but natural that such a forceful example as his should have induced many of his connections to enter the army and the navy, which have never been without honorable representatives of his distinguished name.

The author has spared no pains to insure fulness and accuracy. We must regret a certain diffusiveness of manner and the insertion of matter, here and there, which is not immediately pertinent, however instructive. Some of this, like orders for his ships' internal economy, might better have figured in appendices, and thus have permitted a more compact and incisive treatment of the main theme—Rodgers as a man and a naval officer. It is the duty, also, of a biographer, while not minimizing the deeds of his subject, to bring out the personality of the man that the reader may know him as he was and as he appeared to his contemporaries. Although all this may be gathered from Mr. Paullin's pages, we are but slowly moved to that sympathy and understanding which Rodgers's character was so well fitted to command. Nevertheless, this biography, in itself a credit to the publishers, is a welcome contribution to our naval history, emphasizing as it does the encouraging tendency of the modern school of historians to seek below the surface for those qualities in our forefathers which made them useful servants in laying the foundations of the republic or in protecting it against assault by the foe.

Notes.

"Heroes of the Elizabethan Age," by E. Gilliat, is one of the forthcoming books of the English firm of Seeley.

Two supplementary volumes are announced by the editors of "The Cambridge History of English Literature," one to appear after the publication of Volume VII, the other after the publication of Volume XIV of the "History." Both will contain extracts in prose and verse, illustrative of the text, reproductions of title-pages, portraits, facsimiles, etc.

"The Literature of the South," by Montrose J. Moses; a romance of the South, entitled, "Deep in Piney Woods," by Col. J. W. Church, and "State Socialism in New Zealand," by Prof. J. E. Le Rossignol, are in preparation by Thomas Y Crowell & Co.

Ellen Glasgow's new novel, "The Miller of Old Church," will be published in a few months by Doubleday, Page & Co. The same company will issue "The Osbornes," by E. F. Benson; "Queen Sheba's Ring," by H. Rider Haggard, and Stewart Edward White's "The Rules of the Game."

From the press of Jennings & Graham, Cincinnati, will shortly appear, "The Spiritual Sense in Sacred Legends," by Edward J. Brailsford; "The Aims and Methods of Great Teachers of Judaism and Christianity," by Charles Foster Kent, and the "Methodist Year Book, 1911," edited by Oliver S. Baketel.

A. C. McClurg & Co. make the following announcements: "Princess Sayrane," by Mrs. Carter Harrison; Randall Parrish's "Keith of the Border: A Tale of the Plains"; a new and enlarged edition of Edgar Beecher Bronson's "Reminiscences of a Ranchman"; "The Red-Blooded," by the same author; "Standard Musical Biographies," by George P. Upton; "My Voice and I," by Clara Kathleen Rogers; "Sketches of English Life and Character," by Miss Mitford; "Tales of Irish Life and Character," by Mrs. S. C. Hall; Dr. Sadler's "The Cause and Cure of Colds"; the addition of four new volumes, by Edward B. Warman, to his "Psychic Science Series," dealing respectively with spiritism, suggestion, clairvoyance, and Hindu philosophy; "Christian Symbolism" and "Our Lady in Art," by Mrs. Henry Jenner; Prof. Flinders Petrie's "The Arts and Crafts of Ancient Egypt"; "The Riders of the Plains: A Record of the Royal Northwest Mounted Police of Canada," by A. L. Haydon; "English Costume," by George Clinch; "Home Life in Ireland," by Robert Lynd; "Story Telling: What to Tell and How to Tell It," by Edna Lyman, and "Building Your Boy," by Kenneth H. Wayne.

To us the most interesting parts of the "Gathered Leaves from the Prose of Mary E. Coleridge" (Dutton) are the introductory Memoir by Edith Sichel, and the concluding pages which contain "Notes of the Table Talk of William Cory at some Greek classes which he gave for Mary Coleridge and Others." In the Memoir Miss Sichel, who knew Mary Coleridge intimately, has told the story of a simple, imaginative life with a charm that seems to spring from the subject itself. Mary Coleridge had the intellect that is an inheritance of the family, with something of the aerial fancy that belonged to her great-uncle, the poet. Somebody said of her that she was "like the tail of the comet S. T. C."; and she herself once wrote: "I have no fairy god-mother, but lay claim to a fairy great-great-uncle, which is perhaps the reason that I am condemned to wander restlessly around the Gates of Fairyland, although I have never yet passed them." She wrote novels, which were interesting, but not well constructed; short stories and essays, some of which are reprinted in the present volume, including an excellent study of the character of the Duchess of Malfi; private diaries, extracts from which, together with passages from her letters, are also contained in this collection; and poems, not unlike those of Louisa Shore in quality, by which she is likely to be longest remembered among those who have time for this minor, if exquisite, literature. The selections from her works here printed are all worth reading, but to us the Table Talk of William Cory has a peculiar fascination. Cory, the author of "Ionica," more famous as one of the great masters of Eton, in his later years of retirement taught Greek to a small class of girls, including Mary Coleridge, who took notes of the lessons. Much of the record is, of course, the commonplace of instruction; but much of it is very far from commonplace, showing how Greek to this eccentric scholar was a living subject, connected vitally in his mind with all the other living topics of history. In conclusion we would quote the four lines from the memorial poem of Bernard Holland which are printed as a motto to the book, and which admirably describe Mary Coleridge:

Light was your touch upon the shadowy earth;
And yet, and yet—you loved diviner things.
Each mood you loved that changing nature brings,
You loved it well, yet knew it little worth.

Mr. Elphinstone Dayrell, district commissioner, has made an interesting collection under the title "Folk Stories from Southern Nigeria, West Africa" (Longmans). The stories are full of strange adventures, and the value of the little volume is increased by Andrew Lang's Introduction, in which he explains the various motifs, and gives savage, Greek, and modern European parallels.

The second of the Rylands facsimiles is from the single surviving copy of "A booke in Englysh metre of the great Marchaunt man called Dives Pragmaticus," written about 1563 by Thomas Newbery. The introduction, by Percy E. Newbery, is excellent and sufficient, and in its way quite as scholarly, as well as more intelligent, than the "Remarks on the Vocabulary and Dialect," by Henry Cecil Wyld. Professor Wyld's remarks evidence much learning, and he has compiled an elaborate Glossary of what he assures his readers is a scrappy and incomplete piece of chapmen's literature, quite without value to those who know anything about works of this sort. The glossary is got up according to the most approved style, and in a few cases supplies the meaning of the word, as well as references to the recognized authorities. The facsimile of the original work, like that of the Caxton, leaves absolutely nothing to be desired.

Edwin Sidney Hartland's "Primitive Paternity" (London: David Nutt) is to some extent a continuation of his "Perseus" (now out of print), some of the material of which work he here uses, but with revision and large additions. In successive chapters he discusses stories of supernatural birth; magical practices to obtain children; transformation and metempsychosis; mother-right; rise of father-right; marital jealousy; physiological ignorance on the subject of conception. All these ideas and usages he shows to have been widespread and persistent. He adduces many facts to prove that the origin of mother-right is not (as has often been held) uncertainty of paternity, but the idea that kinship was based on community of blood, the father, in savage communities, being of another kin, and the child naturally belonging by blood to the mother; and he is certainly right in holding that the movement from matrilineal to patrilineal de-

scent was a consequence of the better organization of the family proper (father, mother, and children). The general belief in supernatural birth he here traces to ignorance of the physical relation between father and child; this point he illustrates with much new material, and he brings out with new clearness and force the importance of this latter fact in the history of man's marital and family relations. The two volumes of the work contain rich material for the study of early social life, and the material is handled by the author with skill and judiciousness. An excellent bibliography is appended.

With the seventh volume of his "History of the United States and its People" (Cleveland: The Burrows Brothers Co.), Dr. Elroy M. Avery enters upon the constitutional period, carrying onward the narrative from 1789 to the beginning of 1806. Much as this period has been written about, it has still needed an historian, especially on its social and industrial sides; for the rapid expansion of agriculture, manufactures, and commerce, the latter setting in even before the Constitution was adopted, exercised upon the career of the new government an influence quite as strong as the rise of parties or the embarrassments of foreign relations. Dr. Avery avoids both the constitutional and political elaboration of Von Holst and the diffuse detail of McMaster; but it cannot be said that his narrative, in the main a summary account of events, offers novelty in its treatment. As compared with the preceding volume, one does not get so connected an impression of the period as a whole, some of the chapters reading too much like short monographs. In the exposition of really complicated situations, on the other hand, Dr. Avery is at his best, as witness the chapters on British diplomacy in the Northwest, Spanish diplomacy in the South, and the French imbroglio, where the main threads are skilfully disentangled. We note with approval the importance given to the opinions of Hamilton and Jefferson on the constitutionality of the bank, laying the foundations of the two great schools of constitutional interpretation; and the incidental recognition, doubtless to be further developed in the next volume, of Marshall's indebtedness to Hamilton. The financial situation, however, is by no means thoroughly gone into, although its outlines are clearly traced; nor do the enlivening sketches of social life make up for the scanty treatment of economic subjects which has characterized this work from the beginning. Slips in the text are rare. It is of course misleading to speak (p. 15) of each elector "casting one of his votes" for Washington in 1789, since there was no separate balloting for President at that time. Neither is it correct to say (p. 28) that the attorney-general did not become a member of the Cabinet until the creation of the Department of Justice, in 1870; for while the act of 1870 established a new executive department, with the attorney-general at the head of it, that officer was in practice a member of the Cabinet from the beginning. The influence of cotton in inducing the rejection of the twelfth article of Jay's treaty is also overrated (p. 130). The illustrations and presswork of the volume are as incomparable as ever. An appendix reproduces the text of Washington's "Farewell Address," from the manuscript in the Emmet collection, with its numerous and suggestive interlineations.

E. H. Downey's "History of Labor Legislation in Iowa" (Iowa Historical Society), which was written under the auspices of the Carnegie Institution, is especially valuable because it is the first competent study of the progress of labor legislation in an agricultural State. Although Iowa has not yet developed as complicated a code of labor laws as is found, for example, in New York, her legislation, so far as it has gone, runs parallel with that of the manufacturing States. The time and mode of wage payments, convict labor, labor in mines, on railways, and in factories, and child labor have been regulated by law; the common law of employers' liability has been modified by statute; and, since 1884, a Bureau of Labor Statistics has been in existence, which, since 1904, has boasted a factory inspector. Mr. Downey describes fully the circumstances which gave rise to legislation in these different fields, as well as the laws actually passed and their operation, and indicates, in connection with each subject, the further development of the regulative policy which he deems desirable. Equally with the author, the editor of the Iowa Historical Society, Professor Shambaugh, deserves praise for the admirable form in which the book is published.

Prof. Costanzo Rinaudo of Turin has printed "Il Risorgimento Italiano," a robust work of over 800 pages, being the substance of lectures delivered by him before the War College at Turin. As might be expected, he sets forth the orthodox, official story of Italian Independence, rather than striking out into new interpretations. The main currents are clearly traced; the secret springs are sometimes overlooked. There is a tendency also to smooth over the personal reactions on which the course of events often hinged. But the book will serve better than most Italian works for readers who seek an introduction to the history of the most astonishing national redemption of modern times. Prof. Rinaudo adds a bibliography of 1,000 titles, from which it appears that he is ignorant of the material in English and in German! The book is published by the author, 3 Via Brofferio, Turin.

Dr. Alessandro Luzio, since the death of Ernesto Masi, is the keenest Italian analyst of Risorgimento material. He has the unique advantage of being conversant with the Austrian not less than with the Italian and French sources. As Keeper of the Royal Archives at Mantua, he has further enjoyed special privileges. Welcome, therefore, are the two volumes of "Studi e Bozzetti di Storia Letteraria e Politica" (Milan: Cogliati), in which he has collected nearly two score of his recent papers. They cover a wide field of subjects, and range in time from the end of the eighteenth century down to our own day. Students will be particularly grateful for the reprint here of the monograph on Radetzky, and for several studies of Austrian policy from 1848 to 1860, including the "auto-apologies" of the Austrian commanders for their blunders in the war of 1859. A review of Queen Victoria's Letters shows up her inability to understand the Italian situation, and her lack of sympathy for the Italians struggling for liberty and independence. The account of the "moral torture" inflicted on Monsig. Luigi Martini for his book describing the persecution suffered by the martyrs of Belfiore, may seem grim to readers unfamiliar with the ways of the Congregation of the *Index*. But Dr. Luzio's facts are incontestable, and the directness with which he cross-examines witnesses is as praiseworthy as the clearness with which he presents his conclusions. These volumes ought to find a place in every library which has in stock the material essential to a knowledge of modern European history.

George E. Woodbine has edited in scholarly fashion, as his Ph.D. thesis, "Four Thirteenth Century Law Tracts" (Yale University Press). These tracts came into existence under Edward I, a time when law as a profession was beginning to attract others besides ecclesiastics. They were handy little abridgments of Bracton and Glanville, composed for the convenience of inexperienced professional pleaders. For an accurate text, Mr. Woodbine has collated many manuscripts in the British Museum and elsewhere. In a sane and restrained introduction he gives his reasons for wishing to attribute the authorship of the first tract, "Fet Asaver," to Ralph of Hengham. Such facts as we have point to Hengham's authorship, but the facts are too meagre for absolute certainty. Mr. Woodbine also makes a neat point in connecting the third and fourth tracts. Since the third, 'Modus Componendi Brevia," was in Latin, and the fourth, "Exceptions which may be Pleaded against Writs," was in the atrocious Anglo-French, used in the courts, no one ever suspected any connection between them. Mr. Woodbine shows by internal evidence that they are really but parts of a single tract, perhaps written by the same Ralph of Hengham, and that the difference in language is perfectly explained by the last sentence in the "Modus" itself: "It is the custom in England for men to plead in French and not in Latin, therefore exceptions are written in French."

The dedication of the new home of Boone Library at Wuchang, on May 16, was another striking evidence of the awakening of China. Though connected with Boone College it is virtually a public institution, for it is open to all who desire to use it and books are sent to far inland cities and towns, while a branch has been established at Hankow. The building, which Bishop Roots, in his dedicatory address, described as the handsomest in the Hankow district, contains a large assembly hall, a reading-room, and shelving capacity for 30,000 English volumes and 200,000 Chinese. The aim is to cover all branches of good Chinese literature as well as the masterpieces of the Western, religious and secular. The college students (420 in number, including the preparatory department) at an enthusiastic meeting decided to try during the summer vacation to secure by gifts or to buy as many such works as possible. On the platform at the dedication exercises were several prominent Chinese officials, two of whom, the president of the Provincial Legislature and the director of education for the province of which Wuchang is the capital, made addresses. With them was the commander-in-chief of the Viceroy's forces, who seemed most interested in

the hymn which closed the exercises, "God save the Emperor."

The tenth "part" of the Goldene Klassiker edition of Goethe (see *Nation*, April 21, p. 409), edited by Karl Alt, contains "Faust, Erster Teil, Zweiter Teil," and all the important paralipomena, with an introduction of sixty-four pages. The fourteenth "part" is to contain the "Urfaust," the "Fragment" of 1790, and the "Helena" of 1800, while the commentary will presumably appear in volume eighteen. The introduction covers the necessary ground with clearness and a reasonable degree of thoroughness, and without dragging in irrelevant matter or urging doctrinaire theses. The notes are brief and to the point, and avoid in a commendable fashion the controversial tendencies encountered in so many editions of "Faust." The inevitable array of parallel passages is reduced to the minimum; in fact, some scholars might consider it below the minimum. To be sure, not everything brought forward as a parallel is one, and often such a citation serves only to obscure the real or fancied difficulty, whereas the mere placing side by side of two true parallels is frequently enough to make both of them perfectly clear, though one or both, alone, would have been obscure. Alt may have preferred, as a matter of principle, to keep well within the bounds of necessity rather than to run the risk of seeming to value his commentary above the drama itself. The same may be true with respect to another marked general tendency on the part of "Faust" commentators, viz., to show just how much of Goethe's own self is embodied in each of the characters. Here again Alt resists temptation. As a result, his commentary serves the main purpose of elucidating most, though hardly all, of the difficult passages, whereas it might have undertaken to make us still more thoroughly acquainted than it does with Goethe's characteristic thought and feeling as revealed in "Faust." Judged, however, as a part of an annotated edition of Goethe's works, this volume will not suffer by comparison with any now on the market. In fact, his is the only one that prints all the versions in full. To some this may seem extravagant, but to others it will appear well worth while, since it brings before the reader the material necessary for a genetic study of "Faust," the superiority of which method was referred to in the review of Gräf's new edition (*Nation*, January 20, p. 68). It would not be surprising if we should some day have an edition modelled after Baechtold's "Goetz" and "Iphigenie," with the various versions printed in parallel columns, the variant readings of important texts and manuscript fragments at the bottom of the page, and the paralipomena inserted so far as possible in their proper connection.

The leading critical theological journal of Germany, the *Theologische Literaturzeitung* of Leipzig, edited since its establishment in 1875 by Professors Harnack and Schürer, will now for the first time experience a change in its editorship. The place of the recently deceased Schürer will be taken by Prof. Arthur Titius of Göttingen and by Dr. Hermann Schuster of Hanover, Professor Harnack remaining on the staff until the beginning of the new year, when on account of other work he retires. The *Zeitung* is a bi-weekly and is published by Hinrichs of Leipzig.

The death is reported, in his fifty-second year, of Dr. David Lee Maulsby, who, since 1891, was professor of English literature and oratory at Tufts College.

Science.

A curious problem in tobacco culture has been worked out experimentally in France, and is reported to the Académie des Sciences. The production of nicotine has become insufficient to supply the demand for the treatment of plants and animals. To ascertain if the cultivation of tobacco plants for the special production of this alkaloid would pay, experiments were begun in Brittany and in the centre of France. It was found that the quantity of nicotine produced by the tobacco plants per acre depended chiefly on the head-cutting or pulling of the plants. By leaving only six leaves to a plant the weight of nicotine produced became four or five times as much as that where all the leaves were left, that is precisely in inverse ratio with the tobacco crop. In the central department of the lot, the maximum weight of nicotine for 20,000 six-leaved plants was nearly 350 pounds. With the price at which tobacco leaves are sold, even this maximum production, under the most favorable conditions, would cost far more than it would bring. Tobacco will not therefore be cultivated in France for the nicotine which it produces; and, if the supply of the alkaloid is insufficient, it must be increased from other tobacco-producing countries.

"Who's Who Among the Ferns," compiled and illustrated by W. I. Beecroft (New York: Moffat, Yard & Co.), is, in spite of the sensational title, a most valuable book. The author has adopted a practical method of identification, which renders the determination of the names easy and even pleasant. The illustrations are wholesomely plain, but serve their purpose fully. There are two admirable features presented by this convenient handbook which are worthy of special mention—the precedence given to the common names of ferns, and the blank spaces left for field notes. A handier guide to these attractive plants has not yet come to our notice.

"The Catalogue of the Fowering Plants and Ferns of Conuecticut, Bulletin No. 14 of the State Geological and Natural History Survey of the State of Connecticut," serves the excellent purpose of stimulating further research along the given lines. For without a list of this sort an amateur, at least, never knows when he is making a real discovery, and when simply duplicating work already done. He therefore lacks incentive. The authors of this treatise have worked successfully in their respective fields, and the composite is worthy of commendation. The work will give a great impetus to the investigation of the Eastern flora and will do much to settle many disputed questions in regard to the distribution of our plants.

William H. Wright's "The Black Bear" and "The Grizzly Bear" (Scribner) contain good accounts of those two interesting American mammals. About half of the former volume is devoted to a biography of the author's pet black bear, "Ben," which he captured as a cub and kept for several years. Mr. Wright knew a good deal about bears before he got "Ben," but he learned a good deal more afterward; and the development of his acquaintance with "Ben," as he describes it, is most interesting. The remainder of the book is devoted to a careful and informing account of the habits of this species in its native state, and includes much instructive comparison of *Ursus Americanus* with his more formidable relative, the grizzly. The account of the grizzly, though it also contains much natural history of the animal, is more from the point of view of the hunter.

Edward Breck's "Wilderness Pets at Camp Buckshaw" (Houghton Mifflin) presents in simple descriptive form much correct natural history concerning various animals captured by a backwoodsman naturalist and his guests, a party of boys and girls, and more or less tamed and domesticated at his camp. In this way are set forth many of the simpler and more significant facts in the life histories of the bear, the flying-squirrel, the crow and the raven, the moose, the porcupine, the loon, and other animals, and, incidentally, it is shown in a very convincing manner how much real pleasure and profit comes of making friends of one's wilderness neighbors. For these reasons, it is a capital book put into the hands of young people who are intending to camp out.

Music.

Judaism in Music. By Richard Wagner. Translated by Edwin Evans. Charles Scribner's Sons. $1.25 net.

Franz Liszt. By Raphaël Ledos de Beaufort. Boston: Oliver Ditson Co. New Edition, $1.25.

Richard Wagner was one of the worst as well as one of the best of German prose writers. There are in his numerous volumes many pages as direct and concise, as clear, brilliant, and witty as the best pages of Heine or Schopenhauer; but there are also not a few in which he is as involved, turgid, and inelegant as Kant or Hegel. His essay on the Jews in Music contains specimens of both styles—epigrammatic sentences that stick in the memory being followed by paragraphs vague in the original and still more so in translation. In making an English version of this essay, Edwin Evans, for the sake of greater clearness, divided the unbroken German text into half a dozen sections, under the heads: Introductory, Characteristics, Art-Relations, Musical Creation, Mendelssohn, Meyerbeer, besides introducing numerous marginal sub-heads, as well as footnotes.

In these footnotes—which are the chief *raison d'être* of this edition, for the essay has been translated repeatedly—Mr. Evans dwells not so much on the

BURLINGAME PUBLIC LIB

principal thesis as on such themes as are incidental to the main argument, although he does not neglect the opportunity to applaud or censure details of that argument; calling attention, for instance, to the fact that "all vehemence becomes suddenly absent upon the mention of Mendelssohn's name, and Wagner's sincerity may easily be traced in the fact of the kindly tone being so well sustained."

Sixty years have passed since Wagner committed the indiscretion of attacking the Jews in music at a time when Mendelssohn and Meyerbeer were the chief idols, and their followers the arbiters of taste, and when the German press was practically in Hebrew hands. He can hardly be blamed, however, for writing this essay; for, as one biographer has remarked, "it made his heart bleed to see how two exotic Jewish composers, not of the first rank, were almost monopolizing concert halls and opera houses, to the exclusion of the German classical masters; and it caused his soul the deepest anguish to see how his own works, more inspired, written on a higher level, and purely German, were neglected by his countrymen."

While the situation has entirely changed, the effects of that pamphlet have not quite disappeared, even now. Eighteen years after the first printing of "Das Judenthum in der Musik," in a musical periodical, Wagner brought it out in pamphlet form with some "Elucidations" addressed to the Countess Nesselrode, who had asked him for an explanation of the extraordinarily hostile attitude of the press in all countries (except Russia) toward his works and artistic enterprises. These Elucidations which are as long as the original essay, are included in Mr. Evans's volume. In them Wagner attempts to prove that this hostility had its chief source in that essay of 1850. The insult to their race contained in it rankled in the breasts of Jewish journalists, and their revenge took the form of persistent attacks on his works and projects. He ignores other factors that came into play, but undoubtedly there was some truth in his contention.

The most extraordinary detail in this warfare is that Wagner's field marshal, Franz Liszt, suffered more damage from it than he himself. Liszt had come to the rescue in the hour of deepest distress, and for this the enemies of Wagner fell upon him with unbridled fury. And while the opposition to Wagner himself has practically ceased, Liszt is still the target of arrows poisoned in those days. There can be no doubt of this whatever. Probably the censures of Liszt's works by some prominent critics of the day, in this country as well as in Europe, are sincere; but why are they so venomous? Liszt was the noblest, the most altruistic musician that ever lived; for everybody he had a helping pen or purse; no one ever did so much for living composers as well as for the old masters. Why, therefore, do these critics always write so bitterly, so sneeringly about him? The only plausible explanation is that they are still influenced by the traditional manner of treating Liszt which had its source in his missionary work for Wagner. The situation is quite as amusing as it is deplorable; for most of these writers who thus sneer at Liszt are ardent admirers of Wagner!

The public has long ceased, fortunately, to be affected by the paradoxically scornful attacks on Liszt; his works are steadily growing in popularity, and the number of publications on him also is increasing from year to year. No one is surprised, therefore, at the appearance of a new edition of De Beaufort's story of his life, which was originally published in 1886, shortly after his death, following the exhausting visit to England. Even this volume is affected by the traditional attitude toward Liszt, of whom the author says: "It is highly probable that he will only live in men's memory as an executant"; but that is the only *bêtise* we have noticed. The present edition is enlarged by twenty pages containing the articles on Liszt in Rome, contributed to the New York *Sun* last year by the Russian Princess Schahawskoi (Nadine Helbig). There are also lists of Liszt's works and his pupils.

Richard Strauss's new opera, in three acts, "Der Rosenkavalier," will be brought out in December at the Hoftheater in Dresden.

The Norwegian composer, Jean Selmer, died about a fortnight ago at Venice. He was born in 1844; was successful as a musical conductor, and composed orchestral pieces, songs, and cantatas.

The death is announced from Milan, in his seventieth year, of the Italian composer, Emilio Usiglio. At the age of nineteen, after having studied harmony under Giovanni Rossi, he composed an opera based upon Goldoni's comedy "La Locandiera"; this was followed by a long series of operas by which the author achieved national, though scarcely international, fame.

Charles Lenepveu, a French composer, died last week in Paris. He was born on October 4, 1840, at Rouen, received his education at the Lycée in Rouen, and studied music at the Conservatory in Paris. In 1865 he won the *grand prix de Rome*, with a cantata, "Renaud dans les jardins d'Armide." Among his other works are "Le Florentin," a comic opera completed in 1874; "Velléda," a grand opera bearing the date of 1882; "Jeanne d'Arc," a lyric drama published four years later; a requiem mass, published in 1893; a funeral and triumphal hymn, and a "Ode triomphale à Jeanne d'Arc" (1892), and "Méditation," a composition for solo voices, chorus, and orchestra, based on verses by Corneille, which was completed in 1885. He was an officer of the Legion of Honor and of public instruction, a commander of St. Gregory the Great, and of the Crown of Italy, a member of the Institute, a professor of composition in the Conservatory of Music, an inspector of musical education, and a member of the Superior Council of Musical Education.

Art.

Histoire de l'imagerie populaire flamande et de ses rapports avec les imageries étrangères. Par Emile H. van Heurck, membre de la commission administrative du Musée de Folklore d'Anvers, et G. J. Boekenoogen, docteur ès lettres à Leyde. Pp. ix, 728. Illustrated. Bruxelles: Librairie Nationale d'Art and d'Histoire, G. van Oest & Cie.

The French term "imagerie populaire" covers a rather wide field, corresponding to our chap-books, fly-leaves, and similar "literature," often almost entirely pictorial in character, published for the edification of the masses, or the folk, as it is customary in several quarters to designate them. This monograph, profusely illustrated with facsimile reproductions of engravings (single and in series), fly-leaves, etc., treats in detail of the history of this sort of folk-literature (the term is somewhat inaccurate) in Belgium, in which country the town of Turnhout, especially, has been renowned as a centre of its production. The volume, sumptuous typographically and otherwise, is issued in an edition of but 520 copies (of these twenty on Japan paper), and is quite appropriately dedicated to Max Elskamp, poet and engraver, and also founder of the Folk-Lore Museum in Antwerp. It will probably remain the authoritative work for this part of the Continent. Its preparation was made possible by the fact that both authors had been for years collecting these old engravings and crude picture-books, particularly the actual blocks and cuts.

The art of folk-pictures has now succumbed to the monotony of execution characteristic of modern machinery and to the banality of subjects dealt with to-day, when the workman no longer thinks or invents. Concerning the earlier art, the authors remark (p. 17):

In spite of all imperfections of execution, the old art was characteristic and beautiful. The old pictures were not always mere rude sketches made by hands unskilful and ignorant of drawing. There is very often perceptible in these ephemeral leaves a tone of greatness and authority. The humble artist, sprung from the people and dwelling in their midst, knows the soul of the folk and is able to move it. He has his own way of interpreting with the pencil men, animals, plants, houses, and everything about him. He knows how to give the necessary relief to certain details by enlarging or deforming them at will. The seeming unskilfulness which is one of the charms of the

older art is often intentional; it is accounted for by a careful examination and a certain knowledge of folk-psychology. The folk has its traditional and secular fashion of conceiving beings and things; delicate literature and refined art do not captivate it. Masters of the pencil, great and noble artists, have sought to renovate folk-pictures, but their efforts have been barren; their pictures, skilfully made, but executed according to classical canons, do not sell. They lacked the gift of stirring the folk-soul. . . . To-day the picture is the negation of art. The folk loves what is harmonious in color, and what affects by expression of the line and originality of the word. The modern picture, with its academic drawing, its discordant chemical colors, its banal and pedantic prose, its colorless verses, possesses none of the appreciable qualities of the old picture.

The earliest folk-pictures seem to have been of a religious nature. Subsequently they became legendary, military, realistic, anecdotal, satirical, philosophical, political, documentary, and vulgarizing. It is rather surprising to find so small an element in these folk-pictures that can be regarded as directly literary. Not standard printed books are the chief sources of the tales treated in these pictures; the subjects are drawn from songs and facetiæ widespread among the common people, or have been invented out of hand. It has often happened, of course, that the publishers have made use of plates from such books as the "Fables of Æsop," but this has been because they were able to obtain such cuts cheaply. It is not until towards the beginning of the nineteenth century, when publishers began to copy the competing pictures of the neighboring countries, that the tales of "Mother Goose," "Robinson Crusoe," "Gulliver's Travels," and the like, figure in the folk-pictures of the Low Countries.

The makers of folk-pictures were great plagiarists and shameless copiers of one another's art, and in the transferences which they made, not a few blunders occurred both in the arrangement of the cuts and in the wording of the legends accompanying them. In some cases little attention was paid to historical accuracy, the same picture, *e. g.*, serving for several entirely different things. Thus the picture of Mary, wife of William of Orange (afterwards King of England), is found doing duty for all the princesses of the House of Orange down to the Revolution; and about 1820, although his features must have been almost universally well-known, a fairly good picture of Napoleon was put out as representing the hereditary prince of the Low Countries.

The authors announce their intention of publishing in the near future a less extensive Dutch edition of this book, which has been given a French dress in order to obtain a wider circulation for the data it contains. Certainly no collection aiming to illustrate the history of folk-art can afford to be without this monograph.

Finance.

STRENGTHENING A BANK POSITION

When the surplus reserve of the New York Associated Banks reached $55,743,000 in the middle of the present month, it established the highest record in almost exactly two years. Not since September, 1908, had it reached so large a figure. Furthermore, it may be said that in only three of the past twenty-five years have the banks reported a larger surplus than last Saturday's—in 1908, 1904, and 1894. Those were three periods of industrial reaction, and they followed in each case a season of prolonged Stock Exchange liquidation. The aspect in which the present abnormally large bank surplus differs from those of the other years referred to is the rapidity with which it has been created. The $65,170,000 maximum of two years ago was touched on August 22, 1908; the chapter of liquidation of which it was the sequel had begun in March, 1907. The $58,613,000 high level of six years ago was reported on August 20, 1904; but the liquidation movement had continued since March, 1903. The $111,623,000 of sixteen years ago appeared on February 3, 1894; but the markets had begun their reactionary movement in March of the preceding year. In the present instance, it is less than eight months since even the Stock Exchange liquidation began.

The reason for such abnormal increase in surplus bank reserves at the larger money markets, after a season of financial and industrial reaction, is simple. The surplus reserve represents the excess in a bank's cash holdings over the sum which would make up the 25 per cent. of net deposits required by law. Such an excess might be created by unusually large addition to cash holdings, or by unusually large reduction in the deposit fund. Reduction of loans cancels an equivalent amount of deposits. Therefore, when surplus reserves mount up to unusually high figures, it is to be presumed that banks have either been taking large amounts of currency into their vaults or else have been heavily curtailing loans. As a matter of fact, it is the cash account which has usually been responsible. When the New York surplus reserve touched the high-water mark in 1904, cash holdings were $111,000,000 above the same date the year before, but loans were also $181,000,000 larger. So, too, of the highest surplus of 1908, when cash holdings, as compared with the year preceding, were up $141,000,000 and loans $212,000,000.

The common explanation for such a loan expansion, at an hour of financial and industrial reaction, is that a banker naturally seeks to employ his increased resources, and that he is enabled to do so, on a considerable scale, by redeeming loans which had previously been placed in foreign markets, or by taking over, from our own interior markets, loans which had previously been carried by institutions there. It is undoubtedly in this way that the New York Associated Banks have found opportunity to increase their loans $63,000,000 in the past four weeks—a period when Eastern trade was exceptionally dull and the Stock Exchange demand for credit exceptionally light.

Last Saturday, the weekly bank statement, for the first time since the close of June, reported a decrease in the surplus reserve, and this week the movement of currency, which for weeks has been away from interior markets and in the direction of New York, seems to have reversed itself. From now on, the West and South will be drawing currency from the East for harvest purposes. In the five months after the high August surplus reserve of 1904, this outflow drew $73,000,000 in cash from the New York banks; in the similar period after the maximum surplus of 1908, it drew away $67,000,000. It is hardly to be doubted that a similar process will be at work this coming autumn. Nevertheless, the salient fact remains that the New York banks, which six weeks ago were in no position to encounter satisfactorily the autumn money-market requirements, are now in an exceptionally strong position. As against the present surplus reserve of $50,000,000, the banks reported only $19,500,000 a year ago this week, and less than $10,000,000 at the corresponding date in each of the three years 1905, 1906, and 1907.

Ready This Week

J. A. Thomson's Darwinism and Human Life

By the Professor of Natural History in the University of Aberdeen, author of "Outlines of Zoölogy," etc. $1.50 net.

This volume explains, without unnecessary technicality, what problems Darwin set himself to solve, his solutions and subsequent modifications and additions.

An endeavor has been made, at point after point, to suggest how Darwinism touches everyday life.

L. P. Jack's Mad Shepherd and Other Human Studies

By the Editor of "The Hibbert Journal." $1.20 net.

Extracts from some early English reviews give an idea of this book's importance.

"A remarkable book."—*Daily Telegraph.*

"Masterly and fascinating."—*Truth.*

"Absolutely certain to command the attention of all who are on the lookout for pregnant, fresh and vigorous writing."—*Country Life.*

Eugene Manlove Rhodes's Good Men and True

This lively story of what happened on our Mexican border to a young man who was trying to learn typewriting, has been somewhat expanded since its serial appearance in the *Saturday Evening Post* last winter. Illustrated. $1.00 net.

William T. Walsh's The Mirage of the Many

A prophetic novel delineating the author's ideas, unusual as far as fiction is concerned, of the results of a socialistic régime on the different classes of society. His story convinces. The scene is laid in and near Chicago in the year 1952. 12mo. $1.50.

Henry Holt & Co. 34 W. 33d St, NEW YORK

THE NEW FIRST FOLIO

SHAKESPEARE

Ed. by PORTER-CLARKE. Text of 1623.

THE BAKER & TAYLOR CO., NEW YORK

Lake George and Lake Champlain: The War Trail of the Mohawks and the Battleground of France and England in their Contest for the Control of North America

By W. MAX REID,

Author of "The Mohawk Valley," "The Story of Old Fort Johnson," etc.

8vo, with 90 Full-Page Illustrations. **$3.50 net.**

Mr. Reid's new book is devoted to the history and the scenic beauty of a section of the country every inch of which is to him familiar ground. With its history and traditions he is deeply imbued, and to be deeply imbued with such a history and with such traditions is no insignificant acquisition. The author has seized upon the dramatic incidents that form the staple of this history and has combined them in a narrative that moves with unimpeded swiftness.

SOME FLASHES FROM

As brilliant a series of reviews as was ever accorded

AN AMERICAN NOVEL

"My candidate for the next Nobel Peace Prize would be Will Levington Comfort's ardent anti-war novel,

Routledge Rides Alone"

writes Edwin Markham in the *New York American.*

APART FROM THE BOOK'S THRILLING HUMANITY
"ROUTLEDGE RIDES ALONE"
IS

"A LOVE STORY of great beauty and power."—*Washington Star.*
"A GRIPPING STORY. The terrible intensity of the writer holds one chained to the book."—*Chicago Tribune.*
"A GALLOPING STORY. In the manner of its telling it is romance raised to a high power."—*New York Times.*
"A DARING STORY which stands out boldly among the fiction of the day."—*Philadelphia Press.*
"A RED-BLOODED STORY with the all-compelling motive of the great love of man for woman and woman for man."—*Buffalo Express.*
"A FIGHTING STORY. A half score of Men and one dazzling diamond of a Woman stand in the picture, not beside it."—*Detroit Journal.*
"A NOTABLE STORY, largely planned and nobly executed; splendid in action; alive with feeling."—*New York American.*
"A POWERFUL STORY. Comfort waited to master the biggest demand of the novel to-day. His love interest is first."—*Pittsburg Dispatch.*
"A DASHING STORY. A carnival of adventure, softened now and then by the presence of a lady."—*Leslie's Weekly.*
"A REMARKABLE STORY. One of the biggest and finest romances that has been written these many years."—*Chicago Journal.*
"AN IMPRESSIVE STORY; in fact one of the best stories of its kind that we have ever read."—*The Dial, Chicago.*

"A BIG STORY that fairly overwhelms the reader" is a part of the *Kansas City Star's* enthusiasm. The *Albany Times-Union* adds distinction with: "A STORY OF REAL GENIUS," and the *Twentieth Century Magazine* expresses the current approval thus: "One of the best works of fiction that has appeared in months."

A late addition to one of the greatest series of critiques ever accorded an American novel is from the *Chicago Inter-Ocean's* column and a half: "There's in fiction not a woman more truly lovable than the one woman of this book, Noreen. . . . From start to finish ROUTLEDGE RIDES INDEED; creeps, lags, or stumbles never once, good folk!"

FOURTH EDITION JUST READY. *CLOTH, $1.50.*

MOFFAT, YARD & COMPANY

BOOKS OF IMPORTANCE

MOFFAT, YARD & COMPANY

AMERICAN PROBLEMS:

FROM THE POINT OF VIEW OF A PSYCHOLOGIST

By HUGO MÜNSTERBERG

Professor of Psychology in Harvard University.

8vo. $1.60 *net*. *By mail*, $1.75.

"Here is a learned professor, with the weight of German culture behind him, playing ball with the questions of the hour, and showing a keenness of wit and comprehension, and withal a not wholly guileless knowledge of men and things, as witness his handling of Mme. Palladino, which makes one wonder whether he is a philosopher after all or whether by miracle he has taken unto himself the shrewdness of the Yankee deacon."—*Chicago Evening Post*.

LIFE AND ART OF RICHARD MANSFIELD

WITH SELECTIONS FROM HIS LETTERS

By WILLIAM WINTER

Fully illustrated. Large 8vo. 2 *vols.* $6.00 *net. Carriage paid*, $6.40.

"The most notable addition to contemporary theatrical literature that has been made for a long time, fascinating as a bit of illuminative biography, complete and manifestly authoritative in its statement of facts."—*Nation*.

FORTUNE

By J. C. SNAITH

Author of "Araminta," "Broke of Covenden," etc.

12*mo*. $1.50.

A romantic tale of Spain in the 15th Century.

"An egotist and braggart who is brave and of a marvellous skill with the sword sufficient to back up his words with his deeds, Sir Richard leads us and his companions a mighty chase of abundant excitement."—*Boston Transcript*.

ABNORMAL PSYCHOLOGY

By ISADOR H. CORIAT, M.D.

Co-author of "Religion and Medicine."

Illustrated, 8vo. $2.00 *net. By mail*, $2.20.

"The chapters on 'Sleep,' 'Dreams,' 'Analysis of Mental Life,' 'Losses of Memory,' 'The Splitting of a Personality,' and 'Hysteria' will be of special interest to the general reader. . . . It makes interesting reading and it is highly suggestive throughout."—*Charleston News and Courier*.

FALL BOOKS NOW READY

A GREAT STUDY IN FICTION OF SOCIAL CONDITIONS.

THE HOUSE OF BONDAGE

By REGINALD WRIGHT KAUFFMAN

12*mo*. $1.35 *net. By mail*, $1.47.

This is the most powerful presentation of the social problem in a great city that has appeared in print. In addition it is a gripping story, moving, dramatic, elemental. The author has contrasted the fine, pure story of Herman and Katie with poor Mary's tragic fate in a striking manner. His characters live because they are drawn from real life—the life of this great city, the life of to-day. This story is vital and pregnant with meaning for every man and woman who lives in the world.

THE STORY OF CHANTECLER

A CRITICAL ANALYSIS OF ROSTAND'S PLAY

By MARCO F. LIBERMA

Professor of Romance Languages in Cincinnati University.

Illustrated with drawings from the original performances.
12*mo*. 75 *cents net. By mail*, 82 *cents*.

A brilliant, sympathetic, extremely graphic account of Rostand's celebrated play, dealing with the interesting history of its conception, writing and first performances, together with a description of the story and a critical analysis of it as a work of dramatic and literary art as well as a stage performance. It is exactly the book that everybody needs just now.

HOW TO KEEP FIT

By ALFRED T. SCHOFIELD, M.D., M.R.C.S.

Author of "Nervousness," etc.

Small 16*mo*. 75 *cents net. By mail*, 82 *cents*.

The true path of health outlined by one of the soundest and most widely known writers on sound living in the world to-day.

THE HARD ROCK MAN

By FREDERICK R. BECHDOLT

12*mo*. $1.00 *net. By mail*, $1.10.

A powerful novel of Western life and love by the part author of "9009," the hero of which is a laborer in a railroad construction camp.

PSYCHE SLEEPS, AND OTHER POEMS

By ALIDA CHANDLER EMMET

12*mo*. $1.25 *net. By mail*, $1.35.

Poetry of imagination and originality.

TWO YEARS IN A TENT

By FAITH WHITNEY

The Preface by SAMUEL McCOMB, M.A., D.D.

50 *cents net. By mail*, 55 *cents*.

"The writer of this little book for nervous invalids not only gives due emphasis to the benefit of a return to nature, but shows the value of the psychic element of joyous humor."

READY NEXT WEEK

By WILLIAM WINTER

Author of "Life and Art of Richard Mansfield," "Old Friends," etc.

SHAKESPEARE'S ENGLAND

New, Revised, and Definitive Edition, with many new illustrations.
Large 8vo. $3.00 *net. By mail*, $3.40.

This superb volume, with its many revisions and amplifications, its exquisite new type, its many exquisite illustrations, has all the beauty and attractiveness of a wholly new work. Depicting, "not so much the England of fact as the England created and hallowed by the spirit of her poetry, of which Shakespeare is the soul," it is much more truly to-day, with its many changes, what years ago it was accepted for on both sides the sea, the "best volume of English travel that has ever appeared."

READY IN OCTOBER

LIFE AND LETTERS OF EDMUND CLARENCE STEDMAN

By LAURA STEDMAN

MOFFAT, YARD & COMPANY - NEW YORK

LONGMANS, GREEN, & CO.'S LIST

WORKS BY

WILLIAM JAMES, LL.D.

Late Professor in Harvard University

THE WILL TO BELIEVE, and Other Essays in Popular Philosophy. Crown 8vo. $2.00.

THE VARIETIES OF RELIGIOUS EXPERIENCE. Being the Gifford Lectures on Natural Religion delivered at Edinburgh in 1901-1902. 8vo. Net $3.20. By mail, $3.40.

A PLURALISTIC UNIVERSE. Lectures on the Hibbert Foundation delivered at Oxford, 1908. 8vo. Net, $1.50. By mail, $1.62.

PRAGMATISM: A New Name for Some Old Ways of Thinking. 8vo. Net, $1.25. By mail, $1.38.

THE MEANING OF TRUTH: A sequel to "Pragmatism." 8vo Net, $1.25. By mail, $1.38.

The chapter on "Truth," being the strategic pivot of Professor James's recent book entitled "Pragmatism," has been made the target of severest critical attack. The wildness of most of the criticisms, and their failure to duly comprehend the author's thesis, have convinced him that the latter is as profoundly novel as it seems to him important. He, therefore, brings together in the present volume, in order to shed more light upon the subject, all that he has ever written on the theory of knowledge, including the article on the Function of Cognition, which appeared in 1884, all his recenter polemic and expository contributions, and some replies to criticisms printed here for the first time. The volume should be taken as a full and definite expression of the pragmatist "epistomology," so far as Mr. James's share in it goes.

ESSAYS PHILOSOPHICAL AND PSYCHOLOGICAL. In Honor of William James, Professor in Harvard University. By his Colleagues at Columbia University. With a Portrait in Photogravure. 8vo. Net $3.00. By mail, $3.18.

GEO. B. COCK

FRANKLIN BANK BUILDING, PHILADELPHIA

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 1, 1910.

The Week.

President Taft's announced determination to follow hereafter a policy of "hands off," as respects New York politics, is perhaps only another way of saying that he means to leave the Republicans of this State to stew in their own juice. Presidential non-intervention in such matters ought, of course, to be the rule, though Roosevelt in the White House did not exactly go on that principle. It is probable that Mr. Taft would have made no public utterance had not his position been so grossly misrepresented. Beverly felt that it simply had to do something to put an end to the rumors at Oyster Bay. But as the case stands to-day, there will be hands enough on if the President keeps his off. The Republican party in New York has the desired multitude of counsellors, even if there be no wisdom in them, and though they are fighting each other rather than the Democrats. Every Republican leader has his pet scheme, but it is a scheme to put another leader in a hole or to knife the ticket. All the signs at present point to a reproduction in 1910 of the New York Republican tragedy of 1882—and that, it will be remembered, was largely due to Presidential interference.

It is partly a tribute to the growth of the direct-primary movement, partly a fear of popular wrath and a desire to have something like a real endorsement, which leads New Jersey candidates for the United States Senatorship to file petitions in order to get their names on the ballot in the primary of September 13. The law under which this may be done is an old one that has been practically a dead letter, but it has been revived for this political crisis. Three Republicans and two Democrats have thus formally recorded their Senatorial ambitions. Among the former the name of Senator Kean does not appear. The others say that they wish to leave the Senatorship to the people; Kean says that he prefers to leave it to the Legislature. His plan, in other words, is the convenient old one of first binding to himself the candidates for the Legislature by helping them to meet their election expenses and then duly exacting payment after they are in office.

Mayor Gaynor's article in the *Century* on city government contains many of his well-known views—especially his belief in the absolute necessity of non-partisanship in municipal elections—and has some shrewd things to say about a "business" administration of city affairs. There is undeniable force in his contention that the ordinary merchant may be a failure as a Mayor if he thinks that all that is necessary is to take with him into office the ideas and methods which he has acquired and practised in commerce. As Mr. Gaynor points out, the city's "business" is a business regulated by law, and a municipal administration is a "complex legal and political machine." To make it operate well, mere yardstick and counting-house notions will not suffice. But while this is true, and while we ought to be glad whenever a Mayor has a good knowledge of the law as well as executive ability, the thing ought not to be pressed so far as to make eligible only men with such a combination of qualities. But Mr. Gaynor is irrefragable in what he says about making the only standard of appointment to municipal offices honesty and efficiency, and getting rid of that prolific source of corrupt city politics, "the control of the government or the conduct of officials by outside bosses or organizations."

The Adirondack land inquiry at Albany continues to reveal the unexpected in New York's Republican rulers. Just now it is their love of nature. To commune up there with nature—that is the way they draw their inspiration for wise leadership. They flock to those rare "camps," carefully surrounded by State lands to remind their owners, even in the solitudes, of the call to public service. Timothy Woodruff, Frank H. Platt, son of the Senator, ex-Congressman Louis W. Emerson, Frank D. Bell, Special Counsel to the Forest, Fish, and Game Commissioner, ex-Senator Allds, Congressmen Malby and Millington, Daniel F. Strobel of the Republican State Committee—these and apparently many others heard the call of the wild in one form or another, as attorneys in land sales, or members of speculating firms and syndicates, or as owners of summer homes. Generous Mr. Woodruff paid $12,000 for 1,000 valuable acres; the State paid $167,000 for 25,000 acres first offered to it at $127,000. The Land Purchasing Board, of which Mr. Woodruff was a member, simply had to make the owners a present of $40,000 of State money. Mr. Strobel appears as an habitual trespasser on State lands, and Mr. Bell became special counsel immediately after a sale to the State of lands worth $35,000.

Precisely because conservation has been accepted as a vital problem that will suffer neither slighting nor delay, there is need of not falling into the national habit of going at a new problem with a rush and a hurrah. Every costly mistake that may be made is sure to be seized upon by enemies of the new order. What, for instance, will be the natural effect of the figures published by the Chicago *Evening Post*, concerning thriftlessness and incapacity in the reclamation service? A board of army engineers, now engaged in a study of various reclamation projects in the West and Northwest, has brought to light facts tending to show that more than six million dollars of government money have been sunk in useless or unproductive schemes. The Truckee-Carson project in Nevada is responsible for nearly four millions of the total. Here, as elsewhere, there appears to have been extraordinary lack of foresight or preparation. One plan, on the Canadian border, has been abandoned because it was found that the Canadian farmers were profiting by the new water supply, instead of the American farmers. Elsewhere the construction cost has been so high as to make water prices prohibitive. The conservation of the people's money is one of the elements in the problem that must never be lost sight of.

Senator Dick of Ohio is sadly crying out: "Lord, how are they increased that trouble me!" The latest charge against

him, which he hotly denies, is that he has played in Ohio the rôle of Vice-President Sherman in New York—that is, that he misinterpreted or misrepresented the views of President Taft concerning the conduct of the State campaign. The facts will doubtless come out, for as the controversy rages there will be a demand for the publication of the letter which the President actually wrote. But without this new embarrassment, Senator Dick was having troubles enough. His unpopularity seems to be steadily growing, and his candidacy for reëlection is felt to be a drag on the ticket. Although he got a perfunctory endorsement in the primary—merely of the nature of a recommendation, and "snap" at that—the State Convention did not dare commit itself to him, and even if the Republicans were to carry the Legislature, his return to the Senate would be highly improbable. Fresh accusations of financial irregularities, when he was a State officer, have just been publicly made against him by Mr. Barber, a sheriff is looking for property of his on which to levy for a debt, and altogether Dick is justified in feeling that his lot is not a happy one.

In the death of William James the country has lost one of its most stimulating minds. A man of wide attainments and no mean thinker himself, his most fruitful work has lain in provoking others to think. Not simply those students of his whom he stirred by immediate personal contact, but thousands of readers of his books and discussions did he arouse and quicken and shake out of routine acceptance of routine ideas. This he was able to do partly through his rare gifts of exposition and his vivid style. He actually made philosophy racy and piquant. Nor was this merely a flare of academic sensationalism and flippancy. It was rather the method of sparks struck off an original mind to kindle others; the truth seen picturesquely and presented with varied freshness. And always behind the attractive style, pricking on the interest and challenging thought, there stood the sincere spirit of the man, devoted to inquiry, resolutely applying the scientific method. Professor James wonderfully preserved, even in advancing years, the open mind. There was never audible in him that sort of click which Emerson observed in English bishops, a sign that the mind was shut and would allow no more questions to be asked. Sometimes we see men whose minds are open in the sense that everything flows through them and leaves nothing behind. That could not be said of William James. He had his body of ascertained truth and his deep convictions; but that did not prevent him from admitting that we must continually search and test the foundations of all knowledge and all belief. His death will bring a sense of personal loss to many who never looked upon his face. To few men has it ever been given to radiate so much intellectual force in a whole generation.

From the figures for urban population that have already been published, it seems certain that Detroit will have supplied the sensation of the 1910 census. With an increase of 63 per cent. within the decade, that city has moved forward from thirteenth place in the list of cities to eighth place, or possibly seventh. In 1900, Detroit was only by a few hundreds ahead of Milwaukee. In 1910, it had not only left Milwaukee far behind, but had passed New Orleans, Pittsburgh—that synonym of hustle and modernism—Cincinnati, San Francisco, and Buffalo. The city of Cleveland will have to show an increase of 22 per cent. over 1900 to keep its hold on seventh place. St. Louis is known to have made no such rapid increase as Detroit. And in the nature of things it is impossible that either New York, Chicago, or Philadelphia can even approximate this remarkable 63 per cent.

The plan which Senator Cummins has put forward for a nation-wide primary to nominate candidates for President and Vice-President is spoken of by the Iowa Senator as a "natural development" in the tendency to give the people a more direct voice in the selection of candidates, but it is evident that even he does not believe the time is yet ripe for it. A part of the evil which he strikes at could be overcome by party rules. Senator Cummins speaks with emphasis of the "humiliating" and "revolting" disclosures made in Republican national conventions in connection with the contests of seats for delegates from the Southern States, and dwells upon the anomaly of giving representation on the basis of population, not of party votes actually cast. But this has long been recognized as a grievance, and could be met by such a change in the party regulations as has often been urged. Mr. Cummins talks of a law to supervise national conventions, if, as he surmises, his project for a national primary does not find favor. Yet when a remedy lies so clearly within the control of the members and managers of a party, there seems little reason for invoking the power of the law. But Senator Cummins is not afraid of over-legislation.

Mr. William A. Larned's winning of the tennis championship for the fourth time successively is really a remarkable performance from many points of view. A man of active business, Mr. Larned is now over forty years of age, and thus demonstrates, as have many English players, that hard tennis may be played in middle life and indeed much beyond that. Mr. Larned's secret is keeping himself in perfect physical condition. Indubitably, as champion, he enjoys an advantage in that he does not have to play through a hard ten days' tournament like the challenger. He has the opportunity, moreover, to watch the play of the men whom he is likely to meet, while they are fighting their way through round after round. But after his service with the Rough Riders, Mr. Larned, who had twice been champion before 1898, fought his way through with ease. He has now been six times champion, and as an exponent not merely of a wonderful sport, but of the best kind of sportsmanship, no one will grudge him his remarkable success.

The announcement that two spectators who were injured by an aeroplane falling upon them during the Asbury Park aviation meet have begun suits for heavy damages shows that the courts will soon have new and perplexing legal questions to decide. Must the plaintiffs prove criminal negligence? Is the burden of proof upon them? And can they cite Curtiss and the Wrights as expert witnesses, although they were not spectators of the accident? Can the aviator charge the sudden dropping of the wind to an act of Providence and thus avoid responsibility?

Did the injured men assume a well-known risk on entering the aviation field which would deprive them of any real basis for suit? Is the owner of the ground over which the flight occurred *particeps criminis?* Can the aviator be punished for a defect of his engine? These and other questions will give learned judges much concern before long.

There is no possibility in 70 per cent. of the counties of the State [Virginia] for a negro to procure in the public schools sufficient training in subject-matter to enable her to pass a creditable examination for a first-grade certificate. Several of the State school examiners have estimated for me that in seven-tenths of the negro elementary schools there is really *no* sound teaching, owing to the incompetency of the teachers.

Thus writes Prof. Bruce Payne of the University of Virginia in the *Southern Workman.* Professor Payne says further that before there can be real instruction in the colored schools of Virginia, "a majority of the present teachers" must be dispensed with. This applies even more truly in the more Southern States. But where does it leave those Southerners, like Thomas Nelson Page, who declare that the negro has been educated and has demonstrated his total unfitness to benefit by school training? Fortunately, things are bound to improve. These schools will be made more than mere apologies for institutions of learning. As Professor Payne puts it:

There are enough intelligent, brave, and self-sacrificing men and women among the colored people in this State to accomplish the task. There are enough Christian men and women among the white people who are willing to assist in the doing. When these two groups of consecrated people are once touched by the mute appeal of the more needy we shall see the beginning.

The Admiralty's refusal to deny or affirm the recurring report that a gas-engine battleship is near at hand, is probably another sign that the experiments it has long been making are meeting with success. Fully a year ago it became known that an old gunboat had been fitted up with a gas engine. Since that time such strides have been made in Germany that the Hamburg-American Line has ordered a 9,000-ton vessel fitted up with the Diesel gas engine. If this is worth trying in the merchant marine, we may be certain that the Admiralty, leading as it does the entire naval world, will not be far behind. It is, of course, not a question of adopting the gasolene engine of the familiar power-boat type. That has so demonstrated its usefulness and economy for all craft up to 120 feet that a steam vessel under that length is becoming a rarity. Beyond that size, however, constructors have not yet gone, because the cost of the fuel rapidly approaches that of coal and for round-the-world cruising coal is in one sense the more desirable, because oftener available. The engine upon which the British engineers are at work is one propelled by gas generated on board ship by a small consumption of coal. There is no question whatever that the day this engine is perfected, the Dreadnoughts and Super-Dreadnoughts will be nearly as out-of-date as were the wooden ships the day the Merrimac entered Hampton Roads.

The Kaiser's pronouncements on literature and art are not so frequent as they used to be. When an outraged nation imposed silence on William II after that famous "calculated indiscretion," it seems to have induced a state of imperial reticence which extended to matters other than political. The habits of a lifetime, however, are hard to break; the Kaiser is by nature hospitable, and so a recent conversation between William II and a Scandinavian woman writer whom he received on board his yacht has been rather widely commented upon in the German press. To his guest the Emperor expressed his satisfaction at what he believed to be a decline in the tide of arch-realism in literature and art. He welcomed Sudermann's return from the depressing sordidness of "Das Hohe Lied" to the idyllicism of the "Strandkinder," his latest work. He found that of the plays given in Berlin before working-class audiences the most popular was Kleist's romantic "Prinz Friedrich von Homburg." And the Emperor ventured the opinion that a play like Gorky's "Abyss" would have left the same audiences puzzled and bored. This view has just enough of the Imperial and mediæval tone to make it characteristic of the Kaiser, though not necessarily to make it false. As between the Kaiser and the advocates of the ultra-modern naturalism for which Young Germany has gone in with a vengeance, there is no doubt that the Kaiser is in the right.

Another Socialist victory is reported from Germany, where bye-elections to the Reichstag within the last two years have been practically synonymous with Socialists elected. This time, in a district that has always been represented by a Conservative, the Socialist candidate polled nearly twice as many votes as all the other candidates combined. Thus the Socialists' majorities not only continue, but continue growing in size. The general election of 1906 left them with 43 seats in the Reichstag; they have now climbed to 51. This is still far from the 81 seats which they held in the preceding Reichstag, but there are few people who doubt that if a general election were held to-day, the Socialist strength would soar to a new record. An absolute Socialist majority in the next Reichstag is not within the realm of probability, but a combined Socialist, Liberal, and Radical majority is more than probable. Will such a coalition be brought about? The Liberals have for some time been out of the Government fold, slighted and disillusioned; they regard the peril of Socialism as less than that of reaction.

How peace in Latin America may become more secure with the growth of foreign commercial interests in those countries, has been succinctly stated by Charles M. Pepper, Commercial Adviser to the Department of State, in the latest pamphlet of the American Association for International Conciliation. Europe's investments in South America approximate $3,500,000,000, and constitute a vast peace fund. Our share of the South American trade, about $300,000,000 annually, is not large, as compared with the total, but it is growing and with it a better understanding between the parties concerned. "Our commercial policy," declares Mr. Pepper, "is conciliatory, and whatever tends to increase commerce is an additional means of conciliation." No one will take issue with the intent of this sentence, but it is not happily phrased. "Whatever tends to increase commerce," will certainly not bring conciliation if the "whatever" comes in the shape of shotgun diplomacy and dollar diplomacy. If it is true that international amity follows in the path of international trade, it is also true that friendly relations between two countries are an excellent promoter of trade.

PRESIDENT TAFT'S LETTER.

President Taft's letter to the Chairman of the Republican Congressional Committee is not, it must be confessed, of a sort to raise the hopes of a despondent and apprehensive party. There is nothing "ringing" about it. It has not a single touch of the 'Ercles vein—no shouts, no loud summons to battle, no shrill defiance of the enemy. The document is long and not the easiest of summer reading. It is also frankly partisan, being nothing less than the President's argument for an endorsement of his Administration, and for the election of a Republican House of Representatives next November. Nevertheless, the letter deserves serious attention, not simply because it comes from the President, but because it is a serious discussion and contains a serious programme.

Foremost in the letter stands Mr. Taft's proposal for a speedy re-opening of the tariff question. This must have required courage and firmness on his part, for it is inconceivable that the high-and-dry protectionists of his party could have consented to what they would doubtless call this playing with dynamite. And it must be set down as a notable event that a Republican President goes so far as Mr. Taft now does in admitting that the spreading discontent with the tariff is justified—justified as respects the way in which the tariff bill was log-rolled into shape, and as respects many of the excessive and burdensome duties which it contains. There is no more of the former talk about the Aldrich-Payne law being the best ever enacted by the Republican party, or of appeals to rest and be thankful. The impatient voice of the West has made itself heard at Beverly, and a Republican President has been forced anxiously to consider how to remove Republican tariff grievances.

His plan is explicit and logical and could be made feasible, so far as it goes, if the Republicans in Congress really desired to make it so. Mr. Taft would attack the schedules in detail. He would get from the experts of his tariff board a complete and scientific investigation into the need and the incidence of any given set of tariff taxes, and then, declares Mr. Taft, "I expect to bring the matter to the attention of Congress with a view to its amendment of the tariff in that particular." In order to facilitate such piecemeal revision, he hopes that Congress will adopt a rule shutting out all amendments to a proposed change in one schedule, designed to add changes in others. It must be admitted that if a Republican Congress truly wished to move forward in a swift and business-like way to correct one tariff injustice after another, President Taft has shown how the thing could be done. But it would mean a political revolution.

In this connection, one part of President Taft's argument against the election of a Democratic House shows, rather amusingly, how little attention he has given to the political history of the tariff. He declares that a Republican majority is essential to the success of the method of revision schedule by schedule, since the Democrats would be opposed to any step of that kind. We fear that the President must have forgotten what happened in 1892. In that year a Democratic House did precisely what Mr. Taft now asserts that only a Republican House can be depended upon to do—namely, it passed several bills repealing or amending separate clauses of the tariff. By a large majority it voted to put binder twine on the free list; to remove all duties from cotton bagging; to abolish the protective rates on wool and woollen goods. This last ought especially to interest Mr. Taft, as he has declared that the woollen schedules of the Aldrich-Payne bill are "indefensible."

But what became of those bills to revise piecemeal? They were contumeliously rejected by the Republican Senate. Furthermore, they were covered with ridicule by protectionist orators and the protectionist press. The whole thing was just a piece of Democratic ignorance and folly. It was the policy of pin-pricks. The tariff was a beautiful artistic creation, from which you could not remove one part without destroying the whole. Speaking more frankly and brutally, the spokesmen of protected interests said that they had secured their favors as a matter of bargaining with others, and would not yield a stiver of what they had got without upsetting the entire division of the spoils. A favorite simile was that of conceiving a protective tariff as an "arch," from which you could not take out one stone without pulling all down in ruin. These notions will inevitably return to plague Mr. Taft if he sets about doing what all his party laughed at the Democrats for their trying to do, and he will be accused of taking up with a discredited Democratic plan. That ought not to deter him, and we do not imagine that it will; but it does put in a queer light his present contention that no help in tariff revision could be expected from a Democratic House.

For the rest, the President's letter is a sober account of what his party and his Administration have been able to accomplish in keeping the pledges made two years ago. His review of the legislation enacted cannot be challenged as unfair; and he adds to it a list of the promises which are yet to be fulfilled, and which he says a Republican Congress will be able and willing to fulfil. How great the immediate political effect of this will be, it is impossible to say with confidence. Except for his plan for further tariff revision, for which the President should have praise, he simply tells people "that which you all do know." That its inclusion in the Republican "campaign-book" will win thousands of votes, we greatly doubt. The old query, "Who reads an American book?" has been answered; but to the question, "Who reads a campaign-book?" we have never seen a satisfactory reply.

THE NEW TEST OF ROOSEVELT.

The speaking tour on which Mr. Roosevelt has now set out will furnish a test of his quality more searching, in some respects, than any to which he has ever submitted. We do not refer to the question of his personal bearing. His standards of good taste have become fixed; the country knows what they are, and does not expect him to alter them. He will doubtless go on doing things which in another man we should call shockingly indelicate or vainglorious. If he assumes that he is the most important figure in our public life, and that the nation and the whole world are waiting to be instructed by him, that is only what he has long done, and the people show no signs of being disposed to quarrel with him on that account. Anyhow, he will not change in that particular. Nor can we look for the revelation by him of any new gifts of oratory. His speeches will read very much as before in point of style. There will be the old verbose energy of dictation. But what we are curious to know

is if he will have anything new to say, whether his addresses will come to a public that is confused, politically, and in a time of hesitation, with a sense of their having struck out guiding principles and provided a lead.

It is frankly admitted that the ordeal is severe. For any other man than Mr. Roosevelt we should say that it would be impossible to pass through it successfully. Consider for how many years he has been incessantly speaking in public. Every thought that he ever had he has dragged from the recesses of his mind and uttered again and again. In an ordinary mortal this would mean that he had hopelessly talked himself out; and that, in any new exertions he might make, he could hope for no more than to display the contortions of the Sibyl without her inspiration. But Mr. Roosevelt is the eighth wonder of the world for activity and fertility and supple turning, and it is possible that he may succeed in catching the ear of his countrymen, if not by novel phrases or epigrammatic expression, by marking out a line of policy and effort which would turn confusion into clear purpose, and give men something not only to think about but to translate into political action.

For such a task, we must remember, Mr. Roosevelt has certain advantages. He has been for a year and a half out of the hurly-burly. He has had time, if not for intense reflection—we can scarcely associate that with his character—at least for observation, for detachment, for seeing American politics in just perspective. Since his return, morever, he has had wide and varied sources of information put freely at his disposal. The symptoms of our political disease have been placed fully before him; the question is whether he is able to diagnose them. As he made deep studies of Africa before setting out to shoot there, so he has been carefully scanning our political map before starting on his present journey. Unless his former acute instinct for what is popular, for what is the rising political star to which to hitch his wagon, has grown dull with disuse, he must be in a position to know with much accuracy what are the thoughts and discontents that are to-day stirring in the hearts of his fellow-countrymen. What we must now await is the discovery whether Mr. Roosevelt is able to answer back to the deeps that are calling.

It will not be enough to succeed merely in evoking great popular enthusiasm for Roosevelt himself. That will be easy. He knows how to strike the old chords. We have already heard them humming again: "I am against the crooked man whether he is rich or poor." "I will bring the corporations to time.' There will be no difficulty in setting the crowd to shouting for "Teddy" and crying out that it must have him again in 1912. But all this is on the surface and ephemeral. It does not mark off the claptrap demagogue from the weighty statesman. Is Roosevelt capable of showing himself the latter? Can he go before audiences that are vaguely dissatisfied and querulous, and with sure vigor strike his hand upon the spot and say: "Thou ailest here, and here"? To be specific, take the matter of the tariff. Mr. Roosevelt is to speak in a part of the country where protective duties have awakened an entirely new spirit of resentment and revolt. Is he going to show himself capable of dealing with that great moral question as a real moralist? Will he, bravely recanting his former words and admitting that his previous lethargy in the face of a great national evil was blameworthy, put himself at the head of a movement to strike down this form of embodied injustice? Such are the questions which thoughtful friends of Col. Roosevelt are necessarily asking themselves as he travels West. His opportunity is great. The test to which he voluntarily subjects himself is severe. How will he emerge from it?

That Mr. Roosevelt is himself fully aware of the significance of his coming series of speeches, there is good evidence. He has not left his intimates in ignorance of his intention to strike out for himself, and to blaze new paths. What is to be thought of them, we must wait till we see before judging. It is one thing to furnish catch-words and party cries; it is another to send men to their homes with new and thrilling aspirations kindling in their breasts; so that they will ask only how to work and how to vote in order to compass the national good upon which their eyes have been fixed for the first time. A political orator who can point to the latter result, and can truly say that the impulses he has quickened are in the line of the great democratic movement which now enfolds the world, may justly claim to be a leader, as well as a speaker. The next two weeks will tell us which Roosevelt aspires to be.

ARMY DESERTIONS.

That army circles are deeply stirred by the appearance of a muck-raking article on desertions, in the current *Cosmopolitan Magazine*, entitled, "The Shame of the Army," appears from the prompt and bitter criticisms of it which have appeared in one of the military weeklies. From the pen of Bailey Millard, the *Cosmopolitan* article is of the superficial hap-hazard order, touching in a sensational way the gravest problem the military service has to confront, and offering no really constructive suggestions of any kind, save that the severity of the present sentences for desertion should be decreased. The facts he brings out are not new, and have already appeared in official reports. Yet they are obviously serious enough, for there have been over 50,000 desertions in the decade from 1900 to 1910. Last year there was an increase of 498 over the deserters in the fiscal year 1907-08, the total number of deserters being 5,030, or 4.97 per cent. All of these deserters are branded as criminals, $50 reward is offered for the apprehension of each one, and 4,000 printed descriptions and pictures of the absconders are sent broadcast to the police of the various cities. With probably 40,000 of these unapprehended, it is plain that there are far more criminals of this kind at large than of any other.

But the country, as a whole, does not consider them criminals—there is the rub from the army point of view. The old prejudice against military mercenaries persists; the average American laborer, too, considers it no serious wrong to violate a contract; and there is in many communities, notably in the West, a marked prejudice because of the frequent misbehavior of enlisted men. The standard of the latter has indubitably been raised, but the old frontier soldiers were a rough lot. In 1876, for instance, after the Custer massacre, a batch of 600 "soldiers" was hastily enlisted in the Bowery and sent West, fully half of whom are said to have deserted without loss of time, while few

of the others were really desirable soldiers or citizens. While during and after the Spanish war a very worthy class of men entered the service, there is no denying that to-day, if what officers tell us is correct, the recruits are of a much lower order. But whether the deserter is worthless, or a man who violates his oath because of unbearable dissatisfaction, it has never been possible to make the public run him down like a burglar or a bank thief. Adjt.-Gen. Ainsworth is particularly wroth at this, but it avails him nothing. Two years ago he increased the reward, and he bends every effort to catch those who escape, yet the desertions steadily increase.

All this is the more baffling because, as the War Department boasts, the American soldiers are the best paid, best fed, and best housed in the world. They live often in beautiful parks, such as Governors' Island, Fort Sheridan, Fort Snelling, etc. Their work is light. True they have to do what Mr. Millard calls menial work—cook and clean for themselves, keep the grounds in order, dig intrenchments, and do all the necessary work about a barracks. If men enlist thinking that there are army service corps or unseen fairies to do the dish-washing and make the beds, they are bound to be disappointed. If there were such helpers, the soldier would have little to do, indeed. And the present comparative idleness save at manœuvre seasons is one great cause for dissatisfaction. No American soldier works one-third as hard as the French or German soldier, who marches every day, not once a week or once a month. From the foreign point of view, our soldiers are pampered.

What else can be done to make them happy? The lack of trained officers on duty with companies, and the absence of a beer canteen, are given as two reasons for desertion; and the former unquestionably presents a grave evil. As for the latter, there were plenty of desertions in the old days of the canteen, and the average soldier does not suffer from too little drink. If anything, it is more occupation he needs, particularly in the Coast Artillery, whose stations are often inaccessible and whose activities are limited to a couple of hours' drill a day. Hence many have suggested that these idle men be taught some trade. Be that as it may, before the task of keeping men with the colors is abandoned on the ground that the average white American simply will not stand being bossed by a man in uniform, one other measure ought to be tried. This is the holding of officers responsible for the desertions, or in other words for the happiness or unhappiness of their commands.

Thus when one-third of a company deserts from one of the best posts in the service, as happened in Company K, Twenty-eighth Infantry, at Fort Snelling, there is something so obviously wrong as to call for prompt official investigation and the punishment of those responsible. If it be answered that there is no real way to-day to punish an officer for negligence or inefficiency, it is surely the duty of the War Department to lay its plight before Congress, and with the President to insist on remedial legislation. Some such holding of company commanders and regimental commanding officers to account is absolutely essential. Ours is the only important army in the world in which colonels are not held rigidly accountable, and the responsibility for this state of affairs rests at the War Department's doors, through which politics enters just as freely as ever, despite Theodore Roosevelt's beating the air with his threats against officers who sought political aid for advancement or favors. Something like this must surely be done. Besides the 5,000 deserters, the army loses thousands who purchase discharges, are discharged for crime, or quit on the expiration of their enlistments, or retire, or die in service. The authorized strength of the army is 76,901, exclusive of the Philippine Scouts. It is safe to say that between one-third and one-half of the cavalry, artillery, and infantry regiments are renewed each year—with great loss in efficiency and money. Curiously, the colored soldiers, of a race that is always accused of having in domestic service at least no sense of honor or contractual obligation, hardly ever desert, their percentage being scarcely over one-half of one per cent., to 5.17 per cent. for white troops. That means simply that colored men are happy in the army and white men are not.

BRITISH "SELF-DEPRECIATION."

Among those American readers who may have formed a conception of the English character as marked by self-assurance, not to say arrogance, an article in the London *Spectator* will cause some lifting of the eye-brows. The *Spectator* had received a letter from a Canadian correspondent, apropos of "the injury that is done to the Empire by our national habit of self-depreciation." Englishmen, the *Spectator* admits, "lightheartedly abuse themselves for their shortcomings," and as a nation, England "ought to be ashamed of having so greatly overdone the pride that apes humility, and thereby acquired the habit of self-depreciation."

It can hardly be doubted that this picture will appeal to the American sense of humor. If anything had impressed itself on the imagination of our people, during the past century or so, it was the calm sense of superiority displayed, individually and collectively, by Englishmen. Lowell's remarks on "a certain condescension in foreigners" were applied to the English people. The English novelists themselves have delighted in portraying this national attitude, and if an occasional cynical apologist appeared, like Sydney Smith, to explain that the British tourist's haughty silence in the presence of fellow-travellers was due to the fact that he could not think of anything to say, the atmosphere, nevertheless, remained.

There are two sorts of self-depreciation. There is the one which voices real despondency, but there is also the other which embodies the extreme form of self-laudation. Dickens's immensely wealthy bank director, who at Mr. Dombey's dinner table "mentioned his little place at Kingston-upon-Thames and its just being barely equal to giving Dombey a bed and a chop," and the "little bit of shrubbery the ladies would find there, and a poor little flower-bed or so, and a humble apology for a pinery," was sufficiently true to life. But it will hardly be contended that the traditional Englishman has been in the habit of applying this form of self-depreciation very often to his national affairs. Therefore, in the way of both social and political inquiry, it should be interesting to ascertain just what trait of character the *Spectator* has discovered. It gives some intimation in a citation from its Canadian

correspondent regarding the "shrieks that English trade has been captured by Germany; howls that a German war-balloon is flying over London by night; facts one day showing that at least 40 per cent. of the English nation is getting ready to go to the workhouse; facts the next day showing that the other 60 per cent. should already be in an asylum for the insane." The prevalence of these notions it ascribes primarily, and perhaps rightly, to the sensational portion of the English press.

But the sensational press, one must remember, is the last of all publications to adopt a programme of national self-depreciation unless it either expresses an overwhelming popular sentiment to the same effect or has some political end to serve. The two most most conspicuous phenomena of present-day British politics—the campaign for a protective tariff and the campaign for unprecedented increase in naval armament—are novelties of the past ten or fifteen years. Neither policy appealed to the British popular mind a generation ago, and the only means possessed by the politician of exciting widespread interest in either programme was through frightening the British people about themselves. Mr. Chamberlain well understood that his "tariff-reform" propaganda had not a shadow of chance for success among the voters, unless he persuaded them that England's trade was decadent, her manufacturing prestige threatened by Germany and America, and her control even of her own home markets gravely imperilled.

But to create such a belief, a systematic campaign of national self-depreciation was indispensable. Similarly, when the people or Parliament balked at the prodigious increase in naval appropriations and at the oppressive taxation requisite to meet them, there was no obvious course of action but to impress on the public mind that supremacy of the seas was slipping from England's grasp, that the British coast itself was in hourly peril of invasion by the hated German, and that Blériot's crossing of the Channel in an airship meant the end of all the old-time safeguards. A public once convinced of the truth of these assertions might be induced to open its pocketbook, but it could hardly fail to be started on the road to self-depreciation.

It will be said, perhaps, that there is more truth than poetry behind the alarmist allegations on which these political campaigns are based. In the present case there is this much of basis for the "scare"—that competition by non-English manufacturing states in neutral export territory is sharper than it used to be, and that, with the growth of navies in the younger states, England's numerical naval predominance is possibly not so great as it was a generation ago. But it requires the arts of a pessimist for political purposes to carry the inference to the extreme of national decadence, and the serious efforts to build up such a theory have been exploded with little difficulty. One is reminded of our own national state of mind a couple of decades ago, when arrogant Great Britain was pilloried on the stump as blocking this country's endeavors to make headway, as sending "British gold" to debauch our voters in elections where the protective tariff was at stake, and even (Mr. Bryan and his friends can tell us when) as placing around our national ankles the fetters of the gold standard of currency, to keep our unhappy people in financial servitude to London. Contrasting that campaign of political self-depreciation on our own account with the present similar campaign in England, the American sense of humor is excited. No doubt the time will come when the British sense of humor will be stirred at recalling the incidents of the present day.

GREECE REVISITED.

ATHENS, August 5.

It has been one of the surprises of my return to Greece, after fifteen years of absence, to see how many more foreigners now come here in summer, and to discover that there is no real answer to the question, why not? Why should a few professional Hellenists have all to themselves this glory of scenery and of "arts and memories of an ancient land"? To enjoy these one needs only an eye for nature and an elementary knowledge of history and art. A friend of the artist G. F. Watts quoted him to me as saying that summer is the only time to see Greece properly. Anyhow people are coming, and will come more. Even in out-of-the-way Delphi, we met in three days representatives of France, Germany, Russia, Sweden, and America; in Athens and easily accessible places one sees considerable parties, "personally conducted" under various agencies, especially American and German, and in the aggregate, no small number of independent travellers.

I.

It was June 23 when I landed at Patras, fifteen days direct from New York. Along with the delightful sense of familiarity, changes were at once apparent. Patras is larger; there is a breakwater, and a second mole, and more shipping; but the old castle and the mountains behind the town are the same. Then came the railway journey to Athens. There can scarcely be a more beautiful railway journey in the world. The narrow-gauge track follows the windings of the southern shore of the Corinthian Gulf, among the vineyards that produce a large share of the world's supply of the little dried grapes we call currants. To the left is the sea, beyond the sea the mountains, a continuous panorama, constantly varied, culminating in Parnassus, with Helikon to close the line in the east. No historical or poetic associations are needed, nature suffices. A part of my pleasure lay in watching the growing enthusiasm of a party of ten Americans who were seeing for the first time that glory of color, endlessly playing over mountains and sea, delicate beyond any human art to suggest, heightening as the gulf widened and the "haughty day filled his blue urn with fire"—violet, purple, and blue, with just enough rose to set these off, and all etherealized by the flood of pure white light. But words mean nothing when you are thinking of color. It is only after seeing such visions that one understands why the Greek poets made so little use of words of color. Some assert it was because the ancient sense of color was little developed. Absurd! More probably it was because their sense of color was more highly developed than ours, so that the crude inadequacy of words was more universally felt, and poets never attempted the impossible. The best one could do was what Pindar and Aristophanes did, employ with moderation all the words for light, gleam, gold, and brilliance. The light they knew was prismatic with the hues we still see in Greece in summer, and at their best in summer alone. No doubt this was what the great English painter referred to. Another note in the foreground, along with the green vineyards and gray olive trees, was the masses of oleanders (ancient daphne) in full bloom—and its period of bloom extends over many weeks. The shrub takes prompt possession of the broad spaces covered with sand and gravel by winter floods. If let alone, the shrub which we know as a tub-plant becomes here a bushy tree. Then after crossing the Isthmus it was the Saronic Gulf and a different light—first Aigina in the south, with the mountains of Peloponnese to the right; then Salamis, glimpse of Hymettos, al-

ways the luminous blues of the sea and sky. Then the extent and fertility of the Thriasian plain were a surprise, though I knew them of old. As the climax of the day, after slowly climbing the pass behind Aigaleos, we came in sight of Pentelikon, then of Hymettos, and of Athens nestling about her Acropolis, just as the rose of sunset was tinging the mountains, while the Parthenon stood out in dull gold against the blue.

All along the route one significant change was noticeable. Nowhere was there evidence of any recent forest fire. It was clear that the trees had been protected both from fire and from the equally destructive goats, and that in many places new plantations had been made of pines, cypresses, and other trees. Inquiries confirmed my impression. For ten or twelve years the government has occupied itself seriously with the question. The example of King George on his estate at Tatoi has had an influence, a committee under the presidency of the Crown Princess has aided; Greece is sharing in a world-wide movement. The army and the country constabulary are becoming effective instruments of control over the ignorant and careless. The restoration of forests is slow business in so dry a country; but if distinct results are already visible, a generation more will alter the aspect of things materially. Merely stopping the destruction will do much, and the destruction, if not stopped, is being lessened. For example, fifteen years ago, as at my first visit in 1887, a familiar sight in Athens was the huge donkey-loads of fine, tough shrubbery brought to the city for heating the great stone ovens, which the bakers use precisely as in antiquity. Not a single such load have I seen this time. The sale is forbidden. Left on the mountain-side, the roots penetrate far into the crevices, find the veins of soil, prevent denudation, perform part of the conserving function of a forest, and may in many places be followed by trees. Parts of Hymettos and Pentelikon have materially changed their aspect, showing now large patches of green where before all was gray. One mountain-side in another province I traversed lately, which was pretty well occupied by holm-oak, constantly eaten down by the goats to a mere scrub.

Of course, one of the standing problems here is how to make thirteen inches of rain do the work of thirty. The mountains of central and southern Greece are virtually bare of snow by July 1; only a few little patches of white are to be seen on the highest mountains, like Erymanthos and Parnassos. The strictest conservation of water and the fullest utilization of it are imperatively needed. Lately an American air-motor has been found to work economically, turning the daily winds to account in drawing water from deep artesian wells. More may be done in this direction. If some of the mountain torrents that go to waste in winter could only be saved for summer! So large a part of the entire land is mountain, useless except for pasturage of sheep and goats, and for timber, and the conservation of moisture by vegetation, it would seem that scientific forestry and engineering might, by water conservation, do a great deal for agriculture in the small sections adapted to tillage.

II.

I have been led to the border of politics; but I shall not cross it, or shall do so only in general terms. I have often been exasperated by Greek faults; their inefficiency in many things where efficiency is easily within their reach is most annoying, and amounts to a great national waste very damaging to themselves. It is strange, when much of the handiwork of women is so fine, that a good carpenter, mason, or plumber should be so rare. Why should their post office lose or fail to deliver letters so often, and with such imperturbable tranquillity? Their democratic ways and lack of subordination are an abomination to Germans and to the bureaucratic spirit, though Americans can have a little more sympathy there. But this letter has been called forth by my fresh observation of the changes of twenty-three years, which seem, to one who is a phil-hellene, but no blind one, encouraging. Much depends on the background against which the facts are seen. Greece is small and poor. Her peasants are backward in agriculture, and some Oriental habits are not yet thrown off. But under all difficulties, Greece advances. One item alone I find to set down on the other side, and that is a superficial one. I mean the marked increase of beggary in the capital. This began with the refugees from Crete in 1896, who were certainly miserable enough; refugees from Macedonia have been coming since, and the authorities have not handled the matter well. A professional class has thus found encouragement. But there is no reason to believe that this means an increase of poverty here. The evil will disappear when it is properly treated.

On domestic politics I shall venture to say only two things. The movement that centred in the late "Military League" was a tumultuous, extra-constitutional, most unsoldierlike, and in some aspects comical, endeavor to bring about needed reforms which many good people despaired of effecting by regular methods. It had at first the sympathy of all classes, except the petty politician against whom it was directed. But the leaders were incapable of directing it skilfully to any large issue. Being neither politicians nor statesmen, they soon got bewildered; one asks whether any good was accomplished. One tangible and much-needed reform is pointed to as due directly to the uprising—that of the civil service. Entrance to the service is now only through examinations, and dismissal must be preceded by charges proved before a special tribunal. We in America can appreciate the significance of this change, if it is made permanent.

III.

In looking at the relations between Greece and foreign Powers, particularly in regard to Crete and Macedonia, certain historical facts, easily accessible but too often ignored by most people, should be kept constantly in mind. The question how far the present Greeks are descended from the Greeks of the fifth and fourth centuries B. C., is academic and irrelevant. I do not care. The important facts are these: First, in much of the region occupied by the Hellenes of the classical age, in the lands bordering on the Ægean and the southern shore of the Black Sea and the waters connecting these, there now lives a people speaking a language that is related to that of Plato much as Italian is to that of Cicero. Secondly, the ancestors of these people lived for at least a thousand years under one government, that of the Eastern Roman Empire, with its capital at Canstantinople; under one religion, the Christianity based on the New Testament and the decrees of the first seven Œcumenical councils; with one language, Greek, and the traditions of one literature, those of the same Byzantine Empire. How long does it take to unify a race? Can the English—I do not say the British—yet be called a race? Are the Japanese a race? Thirdly, since the Byzantine Empire was conquered and occupied by the Turks, many of the Byzantine Greeks have found it to their worldly advantage to amalgamate with the conquerors, and have given the Turks a very large part of their strongest men, especially in administration and in war. For example, the victorious general in the Greco-Turkish war of 1897 was of Greek blood. But none found it to their advantage to amalgamate with the despised Christians; for some four centuries the Christian Greeks have remained substantially unmixed. Add this long period of subjection to the previous forces for unification. I think one must admit that these Greeks are entit'ed to be regarded as a race, whatever elements went into the melting-pot from 2,000 to 1,500 years ago, and whatever small fractions have been added since. And wherever situated, they feel themselves to be one people. What we are seeing, then, is not a weak little kingdom trying to extend its borders by absorbing its big neighbor, but a divided people trying to unite. The only claim Turkey ever had on Crete or Macedonia or Constantinople is that of the robber to his booty, to which long possession gives a quasi-title.

But Turkey has never done anything for her subjects to justify her occupation—as England has for India and Egypt, as Austria has for Bosnia and Herzegovina, as we are trying to do for the Philippines. Though the Greeks lost in the last war, the Powers were simply forced to give Crete, at its close, the main substance of what Greece fought for. Intelligent Greeks here now are not worrying over Crete. When the time is ripe, she will join Greece, though it is a little trying to the Cretans to see hopes so long deferred postponed again after such definite promises had been given. But these untoward circumstances mean only a postponement. Macedonia is the sore place just now. And the free Greeks can never be indifferent while any of their brethren under Turkish rule are suffering. Tens of thousands of them have been forced in recent years to take refuge in Thessaly; these have had to be provided for, mainly by the government; this is one cause that has added to her debt and increased taxation. Nor can Turkey ever have tranquillity so long as her millions of Greek subjects—no one knows exactly how many millions, from three to eight perhaps—have just cause for complaint. They are the most advanced, and, along with the Bulgarians, the most energetic section of her population, as they always have been. Under equal rights they might become too strong! Then while the Bulgarians are concentrated in one section, this Greek element is widely diffused, partly in this region where the Bulgarians are the later comers, with some 300,000 in Constantinople itself. They have clung for so many centuries to their language and religion and entire civilization, that it is futile to expect them, under any constitution, to give these up and become simply citizens of Turkey, and not first of all Greeks. They have their schools and churches and their Patriarchate, and are numerous in well-organized communities. If their history has proved anything, it has proved their capacity for resistance to absorption, their power to survive and to recover. Thus, from the Turkish point of view, admitting the best intentions, the problem is thorny. How the whole thing will work out no man can foresee. Temporarily, European mutual distrust, and broader considerations as well, seem to require that the Young Turks shall have more time and a fair chance. Some good judges, observing the fine qualities of the common people and the fine purposes of some leaders of the revolution, believe the Young Turks will succeed. I do not know the ground well enough to do more than ask questions; but have the Turks ever shown any general capacity for managing large commercial or financial enterprises? If not, can they build up a civilized government? The Greeks, on the other hand, have always had a due proportion of bankers and shipowners and merchant princes, successful administrators of large affairs.

IV.

Archæology is no part of my subject here, but one matter so concerns the whole world that it should be mentioned. The antiquities of Greece, whether temples and other ruins or the priceless treasures of her museums, are well cared for, and in spite of poverty are opened freely to the people as part of the educational system, and to foreigners as a treasure held in trust for all the world. Of course, the question of restoration of buildings partly standing is constantly present and is often difficult to decide. The Erechtheion has been put through an elaborate course of treatment, the Propylaia is now in hand, the Parthenon seems to be next on the programme. Opinions have been divided, and especially one hears and reads vigorous protests against all attempts to restore the Parthenon. The whole dispute arises from the ambiguity of the word restoration. It may mean almost anything, from what is most innocent to what is most offensive. What have the Greek archæologists shown that they mean by it in the present cases? So far as I can see, they have not only not damaged, but have immensely improved, the condition of the Erechtheion They have done to it substantially what competent archæologists everywhere do to broken vases or statuary. They have put together the existing fragments, using only so much modern material as is necessary to join these and preserve them, that a better idea may be gained of the missing parts and of the whole. There is no attempt to deceive, or to make a pretty show-piece, or to complete beyond what is necessary for the preservation and exhibition of what is original. In the case of a ruined building, mortar or clamps and some new material are necessary, and they are incongruous. But the result is a far better conception of the original whole and a better appreciation of each fragment than was possible without these incongruous additions. So even the æsthetic effect is finer. Fragments that meant nothing as they lay scattered about on the ground, except to the specialist, are set in their proper places and speak to every observer. The north porch of the Erechtheion now has its panelled ceiling, the west façade shows something like its Roman form, the outline of the whole is less jagged and far more pleasing. On the scientific side, much has been learned, though many questions will remain forever insoluble. One may occasionally differ on some detail, but, on the whole, the scholars who have had charge have vindicated their competence and their taste. They deserve our gratitude, and I am glad to record my own. All such work is expensive; the task with the Parthenon is delicate and serious. But, if they will do that as well as they have done the others, I shall hope to return to see it. Simply to raise the columns that now lie stretched out as rows of disjointed drums to the north and south, and to join their capitals by a semblance of an architrave, will be to preserve the fragments and will enlarge our appreciation of the crowning jewel of the Acropolis.

THOMAS D. GOODELL.

Correspondence.

DR. HALL'S REPLY.

TO THE EDITOR OF THE NATION:

SIR: A few weeks ago a reporter of the Boston *Post* called on me with clippings from papers in the West, where I lately lectured, and elsewhere, not only misrepresenting, but utterly falsifying what I said, and putting sentiments in my mouth that are abhorrent to me. I told this reporter that I would not be interviewed, but would be grateful if he would correct these fabrications concerning which we chatted a few moments. What was my surprise, August 5, to receive a fat envelope from a clipping bureau enclosing a score of articles and editorials from many newspapers based upon an "interview" printed in the Boston *Post* the Sunday before. In this letter I am made to say various preposterous things, and, worst of all, everything is put in quotations, although my visitor took no notes. I sent a letter of remonstrance to the *Post* asking them to print it. This they do not do, and so I turn to the *Nation*.

For instance, I am made to advise teaching "the psychology of love in the public schools." I never held or expressed any such opinion, and deem such a thing preposterous.

I am said to regret that the "physical stamina of girls in the public schools is lower than it was in former days." This, too, I never said, but believe it distinctly higher and constantly improving.

I am said to have condoned and defended "flirtation on the part of girls," and this is amplified. I hold no such views, and do not remember ever to have discussed the subject. The reporter must have confounded me with another professor in another college, who was, rightly or wrongly, some months since, said to have discoursed on this theme.

I am said to have defined love as "emotive delusion" and "rudimentary paranoia." I never attempted to define it, but in a book printed years ago held these, with a lot of other freak definitions by European authorities, up to ridicule.

"Woman makes man a little tin god," etc. The expression and the sentiment are foreign to my mind.

Girls are "ultra-feminized in school." I never dreamed of such a thing, and should have said the tendencies were rather the other way, if anything.

Woman is "supreme over her husband." This, too, is an idea very foreign to my limited sphere of thought.

In the article as a whole there is almost nothing that resembles anything I ever said or thought, and the whole spirit and tenor of the article is repugnant to my tastes and opinions.

Is there no limit to the misrepresentations to which any private citizen is exposed? Is he not at least to be given the benefit of the assumption that he has common sense, and does not habitually talk twaddle or worse, unless he has been proved to do so? Lately, in Chicago, I described with approval the movement for fo k-dancing, which is now s widespread. Next day I was featured as advocating the ballet, and was cartooned as a ballet girl with one foot high over my head. In another city I spoke of the advantages and dangers of boxing as a physical exercise in our gymnasia. Next day I was represented as a defender of slugging, and found myself in the ring in tights. Caricature is amusing and has its rights, but what about unscrupulous misrepresentations for the sake of sensationalism? I wish the *Nation* would discuss the general principles that underly this matter, which it is far more competent to do than I. Perhaps I have no grievance and ought merely to laugh it off as a joke, but I have already had a number of letters from clergymen and teachers censuring me severely for views as repugnant to me as to them. What about this? Is it not a good summer theme for discussion?

G. Stanley Hall.

Clark University, August 15.

PROBABILISM.

To the Editor of The Nation:

Sir: The apology of your French correspondent for the Jesuits, in your issue of July 14—a good date for an article from France—confuses the matter somewhat in his remarks on prohabilism, where he seeks to defend that principle hy reference to the axiom that an uncertain law does not hold and to Bishop Butler's probability as the guide of life. Here is the situation presupposed by probabilism. There are two courses of conduct open to me. One of these is by far the safer, much more in accordance with the moral law and the law of love, and even with my own conscience, when undeflected by my des res, and therefore by every principle of Christianity (1 Thess. 5:22) I ought to take that course, and would take it if I had not heard of the wrangling of casuists. The other course is a loose and less safe one, but, nevertheless, it may be considered as one on which the law is doubtful because I can find one good writer, at least, who so believes. I therefore can take the second course as probably correct, and cannot be held up for it in the confessional; I give the benefit of my happy discovery of a lax casuist like Liguori, for instance, to my conscience, and do the act forbidden by the ethics of Jesus in the opinion of all earnest Christians. The opinion of one reputahle casuist that the law is uncertain in this case makes it probahle for me that this is so. Butler and Mill were hardly sponsors for this kind of ethics. It is true that Pope Alexander VII rejected the form of the doctrine that an opinion represented by only one favorite writer could be considered probable. But like many other papal censures, this has also gone into innocuous desuetude. The view has prevailed among many excellent Catholic moralists that an opinion endorsed by one learned teacher in this field makes it a probable one. And, says Father Noldin, S. J. ("Moralsysteme" in Kirchen-Lexicon, 2 Aufl. [1893], VIII, 1879), "this view has received authentic confirmation by the solemn declaration of the Church that, on account of the authority of the saint alone, probability is imparted to the views represented by St. Alphonso Liguori." And this last remark will also serve to defend Bochmer from the implied censure of S. D.'s sarcasm about his "hahits of mind," as shown in the Bonn professor's really true words to the effect that Liguori's canonization and elevation to the rank of doctor of the Church have "consecrated officially the traditional methods of the society's casuistry, as models for the science of moral theology." And what kind of views in Liguori probahilism thus covers as admissihle may be seen in any scientific work which treats of such things, as, for instance, briefly in the article "Liguori" in the ninth edition of the Encyclopædia Britannica.

I might also say that the idea that Wesley's revival had an "historical descent" from Jesuit "retreats and missions" is pure fiction. During Wesley's day, and long before, the Jesuits held no missions that could have come under his ohservation. The revivals under the Quakers in the seventeenth century, which had several points of contact with Wesley's, as well as various activities of both Anglicans and Nonconformists, could with much more reason be alleged as the historical antecedents of Wesley's method. Permit me to add finally that Professor Boehmer is one of the most brilliant of the younger teachers of Church history in Germany, of thoroughly scientific spirit and attainments, and his little book on the Jesuits (Leipzig: Teubner, 2 Aufl., 1907), is one of the best hrief treatments in any language, as is in another field his "Luther im Lichte der neueren Forschungen" (2 Aufl., 1909).

J. Alfred Faulkner.

BIBLIOGRAPHY OF SUMNER.

To the Editor of The Nation:

Sir: I was interested in reading the hibliography of the late Professor Sumner in your issue of July 21. There should be added to it a little pamphlet, which Professor Sumner published or had printed when I was a senior in college in 1882, entitled, "Political Economy and Political Science; a Selected List of Books Recommended for General Read ng and for an Introduction to Special Study." It contained the titles of about fifty books, and a brief critical appraisal of each one. I have found it in use to be very just.

Albert H. Atterbury.

New York, August 16.

MEDICAL TRAINING.

To the Editor of The Nation:

Sir: Mr. Flexner's recent review of the conditions prevailing at the present time in the medical profession and the criticism by the Carnegie Foundation of medical institutions in general remind the writer of some observations by Joseph Addison on the "overcrowded professions," which were published in the *Spectator* of Saturday, March 24, 1711. He says:

I am sometimes very much trouhled when I reflect upon the three great professions, of Divinity, Law, and Physick, how they are each of them overhurdened with practitioners and filled with multitudes of Ingenious Gentlemen that starve one another.

The man who has not the means to defray the expense of a long preliminary training, to make him a "desirable" matriculate for the institution of advanced learning, has a right to some consideration. Great endowments, lahoratories, and teachers unfortunately cannot make the man of true science; there is something behind all these things.

The great leaders of thought in science were horn with the spark of genius. When we read the history of their lives, of those few of which we have the true story of their childhood days, we cannot fail to be impressed with the traits and characteristics which, clearly innate, dominated their future careers. Can any or all of the changed conditions, as expressed in the modern requirement for matriculation, supply these qualities? He would indeed be hold who answered in the affirmative. Truly the whole subject of medical training appears to he in a transitory state. The passing of the early preceptor was a loss from which we have not recovered, and the question whether we should not adopt some of the old ways with the new is not to he totally disregarded. Apparently if we are to make progress there should be schools which have for their object the training of *practitioners* of medicine, and those which devote their energy to *research work and training of teachers*. In the old days it was possible to find both confined in one, hut this was hefore the days of commercialism in medicine!

Joseph Leidy, Jr.

Literature.

SOCIALISM, DOGMATIC, EMPIRICAL, AND IDEALISTIC.

Evolutiouary Socialism: A Criticism and Affirmation. By Edward Bernstein. Translated by Edith C. Harvey. New York: B. W. Huebsch. $1 net.

The Class Struggle (Erfurt Program). By Karl Kautsky. Translated by William E. Bohn. Chicago: Charles H. Kerr & Co. 50 cents net.

Twentieth Century Socialism: What it Is Not; What it Is; How it May Come. By Edmond Kelly. New York: Longmans, Green, & Co. $1.75 net.

The Poverty of Philosophy (A Reply to "La Philosophie de la Misère" of M. Proudhon). By Karl Marx. With a Preface by Friedrich Engels. Translated by H. Quelch. Chicago: Charles H. Kerr & Co. $1.

The Evolution of Property from Savagery to Civilization. By Paul Lafargue. Chicago: Charles H. Kerr & Co. 50 cents net.

Finality in social philosophy is as remote as in metaphysical speculation. Socialism, like skepticism, is a constantly recurring note in human thinking. We

must expect repeatedly to hear the dissonance of

> . . . the turbid ebb and flow
> Of human misery.

The experienced student will therefore dismiss the hope, which in immaturity he may have cherished, of universal acquiescence in any particular type of economic organization; and will assess a group of books such as this as indicating merely the shifting of the fugitive tide of current opinion.

The three principal volumes, those of Bernstein, Kautsky, and Kelly, are interesting primarily as representing three different versions of the Socialist gospel. The first two, it is true, are but translations of material which German Socialists have threshed over for more than a decade, but the transfer, or, rather, the extension of the area of debate to the English-speaking world is not without its extreme significance. First, in 1892, Kautsky published "Das Erfurter Program," an authoritative exposition of the creed adopted by the German Social Democracy in the previous year. Kautsky's work has gone through a number of editions, this English rendering, under the title "The Class Struggle," being a condensation from the eighth German edition. Its author declared in 1904 his "Erfurt Program" "in all essential particulars an accurate statement of the principles of the German Social Democracy," valid also for the international Socialist movement. Kautsky, in short, is the accredited exponent of unchanged and unchanging Marxist orthodoxy.

Bernstein, on the contrary, essays the rôle of higher critic of "the faith once delivered to the saints" of Marx's fold. His heresies spring from his employment of an objective scientific analysis of industrial phenomena. His letter to the Social Democratic party at Stuttgart in October, 1898, was by implication condemned by them the following year. Kautsky denounced it as "an abandonment of the fundamental principles and conception of scientific Socialism." In the present volume Bernstein refuses to "yield on any material point"; and while protesting himself a Marxist, proceeds to give an exposition of "the tendencies of German Social Democratic revisionists."

Edmond Kelly's volume stands in sharp contrast to the other two. It was penned when that versatile and chivalrous spirit knew his days were numbered. In fact, he survived its completion by only a fortnight. His conversion to Socialism was comparatively recent. It was not Marx, but his own social idealism, which made Edmond Kelly a Socialist. He was distinctly of the right wing, and his book, "intended for non-Socialists," is shot through with an idealism—in places with a Utopianism—which gives his Socialism a characteristic stamp of its own, congenial to the American mind, but foreign alike to the materialistic dogmatism of the orthodox Marxist and to the objective scientific empiricism of Bernstein. It is not unfair to say that the three volumes represent, respectively, the dogmatic, the empirical, and the idealist phases of Socialism.

The "law and the prophets" of scientific Socialism may be summed up in two propositions, in Marx's materialistic interpretation of history, and in his predicted displacement of capitalism, or the system of private ownership in the instruments of production, by Socialism. Bernstein attempts to hold by the law and to dispense with the prophecies; Kautsky holds by both; while Kelly essentially repudiates the philosophy of materialism, though he seems to accept the promised order of large-scale production as inevitable, or rather as practically realized already in most industries in the United States, where only the formal vesting of title in the community is necessary for the realization of Socialism.

How unequivocal is the flat divergence among these writers may be judged by the fact that Bernstein derides the idea "that we have to expect shortly a collapse of the bourgeoisie economy" (p. x), and insists upon the fact that the "number of the members of the possessing classes is to-day not smaller, but larger" (p. xi); whereas Kautsky still harps upon the evident "death-struggle of small production" (p. xvi); and Kelly asserts that our Wall Street group of financiers by their power over the currency "are masters of our commerce, our manufactures, our exports, our politics, our religion" (p. 197). Bernstein denies the tendency of industrial concentration, or large-scale production, to be universal (p. xi); he denies the tendency of the middle class to disappear; he cites statistics to prove the growth of moderate sized incomes (p. 46); he declares "the possessing classes" to be increasing "both relatively and absolutely" (p. 48); he questions Marx's dictum that crises tend to become more frequent or more disastrous; and declares that Socialism does not depend on the "superstition" that there is an "absorption of surplus value by a diminishing group of mammoth capitalists" (p. 48). Kautsky *per contra* avers that "day by day, the small business establishments disappear" (p. 63); that the "intervals of prosperity become ever shorter; the length of the crisis ever longer" (pp. 85, 86). Kelly declares that "workingmen are dependent on their employers under conditions worse than negro slavery" (p. 47); that here in the United States, on July 19, 1909, "millions . . . are on the verge of starvation, and have been for two years past . . ." (p. 64). He even estimates their number at 11,666,666 (p. 77). Bernstein in rebuttal finds "in all advanced countries . . . the privileges of the capitalist bourgeoisie yielding step by step to democratic organizations" (p. xi); holds that the coöperative stores in Great Britain deflect part of the "surplus value" into the pockets of the workers; declares the middle class—not excepting the German—in their bulk to be still fairly healthy, not only economically, but also morally (p. 149, note); and finally culminates in asseverating that "the formation of political and social organs of the democracy is the indispensable preliminary condition to the realization of Socialism" (p. 163).

So far as these conflicting contentions are concerned, it may be said that the principal disputants hardly join issue. Bernstein relies on statistics and empirical investigations. Kautsky proceeds deductively with apodictic certitude from the truths of "Das Capital." On the other hand, whether Bernstein may legitimately contend that he is a true follower of Marx because he (Bernstein) has purged the Marxist system of "a dualism which runs through the whole monumental work of Marx" (p. 209), is more than doubtful. Marx, by the way, would probably have writhed under Bernstein's gloss of Marx's theory of value. The "socially necessary labor time" which Marx taught constituted value does not necessarily hold for particular commodities, says Bernstein, but only for the total output of industry. This reminds one of the chemistry professor who was wont to remark, "the particular experiment, gentlemen, has failed; but the general principle remains true, nevertheless." Kelly is avowedly an eclectic, for whom the fetich of Socialist orthodoxy was relatively of slight concern. His divergence, however, from the narrow path is more striking, when viewed in its bearings upon the fundamental doctrine of Marx, the materialistic interpretation of history.

The fundamental and characteristic principle of Marx's philosophy is the "materialistic interpretation of history." This principle consists in the allegation that in all human history the "determining factor" is the complex of "the material productive forces and the conditions of production among men at the time" ("Evolutionary Socialism," p. 7). According to Kautsky, "in the last analysis, the history of mankind is determined, not by ideas, but by an economic development which progresses irresistibly, obedient to certain underlying laws and not to any one's wishes or whims" ("The Class Struggle," p. 119). Both Bernstein and Kautsky are agreed that "ideologic forces" or "ideas" may serve as vehicles or agents by a sort of maieutic process to hasten or to delay the inevitable culmination of Socialism. Bernstein thinks that he thus frees Socialist philosophy from the charge of philosophic materialism. He appears to imagine that because he recognizes

"ideologic forces" or "ideas," he escapes the exposure to which philosophic idealism has always subjected materialism, pure and simple. But when we inquire into the character of these "ideologic forces" and "ideas," what do we learn of their nature? They are not "unconditional," says Bernstein (p. 13); and Kautsky informs us that "ideas are only the means to social development; the first impulse does not proceed from them, . . . the first impulse comes from economic conditions" (p. 119). If the philosophic materialist is, as Bernstein affirms, a "Calvinist without God," the Marxist appears to be an ostrich hiding his head in the sand of secondary causes. Materialism suffers very little of a sea change by tricking out its necessary agents in the filmy vesture of "ideas" when these very "ideas" are admitted to be only allotropic manifestations of matter.

Even if the fundamental law of Marxism be analyzed on the empirical historical plane, it is far from certain that the prevailing conditions of production exclusively shape all social institutions, such as the form of family life, and the constitution of social classes. Production among the lower animals is essentially the obtaining of their food supply. How then are we to explain the difference between the hive and the solitary bee, between the hermit-like carnivores and the wolf-pack, between the promiscuity of apes and the monogamy of birds? Or, if we shift to the human plane, what change in productive technique created in Japan the order of the Samurai; or what revolution in industry planted upon the Pantheon the emblem of the cross? It is precisely here where Kelly, though impliedly repudiating Marx, makes his real contribution to a sound philosophy of history. Kelly is, indeed, intent upon the disproof of Herbert Spencer's contention that "because natural evolution proceeds upon the principle of the survival of the fittest, therefore human evolution must proceed upon the same lines" (p. 363). But the refutation of Spencer—and impliedly of Marx—is triumphantly accomplished. It is true that Kelly merely reproduces the essence of the argument he had advanced in his earlier writings upon this subject. But that earlier argument was a masterpiece which may well bear reproduction, and which will more than expiate many of the ill-considered opinions and projects embodied in this book, written when the great shadow was already falling upon his page. Human society, gripped as it is by the imperious requirement of material want, has grown to be what it is not merely by acquiescence in the natural process of selective slaughter, but by rising above that process—by imposing the self-legislated trammels of restraint upon sexual jealousy, through the institution of the modern family. To this the social insects have never attained. Extirpation or sterilization of the adults of one sex is the price they pay for their well-ordered social state. It is well enough to tell the sluggard to go to the ant to learn the lesson of industry—though we might, perhaps, with equal pertinence tell the sluggard to go to the devil—but the social regenerator may as well recognize that social well-being is to be sought in a moralized human nature, not in animal automatism.

There are certain qualities about collectivists of the stamp of Kautsky which offend against the scientific temper. There is a cocksureness about the world's industrial future—a quality which sorts naturally enough with the ignorance of industrial history which Kautsky at times displays. Pauperism, says he, first appeared "only as an exceptional phenomenon. In the Middle Ages, for example, there were but few who did not own the instruments of production necessary for the satisfaction of their own wants" (p. 165). There is also in Kautsky, Lafargue, and Marx, a sublime certitude impervious to the sober questioning of inquirers. In more than one respect, the collectivists of this stripe resemble the adherents of Mrs. Eddy. Most offensive of all is a trait common to this group which seems to lurk in their Teutonic origin. It is the employing of language towards opponents which in spirit is akin to billingsgate, but which in expression assumes a bitter, contemptuous *Gemeinheit*, foreign alike to the gentleman and the scholar.

. . . tantæne animis cœlestibus irae?

Thus Engels in his preface to this translation of Marx's "Misère de la Philosophie" belabors Rodbertus much as a drunken *Bauer* might his wife. The entire work, now Englished for the first time, is a bitter, ironical exposé of the pretentious profundities of Proudhon. The translator has an aversion to grammatical usage—"without I . . . having abandoned (p. 34), etc." Misprints abound, perhaps by way of illustrating the Poverty of Philosophy. Thus we find "raito" (p. 38), "oppositon" (p. 39), "Riacrdo" (p. 53), "Proudhan" (p. 101), "borgeois" (p. 113), and "psyhcologial" (p. 168)—among the lesser gems.

The other minor volume is Lafargue's essay on the evolution of property. The Marxian bias permeates the entire essay. Thus we read: "Capitalist civilization condemns the proletarian to vegetate in conditions of existence inferior to those of the savage" (p. 11), whose morality was admirable until "deteriorated by the Bible and brandy" (p. 33). Even where the writer was free to draw conclusions in matters unaffected by collectivism, he was often undiscriminating. It will be news to most that the French Revolution "was fraught with misery and ruin for the peasant" (p. 120). The judicious economic historian will grieve also over the alleged origin of the craft gilds (p. 130). There is, of course, no valid objection to inexpensive reprints of Socialist classics, but where the pages do not follow in sequence, as between p. 83 and p. 89, and where outrageous misprints are numerous, the reader has a valid complaint against the slovenliness of the publisher.

A rather commonplace but at the same time a rather reassuring consideration, emerges from the scrutiny of the various currents of socialistic speculation. As Socialism becomes concrete and practical, its perils, which loom so large *in abstracto*, seem to lose much of their menace. This is due in large part to the fact that Socialism becomes itself transformed in the process until it is quite a different thing from the simon-pure article of Marx. The degrees of approach to something like an *entente* with solidarism vary, of course, from writer to writer. But even Kautsky speaks with disapproval of "confiscation" (p. 129), although "exploitation" is, he thinks, inevitable (p. 130). He expressly exempts savings bank deposits (p. 131), and graciously allows the small producer, presumably including the farmer, to "keep his tools of production" (p. 132). Edmond Kelly declares that "much land and many factories represent to-day an investment of accumulated wages; . . . to expropriate such land without compensation would be as unjust an act of spoliation as the seizure of the land by violence. . . ." (p. 124). Socialists repel the idea that they favor a "dividing up" of wealth, although it is rather a silly subterfuge they invent when they aver that productive plants are not to be physically parcelled out, but only the income emerging from such plants is to be subject to an authoritative partition not based on extant property rights. To this the capitalist might make the excellent rejoinder:

You take my house when you do take the prop
That doth sustain my house; you take my life
When you do take the means whereby I live.

But when all this is granted, the Socialist cannot escape any more than can his opponent the sweet reasonableness of social facts and social necessities. Men shudder at Socialism who shout for "conservation of natural resources." And Socialists who denounce exploitation are beginning to admit a residual sphere where the competitive stimulus and individual enterprise, even for profit, may be temporarily permissible (Kelly, p. 331). Bernstein declines to commit himself longer to a doctrinaire cosmopolitanism. He cannot escape the allurements of the spirit of nationality. He clearly has in mind, first and foremost, the creation in Germany of a true rep-

resentative democracy. It would not be very surprising if in this country, as in Germany and in England, the reëstablishment of popular political control might be accomplished under the forms of a political agitation, professedly socialistic in the Fatherland, professedly reformatory in England and America, but embodying in every case the common principle of a revivified democracy.

CURRENT FICTION.

Wild Oats. By James Oppenheim. With a Foreword by Edward Bok. New York: B. W. Huebsch.

Of late years the novel has more or less successfully appropriated the functions of the historian, the political and social economist, the scientist, the essayist, and the preacher. Pathology is the newest field. Alcoholism, neurasthenia, and various phases of degeneracy have become common themes for the erstwhile romancer. And the strange thing is that the romantic method is now not infrequently applied to these more or less unsavory themes. Mr. James Oppenheim here invites us boldly into one of the darkest corners of the dolorous field. The creator of Doctor Rast has heretofore shown himself an odd compound of realism and well-nigh hysterical sentimentalism. Both elements are intensified in this story. He has not merely written a tract, for his people, extravagantly as they may be presented, have a certain reality. Doctor Rast and his Nell have a hand in the action, and the two persons more immediately involved are of engaging as well as piteous aspect. And yet the question remains whether the experience recorded of them is of a sort to be treated profitably by so slight and emotional a hand as Mr. Oppenheim's. Mr. Edward Bok, arbiter of a great feminine constituency, is sanguine. "It may be," he says in his "foreword," "that the work of arousing the public conscience on the great evils that threaten the very foundations of our social structure, is in the hands of the fictionist. This has unquestionably been true in the past. If it be true of the present evil, may this story speak its great and vibrant message in clarion tones." The present "fictionist," unfortunately, has no clarion tones, but a small, reedy voice, eager and tremulous with feeling, fit to celebrate the ecstasies of young love, young ambition, young anguish. The theme with which he here struggles, whether too high or too low, is beyond him. It has to do with one of the oldest and basest of human penalties. The clarion tone of Juvenal rang it forth. Hogarth gave it another form of vigorous utterance in the third plate of "Marriage-à-la-Mode." When Mr. Bok speaks of the "Great Black Plague" as an evil which "we must very soon face as an actual question to be squarely met and dealt with," we have difficulty in following him. Why "very soon"? Because the evil is rapidly on the increase? Because ignorance of it is growing? We do not think either supposition reasonable. We are forced to the suspicion that the journalistic eye observes in this perennial peril a cause which may conveniently be inscribed upon our world-reforming banner when the Great White Plague is no more—or when it has sufficiently staled upon the popular imagination.

Blaze Derringer. By Eugene P. Lyle, jr. New York: Doubleday, Page & Co.

In the first place, this romance is rather tiresomely like Mr. Richard Harding Davis's South American extravaganzas, especially the latest of them. Here also the young college athlete of inextinguishable fame and (for the school-girl reader, at least) deathless charm sets himself the task of rescuing from prison and imminent death an ex-dictator of the usual Spanish-American republic, which is known to the present author as "Sylvanlitlan." Here also the ex-dictator is possessed of a beauteous daughter of North American manners, who is coveted by several dashing young natives, but destined, of course, for her father's rescuer. Blaze Derringer is son of a Texas cattleman. The name Derringer needs no apology: Blaze alludes to the color of his hair. He leaves college by request, and reports himself in Texas; whereupon the father gives him five thousand dollars and two years to spend it in. The understanding is that if Blaze returns at the end of the two years with a like sum, the father will add two ciphers to it. You perceive the plot: the jailed ex-dictator offers, through his daughter, a large reward for aid in escaping. Blaze hears of it through a desperado named Slag, and the pair go after the money together. But, of course, a glance at the daughter is enough to rid the hero of his mercenary motive. He will have none of the money after the trick is done; in due course, there turns out to be another not totally unexpected reward for him. It is an old story. The only excuse for it economically would be a fresh and ingenious mode of treatment. But the author is no doubt safe in ignoring mere economic considerations, and in requiring of himself the slightest and most perfunctory attention to such matters as intricacy and plausibility of plot. The scheming of Blaze and his ally are child's play, and the escape of the ex-dictator pure farce; but we suspect that unexacting youth would hail the whole performance, by virtue of its cheerfulness and dash, a "corker."

A Circuit Rider's Wife. By Corra Harris. Philadelphia: Henry Altemus Co.

This is a sketch of a Methodist saint; the saint, however, is not the Wife who records her reminiscences—she was "not one of the pallid prayer-meeting virgins," the gayest young Episcopalian hoyden in town, rather—but William, the itinerant preacher, who after thirty years on country circuits has, we are led to hope, "received his LL.D. in the Kingdom of Heaven along with Moses and Elijah." For thirty years the Wife subdued herself to his quality, and acted as his spiritual dynamo at missionary meetings, with only one rebellion against eternal poverty of spirit and only an occasional caustic comment, as on the ways of the feminine soul with the innocent preacher. She had her doubts, that is, about the church system that handcuffed him, but never about William; yet to this church she returns with a genuine conviction of backsliding after a brief widowed experience in a modern institutional church in New York.

It may be doubted if the successive sketches of donation parties, revivals, protracted meetings, obstreperous stewards, and Parsonage Aid Societies can hold the interest of one who cannot himself bring to them a certain continuity born of at least a lively tradition concerning these things. There is a shrewd humor in the book, often of that deep sort which comes to some people from a habit of observing the things of this world against a background of eternity, but not infrequently, owing to a certain cheapness of phrase, it leaves an impression, as William himself did after a visit to a worldly preacher, of being "fresh." We reckon that this is a Southern story, but the Southern atmosphere does not carry conviction. The character of the good parson, however, does, and it is the preservation of this obsolescent type that gives the book its worth; for William fills his world, which with all its bareness and narrowness and vulgar emotionalism is still tense with the "witness of the Spirit," with something like epic completeness.

Rosamond the Second. By Mary Mears. New York: Frederick A. Stokes Co.

In "The Breath of the Runners," Miss Mears produced, not long since, a story of more than average interest. This book we must take to be either an early attempt at fiction or a later experiment in the wrong sort of fiction. The plot has its ingenuity; Poe might have given it a haunting mystery, or Stockton might have wrought it into a humorous *jeu*. As it stands, one hardly knows even what he is expected to make of it. The style is high-flown to the point of absurdity, but there is no indication that the absurdity is intentional. The whole affair turns on the invention by a young scientist of a sort of female Frankenstein monster, created in the image of the young man's scornful sweetheart. There is a scene of meet-

ing between the girl and the automaton (for such the creature properly is), which has great farcical possibilities, but in the actual handling it is not especially funny, nor has it the uncanny impressiveness which we suspect the author was striving for. In short, this is one of the countless books now issued yearly which seem to have been made out of whole cloth—commodities intended, like the spectacles of Moses Primrose, not for use, but for sale. It is a pity that writers of real ability should so often lend themselves to insincere work of this kind. It is not a fault to make such experiments, but it is a fault to allow their publication.

CHINESE SUPERSTITIONS.

The Religion of the Chinese. By J. J. M. De Groot. New York: The Macmillan Co. $1.25 net.

This little volume gives a description of the popular religion of the Chinese people. Its core the author finds to be animism, an implicit belief in the animation of the universe. From the earliest times, all phenomena are grouped under the positive and negative principles: the first represents light, warmth, productive life, and the heavens from which all these good things emanate; and the second is associated with darkness, cold, death, and the earth. Practical man is concerned chiefly with these principles as represented by a multitude of spirits, good and bad. The good animate heaven, the sun, moon, stars, wind, rain, clouds, thunder, fire, the earth, seas, mountains, rivers, rocks, stones, animals, plants, and the souls of deceased men. The evil swarm everywhere in numbers inestimable; for example, public roads are haunted by them, especially during the night, and numerous are the stories of wretches who have been slain by them or miserably afflicted. It is possible to find authentic accounts of hosts of such spectres setting whole towns and countries in commotion and utterly demoralizing the people.

This belief is embodied in laws which prohibit magical practices and prescribe severe penalties for heretical sects which have dealings with these enemies of mankind. Sometimes whirlwinds of public excitement blow over the people, and the absurdest stories are circulated and believed. The officials then issue proclamations directly calculated to increase the disturbance of the public mind. They try to avert the spectres by sacrifice, and Emperors have interfered, summoning the demons to cease their terrible works.

Professor De Groot gives us many accounts in particular of the actions and doings of the spectres. Common as is this belief among ignorant peoples, the world over, it has had a peculiar ethical development in China, where the spirits reward and punish, and are the means even for the detection of secret vice and crime. In the opinion of our author, this doctrine undoubtedly exercises a mighty and salutary influence upon morals. It insures respect for human life, and charitable treatment of the infirm and aged, especially if they stand on the brink of the grave. Such virtues are even extended to animals, for, in fact, these too have souls which may work vengeance or bring reward. The firm belief in ghosts and their retributive justice deters from grievous and protracted injustice, since the wronged being, thoroughly assured of the avenging power of his own spirit when disembodied, will not seldom contrive to convert himself into a wrathful ghost by committing suicide.

The struggle against such spectres has been reduced to a science. In all ages this war has had its leaders, men of genius, magicians, priests, possessing occult experience of advance or attack, self-invented or inherited from older generations. This furnishes material for a study in the natural philosophy of the people and at the same time of the boundless sway which superstition exerts on all minds in China, from the most unlearned man in the street up to Ministers and Emperors.

The book is an amplification of these sentences, which we have taken from the introductory chapters, for even Confucianism and Taoism and Buddhism are brought under the same categories. To our author, the Chinese need nothing so much as the teaching of modern science, so that they may replace the notion of this constant activity of supernatural agents with the conception of natural law.

The book has undoubted value—better than any other upon its topic, it pictures the state of mind of the majority of the people; but it has the defects of its qualities. The author is so concerned with the lower aspects of the religion of the Chinese that he is entirely blind to its higher characteristics. One would think that even a cursory reading of the classics would have led him to different conclusions. To him the Chinese mind has never appreciated the thought of disinterested virtue, though both Confucius and Mencius insist upon it. Confucius is made the minister of a debased polydemonism, although he was extremely restrained in his utterances concerning the spirits, there being three things concerning which the master would not speak, miracles, feats of strength, and the spirits. He also tells us that we should keep the spirits at a distance and further that, though heaven is the proper object of worship, it is so cold and distant that people turn to worship of the spirits and of demons. It is plain that in his day polydemonism was rife, and doubtless he shared to some extent in the popular views, but, without denying the existence of these supernatural agencies, he exerted the whole of his influence against the cultivation of the common cult. The writings of educated Confucianists follow the example of the master. They insist that against the instructed mind, the spirits have no power.

Professor De Groot's book should be renamed "The Superstitions of the Chinese," for its present title is a misnomer. It conveys an entirely false impression when it is set forth as the creed of the intelligent followers of China's great sage.

The Valley of Aosta. A Description and Historical Sketch of an Alpine Valley Noteworthy in Story and in Monument. By Felice Ferrero. Illustrations and Maps. New York: G. P. Putnam's Sons. $2 net.

This is not one of the ordinary books of travel written round a collection of snapshot illustrations; it is a really comprehensive description of one of the most famous valleys in Italy. Signor Ferrero treats his subject on all sides—the geological, the geographical, the historical, the sociological, the picturesque, and the Alpinist. But although he has primed himself with the necessary knowledge, he writes fluently and entertainingly, much as a traveller with a gift for narration would talk.

One of the most interesting sections of his book refers to Roman times. Aosta, we need hardly say, is the modern form of Augusta named after Augustus, who ordered its founding and erection. Built at one stroke, as many of our prairie towns have been built, Augusta Prætoria furnishes an excellent example of the typical Roman method of laying out towns, and the many ruins still extant there make it possible to trace the original lines. Less familiar is Signor Ferrero's account of travel in ancient times, and of the consular roads that led through the valleys and over the Alps. The mere statement that parties of English pilgrims were stoned to death by Saracen bandits on the Mont Cenis early in the tenth century is a clue to much history.

The author describes the Valdostans of to-day from his personal knowledge. They are still a sturdy people, as independent and devout as their neighbors, the Waldensians, but Catholics instead of Primitive Christians. Signor Ferrero discusses such interesting puzzles as the origin of the Gressoney Germans, and the cause of cretinism; but the general reader may find his chapters on mountaineering more absorbing; for he goes into sufficient details to be of use to prospective climbers. He tells again the story of famous exploits, including Whymper's first ascent of the Matterhorn; and he draws pen pictures of some of the great peaks and scenes. Fi-

nally, he unfolds a store of legends, which are intertwined with mediæval and recent history.

The valley had its grandees—the lords of Challant—in constant conflict with their suzerains, the Dukes of Savoy. It has harbored many celebrities, from Calvin, who seems to have hoped to try there his experiment in theocracy, to Cavour, who as a young officer suspected of Liberalism was relegated to the fortress of Bard. (This latter fact, by the way, Signor Ferrero has overlooked.) Calvin's stay at Aosta was brief, but so memorable that the valley-folk still call a local wind that blows regularly from eleven till four every day "Calvin's wind," and the town cross, erected to commemorate Calvin's flight, still stands. But perhaps the most poignant memory is connected with Guasco, who, having caught leprosy, was isolated for many years in the Tower of Terrors, and immortalized by De Maistre. The romances of the Challants, though not lacking in characteristic Renaissance passion and catastrophe, offer nothing so tragic as Guasco's fate.

We have dipped here and there into the bountiful contents of Signor Ferrero's book in order to show how variedly interesting they are. He writes in a sprightly style. We have discovered no serious omission. A Piedmontese might perhaps expect to find some mention of the Aosta Brigade, which has a conspicuous place in Piedmontese military annals, but it early ceased to be recruited exclusively from Valdostans. So the reader, touched by the tragic story of Bianca di Challant, might like to be reminded that Luini painted her beautiful face in one of his frescoes at Milan. These, however, are trifles. The book is a good book, and its many views and maps serve to extend the usefulness and attractions of the text.

Astir, A Publisher's Life-Story. By John Adams Thayer. Boston: Small, Maynard & Co. $1.20 net.

In that world whose twin divinities are Circulation and Advertising, Mr. Thayer has played a conspicuous and honorable part. Since paid puffery on a gigantic scale is one of the most characteristic activities of our times, Mr. Thayer's review of his successes is uncommonly instructive. He is an advocate and exemplar of the traditional gospel of work, with the improvement that the effort must be as clever as it is strenuous. In his early 'teens, our author was editor, printer, and publisher, and, though the term was not then invented, advertising manager of his own paper. Soon he became a union printer; thereafter, a clerk and travelling salesman for a typefounding concern. In ten years, he must have served as many employers, always following some slight increase of salary.

His chance came with the rehabilitation of the *Ladies' Home Journal*, of which he undertook the advertising department. The conditions of his great success seem simple in retrospect: he established uniform, that is honest, rates, and by excluding fraudulent or merely flashy announcements raised the tone and value of the advertising pages. This work he continued later on that widely circulated periodical, the *Delineator*, and his precept and example were doubtless potent in inducing other magazines to purge their paid announcements. He possibly assumes in this matter an undue originality. Many newspapers habitually censored their advertisements, both with regard to veracity and display, long before Mr. Thayer cleaned house for the *Ladies' Home Journal*. An important feature of his success was the extension of his direct influence over the advertisers. In fact the office of advertising manager, which he first bore, has come to exemplify a delicate sort of double agency more consistent with Latin notions of agency than with our own.

Parting from the *Ladies' Home Journal* on an issue of money, Mr. Thayer was called to be the right-hand man of Frank Munsey. For a month, according to directions, the new lieutenant "breathed the air of the office" and was observed. At the end of this brief probation, he received a letter expressing disappointment. Mr. Munsey could find in him neither the elements of "genius" nor capacity to be "a great big salaried man." The whole correspondence is a literary curiosity, for its bandying of large words, its implications of mysterious springs of power in publishers, its essentially personal and romantic attitude toward what a layman would suppose to be a matter of demonstration.

Mr. Thayer's apogee was recorded by *Everybody's Magazine* which was borne into fame by the cometary muck-raker, Thomas Lawson. Long before this charge was assumed, Mr. Thayer cast yearning eyes upon the *Atlantic Monthly*, but was baffled by the inexplicable conservatism of its proprietors. Had he succeeded we might have had the privilege of reading "Frenzied Finance" in the magazine that had once welcomed the "Autocrat."

On the whole, Mr. Thayer makes an impression of singularly narrow intensity. His imagination, highly developed along business lines, seems hard and insensitive elsewhere. Oddly enough, his probity, too, is specialized and asks no collateral questions. His certainty that the literary part of any magazine is merely secondary to its advertising is accompanied by a sort of moral myopia. He freely communicates some of the foibles of Thomas Lawson and his interested motives in the famous exposures of Wall Street. Now on any basis of genuine morals, it was quite as questionable to print Mr. Lawson's blend of vulgarity, sensationalism, half-truth, and conscious misrepresentation, as it would have been to accept advertising from a semi-poisonous nostrum. We seem to reach the ultimate incongruity that a punctilious and financially successful advertising policy may best be based on a rather lax and unscrupulous editorial policy. You must, in short, cheat people's brains, in order honorably to reach their pocketbooks. These are incidental lines of casuistry, suggested by Mr. Thayer's breezy and entertaining confessions.

Family Names and Their Story. By S. Baring-Gould, M.A. Philadelphia: J. B. Lippincott Co. $3 net.

Among Mr. Baring-Gould's many hobbies that have found lodgment in printed form, and one may not guess how many others are still inarticulate, must now be included family nomenclature. In a work of over four hundred pages, entitled "Family Names and Their Story," that versatile author and compiler has gathered a mass of information, gossip, and stories, collected in the course of a long life and omnivorous reading, that without pretensions to scholarship are, in a way, both entertaining and enlightening. The derivations appear to be reliable, though one would have to be an expert in many fields of etymology, genealogy, and history to be sure that all the statements are correct, and it is quite possible that Dr. Bradley and Messrs. Round, Stevenson, and Barron would make short work of some of the origins of family names that Mr. Baring-Gould presents here with so much confidence. It must, however, be acknowledged that the latter is no accepter of fictitious genealogies, folk tales, and vulgar etymologies, but can wield the whip of criticism and denounce the older authorities with vigor. Within the field familiar to the writer of this notice there are no serious errors, though there is much looseness of phraseology in describing social conditions of the English past and an entire want of the scholar's touch throughout. Much of the book must have been written in the eighties or early nineties of the last century, as the historical atmosphere is characteristic of that period.

Accompanying the serious matter of the book and inextricably woven with it is the compiler's commentary, which reads like the after-dinner conversation of a clever *raconteur* entertaining a company over the wine and walnuts. Stories, personal experiences, incidents connected with the host's family, servants, tenants, and tradesmen, various jibes and comments, sometimes harmless, sometimes spiteful, as in the remarks on the Huguenot refugee parsons in England, sometimes amusing and sometimes, it must be confessed, rather

undignified, follow one another with great rapidity. Occasionally, the jests are designed as a passing substitute for wit, as in the case of Miss Muffet and the Tootles family, while a good deal of space is taken up with matter thrown in to relieve what the author believes to be the tedium of the subject (for example, Gilbert's "The Yarn of the Nancy Bell," entire). A few flings at America show that the Mr. Baring-Gould is still living in the days of the Dean of St. Paul, and so prone is he to get everything about America wrong that he even makes Sir George Prévost, British officer during the Revolution, take on a new title and rise to be commander-in-chief of the forces in North America, apparently, if we read Mr. Baring-Gould aright, playing the part of Burgoyne at Saratoga. More extraordinary still is a statement which we give in our author's own words, as they cannot be improved upon: "When the settlers in America broke their tie to the mother country, they burnt the records of their family that told of their connection with their old home, and now many an American family would pay thousands of dollars to recover the records proving their link with the old land" (p. 396). So America was settled by the members of a single family the records of which are destroyed! No wonder that we have so much difficulty with our Anglo-American family connections.

Fifty Years in Camp and Field: Diary of Major-Gen. Ethan Allen Hitchcock, U. S. A. Edited by W. A. Croffut, Ph.D. New York: G. P. Putnam's Sons, $4 net.

In introducing his rather inconspicuous hero, Dr. Croffut out-Knickerbockers the venerable Diedrich himself, whose profound account of the creation we all remember, in the preface to his history of New York. In six preliminary chapters, Dr. Croffut details the story of Vermont, from the Azoic period to the present, establishing beyond all cavil the General's relationship with the trilobites from the Laurentian upheaval on. But we hasten to say that except this one lapse toward irrelevancy, Dr. Croffut has done his work well. His narrative is a well-spun and unobtrusive thread connecting large extracts from a diary of unusual interest.

If Gen. Hitchcock was inconspicuous, it was through lack of good fortune, not of merit. His family is eminent. Ethan Allen of Ticonderoga was his grandfather; his elder brother, who went South from Vermont, became chief justice of Alabama; one nephew, Henry, was long the leader of the bar in Missouri, and another was the able secretary of the interior under McKinley and Roosevelt. Hitchcock graduated from West Point in 1817, but with short interruptions, he remained as an instructor until 1833, promoting greatly the efficiency of the Academy by his service. Later, he took part as a staff-officer in the Seminole and other Indian wars, and was inspector-general of Scott's army in the advance upon Mexico. He had a good practical head, and probably surpassed all his associates in military science. Scott himself was generously willing to credit his capable aide in large measure with his success. Hitchcock's sense of justice was strong; his conscience being ill at ease in the wars with the Indians and with Mexico.

In the civil war, when he was too old and too ill to partake in active service, Hitchcock was employed as counsellor to Lincoln and Stanton; although, as the diary reveals, his advice was too often neglected. But his ability was always recognized, and at one time he had the chance to supersede Grant, which he refused. In the spring of 1862 he urged the folly of a divided command in the West, with the result that Buell was at hand to help Grant at Shiloh, on the evening of April 6. He was, also, wise enough in the same spring to see that Banks should not be weakened in the Shenandoah Valley, that Blenker's division should be retained to cover Washington, and that McDowell's corps should be left unhampered for service toward Richmond. If this advice had been followed, Stonewall Jackson would not have swept down to the Potomac, and the capture of Richmond would not have been so long deferred. Besides acting as counsellor, he was finally charged with the duty, always delicate and often painful, of supervising the management and exchange of prisoners and the conduct of courts-martial.

His diary, which covers the period from Monroe to Grant, and which shows him very frequently in contact with public men and events, is of great value. Hitchcock enjoyed some years of honored retirement after the civil war. Not until then did he marry. In spite of his infirmities, his life was prolonged until 1870. There was in Hitchcock a persistent fondness for abstract thought. He was a disciple of Spinoza and Emerson, and wrote eight books dealing mainly with the Hermetic philosophy.

Notes.

"A History of the French Academy," by D. Maclaren Robertson, is promised by G. W. Dillingham Company.

Prof. Pasquale Villari's "Mediæval Italy" has been translated by his daughter, Mrs. Hulton, and will be published by Fisher Unwin early in the autumn.

Prof. W. Macneile Dixon is preparing an "Edinburgh Book of Scottish Verse."

The publication of Katherine Cecil Thurston's "Max" is set by Harper & Brothers for September.

Methuen is publishing Dr. G. Walter Steeves's "Francis Bacon: a Sketch of his Life, Works, and Literary Friends, chiefly from a Bibliographical Point of View."

"Early Christianity in Great Britain," from the time of the Roman occupation to Augustine, is a forthcoming book by Prof. Hugh Williams.

"Tacitus's Histories, Books I and II," edited by Prof. Frank G. Moore, and "Cicero's Letters," selected and edited by Dr. Ernst Riess, will soon be added to Macmillan's Latin Classics Series.

A book concerning the derivation of Arabic numerals, by Dr. David Eugene Smith and Louis Karpinski, is on the press of Ginn & Co., who also announce a volume of selections from Lincoln, prepared by Ida M. Tarbell.

Among the books in preparation by Sturgis & Walton Company are "Memoirs of the Duc de Lauzun"; "Recollections of an Officer of Napoleon's Army," by Capt. E. Blaize; "Memoirs Relating to Fouché, Minister of Police Under Napoleon," and "Memoirs Relating to the Empress Josephine," by Georgette Ducrest.

"The Function of the Church in Modern Society," by William Jewett Tucker, former president of Dartmouth College, will be brought out by Houghton Mifflin Company. The same firm will publish "A Beginner's History of Philosophy," by Prof. Herbert E. Cushman of Tufts College; Book IV in the series of "Children's Classics in Dramatic Form," by Augusta Stevenson, and a volume containing some of James Parton's biographies of great captains of industry.

Autumn announcements of the Putnams include: "Master of the Vineyard," by Myrtle Reed; "The Sword of the Mountains," by Alice MacGowan; "My Memoirs," reminiscences of the late Princess Caroline Murat; a second series of "Where Ghosts Walk," by Marion Harland; "Hypnotism and Suggestion in Daily Life, Education, and Medical Practice," by Dr. Bernard Hollander; "Romance of Imperial Rome," by Elizabeth W. Champney; "Cathedrals and Cloisters of the Isle-de-France," by Elise W. Rose and Vida Hunt Francis; "Controversial Issues in Scottish History," by William H. Grey; "The Wilderness Trail," by Charles A. Hanna; "Protestant Modernism, or Religious Thinking for Thinking Men," by David C. Torrey; an edition of "A Sentimental Journey," with water-color drawings by Everard Hopkins; "Frederick William Maitland," by H. A. L. Fisher, and "The Steam Engine and Other Heat Engines," by J. A. Ewing.

Henry Holt & Co. announce: Non-Fiction: Henri Bergson's "Creative Evolution," translated from the French by Arthur Mitchell; Lovat Fraser's "India Under Curzon and After"; Leading American Men of Science, (edited by David Starr Jordan): "Benjamin Thompson, Count Rumford," by Edwin E. Slosson; "Alexander Wilson," by Witmer Stone; "John James Audubon," by Witmer Stone; "Benjamin Silliman," by Daniel Coit Gilman; "Joseph Henry," by Simon Newcomb; "Louis Agassiz," by Charles Frederick Holder; "Jeffries Wyman," by Burt G. Wilder; "Asa Gray," by John M. Coulter; "James Dwight Dana," by William North Rice; "Spencer Fullerton Baird," by Charles Frederick Holder; "Othniel Charles Marsh," by George Bird

Grinnell; "Edward Drinker Cope," by Marcus Benjamin; "Josiah Willard Gibbs," by Edwin E. Slosson; "Simon Newcomb," by Marcus Benjamin; "George Brown Goode," by David Starr Jordan; "Henry Augustus Rowland," by Ira Remsen, and "William Keith Brooks," by E. A. Andrews; Oscar Kuhn's "The Love of Books and Reading"; Wilhelm Ostwald's "Natural Philosophy," translated by Thomas Seltzer; Martin Schütze's "Judith." Fiction: William De Morgan's "An Affair of Dishonor"; Inez Haynes Gillmore's "Phœbe and Ernest"; S. Carleton Jones's "Out of Drowning Valley"; John Mätter's "Once"; Romain Rolland's "Jean Christophe," first four volumes, translated by Gilbert Cannan.

A novel experiment in lexicography, undertaken by some Franciscan Fathers, is "An Ethnologic Dictionary of the Navajo Language" (Saint Michaels, Ariz.: The Franciscan Fathers). Their method is to describe all natural objects, diseases, modes of giving names to persons and places, animals, industrial occupations, and religious and other social customs, and to give the words and phrases appertaining to each individual thing. The material has been collected, they say, mainly by their own observations, though they have consulted the works of Washington Matthews and other authorities. The mass of facts thus presented is very large, and much light is thrown on the social culture of the Navajos. There is, for example, an elaborate description of the ritual dances; and, on another side of life, a full account of how lice are dealt with. A large vocabulary is given, the pronunciation of words is indicated, and incidentally there are suggestions for grammatical principles. The bulky volume is a valuable contribution to American Indian sociology.

The stream commemorated in the handsome volume by Helen Ashe Hays, "The Antietam and Its Bridges" (Putnam), which does little more than span Maryland at the narrowest part, is only mildly picturesque, and, excepting for the years 1862 and 1863, is only faintly interesting in its associations. It is crossed by a dozen or so bridges, in which the country masons, building wiser than they knew, achieved for their arches a certain artless grace. On the one occasion when it emerged from the placid, pastoral obscurity of earlier and later days, it gave its name to an engagement which, since it justified to Lincoln the issuing of the Emancipation Proclamation, may cause it to be held in the future as the memorable battle of our civil war. The author describes at too great length the rather torpid life that had its theatre on the quiet banks, and the building of the bridges. She misses a fine opportunity. What a chance for absorbing Erckmann-Chatrian pictures in the vast warlike tumult which the sleepy valley for once in its history underwent! There has been in modern times no tragedy more solemn and momentous than that which rolled for a moment into the experience of those remote and plodding farmers. What said and did the peaceful millers on whose wide floors the armies bivouacked and stretched their wounded? What the toll-keepers and their wives when the cannon tore through their bars? What the quaint worshippers at the Dunker Church, broad-skirted men, poke-bonneted women, when Stonewall Jackson was stemming there the Federal assault? This book is not quite silent about these things: they receive no emphasis, however, in the prolix record, being deferred to the elaborate detail of small rural happenings.

Somewhat more than ten years ago permission was accorded the Historical Manuscripts Commission of Great Britain to begin the calendaring of the great collection of Stuart manuscripts preserved at Windsor Castle. After the first three volumes of calendars had been issued, in 1902, 1904, 1907, respectively, important additional documents were discovered belonging to the period 1687-1716, which had already been covered in volumes one and two. It was, therefore, decided to calendar this supplemental material before going on with the main work, and to issue it as the first part of volume four. This fourth volume has now appeared; it consists of eighty-eight pages of additions, four hundred and seventy-five pages of new material, and an appendix of seven pages containing still other papers which were discovered too late for insertion in their proper places in this and the preceding volumes. It is no unimportant by-product of the work of the commission that private collections of manuscripts, frequently neglected by their owners, are being properly arranged and classified by specially deputed archival experts. The searching and critical examination to which these collections are subjected is of profit, not only to the scholar who uses the calendar, but also to the owners of the manuscripts, and to many others. Thus, in an indirect manner, the private archives of England, Ireland, Scotland, and Wales are undergoing inspection, re-arrangement, and calendaring entirely at the public expense. The commissioners are also ready, if requested, to give their advice as to the best means of repairing and preserving any interesting papers or manuscripts which may be in a state of decay. The bulk of the papers calendared in this volume cover but six months of the year 1717. They give an account of the journey of the Pretender, James III, from Asti, in Piedmont, where he was at the close of the third volume, into Italy; of his first visit to Rome, and of his settlement at Urbino. They throw considerable light on the negotiations between the Jacobites in England and the Czar, thus supplementing the similar negotiations with Sweden described in the previous volume, and they show that Dr. Erskine, Mar's cousin, and the physician and confidant of Peter the Great, had advanced much further in these negotiations than has commonly been supposed. Peter was at this time in Holland and France, and the Jacobites hoped that Sweden and Russia, and possibly the Empire, would support their cause. The main subject of the papers is Jacobite intrigue, but here and there are helps to an understanding of constitutional questions in England and of some puzzling political personalities. On p. 539 is a letter from the sister of James Oglethorpe, recounting his experiences fighting the Turks near Belgrade, under Prince Eugene, and there are other scattered references to the Oglethorpe family. Occasionally we get glimpses of the plantations, but the view is of minor happenings. On p. 28 is a mention of "the Quakers, as are called Pennites, many of [whom] being men of consideration and as ready to a restoration [of the Stuarts] as any."

Andrew Macphail's four "Essays in Fallacy" (Longmans) deserve the old-fashioned name of treatises or disquisitions. It takes fifty-five pages to settle the business of the American Woman; the Suffragette, Education, and Theology require more. Mr. Macphail is a professional exposer of nonsense, which he finds enthroned especially in rebellious womanhood, in the American school and university, and in all theological councils. His manner is vigorous, but impatient and lacking in amenity. With many of his views, we are in sympathy. No one has punctured more forcibly the fallacy of utilitarianism as a university ideal; in his discussion of ultimate discrepancies of sex, there is much drastic good sense. But the value of his pleading is constantly diminished by lapses in taste and indulgence in overstatement. From a quotation, Mr. Macphail's animated but undistinguished style may be judged, and the passage has as well a confessional value none the less marked because quite unconscious:

> Their real enemies [those of the suffragettes] are those of their own household, who hate to see this revelation that women make of themselves, which affords to vulgar satirists congenial exercise of their irony and scoff, for the torment or amusement of those who, like themselves, by continually regarding humanity as it is, have developed a capacity for analysis at the expense of a certain dryness and hardness of heart.

Out of Mr. Macphail's own mouth may be judged whether his is a spell to exorcise the triform demon of feminism, Americanism, and theological dogmatism. Stylistically, it is fair to say, the extract represents him pretty nearly at his worst. Frequently he is pungent, and generally he is not bad reading, but his bludgeoning tactics indicate quite as much blunt perceptions as vigorous convictions.

David W. Amram's "The Makers of Hebrew Books in Italy" (Philadelphia: Julius H. Greenstone) is a handsomely printed and carefully prepared work of more than four hundred pages. It is modestly termed "chapters in the history of the Hebrew printing press"; but readers who are interested in the early records of printing and who have some idea of the services of the Italian pioneers in the art, will find in Mr. Amram's volume a fairly exhaustive study of the subject, so far as the Hebrew printers are concerned. From the first known workers, Abraham ben Garton of Reggio and Meshullam Cusi of Pieve, to Abraham Conat of Mantua, whose wife Estellina was his associate in the craft, and Abraham the Dyer of Pesaro; from Soncino and his sons to Bomberg, Adelkind, and a host of minor presses, it is a story of continuous struggle with more or less adverse conditions and of signally successful achievement. That the art should have attained its highest perfection at its very beginning proves that the pioneers were scholars as well as printers, admirably equipped and full of an enthusiasm that no obstacle would dampen. The readableness of Mr. Amram's work is enhanced, without impairing its usefulness, by his study of the historical background. If he has given special attention to the services of the early Jewish

printers, who made accessible books studied by generations of scholars, he is as warm in his praise of the Christian craftsmen who introduced a new element in the intellectual life of the time; it was the Benedictine monks, he observes, "who saved Italy from intellectual barbarism."

No. VI, Part 3, of the Gibb Memorial Series contains Vol. iii, Part i, of the Arabic text of Yaqut's "Dictionary of Learned Men," edited by Prof. D. S. Margoliouth (London: Luzac & Co.); vol. i is noticed in the *Nation* for June 18, 1908. This half volume concludes the matter contained in the Bodleian MS. marked Or. 753. A MS. with additional matter has been placed at the editor's disposal, and he appeals to friends to aid in the search for the remainder of this important work; vol. iv of the Bombay copy is probably, he thinks, in private hands in India. The editor's method is the same in this part as in those previously issued.

The appearance of "A Guide to the Antiquities of Upper Egypt from Abydos to the Sudan Frontier" (Macmillan), at this season of the year seems somewhat out of place. But it will be a welcome addition to the literature of the subject for the serious student or traveller who is contemplating a trip during the coming winter and who is wisely doing extensive reading in anticipation. The writer of the volume is Arthur E. P. Weigall, the inspector-general of Upper Egypt for the department of antiquities of the Egyptian government. It would be difficult to find a more competent authority on the subjects which he treats. Long service and intimate acquaintance at first hand with the places and objects described constitute claims which none can gainsay. The descriptions given by Steindorff in the Baedeker series are accurate and trustworthy, but they are necessarily brief and more condensed than those of Weigall. The latter has also included many sites where excavations have been carried on, which fall outside of the scope of Baedeker, since they are places which the ordinary tourist does not find it possible to visit on account of the necessary limitations in the itinerary of the Cook and other excursion boats. All of the descriptions have been written on the spot, with the places under the writer's eye and observation. Particularly full are the accounts of Abydos, Denderah, Thebes, including Luxor, Karnak, Deir el Bahari, the Valley of the Kings, and the surroundings of the Ramesseum, Esneh, Edfu, Kom Ombo, Assuan and Elephantine, Philae, and Abu Simbel, all of which are included in the usual itinerary, and nearly all of which can be reached by railway as well. One can only regret that the volume does not include the places north of Abydos also, particularly Assiut, Beni Hasan, Tell el-Amarna, Saqqarah, and Gizeh. The cost and at the same time the value of the volume would have been much increased if it had been illustrated with half-tones as well as by temple plans. The type is small but clear, and the book is one that can be readily carried on the trip.

The total number of students enrolled in the Swiss universities during the past semester was 6,991. Of these 3,141, or 45 per cent., were natives of Switzerland, while 3,850, or 55 per cent., were foreigners, which is a greater showing of foreign students than that made by any university outside of Switzerland. Of these outsiders about 30 per cent. were Russians, 8 per cent. Germans, and 2 per cent. French. Geneva is scarcely a Swiss university, as its foreign element amounts to 80 per cent.; that of Basel is only 20 per cent. According to faculties the student body was distributed as follows: theology 442, law 1,325, medicine 2,236, philosophical disciplines 2,988. In addition there were 1,884 irregular residents, or "hearers," making a total of 8,875, inclusive of 2,761 women, of whom 1,646 were matriculated. The total teaching force was 860, of whom 359 were full professors and 154 adjunct, or "extraordinary," professors. Bern leads in attendance, with an enrolment of 1,626 students, while Neuchâtel is last on the list, with 186.

William James of Harvard University, professor of philosophy, emeritus, died at his summer home at Lake Chocorua last Friday. He had been critically ill since his arrival at Quebec from Europe the previous week. William James was born in New York city on January 11, 1842. At the age of thirteen he was taken abroad, where he remained three years, studying under tutors, and in schools in France and England. He then studied painting with William M. Hunt at Newport, R. I., and spent a winter at the Academy of Geneva, finally entering the chemical department of the Lawrence Scientific School in 1861. He did not remain to take his degree, but entered the Harvard Medical School in 1863, taking his M.D. six years later. While still a medical student he accompanied Prof. Louis Agassiz's Thayer expedition to Brazil in 1864 and in 1867 studied physiology in Berlin. In 1872 he became instructor in vertebrate anatomy and physiology in the college. From 1880 to 1885 he was assistant professor of philosophy; from 1885 to 1889 professor in the same department; professor of psychology from 1889 to 1897, and professor of philosophy from 1897 to 1907, when he became professor emeritus. In the period 1899-1901 he was appointed Gifford lecturer on natural religion at the University of Edinburgh, and in 1908 Hibbert lecturer on philosophy at Oxford. He was a corresponding member of the Academy of Moral and Political Sciences of the Institute of France, of the Royal Prussian Academy of Sciences, of the Royal Denmark Academy of Sciences, of the Acaddemia de Lincei, of the British Academy, National Academy of Sciences, etc. Among the honorary degrees conferred upon him were the Ph.D. and Litt.D. by the University of Padua; the LL.D. by Princeton, Edinburgh, and Harvard, and the D.Sc. by Oxford and by Geneva. His chief works are as follows: "Principles of Psychology," "The Will to Believe, and Other Essays in Popular Philosophy," "Talks to Teachers on Psychology and to Students on Life's Ideals," "Human Immortality—Two Supposed Objections to the Doctrine," "The Varieties of Religious Experiences," "Pragmatism—A New Name for Some Old Ways of Thinking," "A Pluralistic Universe," "The Meaning of Truth." His work will be noticed at length in the *Nation* next week.

The death is reported from Baden, in his seventy-ninth year, of Heinrich Julius Holtzmann, professor of theology, first at Heidelberg, then at Strasburg. Among his writings are: "Die Pastoralbriefe," "Lehrbuch der historisch-kritischen Einleitung in das Neue Testament," and "Die synoptischen Evangelien."

Science.

Edelsteinkunde. Von Dr. Max Bauer. Pp. xvi, 766; 20 plates in color; 115 illustrations in the text. Leipzig: Ch. H. Tauchnitz.

This second German edition gives the result of forty years' study on the part of the author, who is founder and director of the Mineralogical Institute of Marburg, editor of the *Jahrbuch für Mineralogie*, and author of more than a hundred scientific papers. The first edition appeared in 1896, and the work has long been recognized as the foremost authority on the subject; but since the date of its original production, several new gem-stones have been discovered, and the researches of physicists and mineralogists have brought to light a number of important facts touching the constitution of various precious and semi-precious stones. All these matters are fully treated in the present work, the extent of the additions to the first edition amounting to some 55 pages.

In a treatise on precious stones it is but natural that the diamond, the king of gems, should occupy the foreground; we need not therefore be surprised that nearly 200 pages, somewhat more than a quarter of the book, are devoted to this stone. A full account is given of its occurrence in various parts of the world, embracing the latest developments in the South African diamond fields, and the recent discovery in Arkansas. While presenting so fully the facts concerning the collection and working of diamonds, Dr. Bauer has not forgotten the various and divergent theories proposed by scientists to explain the formation of the stone. The splendid corundum gems, the ruby and the sapphire, next in importance to the diamond, are also described fully, and the latest results in their production and mining are recorded. The other forms of gem-corundum are also treated at considerable length. The emerald is the subject of another section. In the present edition much new material has been added regarding the mines at Muzo, in Columbia. Though he deals fully with the principal gems, Dr. Bauer has not neglected the numerous other stones from which gems of great beauty and value have been cut in ancient and modern times. Indeed, a notable merit of his work is the care taken in gathering together all the available data regarding the newer gems, some of which have been first brought to notice in our land. The use of these semi-precious stones makes it practicable to produce color-

contrasts not otherwise possible, and to satisfy that desire for variety which is especially characteristic of our age.

The extensive establishments for gem-cutting at Idar and Oberstein in Germany are described graphically on pages 635-645, and a number of well-executed illustrations are added. Here are cut and polished almost all the agate ornaments sold in various parts of the world, and, as Dr. Bauer says, "wherever in the world a cut and polished agate is seen the probability is that it came from the Oberstein region." A great part of the large supply of Australian opal, so highly in favor at present, is also cut in Idar, Oberstein, or their vicinity.

Among the additions to this second edition we may call attention to the new material in the account of the colored gems from the province of Minas Geraes, Brazil. Of the newer gem material found in the United States one of the most interesting examples is the benitoite, from San Benito County, Cal., a gem possessing much of the beauty of the sapphire and even greater brilliancy. The interesting discovery of peridot, in 1900, on the island of St. Johns in the Red Sea, near the Egyptian coast, is noted, and the importance of this discovery as indicating the source whence the ancient supply of peridot may have been derived.

Taken as a whole, this work is invaluable for the jeweller, the mineralogist, the student, and for all who desire to have the latest and most trustworthy information as to the gem-stones now in use. The plates, especially those in color, give any one not familiar with precious stones a more correct idea of their appearance than could possibly be attained by reading a description.

In the "Rural Life Problem of the United States" (Macmillan), Sir Horace Plunkett has written a book whose importance is not to be measured by its small size. Very briefly, from experience in Ireland and America, and from studies of European conditions, the author sets forth his observations and conclusions. The problem of better rural conditions is closely allied, he believes, to the more popular subject of Conservation, and must be solved if our country is to keep its present position. Of President Roosevelt's three means of improvement, better farming, better business, better living, Sir Horace Plunkett shows that the second must come first, proving, also, that for real success it cannot be achieved by individuals working separately. Nor will combination, which has procured such amazing business prosperity, succeed with the farming problem. It is co-operation, in societies controlled not by the majority of shares but by the majority of individuals, "one man one vote," that alone will put the farmer in a position not merely to supply his needs, but also to find them out. For such societies, once organized, will discover for their members the means to better farming and better living. By their aid success will come long before we could hope to secure it by the slow leaven of educated youth. From twenty years of Irish experiences Sir Horace Plunkett is convinced that the Raiffeisen system of credit associations, by intelligently meeting the needs of farming communities, is best suited to general conditions. Further, he is positive that the American temperament will take naturally to such associations, which he proves by our long list of unsuccessful experiments in search of rural betterment. In order to set the local units on their feet, he proposes to "hitch the Country Life wagon to the Conservation star" by means of two organizations, the one a popular propagandist association, temporary in its nature, the other an institute for research, to be permanently established. The association would organize the local bodies, put them on their feet, combine them into State leagues, and then leave them to themselves, confident that so long as they preferred coöperation to combination their success would be sure. In its propaganda the association would utilize all such existing agencies as it could find, and when its work was done, it would dissolve. The institute, on the other hand, would be permanent and almost international, collecting and classifying information on all subjects relating to the needs of the local bodies. It would, of course, require an endowment. Perhaps the best feature of this book is its acknowledgment that the farmer will never organize if left to himself, and its consequent appeal to the townsman to take the lead. The townsman can well appreciate the danger, not only to the future of the nation, but also to what touches him more nearly, present prosperity. Sir Horace Plunkett finds even in the present fad of country life hope that educated men will give the first impulse to the movement. The book is most readable, and its plan will appeal strongly to all those who know the backwardness, the inertia, and the miserable earnings of many American farmers.

From Paris is announced the death of Louis Olivier, the founder and editor of the *Revue Générale des Sciences*.

Prof. Louis-Hubert Farabeuf, whose death occurred about a fortnight ago, was born in 1841; he was an honorary member of the faculty of medicine at the University of Paris, and an officer of the Legion of Honor. He wrote a large number of treatises on medical subjects.

Charles Talbot Porter of Montclair, N. J., died in that city on Sunday. He was born in 1829, and had been an engineer all his life. Last year he was presented with the John Fritz medal, established as a recognition of notable scientific or industrial achievement. The four men who had been awarded the medal before Mr. Porter received it were Lord Kelvin, George Westinghouse, Alexander Graham Bell, and Thomas A. Edison.

Drama.

AN OVERWORKED THEORY IN DRAMA.

Two able and interesting works published in the last year, "The Study of the Drama," by Prof. Brander Matthews, and "The Theory of the Theatre," by Clayton Hamilton, have agreed in giving marked emphasis and cordial support to the now popular theory that the drama is conditioned by the stage. That the drama in a general way has been influenced by the stage no one, I suppose, has ever doubted; the point of novelty in the recent view is the attempt to trace the effects of the specific stage on the specific drama, in other words, to show that the peculiarities of the stage settings of a given time and place have their counterpart in the peculiarities of the drama current in that time and place. The problem has interest enough to justify a survey of the evidence.

I.

The case is nowhere put more clearly and forcibly than by Professor Matthews in his treatment of the Greek theatre. I shall quote one passage as a favorable specimen of the nature and the strength of the evidence by which the theory is supported.

> It has been asserted that more than twenty thousand spectators could be present at a performance. As we sit on those benches to-day, and glance down the orchestra and see how small a single figure looks so far away, and how impossible it is to perceive any play of feature, we are not surprised that the Greek actors were raised on lofty boots and wore masks that towered above their heads, increasing their apparent stature. We recognize that under such circumstances the dramatist was wise to avoid all acts of physical violence impossible to performers thus accoutred. We perceive that he was well advised when he preferred a plot already familiar to his spectators, so that they would not lose the thread of the story, even if a sudden gust of wind from the Ægean might now and again wrap the floating draperies about the heads of the performers and for a moment deprive the audience of the spoken words. We can approve also his practical shrewdness in choosing a theme not only already known in its outline, but also possessing a bold simplicity, which demanded a massive treatment.

In another passage on The Three Unities, Professor Matthews explains the observance of the unity of place in Greek tragedy on the traditional ground that the permanence of the chorus in the orchestra made variations of scene impossible.

In these two passages four important traits of Greek tragedy—the avoidance of open violence, the traditional and familiar plot, the simplicity and massiveness of treatment, and the unity of place—are referred to well-marked features of the Greek setting: the rigidity of the actors, the distance of the audience, and the stability of the chorus. Furthermore, a feature of equipment, the high boots and masks, is referred to the size of the theatre. The points are definite and the style clear; the theory nowhere appears to better advantage.

A question, however, suggests itself to the half convinced reader. The Old Comedy, the comedy of Aristophanes, was acted in the same theatre with tragedy, under almost identical conditions. The results of environment should apply equally to both, yet comedy lacks nearly every one of the traits ascribed in the above paragraphs to tragedy. The comic actor did not wear a high boot, but a low slipper. The comic plot was not familiar or traditional, but dealt with unprescribed and novel matter. The comic treatment was not simple and massive, but showed a riotous fulness and an exuberant disorder. The comic method did not observe strictly the unity of place, but was so frequent and audacious in its shifts as to lead one scholar to declare that "all considerations of time and place were disregarded." These are facts that induce reflections.

Reflection is a perilous indulgence; once started, it is difficult to arrest. The reader's thoughts turn to the argument which explains the absence of battle, murder, and sudden death on the Greek stage by the use of a high boot unsuited to violence or swift movement. This is very much as if one were to account for a young woman's habitual abstinence from dancing or lawn tennis on the theory that she did not wear dancing slippers or tennis shoes. One can imagine the hoots, not to say the missiles, with which an Elizabethan audience, complaining of the absence of the expected siege and battle scenes in "Henry V," would have received the explanation that the shoes of the actors disqualified them for taking part in scenes of combat. The aid of St. Crispin would have been promptly invoked in a manner quite different from that of the English king. Men adapt dress to service, on the stage and off; and if deeds of blood had been wanted in the theatre of Dionysos as they were wanted in the Globe or the Curtain, it is safe to say that the boots would have been shaped to meet the demand. It is doubtful, moreover, whether even for purposes of mere visual distinctness the very moderate gain in size secured by the high boot and the projecting mask would not have been more than offset by the loss in freedom and flexibility of movement.

We are told that the theatre was so large, and sight and hearing so uncertain, that the dramatist was led to use old plots from the difficulty of elucidating new ones. How are we to reconcile the intellectual subtlety, the firmness of detail, the delicacy of suggestion, in the Greek treatment of tragic themes, with conditions which made the conveyance of the outlines of a bare plot a matter of difficulty and uncertainty?

We are told that the bold simplicity and massiveness of treatment in Greek tragedy was an effect of the size of the auditorium. How are we to account for the appearance of this same simplicity and massiveness in Greek architecture, Greek sculpture, Greek historical narrative, on which conditions of representation would exert no influence?

II.

The presence or absence of stage scenery is a point on which the advocates of the mechanism theory are never weary of descanting, but the facts which they cite have a curious way of playing into the hands of their opponents. We are told that there was no provision for change of scene on the Elizabethan stage, and forthwith we are intrepidly assured that Shakespeare and his colleagues shifted localities as often as they liked. We are told that in the days of Molière painted scenery was available in the theatres; yet, almost in the same breath, we are informed that Molière in most of his plays adhered to the uniform setting. The inference would be that Shakespeare and Molière, each in his own way, displayed a disdainful indifference to the stage machinery of his own time; the one flouted its handicaps, while the other repelled its invitations.

It would be inaccurate, however, to assert that the Elizabethan stage was marked by any preëminent unfitness for the exhibition of varieties of place. The truth is that it held a medial position between the extremes of fitness and unfitness. The best stage for shifts of place is that which offers most helps to the imagination, and the second-best is that which offers fewest hindrances. The ideal condition is that which supplies an appropriate setting for each scene; next to this in desirability is the absence of any setting whatever; a bare raised platform, after the Elizabethan fashion, or a bare central hollow according to the Greek plan, as recently conceived, would, in the absence of furniture and background, have furthered rather than hindered the imagined change of place. In such a case, if the dramatist's affirmation that the scene is a hall or street is unconfirmed, it is likewise uncontradicted. The planks of the flooring or the hardened plot of ground are not accepted as testimony, and the rows of seats and spectators are immaterial, because they lie outside of what we may call the field of imaginative vision. But introduce into this field any suggestion of a particular setting, an arbor on the platform or a portico in the background, and then shift the supposed scene to places where such an object would be irrational or incongruous, and incredulity or perplexity follows.

Costume supplies a perfect analogy. When the "Merchant of Venice" is acted with each player in appropriate costume, we are satisfied; when it is read by an elocutionist in ordinary evening dress, we are content: but, if the elocutionist were to appear in the gaberdine of Shylock, and read the parts of Antonio, Gratiano, Launcelot, and Portia, in this costume, we should be distressed and offended. The platform or the depression, without furniture or background, corresponds precisely to the neutral evening dress. Both the Greek and Elizabethan stages seem *in principle* to have been fairly well adapted to variations of dramatic place; and whatever difficulties arose in practice sprang out of infractions or invasions of this principle, out of the insertion of an architectural background by the Greeks, and the adoption or retention of the wall with doors, the balcony, curtains, and alcove by the Elizabethans. In the latter instance the presence of spectators on the stage would offer an additional obstacle. The development, in Elizabethan times, of a drama showing the widest latitude and versatility of place was probably as much hindered as helped by the stage dispositions prevailing at the period. And since, for scenical purposes, the minimum of setting ranks next in efficiency and propriety to the maximum, and since the minimum is naturally at everybody's command, there seems to be no reason why stagecraft should control drama in the point of local change.

III.

Clayton Hamilton, in "The Theory of the Theatre," chapter four, mentions three successive phases of English drama, the Drama of Rhetoric, the Drama of Conversation, and the Drama of Illusion, as dependent on three successive phases in stage history. In a single paragraph, he sums up the best known facts about the Elizabethan playhouse, the "projecting platform," the gallants on the stage, the arras and alcove, the balcony, the absence of scenery, front curtain, and artificial light. He begins his next paragraph with the following sentence: "In order to succeed in a theatre such as this, the drama was necessarily forced to be a Drama of Rhetoric."

Now, I will not stop to debate the eminently debatable question as to whether the Elizabethan drama in its entirety can be rightly called a Drama of Rhetoric with a capital R. I will not dwell on the point that rhetoric was common in every field of Elizabethan work, and that an unenclosed platform cannot be called to account for its appearance in the sonnets, in the lyrics, in the "Shepherd's Calendar," in the pamphlets, in the "Euphues," and in the "Arcadia." I will confine myself strictly to the central issue.

Let us admit that a platform stage has a distinct adaptation to the Drama of Rhetoric, and that the picture-frame stage is preferable to any other stage for the realistic or illusory drama. Is there any ground for supposing that an appetite for illusion or reality would

content itself with rhetoric for no better reason than its inability to obtain its illusion or reality in a picture-frame? Do the qualities apart from rhetoric or opposed to rhetoric—simplicity, directness, plain truth, native vigor, natural feeling—lose their hold on their own clientage by their transference from a box with painted sides to an unenclosed and unfurnished platform? Does nature in dialogue or delivery lose all its force merely because it is not reinforced by nature in the form of real walls and mimetic painting? That the Elizabethans found many things besides rhetoric effective from their projecting platform, we need only one testimony—the Elizabethan plays. A stage from which Macduff's "He has no children" or Cordelia's "No cause, no cause" could be effectively pronounced, was surely not "forced" into rhetoric by the collapse or powerlessness of other agencies.

From 1660 onward, according to Mr. Hamilton, the Drama of Conversation, by which he apparently means the drama of keen sayings, of wit and retort, superseded the Drama of Rhetoric. In explaining the dependence of this change on the revolution in theatrical conditions, he dwells long on the introduction of scenery. I should personally have supposed that, if there is any phase of drama which does not require scenery, it is wit; and that, if there is anything theatrical that does not involve or suggest wit, it is scenery. We may like, we may even crave, a background for a quarrel or a love-scene or a death-scene, but who asks a background for an epigram or a sally? When men quarrel or die or make love, it is easy to think of them as elements in a picture, but when they say pointed and brilliant things, the body—their only means of participation in a picture—itself retreats into the background.

In one respect alone is setting congenial to brilliant conversation—a room, an enclosure, is all but indispensable. Wit is a fine, slender, compact, incorporeal thing; it has not the body or the bigness to flourish under the open sky, or even on the open platform; the condensation and succinctness which are part of its quality it seeks, also, in its surroundings. Now, if Mr. Hamilton were able to prove that the conversation of the drama in question had been held in a boxed frame (allowing, of course, for the removal of one wall of the box) he would have made a step toward the demonstration of a harmony between the play and its setting. But this is exactly what he is unable to do; or rather he is alert to supply the data which make this view untenable. He tells us, indeed, that the stage at this period receded toward the proscenium; but it stopped, unluckily, some time before it reached the point at which its retreat would have been serviceable to Mr. Hamilton. An "apron" was left on which virtually all the acting and speaking were done, and the advantage of enclosure was as unattainable as ever.

IV.

The above review suggests the existence of three kinds of fallacy in the evidence adduced for the control of drama by the structure and equipment of the theatre.

The first fallacy is the assumption that the imagination is necessarily baffled, or even burdened, by a grave or gross logical inconsistency. One might almost ask in reply, "What is the imagination for? When should it help us out, if not when sense and logic are at a stand?" It is, indeed, a selfish and a lazy servant; it will commonly do nothing unless it is paid, and nothing until it is prompted. But it is also a very capable and powerful servant; and, when it has been both liberally paid and skilfully prompted, there is almost nothing that it cannot and will not do. It may be added, moreover, that its power has few abler expositors than Prof. Brander Matthews and Clayton Hamilton.

The second fallacy is the assumption that every mechanical arrangement or usage in past times was inelastic, immovable, and final. This is illustrated in the tacit implication that nobody can change the size of a boot or the habits of a chorus. Another example is found in the reference of the Elizabethan abstinence from the more tense and dramatic form of conclusion to the absence of a front curtain and the necessity of a public exit from the stage. One might almost as well say that a given room, otherwise available, was not used as a dining-room because it contained no table, or as a library because it contained no shelves. Men do not forego a valued purpose, because some needful appliance which chances to be familiar, accessible, and movable happens not to be on the spot at the outset. The ancestors of Watt and Edison might surely be trusted to solve any difficulty involved in the suggestion or the erection of a curtain. Wherever dress or furniture or tools are variable and in the precise measure of their variability, common sense assumes that apparatus is controlled by purpose and desire, not purpose and desire by apparatus. The opposite assumption, if pushed to an extreme, would lead us to reason that Charles Lamb read because he sat in a library, that Mark Twain smoked because he owned a pipe, that Colonel Roosevelt sailed from England to the United States because he bought a ticket, and that President Taft attends church because he has a pew.

The third fallacy is the assumption that men will prefer what is convenient but undesirable to what is desirable but inconvenient, or, briefly, that convenience outweighs appetite. The most superficial observation of one's self or one's neighbors is enough to confute this supposition. A man who prefers coffee to beer as a breakfast drink will not take beer instead of coffee, merely because a thoughtless serving-maid has supplied him with a beer schooner instead of a coffee cup. Inconvenience is, of course, a cause of pain; and there is, no doubt, a degree of pain which would neutralize the effects of the desired pleasure; but, in all ordinary cases, men take what they want with such commodity as they can. They will not refuse the sense and simplicity which they crave because it is not proffered in a picture-frame; and they will not take the rhetoric they do not want merely because it is served from a platform.

In conclusion two remarks are appropriate. The first is that nearly, if not quite, every fact in drama which it is proposed to refer to a mechanical cause may be referred without contradiction or improbability to the character of the dramatist or the nation. In other words, we are never, or very rarely, forced to accept the mechanical cause for want of a substitute. Such a compulsion might exist, if the drama of a people were found to display any trait inconsistent with the known character of that people. But, so far as I am aware, no such trait has been pointed out; no fact in Greek or French or Elizabethan drama has been adduced which is irreconcilable with our knowledge of Greek or French or Elizabethan nature. The second remark pertains to the fact that drama is, primarily and properly, an expression of the spirit; and we lose in the exact measure in which we are forced to view it as an incident of carpentry and mechanics. This is no reason for withstanding adequate proofs: it is an excellent reason for waiting until adequate proofs have been offered.

DOCENT SERVICE AT THE BOSTON ART MUSEUM.

Boston, August 25.

The day has long gone by when a librarian could exclaim with glee, as a librarian of the old school is said to have done: "All the books are in to-night except two, and I am going over to get those." Likewise, the day is passing when the accumulations of museums will be accepted as a measure of their success. They will be asked what they are doing to make their accumulations tell on the community.

Years ago, the late President Gilman of the Johns Hopkins University made in conversation the suggestion that public libraries should invite representative men in various walks of life to be present at stated times in the library to help all comers to a knowledge of books in their various specialties. Art museums offer a similar opportunity. The pulpit has long ceased, even in our New Eng-

land communities, to be the all-sufficient source of light and leading. Meanwhile, all classes of the community, church-goers and non-church-goers alike, have won leisure to devote to literature and art. Why should they not gather in libraries and museums to hear works of literature and art commented upon by those who know and love these things? In the spring of 1907, this suggestion of years before was put into practice in Boston. The Museum Bulletin announced that one of the assistants at the Museum had been assigned, with the title of Docent, to the duty of meeting visitors in the galleries and giving information about the exhibits. The service has grown from this beginning until it now occupies several of the staff during parts of every weekday, and, with the aid of speakers from outside the Museum, has been extended to Sunday also.

The one great interest present to all hearers alike, the one difficult thing to comprehend, is the faraway source of the objects before them. This deep and singular impression on almost every attentive beholder is due to nothing that a Docent can say, but to the work itself, which thereby prepares to make itself understood. A sense of beauty is as impossible to convey by word of mouth as a change of heart. Indeed, as Professor Réau has just written: "Must we not be *en état de grace* (subjects of grace as the English theologians would say) in order to understand a work of art?" In the words of Jacob Burckhardt, a Docent does not seek to "point out the fundamental idea or conception of a work of art. Were it possible to give this completely in words at all, art would be superfluous and the work might have remained unbuilt, unchiselled, and unpainted." The aim of a Docent is "to sketch outlines which the beholder's own perceptions can quicken into life."

Of course, there are many visitors who turn away listlessly. And of those who stay and who return by no means all may be really the gainers. Many may be attracted by the novelty or by an idle pleasure in something going on. One sometimes comes back from a tour of the galleries with the doubt whether, after all, it is possible to make a museum of fine art in any vital sense a popular institution. Anatole France reminds us that since life feeds on life, we are fighting against nature when we attempt to keep alive in museums the outward forms in which the ideals of past civilizations have expressed themselves. The after-world for them consists only of fewer and fewer learned men. Are museums, then, doing the general public any real service when they collect objects out of date with the intention of allowing them to become more and more so?

Against so formidable a doubt, the only safety is an appeal to facts. We must seek actual observation as to the capacity of men in general to get good out of the remains of bygone art. We know that the museum is a favorite weekly resort for all classes. What more can it do to help all its visitors to that share in the life of the imagination which is every one's birthright? That it can do much more seems not unlikely.

But at once other doubts arise. We are told that talk about the subjects of pictures and statues and upon the men and times that produced them does not elevate, but flatters, the public taste. Let it be replied frankly that this opinion is due to defective æsthetics and an altogether mistaken psychology. Defective æsthetics, because the subject of a work of art unquestionably is a part of its artistic content; else a painting of an ash-heap might rival a portrait in artistic rank. The fifteenth-century Italians who knew something of fine art in practice, however unmindful of its theory, had no other word than stories (*istorie*) for the sculptured reliefs that have since been the admiration of the world. Mistaken psychologically, because to disapprove of using the historical interest of works of art as a help to their appreciation is to ignore the pre-eminent value of indirect mental access. Every nursery teaches that there is many a true and needed word that can be spoken only in jest. In diplomacy what has not the *salon* wrought, and in business the smoking-room and the yachting party? Every astronomer knows that fainter objects of the sky can be seen only if the eye is directed a little aside. So it is with the more delicate factors with which the artist works. While a historical picture is building itself up in the mind of the hearer, is not his eye opened to the forms and proportions, the balance, and the harmony before him? And will not his attention take in these elements quite as well if thus held near as it would if turned directly upon them? What else do the fables of Cupid and Psyche, and of Lohengrin and Elsa mean than that sources of happiness too curiously inquired into are apt to fail us?

The Docent Service has been organized at the Boston Museum to meet the common experience of travellers. Any one who has ever looked at a picture or a statue in the company of an appreciative friend knows how much the comprehension of it can be aided by the communication of another's interest and information. Tennyson's lines express the idea:

> And what delights can equal those
> That stir the spirit's inner deeps
> When one that loves, but knows not, reaps
> A truth from one that loves and knows.

But, on the other hand, every one who has visited places of interest like Warwick Castle, where the "h'inlaid h'arms is very beautiful," or the tombs of the Scaligers described by Anstey's amusing Italian as "very grazioso, molto magnifique, joli conservé," knows also what unutterable weariness results from the companionship of most professional guides. The Italian word *Cicerone*—fuller of words than Cicero himself—expresses the tedium of generations of travellers. Granting the fact that it is fatal to make a business of talking about art, nevertheless it remains true that those who have already made friends with works of art may profitably be asked to devote a fraction of their time in introducing others to the same friendship. This is what has been done at the Boston Museum. A Docent is a companion among works of art, but he is also *not* a companion by profession. Docent Service is a new function of museum officials and other interested persons, not a new office in museums. That those invited to this duty should be otherwise employed during much the greater part of their time is its cardinal feature. A museum of art is full of voices worthy to be listened to, but as the deaf are often helped by other sounds, so we who wander through museum galleries often hear the silent utterances around us only when a living voice makes them audible. In every museum of fine art the pulpit and the texts are ready, and the hearers await the speaker. BENJAMIN IVES GILMAN.

The death is announced, at the age of sixty-eight, of Archip Kuindski, who is perhaps better known in this country as the Russian Turner.

The death is announced of the sculptor Pierre Granet, who won fame by his statue of Alfred de Musset at the Porte Maillot and by his statue of "Figaro."

Adolf Michaelis, professor of archæology at the University of Strasburg, died recently, at the age of seventy-five. His works include an edition of "Taciti Dialogus de Oratoribus," "Ancient Marbles in Great Britain," editions of Sophocles's "Electra" and Apuleius's "Psyche et Cupido," and a reworking of Springer's "Handbook of the History of the Art of Antiquity."

Finance.

"WAITING TWO YEARS."

Mr. John D. Rockefeller having denied the picturesque story of his remark to a woman who had confessed her purpose of building a house, that she would do better to wait two years, the seal of authority is removed from that advice. But the fact that the bit of counsel as reported caused both interest and controversy in the financial community, and that no one dismissed it as absurd on its face, makes it worth a little more discussion. What is it, for instance, that would make the cost of building a house, or the cost of any other undertaking of the sort, cheaper in 1912 than in 1910?

The answer naturally will be a general reduction in cost of materials and possibly in cost of labor. People who assert the possibility of such reduction are in the habit of declaring that we have had since 1907 none of the traditional "after-panic readjustment" of wages and prices of commodities; that, on the contrary, prices this year reached a higher average level (9.231 last January, by the *Bradstreet* index number) than the highest level before the panic (which was 9.129, on March 1, 1907), and are only a trifle lower now; the case of wages being similar. People who hold the negative reply that prices and wages have both continued to go higher, after the brief relapse of 1907 and 1908, because demand, in the natural order of the markets, kept running beyond supply; and, more specifically, they argue that increased production of gold in the world at large has forced up prices irrespective of panics and reactions.

This may not end the controversy; the affirmative will perhaps retort that the high American prices prevalent since 1908 were signs of an abnormal situation, without the element of permanency—an allegation based on the strain on credit, which accompanied the advancing prices of 1909, and on the change in our foreign trade from an export to an import surplus, which suggested that our markets were out of touch with markets of other commercial nations. As for the world's gold output, it is sometimes answered that where the annual increase was $30,000,000 or $50,000,000 in such years as 1897 and 1898, and $20,000,000 or $30,000,000 in 1904 and 1905, it ranged around $12,000,000 in 1907 and 1909, and that there has apparently been no further increase whatever thus far in 1910.

Probably the final answer on the other side will be that at any rate gold production has not decreased, and that the strain which lately existed on reserves and credit has been relieved through Stock Exchange liquidation, leaving commodities, as in 1903, to fall back a trifle and then resume their upward movement. These are a few of the opposing considerations which Mr. Rockefeller, had he really said what was reported, would doubtless have set forth to the woman about to build a house.

In one shape or another, the question at issue in that imagined colloquy underlies a very great deal of current financial plans. Whatever may be the controlling cause for the recent continuous rise in prices—whether increased gold output, or extravagance in consumption of commodities, or reduced productivity in natural resources—it is safe to hazard the guess that the average business man would be glad to have the process arrested, long enough at any rate for him to get his bearings. The railways, whose conditions are typical as a rule of conditions prevalent in other industries, stand confessedly in a curious position. It is not alone that while gross receipts are increasing rapidly, working expenses and maintenance of plant are increasing just now in a still more rapid ratio. The question of new capital is even more perplexing. For their larger improvements, railways may raise money in any one of four different ways—by selling new stock, by selling new bonds, by selling notes with one to three years to run, or by borrowing from banks, on collateral of Treasury securities, capital which they expect to repay from the proceeds of future sales of stocks or bonds.

Now, the present position is this: new stocks are hard to sell, because prices on the Stock Exchange, after a period of wild inflation, have had a demoralizing collapse, and new bonds can find a market only on unfavorable terms, because such demands on investment capital have been exceptionally large at the very moment when high average living expenses are curtailing the average investor's savings. As for the "short-time notes," they have achieved much popularity in recent years, because they committed neither lender nor borrower for too long a time when future conditions were difficult to foresee, and because, therefore, a higher interest rate could be allowed than a railway cared to pledge on a long-term bond. But the popularity of this borrowing expedient has not blinded the parties in interest to its dangers. It was the short-term notes which brought the railways to grief in 1873 and 1893, and it was only their good fortune in 1907 that so little of such paper happened to mature in the actual period of panic, when it might not have been possible to redeem or renew it.

Supposing that within the next few years, a general and far-reaching readjustment of the present high prices of commodities were to occur, how would these aspects of the situation be affected? Railways, in common with other corporations, would have less to pay for materials and perhaps for wages. But this would leave another question open—whether the traffic of the railways, with the producers and manufacturers of such materials, would not also be impaired through contraction in the profits of those producers. Such readjustment would infallibly create much hardship. Those who would benefit most by it would be the class which has chiefly suffered by the rise in prices—people with stationary salaries or fixed incomes—whereas those who, like the owners of land or producers of raw materials, have reaped the larger benefit from the recent spectacular rise, would doubtless be the conspicuous sufferers from the fall.

It cannot be said, however, that the signs are pointing to any such thoroughgoing readjustment. What still seems to be the order of the day is an alternation of forward movements leading to sudden overstrain on capital, with resultant liquidation, and backward movements, checked in the end by re-assertion of healthy demand on markets where supplies have increased but little. Mr. Carnegie some years ago put the matter in another way, by saying that under existing conditions both "booms" and "reactions" would be more frequent and more violent, but with reactions less destructive than in the older normal days.

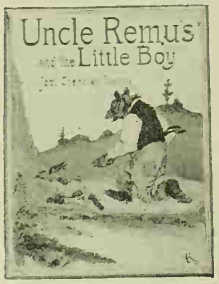
NEW AND RECENT BOOKS OF IMPORTANCE

UNCLE REMUS AND THE LITTLE BOY — **By Joel Chandler Harris**



The new Uncle Remus book is an unqualified delight. The last, alas, that ever will be, it is a collection of tales told by Uncle Remus in response to the eager, insistent questioning of the Little Boy, some of them in prose and some in verse. All are instinct with the mellow spirit of their beloved creator, and young and old alike will rejoice at "The Story of the Doodang," "Brer Rabbit Causes Brer Fox to Lose His Hide," "How Brer Rabbit Saved Brer B'ar's Life," "Brer Rabbit and the Pimmerly Plum," and the many others. It is unquestionably the leading juvenile this season.

With fifty-five illustrations by J. M. Condé, eight of them in four colors. $1.25

DOWN HOME WITH JENNIE ALLEN — **By Grace Donworth**
Author of "The Letters of Jennie Allen."

This is the long-awaited sequel to "The Letters of Jennie Allen," whose quaint, unconscious humor has convulsed a nation. The new book is even funnier, more delightful, more human, and, if possible, more lovable than the earlier volume.

Illustrated by F. R. Gruger. $1.50

THE GOSSAMER THREAD — **By Venita Seibert**

The story of a little German-American girl, not for children, but for "grown-ups." "We have had an era of the American child in fiction, but the little German-American, the heir of all, the märchen, with the Northern romance in her blood and the household fairies for her very own people, has now her first definite place among the children of American literature. The word 'literature,' moreover, is used with deliberate intent."—*Louisville Post.* *Illustrated by W. T. Benda, $1.00 net; postage, 10 cents*

WHEN LOVE CALLS MEN TO ARMS — **By Stephen Chalmers**

"There is enough adventure in this story of Highland fierceness and clannishness to fill a dozen books. It is a thrilling, well-written and wholly plausible story."—*Chicago Examiner.* "Very much worth reading."—*Newark Call.* "The charm of the story is in the delightfully foreign flavor to love's appeal as shown in the wooing of three centuries ago."—*Boston Transcript.* *Illustrated by Howard Chandler Christy, $1.50*

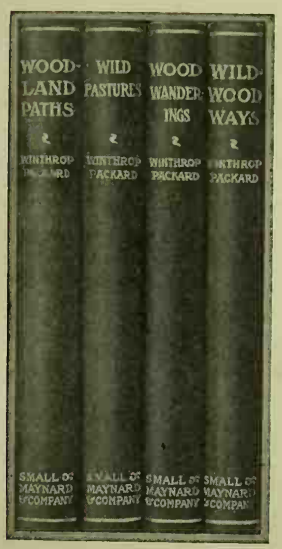
THE ACHIEVEMENTS OF LUTHER TRANT — **By Edwin Bolmer and William MacHarg**

Luther Trant is a distinctive and memorable character—a psychological detective. "When one comes across a really original and unique detective one is glad to spread the tidings to his fellows. For this reason 'Trant' is enthusiastically recommended. Unless you have plenty of time, do not begin this volume, for you will surely miss your engagement."—*Indianapolis News.* *Illustrated, $1.50*

WITH STEPHENSON IN SAMOA — **By H. J. Moors**

The author of this remarkable volume is an American merchant and planter who still lives in Samoa, and who had the singular good fortune of being the "guide, philosopher and friend" of Stevenson during his eventful life in the South Seas. The record of their friendship is singularly attractive and of great value. The illustrations from photographs, letters, etc., present a collection of Stevenson pictures that may be said to be unequaled.

Profusely illustrated, with photogravure frontispiece. $1.20 net; postage, 12 cents



WOOD WANDERINGS — **By Winthrop Packard**

The publication of this volume completes the series dealing with "the New England year" which has established Mr. Packard's reputation as a nature essayist, "the foremost to-day," says Prof. Richard Burton in the *Bellman.* "Wood Wanderings" treats of Autumn and its delights. "Mr. Packard is a lover of the open air in all weathers, an observer of the birds and wild creatures in forest and marsh, and knows how to make us see what he has himself enjoyed."—*Congregationalist.*

Each of the four volumes is illustrated by Charles Copeland. Small 12mo, ornamental cloth, each $1.20 net; postage, 10 cents. Sold in sets, boxed, or separately.

ASTIR : A PUBLISHER'S LIFE-STORY — **By John Adams Thayer**

The former part-owner of *Everybody's* here tells of the men and events of a busy magazine publisher's life. "Mr. Thayer's review of his successes is uncommonly instructive."—*Nation.* "It is a valuable story to have, giving one many facts about the lively trade of magazine publishing and some sketches of contemporary figures."—*Chicago Post.* "As unique as the 'Autobiography' of Benjamin Franklin." — *Washington Herald.* $1.20 *net; postage,* 13 cents.

FROM IRISH CASTLES TO FRENCH CHATEAUX — **By Norma Bright Carson**

A sprightly book of travel, covering a wide field, yet full of human interest and helpful notes for the tourist. In no sense a guide book, this volume may be profitably read and consulted by every one contemplating a trip through the regions described by the author, particularly literary Scotland and England. *Profusely illustrated from photographs,* $1.75 *net; postage,* 14 *cents.*

SELF-HELP AND SELF-CURE — **By Elizabeth Wilder and Edith Mendall Taylor**
A PRIMER OF PSYCHOTHERAPY.

"Instructive, suggestive, stimulating."—*Churchman.* 75 *cents net; postage,* 8 *cents.*

A CYCLE OF SUNSETS — **By Mabel Loomis Todd**

"A nature book of a new order, to be commended without reservation and with delight."—*Minneapolis Journal.* "Here we seem to find Turner transmuted into gorgeous and flaming prose. The spectacles painted so finely in words are saved from any danger of repetition by their extraordinary variety."—*Rochester Post-Express.* "A rare treat."—*Chicago Record-Herald.* $1.20 *net; postage,* 12 *cents*

THE COMING RELIGION — **By Charles F. Dole**

A thoughtful and suggestive book on the problems proposed by modern religious conditions. The author treats a broad subject in a broad manner, and commands the attention of thoughtful people. "Mr. Dole has contributed migbtily to the impulses making for real civilization and social unity in "The Coming Religion.' "—Editorial in *Ottawa Citizen.* "A good book to put into the hands of any who seriously questions the place of religion in modern life."—*World To-day.* $1.00 *net; postage,* 12 *cents.*

A SIMPLE EXPLANATION OF MODERN BANKING CUSTOMS — **By Humphrey Robinson**

"The most interesting book ever issued for the use of bank patrons."—C. A. HAZEN, editor of *The New York Financier.* "It belongs on the housewife's writing-table, alongside of her check- and bank-books, as well as in the library of the business man, or in the pocket of the bank clerk."—*Wall Street Journal.* 25 *cents net; postage,* 4 *cents.*

NEW BOOKS FROM GINN AND COMPANY

FESS. The History of Political Theory and Party Organization

By SIMEON D. FESS. 12mo, cloth, 451 pages, illustrated, $1.50.

"No book on the market gives a better idea of the history of political organization than this. It presents in a concise and interesting way the story of the struggles and issues involved in the organization of political parties, with side lights on the motives and characters of the great leaders."

—*Portland Evening Express.*

"An admirable and much-needed book—a book to be recommended not only to college and other students, but to all general readers of intelligence."

—*Chicago Record-Herald.*

GETTELL. Introduction to Political Science

By RAYMOND G. GETTELL, 8vo, cloth, 448 pages. $2.00. *Ready in the early Fall.*

A text-book which combines in brief compass the essentials of political science as they have been so ably worked out by such men as Burgess, Lowell, Leacock, Dealey, and others, whose writings have been freely drawn upon for material in its making. No field of study more happily combines material of academic interest to the student and possibilities of practical application than does political science. There is an especial need of a text-book for use in university classes.

Gettell's "Introduction" meets this need.

CANNON. Reading References for English History

By HENRY LEWIN CANNON. 12mo, cloth, 559 pages. $2.50. *Just published.*

Exact references to some two thousand of the most useful and accessible works on English history will be found in this new and helpful book. With these it is possible for any one to make the most of the library facilities at hand, and the instructor is enabled to direct the collateral reading of his students with the maximum amount of efficiency and the minimum amount of personal attention.

NEW HUDSON SHAKESPEARE

Per volume, 50 cents.

Introduction and notes by HENRY HUDSON. Edited and revised by E. CHARLTON BLACK, ANDREW J. GEORGE, and M. GRANT DANIELL.

In this edition scholarly editing is combined with convenience for practical use and reasonable prices.

AS YOU LIKE IT **THE MERCHANT OF VENICE**
JULIUS CAESAR **HAMLET**
HENRY THE FIFTH **TWELFTH NIGHT**
MACBETH **THE TEMPEST**
MIDSUMMER NIGHT'S DREAM

have already been published. The other plays will appear at short intervals.

BRIGHT AND MILLER. The Elements of English Versification

By JAMES WILSON BRIGHT and RAYMOND D. MILLER. 12mo, cloth, xii+166 pages. 80 cents.

Treating in Part One, of the individual verse in regard to rhythm, meter, melody, and harmony; in Part Two, of the grouping of verses into paragraphs, stanzas and complete poems.

"It is astonishing how you have been able to be clear and simple on the subject which is so intricate in itself."—*Professor Albert Feuillerat,* University of Rennes, Rennes, France.

" 'English Versification' is packed full of information concerning metrics without undue padding or expansion."—*Fred. P. Emery,* Professor of Rhetoric and Oratory, Dartmouth College.

STANDARD ENGLISH CLASSICS

BUNYAN'S GRACE ABOUNDING
Edited by EDWARD CHAUNCEY BALDWIN. 35 cents.

GOLDSMITH'S DESERTED VILLAGE and GRAY'S ELEGY
Edited by LOUISE POUND. 25 cents.

DICKENS' THE PERSONAL HISTORY AND EXPERIENCE OF DAVID COPPERFIELD THE YOUNGER
Edited by PHILO MELVYN BUCK, JR. (Ready in the Fall.)

MACAULAY'S ESSAY ON LORD CLIVE AND WARREN HASTINGS
Edited by CHARLES ROBERT GASTON. (Ready in the Fall.)

FRANCIS PARKMAN'S OREGON TRAIL
Edited by WILLIAM ELLERY LEONARD. (Ready in the Fall.)

All of the demands which may reasonably be made by either teacher or student are satisfactorily met in the Standard English Classics Series.

This series is the result of years of painstaking endeavor to produce the best and most serviceable editions of the classics. The prices are exceptionally reasonable. Send for complete list.

LONG. English Literature

Its History and Significance for the Life of the English-Speaking World.

Illustrated. Frontispiece in Eleven Colors. By WILLIAM J. LONG.

No book of its kind has ever been more spontaneously and enthusiastically commended than Long's English Literature. Though published just a year ago, its readers are still finding new qualities to praise. Not only is the book "scholarly," "classic," "sympathetic," "inspiring," but it is "novel," "practical," "interesting," "provided with helps such as quotations, outlines, historical introductions, and summaries," "appeals to young student or mature reader," etc.

Send for booklet giving description and letters—or, better, send for the BOOK. Price, $1.35.

School and Home Library Necessities

Lippincott's New Gazetteer

EDITED BY ANGELO HEILPRIN AND LOUIS HEILPRIN.

A geographical dictionary of the world, giving an accurate picture of every corner of the globe in its minutest details, as it exists in the twentieth century.

"Libraries having few reference books will find in this volume a mine of geographical information, which will practically supply their needs in its field."—*Public Libraries, Chicago.*

Over 2,000 pages. Quarto. Sheep, $10.00 net; half russia, $12.50 net. Patent thumb index, 50 cents extra.

Lippincott's Dictionary of Biography and Mythology

By JOSEPH THOMAS, M.D., LL.D.

This magnificent work, which for years has been in its department without a rival in the estimation of scholars, has lately undergone an extensive revision. It is now offered in a greatly improved form, embracing, besides the revision of the articles included in the previous issues, numerous new biographical sketches of persons who have lately become of sufficient prominence to merit mention.

Illustrated Octavo. Sheep, $8.00 net; half morocco, $10.00 net.

Chambers's Cyclopaedia of English Literature

NEW REVISED EDITION.

A clear and comprehensive survey of English literature from the beginning to the twentieth century.

Contains an authentic biography of every American and English writer of note, whether poet, dramatist, novelist, or historian, including a portrait wherever it has been possible to secure a satisfactory likeness.

It is the cheapest authoritative reference work of similar scope now in print.

Illustrated with Approved Portraits and Drawings. Over 2,500 pages. Complete in three imperial octavo Volumes. Cloth, gilt top, $12.00 net per set.

Furness's New Variorum Edition of Shakespeare

EDITED BY HORACE HOWARD FURNESS AND HORACE HOWARD FURNESS, JR.

This edition of the works of Shakespeare, prepared by one of the foremost living Shakespearian scholars, has been received everywhere with the greatest possible favor. It is the most exhaustive edition of the plays of the great dramatist, containing, as its name implies, a record of the notes and textual reading of all the editions that have preceded it. Mr. Furness has also added some new notes, and articles on the text, date of composition, sources of plot, etc., of the different plays.

15 PLAYS IN 16 VOLUMES HAVE THUS FAR BEEN ISSUED.

Royal Octavo. Cloth, gilt top, uncut edges, $4.00 net per volume; three-quarter levant, $5.00 net per volume.

FAIRBANKS'S HANDBOOK of GREEK RELIGION $1.50
By **ARTHUR FAIRBANKS,** Director of the Museum of Fine Arts, Boston.

COLLITZ'S SELECTIONS FROM EARLY GERMAN LITERATURE $1.00
By **KLARA HECHTENBERG COLLITZ,** Formerly of the Department of Germanic Philology in Smith College and in Oxford University.

HOLZWARTH'S GERMAN LITERATURE, LAND, AND PEOPLE $1.00
By **FRANKLIN J. HOLZWARTH,** Professor of the Germanic Languages and Literatures, Syracuse University.

COULTER AND NELSON'S NEW MANUAL OF THE BOTANY OF THE CENTRAL ROCKY MOUNTAINS $2.50
By **JOHN M. COULTER,** Professor of Botany, University of Chicago, and **AVEN NELSON,** Professor of Botany, University of Wyoming.

COULTER, BARNES, AND COWLES'S TEXTBOOK OF BOTANY, VOLUME I. $2.00
By **JOHN MERLE COULTER,** Professor of Plant Morphology, **CHARLES REID BARNES,** Late Professor of Plant Physiology, and **HENRY CHANDLER COWLES,** Assistant Professor of Plant Ecology, University of Chicago.

APGAR'S ORNAMENTAL SHRUBS OF THE UNITED STATES $1.50
By **AUSTIN C. APGAR,** Late Professor of Botany, New Jersey State Normal School.

ELLWOOD'S SOCIOLOGY and MODERN SOCIAL PROBLEMS $1.00
By **PROFESSOR CHARLES A. ELLWOOD,** Professor of Sociology, University of Missouri.

WILKINSON'S PRACTICAL AGRICULTURE $1.00
By **JOHN W. WILKINSON,** Assistant State Superintendent of Public Instruction, Oklahoma.

COLLINS'S ALGEBRA, FIRST YEAR COURSE $0.85
By **JOSEPH V. COLLINS,** Professor of Mathematics, State Normal School, Stevens Point, Wis.

CARNER'S INTRODUCTION TO POLITICAL SCIENCE $2.50
By **JAMES W. GARNER,** Head of the Department of Political Science, University of Illinois.

MORGAN'S ADDRESSES AND ESSAYS $1.50
By **MORRIS H. MORGAN,** Late Professor of Classical Philology, Harvard University.

VALERA, PEPITA JIMENEZ $0.90
By **C. V. CUSACHS,** Professor of Spanish, United States Naval Academy.

SMITH'S PLANE GEOMETRY DEVELOPED BY THE SYLLABUS METHOD $0.75
By **EUGENE RANDOLPH SMITH,** Head of the Department of Mathematics, Polytechnic Preparatory School, Brooklyn, N. Y.

ROBBINS'S PLANE TRIGONOMETRY $0.60
By **EDWARD R. ROBBINS,** Senior Mathematical Master, William Penn Charter School, Phila.

CONANT'S PLANE AND SPHERICAL TRIGONOMETRY $1.20
By **LEVI L. CONANT,** Professor of Mathematics, Worcester Polytechnic Institute.

FOWLER AND WHEELER'S HANDBOOK OF GREEK ARCHAEOLOGY $2.00
By **HAROLD N. FOWLER,** Professor of Greek, Western Reserve University, and **JAMES R. WHEELER,** Professor of Greek Archæology and Art, Columbia University.

FARNSWORTH'S EDUCATION THROUGH MUSIC $1.00
By **CHARLES HUBERT FARNSWORTH,** Adjunct Professor of Music, Teachers College, Columbia University.

GILLETTE'S VOCATIONAL EDUCATION $1.00
By **JOHN M. GILLETTE,** Professor of Sociology, University of North Dakota.

BUTLER'S EDUCATION IN THE UNITED STATES $2.50
By **NICHOLAS MURRAY BUTLER,** President of Columbia University.

LEWIS'S PUPIL'S NOTEBOOK AND STUDY OUTLINE IN ORIENTAL AND GREEK HISTORY $0.25
By **L. B. LEWIS,** Teacher of Ancient History, Central High School, Syracuse, N. Y.

McKINLEY'S PUPIL'S NOTEBOOK AND STUDY OUTLINE IN ROMAN HISTORY $0.25
By **EDNA M. McKINLEY,** Teacher of Ancient and European History, Central High School, Syracuse, New York.

WINNING SPEECHES $1.00
Edited by **THOMAS C. TRUEBLOOD,** Professor of Oratory, University of Michigan; **WILLIAM C. CASKEY,** Professor of Oratory and Rhetoric, Oberlin College; and **HENRY E. GORDON,** Professor of Public Speaking, State University of Iowa.

MARTIN'S FRENCH VERB $1.25
By **LIEUTENANT CHARLES F. MARTIN,** Instructor in Modern Languages, United States Military Academy.

FRANCOIS' EASY STANDARD FRENCH $0.40
By **VICTOR E. FRANCOIS,** Associate Professor of French, College of the City of New York.

GUERBER'S JOAN OF ARC-FRENCH COMPOSITION $0.30
By **H. A. GUERBER.**

SAND'S LE MEUNIER D'ANGIBAULT (Kuhne) $0.40
Edited by **J. W. KUHNE,** Instructor in Romance Languages, Northwestern University.

Forthcoming Macmillan Publications

IN FICTION

Love's Young Dream By S. R. CROCKETT *Cloth*, $1.50
An adventure story full of homely humor and old-time charm. *Ready Sept. 7.*

Mr. Ingleside By E. V. LUCAS *Cloth*, $.135 *net*
By the Author of "Over Bemerton's," and quite as charming and whimsical. *Ready Sept. 22.*

Burning Daylight By JACK LONDON *Cloth*, $1.50
A brilliant love story which embodies the strength and the warmth of the golden North. *Ready Oct. 5.*

IN JUVENILE FICTION

Hero Tales of the Far North By JACOB A. RIIS *Cloth*, $1.50
Stories from stirring Scandinavian history, full of a quaint charm. *Ready Sept. 14.*

Hearts and Coronets By ALICE WILSON FOX *Cloth*, $1.50
A good specimen of that rare kind—an *interesting* story for girls. *Ready Sept. 21.*

Two Boys in the Tropics By E. H. EIGYELMESSY *Cloth*, $1.50
An illustrated account of a boy's view of British Guiana. *Ready Sept. 22.*

The Horsemen of the Plains By JOSEPH A. ALTSHELER *Cloth*, $1.50
A story of the Rockies of the time when the word meant exciting adventures. *Ready in October.*

OF BIOGRAPHICAL INTEREST

The Life of Benjamin Disraeli *From Official Sources*
This notable work will be published in three or four octavo volumes, of which the first volume will appear at once.

Twenty Years at Hull House By JANE ADDAMS. *Cloth. Ready Oct. 26.*
The story of the beginnings of Hull House and of her work among the conditions surrounding it.

Memories and Impressions of Helen Modjeska *Cloth*, $4.00 *net*
An illustrated autobiographical record of a very varied life. *Ready in October*

OF RELIGIOUS INTEREST

The Ecclesiastical and Religious Correspondence of Gladstone *Two volumes.*
Edited by D. C. LATHBURY. *Ready Sept. 14.* *Illustrated, cloth, 8vo.* $5 *net.*

The Building of the Church By CHARLES E. JEFFERSON, D.D. $1.50 *net.*
The progress of the church from apostolic times is here related to the building of character. *Ready Sept. 14.*

The World a Spiritual System By JAMES SNOWDEN, D.D.
A most lucid working out of a metaphysical idea applied to practical problems. *Ready Sept. 14.*

The Gospel and the Modern Man By Dr. SHAILER MATHEWS *Cloth*, $1.50 *net.*
By the Author of "New Testament Times in Palestine," of which a new edition is ready next week.

OF INTEREST TO STUDENTS OF GOVERNMENT, ETC.

Great Cities in America By DELOS F. WILCOX $1.25 *net.*
A new volume of The Citizen's Library on the problems and government of great cities. *Ready Sept. 14.*

The Conservation of Natural Resources in the United States
By CHARLES R. VAN HISE, University of Wisconsin. *Ready Sept. 21.* *Cloth*, $2.00 *net.*

Democracy and the Party System in the United States
By M. OSTROGORSKI. A Study in Extra Constitutional Government. *Ready Sept. 7.*

TOUCHING MISCELLANEOUS INTERESTS

Greek Athletic Sports and Festivals By NORMAN E. GARDNER $2.50 *net.*
A new volume in the Series of Handbooks on Art and Archæology. *Now ready.*

The Nigger A Play. By EDWARD SHELDON *Cloth*, $1.25 *net.*
The vivid realistic drama of the race question so hotly discussed last season. *Ready Sept. 7.*

Principles of Secondary Education By CHARLES DE GARMO
Vol. III. Ethical Training, completing the work. *Ready Sept. 7.*

Grove's Dictionary of Music and Musicians *Now complete.*
The issue of Volume V ($5 *net*) completes the new, revised and greatly enlarged edition of this indispensable work. *Price of sets, cloth, $25 net.*

NOTE: The above are merely the *earliest* of the forthcoming Macmillan publications; for the complete Fall Announcement List address

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 8, 1910.

The Week.

President Taft is fortunate in having been abie to make up his commission on Federai regulation of raiiway securities in a way to inspire public confidence. In addition to President Hadiey, who will be chairman, Mr. Taft has appointed two iawyers of high standing, one business man, and a professor of economics who has made a specialty of railway studies, having been chairman of the Wisconsin Raiiway Commission, and employed by the Census Bureau and the Interstate Commerce Commission as an expert on railway valuations. At the hands of so capable a commission, the country may be assured that the whole question will be thoroughly and impartialiy investigated; so that any report or recommendations that may be iaid before Congress will have uncommon weight.

In the rapid conversion of Mr. Rooseveit to beliefs which he used to denounce, nothing is more astonishing than his coming over to the idea that the tariff is a moral issue. In his Saturday's address at Sioux Falls he spoke with vehemence of "the scramble of seifish interests" which goes to the making of a protective tariff—the Dingley law as well as the Payne-Aldrich bill—and said that when "we get a crooked deai" in the tariff, as he admitted that the people had, "then it becomes very emphaticaiiy a moral issue." But this is what Roosevelt when candidate and Roosevelt when President couid never be got to concede. The tariff then was a mere fiscal measure, with a iot of wearisome details, in which he could not be induced to take any interest because it was not a moral question. During all the seven years of his Presidency he never once lifted a finger to remove the burdens and scandais of the then tariff in which, as he now confesses, the "general interest of the pubiic" was "subordinated" to "the profit of the speciai interests." In the light of this experience, it is clear that, in Mr. Roosevelt's case, we need a new definition of what is "moral." A thing is evidently moral when votes and popularity can be won by advocating it, but is abysmaliy immoral if a man like Cannon goes to the White House and telis the President that he will hurt himself and his party by taking it up.

With two months now completed in the Government's new fiscal year, it is possible to get a clearer idea as to how the Payne-Aldrich tariff, a year after its enactment, is operating to raise the pubiic revenue to a ievei with public expenditure. During the past two months, the reguiar expenditures (exciuding outlay on the Panama Canal) have run $14,197,000 beyond the revenue. This deficit is less formidabie than in the same two months a year ago, when the excess of expenditure was $21,520,000. But examination of the separate items shows that the tariff scheduies were in no degree responsible for the better showing. Nearly ali of the $7,341,000 reduction in the two months' deficit is accounted for by the $6,197,000 collected in the period from the new corporation tax, which did not figure in last year's finances, and which will figure very little in the finances of the next few months. The customs revenue for Juiy and August was, in fact, $4,322,000 less than a year ago, and but for the fact that $4,500,000 postal deficiency was charged against those two months iast year, whereas none at all was charged this year, the comparison of deficits would be stiii less favorabie to 1910.

If the point is made that the tariff bill did not go into effect untii August, 1909, and that, therefore, comparisons for the two months are unfair, it is to be observed that the public deficit for August alone is $4,585,000, against $8,419,000 in August, 1909, and that but for a $3,300,000 increase in the internal revenue, the result would have been very close to what it was last year. The gist of the matter is that the tariff law of 1909 is proving itself another of those hit-or-miss exploits in revenue legislation with which the tinkering of protectionist statesmen in the past has made the country unhappily familiar. This, it is neediess to say, is the quite inevitable working of legislation framed primarily, not with the purpose of making both ends meet in the public finances, but with a view to shutting out as much foreign merchandise as the legislators dared to exciude. It is one of the incidental curses of the protective theory in tax iegislation that it virtually prevents even the most enlightened statesman from constructing public revenue laws on a sound fiscal basis.

Quarrels in the Republican happy family of New Jersey are thickening daiiy. Ex-Gov. Stokes, who is himself a candidate for United States Senator, has just made a bitter attack upon Senator Kean. It was not placed upon the highest ground conceivabie, for it was largely an arraignment of Senator Kean for not recognizing the honor that ought to exist among—politicians. Mr. Stokes comes from Cumberland County, and thinks that he is entitied to its delegates and its candidates for the Legislature as a matter of "courtesy." But to his horror he has discovered that there is a "Kean legislative ticket" in his own sacred preserve of Cumberland County. He asks plaintively what would be thought of a "Stokes legislative ticket" in Union County, Senator Kean's home. But in this falling out of New Jersey Republicans much useful truth is in the way of being told. Mr. Stokes, for exampie, had some pointed things to say of the way in which the Kean machine has been run by Federal office-holders and money. It is a "veritable Sibley campaign," alieges ex-Gov. Stokes, which John Kean is planning in New Jersey. Such charges, with the facts behind them, will not exactly hinder the election of Woodrow Wiison as Governor of New Jersey.

Insurgency in Minnesota has not such opportunities for display as in Wisconsin, but the announcement of the Chairman of the Democratic State Committee that Senator Clapp's seat is in no danger is indication enough of the strength of the Progressives in that State. A number of the Democratic candidates for the Legislature, hoping to win insurgent support, have pledged themselves to vote for Senator Ciapp. The Minnesota primary law does not cover the Senatorship, and election must wait upon the Legislature's vote; no formidable opponent, however, has

yet appeared. Frank B. Kellogg, the special attorney for the Government in the prosecution of Trust cases, is looked upon as a possible candidate, but it is regarded as unlikely that he will abandon his legal task now, as the cases must be re-argued. In the Congressional districts the candidates having the hardest time are those who have some taint of Cannonism. Representative Nye, who voted with Cannon in the fight on the rules, holds a shaky title to his seat in the Fifth District, and even Tawney finds his high-tariff associations embarrassing, although it is generally conceded that he will win in the primaries on September 20. All other districts are confidently expected to return Democratic or insurgent Congressmen.

The Kansas Republican platform adopted a week ago puts the party in that State squarely under "the Roosevelt banner," and passes over Mr. Taft with a brief appreciation of his success in obtaining legislation from Congress. But it emphatically dissents from the President when it comes to the question whether the Payne-Aldrich tariff really fulfilled the party's platform pledge of adequate tariff revision. The Kansas branch of his party is so dissatisfied that it, too, asks for immediate revision schedule by schedule—upon facts to be "scientifically" ascertained—a position which, we venture to assert, the Kansas Republicans will some day take the lead in leaving far in the rear. For nearly every schedule as it is examined will be found to enrich somebody at government expense or to be rotten with ill-concealed grafting.

Enormous election funds and "jackpots" were not the only sources of income for the thrifty Illinois legislator. There seems to be a general belief that the railway pass is an extinct institution. Yet on June 1, 1909, Representative Lee O'Neil Browne, now on trial for bribery, inserted the following afterthought in a letter addressed to Representative Charles A. White:

> P. S.—Have you sent for your transportation as yet?
>
> C. & A.: Write to president Chicago and Alton Railroad, Railway Exchange Building, Chicago, Ill.
>
> Illinois Central: Write to John G. Drennan, general counsel, Park Row, Chicago, Ill.
>
> Wabash Railroad Company: Write to Col. Wells H. Blodgett, general counsel, St. Louis, Mo.
>
> Pullman passes: Write to Hon. John S. Runnells, general counsel P. P. C. Co., Pullman Building, Chicago, Ill., for half a dozen sets Pullman passes and return, good sixty days.
>
> More later, as soon as lists are made out.

The Chicago *Tribune* records the fact that when the district attorney's office applied to the office of the Pullman Company for certain corroborative evidence, an official of the company declared:

> We will do nothing to injure Representative Lee O'Neil Browne. In this attitude I am doing as I have been directed.

How could a great corporation expect to do business if it did not stand by its friends?

It is to be hoped that the measure now before the Texas Legislature, providing for the abolition of the convict-leasing system and for other penal reforms, will not be put off for insufficient reasons. Members of the Senate, it is reported, are in favor of postponing the reform until the next regular session, so that the credit may fall to the account of Gov.-elect Colquitt's administration; and several leading journals are urging that the short time left to the present Legislature, now in its fourth extra session, is not enough for the drafting of a satisfactory bill. Gov. Campbell's friends, on the other hand, are anxious to push the matter. Remembering the abuses which the recent inquiry in the State disclosed, and also the intolerable conditions found in Georgia two years ago, the legislators should make haste to put an end to the leasing system and provide funds for purchase of the necessary State farms and for prisons. The experience of several States, which has shown that such farms can be made self-sustaining, answers the argument on the score of expense.

We have received a prospectus of the "Texas Purchase Movement," from which it appears that some colored people are going to see if they can carry out the suggestion of William Archer and many Southern writers on the negro problem by taking for themselves one State in the Union. The plan is simply to induce the Federal Government to purchase Texas from the people of Texas, "with all that it has and contains; with its entire outfit, including stock and crops; and to sell it to us, and give us one hundred years to repay the Government." The 800,000 colored people now in Texas will, of course, not have to be bought out, and when every negro in the United States has moved in, there is to be set up an independent republic whose sovereignty and independence are to be guaranteed by the United States. The projectors of this plan call it a "plain business proposition"; their reasons for it are pathetic:

> We are ready and anxious to go, many of us, because we receive very little encouragement to grow up our boys and girls into the best types of manhood and womanhood, for many of the laws are against our progress and development; and those that are for our special benefit are seldom enforced for our protection, and, indeed, we are coolly told we are the nation's burden.

Now, we sincerely hope that this plan to purchase Texas, or any other State, for the purpose of segregating the colored people will be pushed forward until its utter folly is clearly demonstrated. Imagine the howls of anger that will arise in Texas when it is learned that impudent negroes desire to buy out all the whites of the State. The mere suggestion is preposterous. Again, if all the negroes in the rest of the South should leave it for Texas, industry and agriculture would be prostrate. As there are already laws in most of the Southern States forbidding the enticing away of negroes in lots of fifty or more, it is easy to see what would happen if all the servants in Atlanta suddenly moved off to Arkansas. Finally, how could the negroes be kept in a segregated State? If some ambitious negroes wanted to leave to live in Michigan, could they be compelled by bayonets to remain within the confines of their State, by a sort of Chinese exclusion act?

Just two years' increase, added to the population of 4,766,883, which the official census gives New York, will bring the city to the coveted five-million mark. If normally sustained growth on a high plane of vigor is any indication of a city's physical and moral well-being, Mr. Gaynor's anger against New York's traducers is well justified. A great metropolis can make no spurts. Even a gradual slackening of its proportional growth is regarded as natural. No such

situation exists with respect to New York, which grew by 38.7 per cent. during the last decade, as against 37.1 per cent. from 1890 to 1900. Of the five boroughs, Brooklyn, Bronx, and Queens have shown the expected tremendous growth. Manhattan, though it has added 481,449 to its population since 1900, nevertheless registers a fall from a 28 per cent. increase in 1890-1900 to a 26 per cent. increase in 1900-10. This is natural. Cumulative expansion in Manhattan should long ago have ceased. With regard to the Borough of Richmond the case is different. Richmond shows an increase of 28.3 per cent. for the last ten years, as compared with 29.7 in the preceding decade. This, for a thinly populated borough, is a poor showing; it is a rate of growth only four-fifths of the general rate for the city. The answer, of course, is transit. Even the swiftest of municipal ferry-boats are neither tunnels nor bridges.

The census reports of the population of the Michigan counties and of those cities of that State which have over 25,000 inhabitants each, show how rapidly the Middle West is changing from the almost purely rural community it was a few decades ago to what will soon be a predominantly urban section. Incidentally, they explain why many food supplies not materially affected by the tariff or the Trusts have so much advanced in price. In Michigan there are nine cities having a population of upwards of 25,000. All of these are in the Southern Peninsula and lie south of the forty-fourth parallel of latitude. Forty-seven counties of the State are in whole or in part on this side the same line. The population of these counties outside of the nine cities and that of those cities in 1900 and in 1910 compare as follows:

	Cities.	Counties.
1910	839,929	1,388,085
1900	540,977	1,390,431
Increase	298,952	
Decrease		2,346

When the census tells us the population of the State by minor civil divisions, it will doubtless appear that the smaller cities and the manufacturing villages have grown in the decade and that the decrease in the number of inhabitants of the rural districts has been even greater than is above indicated.

Acknowledgment of the capacity of women for work of the first order in scientific research is not yet so complete as to deprive the announcement made by Mme. Curie to the Academy of Sciences last Monday of a high degree of interest from this point of view, as well as from that of science itself. The discovery of radium, made by her jointly with her husband, became one of the landmarks in the history of chemistry and physics, and has in the years that have since passed been the source of a vast amount of experimentation and inquiry in every centre of scientific work throughout the world; and it is, therefore, peculiarly interesting that it has been reserved for Mme. Curie herself to accomplish the task of obtaining the pure element isolated, radium having hitherto been secured only in chemical combination with other substances.

Graduated inheritance taxes have shown an upward tendency, so far as large fortunes are concerned, in nearly all the many countries which have imposed them. In France and Italy duties payable by inheritors in the direct line, or by widows, are lower than those in Great Britain, ranging up to 5 per cent.; but duties payable by brothers and sisters and other relatives are higher. In Germany, where wives and children are exempt, an inheritance of a million marks is taxed at two and a half times the rate charged on 20,000 marks. In Australasia, the duties average 10 per cent. on estates of and above half a million dollars in Tasmania and New South Wales, and as low as a hundred thousand dollars in Victoria, Queensland, and New Zealand. In Great Britain the duties on the minor millionaire estates have increased from 7 to 8 per cent. in recent years, but from 8 to as high as 15 per cent. on "swollen" fortunes. In 1908 an estate of £3,448,692 paid the large duty of £469,003, being 10 per cent. on the first million and a super tax of 15 per cent. on the balance. In that year nearly £20,000,000 was received in duty on estates assessed at over £280,000,000. More than 150 estates of a million dollars or above were transferred by death in the twelvemonth. In the case of the average rich heir the death duties have meant the loss of the estate's income for a year or a year and a half.

American affairs were to the front on the first day's programme of the International Socialist Congress at Copenhagen. The old feud between the two Socialist parties in this country was fought out again. The result would seem to indicate that one of the two parties is bound to disappear from the field in the near future. This is the Socialist Labor Party of which Daniel De Leon is the leader and the only well-known member. The Socialist Labor Party is the parent of the present Socialist Party, but is now reduced to a mere handful which seeks to make up for its lack of influence by intensity of revolutionary fervor. In 1908 it polled 14,000 votes for President, as against 420,000 votes cast for the Socialist Party. Its decline was arrested for a time by the vigorous trade-union movement that went by the name of Industrial Workers of the World, fathered by De Leon. To-day the I. W. W. is decrepit and its most powerful support, the Western Federation of Miners, has applied for affiliation with Mr. Gompers's conservative American Federation of Labor. Something of its former prestige remained to De Leon's party abroad. But at Copenhagen, only one out of the fourteen American delegates was awarded to it.

There are absolutists and absolutists. In the Königsberg speech of the Emperor William, which aroused so much comment, he said: "Considering myself as an instrument of the Lord, without heeding the views and opinions of the day, I go my way." But it is easy to imagine a ruler, or a would-be ruler, giving the most anxious heed to the views and opinions of the day, yet in his heart scheming to secure himself in a sway as absolute as any that the Kaisers have ever been accused of desiring. Napoleon III boasted that he was a "plebiscitary" Emperor. He had not only consulted the wishes, but had asked the votes, of the French people, and felt his power more secure than dynastic right alone could make it. Indeed, the absolute monarch—or President—or expectant President—who can rest his claims to be independent of the Constitution or Congress or the laws upon the fact that the people have fondly confided to him all the power that he exercises, has a far easier time of it than the ruler by right divine.

THE PRESIDENT ON CONSERVATION.

Mr. Taft's Labor Day address before the National Conservation Congress was as admirable in tone and spirit as it was comprehensive and thoroughgoing in scope. His acknowledgment of the great value of Mr. Roosevelt's work in this field was precisely such as a man of sincerity would feel called upon to make, and erred neither by excess nor by defect. And at the same time that it did justice to these services, it incidentally disposed of the position that the enemies of the conservation policy have been more and more assuming—the position, namely, that there had been no need of the whole agitation. "The danger to the state and to the people at large from the waste and dissipation of our national wealth" in the shape of natural resources has not only been a real and great danger, says President Taft, but one that has "always been present" to the minds of "scientific men and thoughtful observers"; but this condition of things might have gone on indefinitely had not some powerful agency made of it an urgent public question:

> Theodore Roosevelt took up this task in the last two years of his second Administration, and well did he perform it. As a President of the United States I have, as it were, inherited this policy, and I rejoice in my heritage.

But a general expression of adhesion to the principles of a sound national policy of conservation would in itself be of little significance in the face of the formidable opposition to which that policy is constantly exposed; and it is specially gratifying, therefore, that in several of the leading points at issue Mr. Taft emphatically takes ground against the position of those who favor the old and easy-going ways. This is preëminently the case in the matter of the leasing of coal lands. He disposes effectively of the plea that a leasing system would not be practicable because it has never been in use in this country; and this in two ways. In the first place, he points out that the assertion itself is not true, since coal lands in this country are in many instances worked under a system either of fixed rentals or of royalties, the owners not investing any of their own money in the plant; and, secondly, he refers to the report made at the instance of President Roosevelt upon the disposition of coal lands in Australia, Tasmania, and New Zealand, which shows that a government leasing system is entirely practicable. Mr. Taft plants himself squarely on the ground that the true policy is for the nation to retain control of these and other mineral resources; and, while admitting that the task of devising a proper leasing system will be attended with difficulties, he insists that it can and should be accomplished.

On two of the questions that have been most subject to controversy, Mr. Taft contents himself with pointing out the nature of the issues involved, the present state of the law and of the facts, and the urgent necessity of intelligent action by Congress. We refer to the Alaska coal lands and the water-power sites. In the case of Alaska, the President preserves an absolutely judicial tone as regards the Cunningham and similar claims, and he makes no reference, either expressly or by implication, to the Pinchot-Ballinger affair. It is admitted on all hands that the law as it stands is utterly unsuited to the Alaskan situation, and the President is right in declaring that the problem of the disposition of the lands is one that could be settled by wise legislation in one session of Congress. As for the water-power sites, Mr. Taft sets forth the complexity of the situation as between State and Federal control, with some indication of how it might be dealt with; and it is important to note that he distinctly recognizes the danger of monopoly, and asserts the duty of the Federal Government to make such use of its possession of the water-power sites as shall insure the people against this danger.

Coming in immediate succession to Mr. Roosevelt's sensational speeches in the West, the careful and firm handling of this large subject by Mr. Taft cannot fail to suggest a striking and refreshing contrast. And in addition to its whole tone and temper, there are two utterances in Mr. Taft's address that stand out in express opposition to the Rooseveltian methods. "In these days," says the President, "there is a disposition to look too much to the Federal Government for everything. I am liberal in the construction of the Constitution with reference to Federal power, but I am firmly convinced that the only safe course for us to pursue is to hold fast to the limitations of the Constitution and to regard as sacred the powers of the States." And in the closing part of his address he declares that "the time has come for a halt in general rhapsodies over conservation, making the word mean every known good in the world." Emotional agitation is Mr. Roosevelt's *forte*, and impatience of every general law or principle that stands in the way of his immediate object is his most persistent characteristic. We are confident that Mr. Taft's appeal to the sober sense and the rational conservatism of Americans will meet with a hearty response from his countrymen.

MR. ROOSEVELT'S NEW PLATFORM.

We wish to be entirely fair to Mr. Roosevelt's speech in Kansas, and are ready to believe that it represents his sincere aspirations. To call it radical is doubtless only what he himself would call it; in one of his European addresses he said that he wanted to be known as a thorough radical. And if there are some things that are startling in this latest utterance of his, there are also some things that are gratifying. Mr. Roosevelt makes it plain that he has come to a much clearer view of the danger of "special interests" in legislation, especially in tariff legislation, than he used to have. What he had to say on this head has great force; and in any fight he may make for the rooting out of the mercenary and baneful influences that have stuffed our tariffs with graft, he deserves and will receive the support of all who have had their eyes opened to that corrosive evil.

One criticism that will generally be made of Mr. Roosevelt's careful speech on Wednesday of last week relates to its form. He put forth his views with the tone of the chief of a great party, and as a summons to a great political struggle, yet he never once mentioned the party to which he is supposed to belong and which has given him its highest honors, nor referred in the remotest way to the President to whom he sent a telegram last year pledging "loyalty." What are we to make of this? Are we to infer that Mr. Roosevelt proposes to found and head a new party, made up of elements from both the old ones? Is this speech to be taken as a bold bid for the Presidency in 1912? We do not know, and we do not imagine that Mr. Roosevelt himself

yet knows. Before he started West he declared that his speeches would represent his own views, and as such he perhaps announces them merely to see what the effect will be.

The first effect will undoubtedly be to convince people that Mr. Roosevelt is now ready to go much further than ever before in the way of government control of business. In fact, his Kansas speech outstrips not only the most extreme utterance that he himself ever made previously, but that of any of the most radical men in public life in our time. It makes progressives like Cummins and La Follette look like moss-backed reactionaries, and Bryan himself appear pre-Adamite. For not only does Mr. Roosevelt favor having the government regulate the railways in every detail and with the utmost rigor, but would have it regulate Trusts dealing in the necessaries of life, such as meat and coal and oil, and also fix the "terms and conditions of labor"—that is, as he makes plain, the wages to be received and the hours to be worked.

Now, on the practical side of these staggering proposals for a vast series of new statutes, it is to be said that if they constitute an appeal for another term in the Presidency for Mr. Roosevelt, they appeal also for four or five terms, for not in twenty years could Congress work out in actual enactment all the laws which would be necessary to carry out Mr. Roosevelt's ideas. It is really the vice of such a presentation as his that it breathes benevolent desires, and sketches out vague plans of betterment, without even indicating where the Constitutional power can be found to warrant them, or how statutes could be drawn to execute them. All those things we presume that Mr. Roosevelt would dismiss as "mere details," which any clerk or secretary could attend to; but many an ambitious project of legislation has broken down hopelessly over mere details, and many another one will. In any event, the time which will necessarily have to be spent in debate and deliberation will be so great as to remove any fear that we shall either have a revolution or enter into a millennium overnight. So if any of our readers are frightened by Mr. Roosevelt's radical programme, we advise them to take courage. None of these things is imminent. We shall doubtless hear a great deal about them and they may result soon in party upheaval; but from that to actual realization is a long way.

To our mind, the worst effect of Mr. Roosevelt's speech will be its rousing of unfounded hopes in the breasts of thousands of the credulous and ignorant. They will read his words and will say, in a spirit of confiding trust from which the inevitable awakening will be cruel: "At last, here is the man to right all our wrongs. He will see to it that we get high wages and short hours; that the prices of the necessaries of life be cut down; that the rich man shall be abased and the poor man exalted; that dishonesty shall be entirely banished from our public life." It is pathetic to think of such expectations being formed only to be thrown to the earth and to make the subsequent discontent and bitterness all the greater. It is a fearful burden which any man binds upon his shoulders who allows the millions of strugglers who often despair to believe that in him and his measures they have a sure remedy for their woes. For a politician to do this inadvertently is a great misfortune; for him to do it deliberately is an outright wickedness.

UNDER THE POLITICAL SURFACE.

An experienced and sagacious political observer writes in a private letter:

> Never, within my recollection—which, I am sorry to say, now stretches over sixty years—has politics been so empty as now of either characters or consequence; while never, in all that time, has the underlying movement been so considerable, so portentous, or, also, so manifest. The trouble is that the movement now in process—the unprecedentedly rapid accumulation of vast wealth, very unevenly distributed—is beyond the reach of legislation; and so the actors on the political stage of the day have to content themselves with enunciating "progressive policies" and going through the subsequent motions.

This is a view of politics which has often been held by those whose minds are in the habit of going below the surface, and in it there is indisputably much truth. Economic and social forces are by nature more powerful than the play of political energy. Politicians vaguely feel the deep causes at work and seek to adjust their activities so as to take advantage of them; but oftener than not they appear like children trying to harness a volcano in eruption. Some great change supervenes, vitally affecting the pockets and so the emotions of large classes of citizens, and bursts through all the plans and manœuvring of the men in charge of public affairs, making them look like mere straws at the sport of the gale. It was not argument or a political party that brought about the repeal of the corn laws in England; it was the potato blight in Ireland. And, to take an example from our own country, what makes American protectionists tremble in their shoes to-day is, not the force of reason and of morality arrayed against them, as it long has been, but the sudden rise in the cost of living and the angry discontent which it has caused in millions of citizens.

Our correspondent is undoubtedly right in thinking that the present extraordinary confusion in our political situation is due to causes which scarcely swim into the ken of the ordinary politicians. They know that something is astir, but what it is and how to deal with it they are ignorant. Sentiments have been created which are too strong for party. When party lines are crumpled and cut through as we see them to-day, the inference is irresistible that parties have got out of relation to the deep underlying dissatisfactions and cravings of the mass of the people. Speeches are made and resolutions adopted and programmes marked out in the hope of getting things back where they were before, but all is of little avail. Herbert Spencer said at Biarritz, pointing to the incessant beat of the waves, that the great social forces sweep in upon us, making the individual politician look like a pigmy —"what is to be will be, and no man's arm can stay it." Meanwhile, the men with nostrums and "policies" cut rather a comic figure as they are knocked about by the huge rollers, though they pretend to be riding the whirlwind and directing the storm.

Such times of upheaval as we are now passing through furnish a useful test of the stuff which is in public men. Their behavior in the presence of movements that are not only breaking up parties but threatening to sweep away ancient landmarks, enables us to decide whether they are really statesmen or mere time-servers. Some one has compared a party leader, even when he appears most powerful, to a man in a boat at the mouth of one of the great tidal rivers of Australia, waiting

for a favoring wave to carry him over the bar, and then, when once safely across it, accepting the plaudits of the multitude acclaiming his skill and strength as an oarsman. That is, of course, the very model of the opportunist politician, taking occasion by the hand; and in ordinary times neither he nor his success is to be despised. But when a nation is torn and distracted, not knowing which way to turn, and in danger of rushing down a steep place into the sea, opportunism is as futile as trying to put out a conflagration with rose-water. The qualities of true leadership are then demanded, and will come out if they exist.

One thing which the true political leader will do in a period of seething discontent and threatened disturbance is to draw a clear line between public ills that are remediable by legislation and those that are not. The quack doctors of politics, ready to fool the people to the top of their bent, have a law to propose for every political trouble; they draw out their successive legislative patent-medicines with all the skill and less than the conscience of the street-corner vender. But the honest practitioner will tell the truth about the ills to which mortals have always been subject, and always will be so long as they live in communities, and will advise the necessary endurance of those, with as much patience as may be, while the attention is given to what need not be endured because it can be cured.

As for actual remedies and the true course to follow, the wisest and bravest leaders must often confess themselves at a loss. In proportion to their wisdom and patriotism will they feel that the forces which circumstances beyond their control have let loose are too mighty for any political contrivance. They will be cautious and modest; will make no big promises; will try experiments rather than announce successful demonstrations with a flourish; and will feel their way to gains by painful inches. Only of one thing will they be supremely confident, and that is that trimmers and demagogues and charlatans and hypocrites must be shown for what they are and fought to the death.

JOHN BROWN AND KANSAS.

The celebration in Osawatomie of the opening of the John Brown battlefield as a State park is but one of many illustrations of the tenacity with which Kansas clings to the memories of its *Sturm und Drang* period. Its pioneers are truly of gigantic frame; their deeds of Homeric grandeur. Wherever there resides one who can say that he stood at Lawrence with John Brown, or heard Gen. Reid's shots at Osawatomie, or marched with Gen. Lane on some of his wild dashes across the prairies, there is a man who is admired and respected of his neighbors. To be a Son or Daughter of the Revolution or a member of the Cincinnati is as nothing compared to the fortune of having been a Free State fighter. Even among the oldest settlers there are marked distinctions and class divisions. Thus, to have arrived in Kansas in 1855 is to be assured of a place close to the immortals. The human crop of 1856 stands next in order of merit—but 1855 and 1856 look down upon 1857 and 1858 much as a *parvenu* with a million dollars despises him who has an income of but $10,000 a year. The bar sinister of having been an emigrant in later years is only really bearable if one can claim to have witnessed Quantrill's raid and seen Lawrence in blood and flames.

Then when it comes to the leaders, while Kansas presents an unbroken front to the rest of the world, behind its serried ranks a great battle goes on merrily and with no sign of abatement. To the casual observer there could be no greater heat, fifty years after an historic period, than appears in the discussions as to who was the actual saviour of Kansas. Like all Gaul, Kansas is divided into three parts: the Kansas of Senator James H. Lane, of John Brown, and of Gov. Charles Robinson. To the closest followers of Robinson, John Brown is merely a murderer, and Lane a man of words who plotted, vainly, diabolical things. The Brown and Lane partisans see in Robinson only a tricky, compromising diplomat, who perceived in negotiation merely the opportunity to lie and cheat. Lane's followers are still under the spell of his wonderful eloquence, of his brigadier-generals' commissions scattered far and wide, of his erratic but brilliant personality. Yet so great is the loyalty to Kansas in every true Kansan heart that all, or nearly all, of the factionists can unite around a statue to one or attend a ceremonial for another in perfect good humor—until the next opportunity to rush into print.

Similarly, everything relating to the Free State times becomes—and rightly—of precious moment, to be kept in one's parlor next to the pictures of the dear deceased, the family photograph album, and the last issues of the *Outlook* and *Ladies' Home Journal*. When a home is broken up in which are manuscripts or relics, an alert agent of the State Historical Society is sure to be on hand. How much richer would the country be to-day had there been similar reverence fifty years after the Revolution for survivals of that time of national stress! As it is, Mount Vernon, we are sure, is no more tenderly cherished than this Osawatomie battlefield and the near-by Adair cabin in which John Brown lay ill of typhoid fever in the summer of 1858. John Brown *did* things—that is one reason why he appeals so to Kansas.

The little skirmish at Osawatomie in which he with forty-odd men exchanged a few volleys with Gen. Reid's hundreds, can hardly rank as one of the world's great conflicts. Yet Kansas will not forget that as he was hurrying to the battle-ground he said to one of his men, Luke F. Parsons, who has just been addressing the crowd at Osawatomie: "Take more care to end life well than to live long"; and that this skirmish was one of the first determined efforts to meet Border Ruffian violence with violence. Remembering this, Kansas is apt to overlook the Pottawatomie murders committed by John Brown and his sons in the dead of night, and the fact that Reid's attack on Osawatomie was a direct outcome of those same murders. Reid sought to avenge them by driving Brown's men out like a "flock of quail," he afterwards said—for, a Mexican War veteran, he never would admit there was a battle at Osawatomie—and by burning the hamlet. The gloss of time has done its work, and John Brown's good deeds loom up bravely, and the others are forgotten. It is emphatically a case where the good that men have done is not interred with their bones. John Brown spent, all told, but twenty-two months in Kansas at varying intervals. He never took part in a single constructive action in the build-

ing up of Kansas as a State, save in so far as his fighting may be adjudged of constructive value. He came neither to settle nor to build up. Yet there, on the soil which, as he himself said, was "watered by his children's tears and blood," his memory is preserved as if he had been Kansas-born, Kansas-bred, and had perished for Kansas and not for the slave.

The secret of all this is, of course, a simple one. John Brown fought in Kansas with absolute unselfishness and for a noble cause. His readiness to die for others assures him his niche in the Kansas Hall of Fame. Beside this the details of his career are often forgotten. Whether this is for the best or not, no one will deny that gratitude towards the notable figures of a past generation cannot be too highly commended. The more Kansas clings to its unselfish patriots, the more likely is it to take an unselfish view of present-day political problems.

SOLID READING.

Dr. Eliot's failure to bring together a library ideally adapted to railway reading casts no essential discredit on his five-foot shelf. The incident has been seized upon, of course, as another instance of the degeneracy of modern literary taste. What it actually does prove is that people travel on trains now who did not travel fifty years ago. In the welter of discussion that surged about the five-foot shelf, the original purpose of that miniature collection was lost sight of. Dr. Eliot asserted that any man to whom the benefits of a cultural education had been denied in youth could secure the essence of a cultural education out of the fifty volumes on his five-foot shelf. Recall this special public that Dr. Eliot had in mind, and there is little occasion left for the huge merriment aroused by the inclusion of such palatable bits of reading as the "Journal of John Woolman" or Izaak Walton's Lives of the poets Donne and Herbert. Dr. Eliot was no fanatic of the old school which holds that all reading must be solid and edifying. But he did know that to the man whose hunger for books has never been satisfied, no book can be too heavy, whereas very many books might easily be too light. The long-denied appetite for the printed word might easily be disappointed if set to work on chocolate and mayonnaise, where precisely such a book as Woolman's or Walton's will answer to the reverent awe with which the unlettered man looks upon Books.

Too much of the criticism that is being directed against a debauched literary taste overlooks the enormous extension that has come over the functions of reading. The exercise of reading to-day does not mean what it meant five hundred years ago, nor even what it meant fifty years ago; and yet we insist on investing it with the dignity and importance which the exercise enjoyed in the past. Five hundred years ago, and to a proportionately less extent fifty years ago, books answered to a comparatively restricted measure of a man's needs. A man in those days had his religion, which he found in the Church; his artistic sensibilities, which he satisfied in the contemplation of architecture and sculpture and painting; his amusements, which he obtained in martial exercise or in travel, or in pageants, or in public festivals, or in gossip in the public square; and he had his books. To these he turned, in the familiar phrase, when he wanted to commune with the greatest thoughts and the greatest souls of the past. To-day the average man has no such variety of avocations. To satisfy our æsthetic demands, we read books on art. To satisfy the curiosity for new lands and new faces, we read books of travel. To satisfy the human desire for pageantry and festival, we read romantic novels. To satisfy the human desire for laughter, we read the comic journals. We no longer gossip in the public squares, but read newspapers. Our rural population does not dance on the village green or attend weekly market-fairs and engage in wrestling and single-stick exercise; our farmers nowadays stay at home and read.

It stands to reason, therefore, that a higher solemnity must have characterized the practice of reading when books meant high intellectual and moral communion, than can attach to reading to-day when books answer to the appetite for instruction, religion, art, recreation, physical exercise, gossip, horse-play, pageantry, laughter, and scandal. You will find college professors to-day who stave off mental fatigue by a deep plunge into literature of the Nick Carter and Deadwood Dick type. Yet the professor's labors over the latest German treatise on experimental psychology and his excursions into Nick Carter are described by the same word—reading. The tired business man of a hundred years ago found his recreation at the inn or at his guild meeting. To-day he goes to the theatre and reads novels, and the fare set up for his entertainment goes by the name of literature. The good name of literature suffers in the process; but it need not if one would only remember what a throng of vastly different appetites sit down to the same table. Art does not suffer because the same chisel and mallet that shape an exquisite bit of carving may be used to build an outhouse. It is merely accident that the same happy idea of Gutenberg's should have become the medium for holding Dr. Eliot spellbound and entertaining the shop-girl who chews gum and says "foist."

If modern life had kept something of the well-rounded existence that was the gift of an earlier age, cheap reading would now be less plentiful. We cannot help thinking in this connection of the man who has excited so much interest of late as the advocate and practitioner of the old-fashioned solid reading. Mr. Gaynor's fondness for Marcus Aurelius, Epictetus, and Montaigne is not a sporadic appetite, but fits in admirably with his entire mode of life. When Mr. Gaynor reads, he reads solidly; when he wants recreation, he walks, attends to the hay on his farm, and looks after his horses and his pigs. A man so engaged is apt to find no time hanging heavy on his hands nor much inclination for what we call light reading.

OLD-FASHIONED REMARKS ON EDUCATIONAL TOPICS.

I.

"The chief trouble with education in this country," said a friend of mine the other day, "is that it is too much discussed by the uneducated." As this remark was made immediately after I had stated that I had rashly promised to write an article for the Educational Number of the *Nation*, I was not quite sure whether I ought to take it as an epigram or as an insult. It seemed, on reflection, wiser to take it as an epigram, and to use it as the text of my article, especially as choice of a text does not necessarily mean that one must stick to it.

For the benefit of the numerous people who in the past few years have

published books and papers upon the conditions obtaining in our educational institutions, particularly our colleges, I will hasten to say that my friend is an old-fashioned person, and that by his phrase, "the uneducated," he meant to designate all such unfortunate individuals as have never received, or else never adequately utilized, a training in the Greek and Latin classics. This statement will enable those who may take exception to his epigrammatic remark to take a measure of his intelligence. In order that they may not so readily take a measure of mine, I will abstain from saying whether I agree with him or not—a needless precaution, since I am in duty bound to add at once that I have read but little of the educational literature which called forth the very uncomplimentary generalization selected as my text. Instead of discussing and reading about education, I have been engaged for twenty-five years in the humbler task of teaching.

If this experience warrants my passing any judgment upon the general condition of education in America, such judgment must, on the whole, be distinctly favorable. During a quarter of a century, three-fifths of it spent in the South and two-fifths in the North, I have never yet been confronted by a class the major part of which did not seem ready and competent to take whatever instruction it was in my power to give. Furthermore, among the numerous colleagues I have had I can recall but few who, through their known incompetence or their dislike of their vocation, might be presumably unable or unwilling to make a statement fairly similar to the one I have just made. Finally, for ten years I have been teaching graduate students from all parts of the country, most of whom intend to be teachers, and I cannot but believe that the training these men and women have brought to the university represents, in the main, better work on the part of their previous teachers than was to be found a generation ago. I must believe also that these future teachers, whom my colleagues and I are endeavoring to prepare for their profession, will make possible a far greater advance in popular education in the next quarter of a century than the past twenty-five years have witnessed.

These optimistic remarks, however, to be entirely frank, are made in order that I may secure a more complacent hearing for certain strictures. What I have said amounts to a statement of my belief that we have a fairly good and promising system of democratic education for a democratic people. I have said nothing about the kind of education which may be denominated, in a broad sense, aristocratic, the education which makes for intensive culture of the individual and the class, which endeavors to choose from the vast range of studies those that presumably furnish the best mental and moral discipline and at the same time conduct the student into the highest regions of thought and emotion, which, finally, uses as a shibboleth the word "disinterested" rather than the words "useful" and "practical." This sort of education, which was more or less imperfectly given when I was a boy in the best private schools and in the colleges, seems not only to occupy a position of less relative importance—that was to be expected from the circumstances attending our rapid growth as a people—but to be less excellently administered, speaking absolutely, than was the case a generation or two ago. The culture of the modern college graduate may be better adapted to the world in which he has to live and move than it would have been if the conditions of aristocratic education in this country had remained constant, or had developed along conservative lines. The point is that, in my judgment, the culture of the body of college graduates is a different thing from what it used to be, and that no one has yet proved that it is a better thing.

II.

It will be perceived at once that I am getting back to my text. My friend's epigram was prompted by the conviction that harm has resulted to American education from neglect of the classics, not to say from positive hostility to them. And when I point out the difference I seem to perceive between the culture of the college graduate of to-day and that of the graduate of a generation or two ago, it is obvious that I am pointing to a phenomenon partly or chiefly caused by the relegation of the classics to a less important position in the curriculum, or if one chooses so to phrase it, by the rise of scientific and other modern studies to a place of equal or of superior importance. I shall not inquire how far the teachers of the classics are themselves responsible for their own comparative eclipse, or how far one can expect a new and mixed public to profit from an ancient and select discipline. What interests me now is the fact that there has been a change, that that change seems to have substituted a heterogeneous for a homogeneous culture, that it has been chiefly accomplished by persons whose shibboleth is the word "useful," and that, now that it seems to be accomplished, we find our schools, colleges, and universities subjected to a larger amount of adverse criticism than has been the case for many years.

Its typical product is what we call "the college boy" or "the college girl," a product which, as I have observed, may be well adapted to the age and country in which it has to live, which is certainly adapted for use in Gibson pictures and for newspaper exploitation. Whether it is adapted to play the part in cultivated society expected of the product of the old fashioned college, or whether, indeed, a cultivated society, as the term has been vaguely used, is expected to play any part in the democratic régime of the future, these are questions I do not feel competent to discuss. I am old-fashioned and middle-aged and merely a teacher. When I find among young people a lack of standards in matters intellectual, to say nothing of other matters equally important, it may be that I am only judging modern life by standards inculcated in me by my ancestors and by my teachers, who subjected me to a rigid discipline, based chiefly on the classics. That I should admire the modern American college is impossible; that I should censure it would be rash; that I may cherish the belief that it is passing through a transition stage and that it will see the need of creating for itself a new and true discipline out of its heterogeneous curriculum, may, I hope, be permitted me. May I be permitted also to inquire once more whether many of the critics of the modern college are not at bottom *laudatores temporis acti*, although they may little fancy that they are playing that part, whether they are not demanding of the college of to-day results produced by the old discipline without realizing that the present no-discipline—I mean, of course, in the main, lack of correlated mental and moral training—was more or less forced upon the college when, in answer to outside pressure, the academic authorities of the country began to modify its educational institutions in order to give a so-called useful education alongside of or in place of a disinterested culture?

I am not sufficiently well posted in matters of educational policy to be able to discuss the efforts making in certain of our larger institutions to render less amorphous the product—the mercantile phrase seems apt—they are yearly turning out. Some persons seem to be looking toward England for help in their time of trouble, a procedure to which I have an instinctive rather than a reasoned-out aversion. No other people has our social structure, or, presumably, our educational needs, and I expect little relief until we have analyzed thoroughly our own situation. Perhaps, too, I have a feeling of jealousy for my own profession. I do not want to see a class of men resembling the English Dons domesticated in our American universities. This statement may be prejudiced, but it is at least frank.

Other persons appear to place reliance on a stricter system of supervision, that is, on a more rigid discipline in the narrower sense of the word, and on a more detailed system of premiums and rewards. Here again I feel myself scep-

tical. The process of putting ribbons and bells around the necks of academic sheep, and of carefully penning up the goats early in the evening, may fill certain shepherds and goatherds with satisfaction; but I doubt whether it will change essentially the character of the flocks committed to their charge. What I mean by goats and what I mean by sheep need not be explained, since, while I desire to be frank in these remarks, I do not wish to be considered insulting. What I am chiefly concerned with is the endeavor to emphasize what I believe to be the main cause of the widespread dissatisfaction that exists in some quarters with regard to the work of the American college. We are requiring it to do all sorts of things for all sorts of people, and then wondering why it does not do an ideal sort of thing for a special sort of people. We have got ourselves in an *impasse*.

How we shall get out of it is a question for time to answer. Meanwhile those of us who are teaching can do our best with our classes and can also try, in our respective ways, to clear up in the mind of the public the difference between a disinterested culture and a practical education. Perhaps in time, certain colleges will be able to emphasize to a greater degree the tried classical discipline and to cease to compete with the technical schools. There is room in this huge country for institutions of every kind, and there are still people who would gladly give their children an old-fashioned education, that is a discipline that has been tested, under teachers convinced of its merits and not hampered by the necessity of defending it against colleagues who do not believe in it. I should like to see institutions of the old, less complex type and institutions of the new, heterogeneous type, as well as technical schools and high schools doing the work of colleges, all flourishing side by side in friendly rivalry. Long after this generation is in its grave, there may possibly be data for determining in a rough way the respective merits of the respective systems of discipline. Then, if the classically trained man shall be shown to be incapable of more than holding his own with his rivals, even in their own specialties, I shall certainly break away from whatever confines shall be hemming in my shadowy being, and shall return for a brief space to earth, in order to rend my spiritual garments. Pending this dire consummation, I shall change the subject.

III.

The American university seems, like the college, to have been subjected to a considerable amount of criticism, one reason being in both cases the increasing publicity given by the newspapers to whatever can furnish news. Heaven forbid that I should undertake to explain why any intelligent man or woman should want to read college or university news, or that I should argue that institutions of learning would do their work better if the press did not exploit them. I have confessed to being old-fashioned; there is no reason to confess that I am antediluvian enough to believe that notoriety is a simplified way of spelling vulgarity.

Criticism of the university does not chiefly result, as seems to be the case with the college, from the confusion apparent in its aims. Some persons, it is true, are inclined to look upon the university as a home of culture rather than as an institution designed for the encouragement of learning and research and for specific training in the professions. I see no inherent reason why, in certain senses, the university should not be a home of culture, but I do not think that its primary work is to give poorly trained college students an opportunity to make up their cultural deficiencies or to teach aspiring people how to write books and plays or to paint pictures or to play the organ. It is true that, to judge from the letters people write to professors, one might imagine that the public fancies that a university exists for disseminating information on every possible subject to every possible person; but, on the whole, it is either fairly well recognized, or it will be recognized before long, that the prime functions of the university are to encourage scholarship and to give professional training. Recognition of this fact will sooner or later carry with it acquiescence in the specialistic trend of university teaching and in the established differentiation between the American and the British types of university.

There will still remain, however, ample scope for misunderstanding and for adverse criticism as long as the aims of those professors whose chief interest is in training scholars and of those whose chief interest is in training teachers continue to be as confused as they are at present. Complaints are constant, for example, that students who wish to be trained to teach English literature are forced to take courses in Gothic and other equally remote subjects, or to write learned disquisitions on topics which can be of little service to them in their teaching. Some persons advise us to cut the knot by resolutely striving to make scholars of all who take post-graduate courses under the so-called non-professional faculties; others tend to practical pedagogical training; others try to blend the two forms of teaching. Confusion and consequent censure seem thus to be inevitable. The only suggestion I can make is that we should try to look the facts in the face. Most of the students who study under non-professional graduate faculties in America expect to become teachers of one sort or another. Teaching is a profession which sustains varied relations with what we know as scholarship and scholarly research. Not to try to carry our students some distance along the specially chosen path of learning would be bad for professor and student alike, and would ultimately be fatal to the profession of teaching. Not to recognize that nine out of ten of our students have no need for advanced scholarship and could not attain it, even if they needed it, is, without exaggeration, to insult common sense on the one hand and scholarship on the other. What way is there out of this dilemma? What but the resolute grasping of both its horns? Surely, each professor or each department must consult the needs of every individual student and give that student the best training possible under existing conditions. This means, I think, the training of many teachers and few scholars, but that is what the country needs, and the university exists to serve the country. Perhaps in time we shall improve the degree of master of arts until its possession will imply all the training for teachers that a university is normally expected to give, and then we can reserve the degree of doctor of philosophy, which is now very foolishly demanded of many would-be teachers and professors, to reward students who promise to be scholars in their specialties. These, however, are mere details to be worked out by the various faculties. The important point is that the public, both academic and non-academic, should recognize the fact that the university exists to give specialistic training, but that that training need not necessarily be carried to the point where it results in making scholars in the true sense of the term. When this point is fully grasped, we shall be spared having continually to explain that men and women can be well educated persons and successful teachers without being true scholars, just as a man can be a good preacher and parish priest without being a profound theologian. And those who have grasped this point may be prepared to admit that even in a democratic country there is a place for a form of aristocratic education. Strive as we will for equality, there are some spheres in which inequalities will assert themselves to the end of time, and that of learning is one of them.

IV.

The topics I have been discussing are not, however, those in which the public that considers universities at all is most interested. The topics we hear most about are chiefly connected with complaints about the scant salaries paid professors, about the tyranny of presidents, about the non-scholastic activities of students, and the like. With regard to athletics and other forms of student ebullience, I have really nothing to say.

When I held an executive position in a faculty, I was too young, and student activities were too undeveloped, for me to get a fair grasp of the situation. At present, I have no direct responsibilities in this matter, and my advice is not needed. It is either just as well for me or just as well for the young barbarians that I am a gray-bearded outsider in full sympathy with the much abused American parent, but with no opportunity to make that sympathy effective.

As to the salaries paid professors, my views are likely to be thought biassed. It seems to me that salaries are too low, especially those of the younger men; but I do not think that they are surprisingly low, in view of the facts that they are often bargained for, that there is a considerable supply of fairly well-trained persons ready to fill chairs, that this is a commercial country with prepondératingly commercial standards. That low salaries, if persisted in, will result in a deterioration of the professorial class seems probable; but I do not believe that there is much chance that the American people, who have the shrewdness that goes with commercial success, will allow their scholars and teachers to be permanently mingled with social classes beneath them in general refinement. The Carnegie Foundation and the efforts making in several of the larger universities will almost surely improve the situation, and it is to be hoped that the professor of the future will not in every instance be compelled to marry for money.

With regard finally to the tyrannical sway university presidents are often said to exercise, I know of no more fitting comment than Mr. Burchell's "Fudge." That, in our rapidly evolved institutions, the administrative machinery has not worked perfectly may be granted at once. That the faculties, which, if entrusted with full control would probably have given us anarchy, have lost too much power, especially with regard to purely scholastic matters, is probable; but I see no reason why, if this be so, proper remedies may not be found. I trust I am as zealous for the rights and privileges of my class as any one; but I have a shrewd notion that even more to be pitied than the professor whose energy is chiefly absorbed in administrative routine, is the president, who has to keep an even hand between rival departments and faculties, who must soothe irritated scholars, who is obliged to think of ways and means when others can talk glibly about ideals, who finally is expected to sacrifice all thought of privacy and to make himself an acceptable public speaker on every subject under the sun. Not the least of his misfortunes is the fact that, like all other chief executives, he must get most of his information at second hand, and that almost inevitably he finds himself, before he knows it, surrounded by satraps not remarkable for their sapience. Poor downtrodden professors, indeed! It is rather poor tugged-at and fagged-out presidents. When it can be proved beyond doubt that they have tyrannically forced a worthy professor from his chair, they ought, of course, to be held to strict account. Fatigue is no excuse for injustice. But how many clear cases of this sort of injustice can any professor who has been teaching for twenty-five years recall? And how many cases of long-suffering on the part of presidents and trustees can he not recall? As erring mortals doomed to labor with and on other erring mortals, we professors have enough real evils to endure to warrant us in refusing to lend an ear to complaints of evils that are chiefly imaginary.

New York.

WILLIAM JAMES.

In William James, America loses her one philosopher whose work is studied in France and China, in Finland and Australia, wherever men are seriously concerned about human nature and human destiny. What chiefly characterizes his thought is that rarest of all qualities, intellectual justice. He was utterly free from extremes, whether of aspiration or of argument. People have been used to call this quality a defect in logical power, and to accuse him of inconsistency, but, in truth, the inconsistency is not that of the thinker, but that of the world which he interpreted; the defect was not in his reasoning, but in the universe which he reasoned about. He could be subtle and dialectical enough when the occasion required it, as any reader of his latest book, "The Meaning of Truth," can testify. But he had a great dislike of dialectic and logic-chopping. He was a philosopher, not a professor of philosophy. What he cared for deeply and what was strongest in his own nature was the capacity for that direct, immediate intuition into the character of reality, which is the foundation for all dialectic and the criterion of all logical operations. This intuition, this justness of vision was so perfect in him that he could place himself, at a bound, at the very heart of even an opponent's thought, and see it with such a degree of sympathy as to hurt his own cause. He was always trying to save as much of the other man's values as he could. He set himself at the centre and drew all extremes in toward him. One of the many ways in which he indicated the nature of Pragmatism was to call it a mediator.

And a mediator Pragmatism is. It springs directly from that power of sympathetic comprehension and adequacy of intuition which were the whole nature of William James. Among philosophers who have found a place in the history of philosophy, there are hardly any, if we except Spinoza, whose philosophy and life were so absolutely at one. And that is perhaps the secret of the limpid, persuasive English, its arresting freshness, its thought-provoking power, which we have learned to know as the style of William James. In his case, the style was certainly the man, and the man the insight.

This insight is an insight into the basis and value of life. It apprehends experience as a flux and thought as a mediation. It is a mediation between the spirit and its environment, and for James himself had become, as Pragmatism, a mediation between fate and faith, between the march of things and the impulsion of ideas, between the will of nature and the will of man, between science and religion. There are two forces which impel men to philosophy. One is the inner impulse, the hopes and ideals of which the essence of human nature is woven. If operating without reference to the other, it creates a world in which all the values of our existence are conserved, but which does not describe the world in which mankind must and does seek its livelihood at the hazard of its life. This is the world envisaged in most religions and idealisms. They conserve values, but belie nature; they are optimistic and always have a problem of evil to face. The other force which impels men to philosophy is the shock from without, the massing upon life of the forces of nature which demand to be defined and understood if life is to maintain itself among them. This comprehension and definition is science. It envisages the environment without making it amenable to the ideal. It gets at nature by losing sight of human nature. In the case of idealism aspiration goes off into a limbo of its own without considering its conditions; in the case of naturalism, the flux sweeps on its irrevocable way unmindful of life or its interests. Each of these visions is inwardly coherent, logically consistent; neither is correct. The world is neither purely mechanical nor purely spiritual. It contains clashings of purposes and events, it contains purposes and events that harmonize. Ideals and ideas, William James insists again and again, must not be irrelevant to the conditions of their fulfilment, they are not aliens in a strange world, they have more than a squatter's claim in it. They, too, have a share in making it over and the existence of desire may be one of the conditions of the existence of its satisfaction; the will to believe may be one of the conditions for the coming of its object. Ideas and ideals also are factors in the universal struggle for survival. They, too, have a rôle to play in the flux, and they become valid and true only as they play that rôle fitly. But because they play a rôle, they must not be mistaken, as they are by idealisms and religions, for the sole protagonists in the

cosmic drama. That "precipitousness," that certain menace and danger which we find in existence, springs from no ideal or spirit. There is a residual environment where God himself must battle for the good as he knows the good, an environment which is the condition of the good's existence and in which it must be sought. Ideas must be relevant if they are to work; relevancy, appropriateness, fitness, is the condition of all excellence. Reason itself is no more than the sentiment of this relevancy, this adequacy of articulation in the onrush of reality.

From this central vision springs every particular achievement of William James. The "functional viewpoint" in psychology, through which Professor Dewey and others have done so much, and which is to-day the most widespread among psychologists, originates in this vision, for it is from James's treatment of the concept that the "functional viewpoint" derives. And his treatment of the concept itself derives from the radical empiricism which envisages the intimate and interchangeable connections between ideas and things. This envisagement is still more evident in James's philosophy of religion. If divinity is to be known in its true nature at all, it must be known directly, in an immediate experience, which is only more mystical than the immediate experience of chairs and tables and men and the commoner aspects of nature, in the fact that it is rarer, not in the fact that it is different. The idea of God must be effective in an environment which has God for an object. To know him is to meet him under appropriate conditions face to face; to know him is as much an act of perception as to know any other fellow-being. For God is no more than a fellow-being, a very precious one, a conserver of our values who is engaged with us on our side in the struggle for life against the enmities that surround it, but still a fellow-being only, also enlisted in the great war for the good. And that supremest good, life itself, which discourse represents as the belief in immortality, that also must be sought and justified under appropriate conditions. Those conditions occur wherever the life after death seems to manifest itself, and they must be taken for what they are worth, tested to the limit for the validity, the fitness of the belief in immortality to survive. There is no more than this in William James's attitude toward psychical research. Sensation-mongers have made capital of the wide and just sympathy which ever led James to pursue the truth wherever it seemed to show its face. They have wronged him without reason, and sometimes with malice. Nowhere in his printed utterances on the subject of psychical research can be found anything more than just this readiness to test and examine, to consider and to weigh alternatives, just his righteous indignation at casting aside without a hearing whatever data are offered for the validation of a claim, the satisfaction of an interest, or the realization of an ideal. What moved him in all this was the love of man working through the spirit and with the methods of science. He insisted on giving human aspiration a fair trial.

Giving men and things a fair trial was the whole of William James's life. His sense of justice it was that made him an empiricist and libertarian in metaphysics and a meliorist in ethics. For him change was real, and nothing was so bad that it might not be improved. His own life was an expression of this conviction. For many years under the malignant influence of a grave and baffling disease, he carried out his appointed tasks with unflinching constancy and invincible will. He had, moreover, an extraordinary and infectious joyousness, a sort of youthful buoyancy, which seemed woven into the warp and woof of his philosophic vision as well as into the routine of his daily life. He touched nothing but to illuminate it; a subject in his hands soon began to sparkle and shine, to cast rays in infinite directions on infinite things. He always imparted to his pupils and hearers the feeling of the "something beyond," the "and" which trails after. He gave himself freely to all things; there was not a single humane cause in which he had not a part.

H. M. Kallen.

Cambridge, Mass.

NEWS FOR BIBLIOPHILES.

In some copies of the second edition of Burns's "Poems" (Edinburgh, 1787) there is a misprint, "stinking" for "skinking," in the line

Auld Scotland wants nae skinking ware,

in the last stanza of the poem "To a Haggis," while in other copies the word is correctly printed. The variation was discovered by some Burns student many years ago, and, on the principle generally true in bibliography that the issue with the misprint is earlier than the one in which the error has been corrected, the copies with "stinking" have generally been called first issue in catalogues, and have brought higher prices than those in which the error does not appear. Miss Henrietta C. Bartlett, who is preparing a catalogue of Beverly Chew's library, has, by a comparison of two copies, recently discovered that the types of the entire body of the book were twice set, and that the "stinking" issue is actually the second. No variation has been discovered in the preliminary leaves, the list of subscribers, or the glossary. The two issues were printed in the same printing office, with the same types, though there is one uniform point of difference. In the font of italic type used in printing the captions of many of the poems, in the first issue the upper-case T has a curved top, whereas in the second issue a straight-topped T is used.

The poem "To a Haggis" did not appear in the first edition (Kilmarnock, 1786), but other slight typographical differences seem to confirm the priority of the "skinking" edition. We need not take space here to give page and line, but the following examples may be given:

KILMARNOCK AND FIRST ISSUE OF EDINBURGH EDITION.	SECOND ISSUE OF EDINBURGH AND LATER EDITIONS.
o'	of
tho'	though
takes	taks
mysel	mysell
taen	ta'en

The first edition of Burns's "Poems" was printed at Kilmarnock by John Wilson in 1786. The edition consisted of 612 copies, for 350 of which subscriptions had been received before publication, and in less than one month 599 copies in all had been disposed of. This first edition, known as the "Kilmarnock Burns," is one of the most valuable books of its period, a trimmed copy being worth upwards of a thousand dollars, while a thousand pounds has been paid for one of the few copies which have survived in the original blue paper covers, edges untrimmed. On November 29, 1786, Burns set out for Edinburgh to arrange for printing a new edition. On December 7 he wrote to Gavin Hamilton:

For my own affairs I am in a fair way of becoming as eminent as Thomas à Kempis or John Bunyan, and you may expect henceforth to see my birthday inserted among the wonderful events, and in the Poor Robin's and Aberdeen Almanacks, along with Black Monday, and the battle of Bothwell Bridge. My Lord Glencairn and the Dean of Faculty, Mr. H. Erskine, have taken me under their wing, and by all probability I shall soon be the tenth worthy, and the eighth wise man of the world. Through my Lord's influence it is inserted in the records of the Caledonian Hunt, that they universally, one and all, subscribe for the second edition. My subscription bills come out to-morrow, and you shall have some of them next post.

On January 14, 1787, Burns had "to-day corrected my 152d page," and on March 22, 1787 he wrote as a postscript to a letter to Mrs. Dunlop:

I have to-day corrected the last proof sheet of my poems, and have now only the Glossary and subscribers' names to print. Printing this last is much against my will, but some of my friends whom I do not chuse to thwart, will have it so. I have both a second and third edition going on, as the second was begun with too small a number of copies. The whole I have printed is three thousand.

This interesting postscript (first printed in 1898 in the Burns-Dunlop correspondence, edited by William Wallace) shows the correctness of Miss Bartlett's independent discovery. It also shows why no variations could be discovered in the list of subscribers or glossary. These leaves evidently were set once only, and three thousand copies, sufficient for both editions of the text, were printed. When the book appeared on April 21, Burns had sold 2,800 copies. He cleared about £500 on the edition.

Later, in 1787, appeared the first London edition, called "Third edition" on the title, but, as we now know, more accurately the fourth. The next year, 1788, editions were printed in both Philadelphia and New York. Precedence has sometimes been given to one of these and sometimes to the other, as the first American edition, but

contemporary advertisements show that the Philadelphia edition was actually the earlier. The following interesting advertisement appeared upon the cover of some Philadelphia magazine, probably the *Columbian Magazine*. The specimen seen was a clipping pasted in a copy of the book.

BURNS'S POEMS.

Philadelphia, 7th July, 1788.

Just published, and to be sold at Peter Stewart's printing-office, the west side of Second-Street, the ninth door above Chestnut-Street, and by most of the booksellers of this city:

(In one neat pocket volume, price only 6s. handsomely bound and lettered, although the Edinburgh copy sold for 6s. sterling in blue boards.)

Poems,
Chiefly in the Scottish dialect.
By Robert Burns, the celebrated Ayrshire ploughman.

the peculiar merit of this work is sufficiently evinced by the very numerous list of subscribers prefixed to the Edinburgh edition (there being not less than sixteen hundred) among whom appear many of the nobility and gentry of Scotland . . .

* * * It is hoped the very reduced price of this American edition will recommend it to the patronage of the public.

This shows that the book was bound and on sale early in July. The following advertisement, which appeared in the *New York Packet* for the issues of August 22 and September 2, 1788, shows that the New York edition could not have been ready until September, 1788:

Burns's Poems.

The publishers return their sincere thanks to those gentlemen who subscribed for this work some time ago, and assure them that the reason of it not appearing sooner was entirely owing to the extreme scarcity of printing paper; a supply of fine paper is now received and as the work is on the press they may rely on having their copies in a short time.

Correspondence.

OUR EDUCATIONAL AIMS, AND THE RHODES SCHOLARSHIPS.

To the Editor of The Nation:

Sir: The interesting letter of Mr. Frank Aydelotte on the Rhodes scholarships (*Nation*, June 9) presents a number of points which will bear further comment. Permit me to direct attention to two of them.

Mr. Aydelotte says: "Our educational aims are definite and practical enough." That is true; and he might have added with equal truth, "and numerous enough; perhaps too numerous, and too practical." "Educational aims" are aims which may be made tributary to an aim of education, and parts of a unified system of education adapted to the promotion of that aim; but they are also aims which may not be so tributary, but may, instead, be pursued in a desultory fashion with little or no regard to the aim of education as a whole, or to any unified or logical system of education. In our case, unfortunately, they are mostly the latter. We are in the curious situation of having a vast and varied assortment of educational aims, but *no aim of education*. We are like the man in the forest who complained that he could not see the forest because there were so many trees in the way. Our scheme of education is lacking in perspective, in unity of purpose, and subordination of parts. But human nature is not entirely satisfied with this tyranny of "things in the saddle," and it sometimes asks what all this labor is for. For answer to this question, we have only a vague intimation that there is such a purpose somewhere in the far future; that the individual man is as it were a cog in one of the many wheels of a vast cosmical machine, which is supposed to be working to the accomplishment

> Of some far-off-divine event
> To which the whole creation moves,

of which he himself knows and can know nothing.

In striking contrast to this is the English system into contact with which the Rhodes bequest is designed to bring American students. That system has an aim of education; and it is one which gives a far different answer to the question, *cui bono?* Instead of making the individual man of the present a sacrificial victim to some far-off divine event in the supposed interests of some future collective superman, it asserts the infinite value of man individually and places him before man collectively; it assumes that the individual man is himself the event which should be the objective point of education—not far off or divine, but now and here and human; that the individual man of to-day is himself the measure and explanation of the world rather than that the world or some ultimate exterior purpose is the measure and explanation of him.

In comparison with this English idea of education, our own exhibits some striking and significant peculiarities. In the first place, it exalts doing above being, thereby reversing the relative positions of end and means, and turning the order of nature upside down. Naturally, all our doing is for the purpose of attaining some condition of being that appears more desirable than the present one. But in our logically absurd scheme of education the object of doing is merely to give occasion and opportunity for further doing. Another significant fact which appears from comparison of these two educational ideas is that the one is essentially Christian and the other pagan. In its exaltation of the individual soul, the English idea is essentially Christian; and, on the other hand, in its dethronement and relentless sacrifice of the individual to the mass, the American idea is essentially pagan—or, at least, irreligious. One of the most fundamental and essential features of Christianity is its postulate of the immortality, and, therefore, infinite value, of the individual human soul. To this postulate probably, more than to all else, Christianity owes its success in the conquest of the world. I will venture to say that a very large proportion of the educational ills from which we are now suffering are traceable directly or indirectly to the deliberate abandonment or careless disregard of this postulate. Whatever else may be thought of our determined secularization of education, certain it is that in so far as it involves the reflection or elimination of this postulate, it entails a heavy and irreparable loss. Some theory as to the nature and destiny of the soul that is to be educated there must be; and what theory other than this can there be that will make the higher education seem worth acquiring? It is a vital source of weakness in our secularized system that it ignores this necessity and makes no provision for this natural want.

In view of these characteristics of the two systems respectively, was Mr. Rhodes mistaken in supposing that the English system could be made of some serious benefit to ours? Mr. Aydelotte says that "the English system would not do as a substitute for ours." This is perfectly true. A system designed for the education on individualistic principles of a few thousand select people, certainly would never do for the education on quite different principles of the eighty millions of unselected people whom our system is designed to furnish with some degree of education. It is not a substitute that we want but an amendment—or, if you prefer, a supplement—something that will supply in our system what is needed to remedy its defects. For the defect already pointed out, does not the English system in the feature above described offer an obvious remedy? Is not that aim of education precisely what is needed to restore to equilibrium our now lop-sided system? I say "restore," for its adoption into our system would not be an innovation but a restoration merely. It would be simply restoring to our colleges an aim of education which our colleges once possessed, and relinquished only under pressure of a clamorous and insistent popular demand for educational aims of more immediate practical value—a demand which, it may be remarked, would never have been acceded to but for the fact that the colleges themselves were in a race for popularity.

That the concession thus made by the colleges was unnecessary is evident from the fact that the new demand for more immediately practical aims could and should have been met not by revolutionizing the colleges, but by providing new agencies. That the concession was a disastrous mistake can hardly be doubted by any one who has observed its effects upon scholarship as exhibited by the average college graduate of to-day in America. Let us continue to educate the masses for citizenship and for usefulness in special callings; but, having educated these for the usefulness of *doing*, let us not forget to educate such as we may for that other kind of usefulness no less important which pertains to the fulness of *being*, intellectual, moral, and spiritual; so that it can no longer be said of us that we have a great educational system that is capable of producing almost everything except well educated men and women.

Herbert L. Baker.

Detroit, Mich., August 30.

THE RECEPTION OF CHINESE STUDENTS.

To the Editor of The Nation:

Sir: Since I have been a student in Oberlin College, I have learned that the *Nation* is one of the most cosmopolitan journals in America, and since I have made several unsuccessful pleas to the immigration officials in Washington, in behalf of Chinese students in America, perhaps you will be kind enough to give me a hearing through your columns. While now a student in one of your colleges, I was formerly a teacher in Foochow College, and expect to return to my native country to disseminate the impressions I have gained while here. I am sorry to confess that my

first impression as I reached America was unpleasant. In order that the students who enjoy the benefit of the kindness of the United States in returning the indemnity money may not at the moment of their arrival experience the same disagreeable sensation, in order that no germ of hatred may arise in the proud hearts of these young men coming here for training for important offices in the New China, I plead for more simplicity and less restraint in the forms through which they are required to go upon arrival. These forms detained me in San Francisco against my will for some thirty-six hours, and were it not for subsequent kindness shown me, I fear that I should have kept a while here, and later on carried back to China, hatred, instead of friendship and good feeling toward America. I know that some of my friends have been kept at San Francisco even longer than I was, but it is not necessary to mention their cases. I understand that those officials have reason to thus detain us; I am not intimating that they did not maintain the law of the United States. But I am pleading for a special arrangement to be made for the Chinese student-class, so that upon the presentation of their student passports with the signature and seal of both the American consul and the Chinese official, they will be allowed to go. It seems to me that America believes China can and will become a great nation. She returned to her some part of the so-called Boxer Indemnity and gave an invitation to the Chinese students to be educated in America. This favor is greatly appreciated by every intelligent Chinese, and the Chinese students are very eager to come, cherishing a hope that they will be greeted with a warm reception. It is worthy of notice that these students are going to fill the prominent places of the new Chinese Empire; if they have good impressions of the States, how much greater the friendship between the two countries will be created by them.

I love America and I love China; I should not like to see the friendship of these two nations thus injured, so I forget myself and boldly come forward in behalf of my fellow students. I should be very sorry if my plea was of no effect. With firm faith in American loyalty to international justice and to the interest of both governments, I look forward with great hope to a better condition in this matter. L. S.

Oberlin College, August 31.

A CHURCH WITHOUT CREED.

To the Editor of The Nation.

Sir: Lately I met an old friend who lives in a distant city, and our talk turned after a time to religious matters. He had formerly been a church member in good and regular standing.

"What church do you attend now?" I asked him.

"You would think it a queer one," he answered. "It has a wonderfully beautiful edifice, in the first place; large and spacious, with great seating capacity; and unlimited pains have been taken with the decoration. And the music is magnificent, and the incense and all."

"Incense!" I exclaimed.

"I told you you'd think it queer," he answered calmly. "Still, it is not Catholic, though no doubt there are Catholics who come to it. But our pastor is allowed to have things pretty much his own way, and no good thing is distasteful to him on account of prejudice."

"So you have joined those who attend church on account of the æsthetic delights of sound and color and odor connected with the service," I said.

"Most churches employ some of them," he replied, "to a limited extent, at least; perhaps often somewhat blindly. They have their legitimate office. They suggest the mystery and beauty of the universe; they lift the soul into an atmosphere where the deeper realities are felt to be real, and the transitory ceases to overwhelm."

"Go on," I prompted. "What denomination does your church belong to?"

"Virtually the only doctrines preached are love toward God and man."

"You have become a Unitarian. I used to be afraid you would."

"Not at all. I believe about as I always did. And the Unitarian doctrines are not preached in this church, any more than those of any other sect."

"Church union at last, then! Does it really work?"

"It isn't the official union of any church bodies. Every member of the congregation is simply expected to live in peace and good fellowship with his neighbor, believing what he thinks best and allowing his neighbor to do the same. We call it the Temple of Tolerance."

"But apparently it isn't even distinctively Christian."

"The Founder of Christianity called those the two greatest commandments: love for God and man."

"But it takes other doctrines to make a church really Christian."

"It seems to our pastor that the truly Christian way is to preach these and allow people to differ on other matters.

"For many people it would not seem like church with their favorite doctrines left out."

"Well, one other belief is assumed, at least: that in a future life, because most people believe it, and of those who don't, few or none object to it."

Something in my friend's tone had roused a vague suspicion in my mind.

"What is your preacher's name?" I questioned.

"Rev. Dr. Greenfield," he answered, and there was a twinkle in his eye that showed me I had been trapped. I ought to have been forewarned by experiences of former days.

"I know the old heretic!" I exclaimed. "He preaches no sermons at all. Or, at least, every one who goes to him hears something different. And some of his speeches have no suggestion of religion in them!"

My friend admitted that to be the weak point of the genial old gentleman.

"But the church and its doctrines are ideal," he still maintained. "And I hope in time we shall have ministers who will stick to the text, and a widespread organization that will take in the thousands of the strays and the discontented and carry on a great work. There is a great deal to be done that the present churches, on account of their sectarian character, are incapable of. One thing is the fight for moral education. We are the most criminal of the great nations, with no moral teaching in our public schools, such as other nations have, and with great educational institutions of crime in our jails and saloons. Sectarianism is to blame for some of this, and a non-sectarian church is best fitted to cope with it."

After this he presented me with the following sonnet, which I beg you will kindly print. The most solemn convictions are often better expressed by verse than prose, and it may be that I have not done my friend justice in the above report of his conversation, which, though lightly uttered, I found to be the expression of very earnest belief.

The forest's vaulted aisles, with faint light gleaming
Through leafy traceries, the hush, the choir,
The incense, breathe a kindly awe, inspire
Faith in a love behind this outward seeming.
And man's cathedrals too in sacred gloaming
And prayerful silence lift the soul with power;—
But in their vaults what ancient errors lower,
And through their dusk what bigot ghosts go roaming!
When will there be a temple, I have wondered,
Where all, in sect-forgetting adoration,
May worship, reverent and awed by beauty?
"Not thine it is to chain men's thought! Thy duty
Is love like God's toward Him and His creation."
Oh, for such creed to join what creeds have sundered!

R. Mowry Bell.

Princeton, N. J., August 24.

"GOOD AND" AND "MAKE GOOD."

To the Editor of The Nation:

Sir: Some time ago a former student of mine sent me a pretty little story, clipped from a Brooklyn paper. The story tells how H——, a native, ordered of W——, a Greek restaurant keeper, an oyster sandwich "good and hot." The Greek looked upon the word "good" as implying that he might have oysters which were not good; plainly, an aspersion upon his restaurant. The dispute proceeded from words to blows, to the use of the knife, and arrest. *Se non è vero,* etc.

Has any one discussed the phrase "good and" as a mere intensive="very, thoroughly"? I do not find the phrase in the Oxford Dictionary. The nearest approach is at p. 290, A 19 b; here "good" (without "and," however) is illustrated as an intensive adverb in such expressions as "a good large province," "a good smart cut," "a good bold hand"; also "good pretty"= "pretty good." In the American Dialect Notes, II, p. 315, D. S. Crumb, in his paper on the Dialect of Southeastern Missouri, records the phrase "good and ready"= "fully ready." But "good and" is by no means confined to any one section of our country. Rather, it is common American, for I have been familiar with it all my life. Still, it is not slang, but mere conversational expression; I should refrain from using it in formal discourse, but should not besitate in ordinary talk. At any rate, it seems American rather than British; I do not remember hearing it from an Englishman or meeting it in a book printed in England. My personal recollections, however, are not conclusive on such a point.

"Make good" is spreading rapidly in our speech, and perhaps also in our writing. Now a glance at the Oxford Dictionary, p. 290 A 22, will show that "to make

good" in the sense of "to atone for," "to perform, carry out," etc., is no novelty. In all the Oxford Dictionary examples, however, "make good" is followed by a grammatical object; somebody makes something good, or valid. Whereas our American slang—for it is slang to my sense—uses the expression absolutely. Every day we hear the utterance: "He has made good," *i. e.*, "he has succeeded," he has done what was expected of him. In ten years, perhaps, our lexicographers will have to enter "make good" as a compound verb, like the German *guthaben gutachten*.

J. M. Hart.

Ithaca, N. Y., August 15.

WHY NOT TYPEWRITE MANUSCRIPTS?

To the Editor of The Nation:

Sir: In the letters of Messrs. Ford and Konkle in your issues of July 21 and August 11 respectively there is apparently assumed to be an alternative only between ink and pencil; in passing it may be remarked that some inks fade and that carbon copies may be made with the pencil. But why not use the typewriting machine now almost everywhere available? The investigator unable to manipulate it himself may employ an operator to transcribe directly from the manuscript or to write from dictation, in full or stenographically.

Burt G. Wilder.

THE DERIVATION OF ALFALFA.

To the Editor of The Nation:

Sir: Your correspondent's ingenious explanation of alfalfa as a derivative of alfel-Fez (*Nation*, July 28) is an etymology, I take it, more fanciful than demonstrable. The identification suggested by Murray's may safely be followed. The letter *Koph* (pronounced as hard *k* in classical periods) has a tendency toward complete quiescence. We have such a phenomenon as the equivalence of James and Jakob, where the *k* is on its way to entire disappearance, being represented by the weak *m;* and there are any number of examples in the modern Arabic of Syria at any rate where the consonantal value of the *k* is no longer apparent; *e. g.*, Jerusalem is termed el-*K*uds (pronounced el-Uds). A. Meyer.

San Francisco, August 20.

NOTES ON TEXT BOOKS.

PÆDAGOGICS AND ENGLISH.

A book which deals with social aspects of the subject is "Vocational Education," by John M. Gillette (American Book Company). The field of education considered is that of the elementary school. It is contended that economic activities constitute the line of achievement of organized society which should determine the method and content of education; that since the social environment is specialized into vocations, education must likewise be specialized; that the traditional curriculum and traditional methods of training do not meet present social demands, since they rest largely upon the theory of the value of a general discipline for all children; and that the criterion which should be applied in the reorganization of the school system is that of educating the individual to be able to adjust himself to the social situation he is most likely to meet in life. The author would apply this criterion to every programme, to every subject. In keeping ever in mind throughout his school training the purpose of preparing the child to take a more or less definite place in the economic environment, in despising the cultural and in largely overlooking the spiritual ideal in education, the author is frankly most radical. Many of his propositions involve us in serious difficulties, and evidently need much more careful consideration before they can be accepted. His enthusiasm has led him to make the vocational requirements of the modern world not merely of great importance in education, but supreme. The book shows a tendency of the times.

Students of education in this country are aware of the great advance that has been made in the public-school system of France during the past quarter of a century and especially within the past decade. Answers to the inquiries that are being more and more frequently made about the schools of that country may be found in the volume, entitled, "French Secondary Schools" (Longmans, Green & Co.), by Frederic E. Farrington, recently published, and in "The Public Primary School System of France," by the same author, and published some years ago. The present volume contains an account of the origin, development, and present organization of secondary education in France. Beginning with an historical sketch of the secondary schools from the first revival of learning to the present time, it takes up successively the administrative organization, the teaching force, the programme, the life of the school, the education of girls, and the various subjects of the curriculum. Each of these topics is admirably prefaced by an account of conditions as they have existed in successive periods down to the present era; followed by a comprehensive view of the actual workings of the lycées and colleges under the present system. The total result is a very clear and complete study of the state secondary schools. The author sets forth conditions as they appear from the American standpoint, but throughout he has played the part of the sympathetic critic, stating frequently the French point of view which has determined methods and courses. The American reader of the book will be very forcibly impressed by the fact of the extreme centralization of the administrative organization of the French school system, which contrasts so greatly with our own extreme decentralization. The ideal would seem to be somewhere between the two. In the attempt to solve some of the problems of school administration in this country there appears to be a tendency toward a greater degree of centralization. Its advantages and disadvantages, as applied in France at least, are suggested very vividly to the reader of this book.

An excellent thesaurus of English literature has been prepared by Prof. A. G. Newcomer of Leland Stanford University and Miss Alice E. Andrews of the Cleveland High School, St. Paul, under the title "Twelve Centuries of English Poetry and Prose" (Scott, Foresman & Co.). It begins with "Beowulf" and ends with R. L. Stevenson, finding space in its seven hundred double-column pages for such long works as "Everyman," "The Tempest," "The Rape of the Lock," and "Sohrab and Rustum." The notes are sufficient to make the work independent of reference books, and altogether the editors have made a useful and interesting volume.

Prof. W. C. Bronson's series of "English Poems" has been completed by a fourth volume, the "Old English and Middle English Periods," 450-1550 (University of Chicago Press). The more or less popular intention of the volume has induced the editor to present his selections from the Anglo-Saxon in the form of a prose translation, which gives a rather anomalous appearance to the first fifty pages of a book devoted to poetry. For the rest, the translation is of the usual un-English type affected by scholars for the reproduction of Old English. The Middle-English verse, on the other hand, is virtually untampered with and is reinforced by a vocabulary amply sufficient for reading purposes. The specimens are fairly representative; indeed, within these limits there is comparatively small room for choice, though the range is somewhat extended by examples of the early drama—miracle and morality, and John Heywood's "Foure PP." The volume is equipped with notes and brief bibliographies. Used in connection with the other members of the series, as an introduction to a survey of English poetry at large, the book ought to be a useful one.

"Speaking in Public," by Charles Seymour (Dutton), is a good example of the difficulties and dangers of rhetorical teaching in its more utilitarian forms. Mr. Seymour's aims are extremely businesslike—indeed, he seems to have had unusual success as an oratorical coach—and his volume bears the not unpromising sub-title, "How to Produce Ideas and How to Acquire Fluency." As so frequently happens, however, in this sort of attempt to draw the literary badger, the instruction offered is conspicuously verbal after all. If the pupil only acquires the trick of talking on unfalteringly with a thin unintermitting drizzle of language, he would seem to do about as much as can reasonably be required of him. Some of the exercises to this end are ingenious and illustrate amusingly the purely conventional significance attached to the word "idea" in modern methods of composition. So, for instance, the student is directed to stand beside his chair, and after describing the objects in the room to an imaginary audience, to "evolve a thought" instantaneously from each of them, as follows: "A pedestal writing-desk occupies a position in the room near the window; to the busy man this article is indispensable. It conduces to order and method and facilitates the dispatch of any kind of work in which pen or pencil is actively employed," and so on.

MODERN LANGUAGES.

Voltaire's "Zaïre," edited with introduction and notes by Prof. C. W. Cabeen of Syracuse University, has appeared in Heath's Modern Language Series. Apart from the relation of the play to "Othello," Voltaire's so-called tragedies have enough historical interest to warrant the inclusion of perhaps the best one of them in a comprehensive French text series. The editing is satisfactory.

Sandeau's "Un Héritage," with introduction and notes by Pauline K. Leveson, is the latest addition to the Oxford Modern French Series (Clarendon Press). Simplicity of style and directness of narrative make the unpretentious story well adapted to the needs of beginners. The notes, while few, are adequate; type and paper are excellent.

Under the title of "Contes des marins de la Haute Bretagne," four of Sébillot's Breton fairy tales, with exercises on the text and vocabulary, have been added to the series of Crowell's Shorter French Texts. The easy, bright little stories are suitable for school use, and may be recommended for elementary college courses, in cases where the instructor needs a short book. There are thirty-two pages of text.

From the Cambridge University Press (Putnam) comes F. A. Kirkpatrick's edition of two of Cervantes's less familiar "Novelas Ejemplares," viz.: "La Illustre Fregona" and "El Licenciado Vidriera." In the treatment of the text the editor has shown good judgment. The notes are painstaking and interesting, while unusually voluminous. Altogether, the volume is a welcome addition to the not over-long list of well-edited Spanish texts.

"An Easy German Reader," by A. B. Nichols (Holt), is a modest collection of stories suitable for early reading, simplified, and accompanied by a Vocabulary in which particular attention is given to derivation and to cognates. The editorial work is intelligent and careful.

The American branch of the Oxford University Press has inaugurated a new series of text-books with editions of Annette von Droste-Hülshoff's "Judenbuche," by E. O. Eckelmann, and Lessing's "Minna von Barnhelm," by Josef Wiehr. Each is provided with an introduction, notes, and a vocabulary. The books present a good appearance and have been prepared with care. "Die Judenbuche" is the first of the author's stories to be edited in America. It does not belong to any *genre tranché:* one is tempted to describe it by a phrase that has been applied to one of Heine's ballads: "une succession de points lumineux sur un fond de pénombre." Dr. Eckelmann's introduction is sympathetic, his vocabulary is exhaustive; his Notes, though sufficient for the purpose, might have been more instructively formulated. Dr. Wiehr's "Minna" is similarly thorough. The introduction gives a good general account of the historical position and the ethical content of the play. The notes take up all important questions likely to arise in the reading of it. There are here, however, various polemics against interpretations and views not very likely to arise in the American class room, and the editor is frequently not as helpful as he might have been if he had more perfectly put himself in the position of his American reader. His use of the colon, for instance, is more German than English.

The attention given to Grillparzer's dramas in American colleges fully justifies the unusual scholarly research bestowed by Prof. Carl Edgar Eggert, on his edition of "König Ottokars Glück und Ende" (Holt). An introduction of fifty pages not only presents us with a critical analysis of what is now universally regarded as one of the most powerful and most admirably constructed dramas in German literature, but furnishes one of the best short biographical and literary surveys of the poet in the English language. If the addition of the "historical background" seems rather minute, and the space given to grammatical elucidations of the text somewhat scant, these are errors in the right direction, as college editions of literary masterpieces go. Notes intended for advanced students ought to be, as they are in this instance, devoted to less elementary things than rudiments of phraseology. Grillparzer's occasional Austriacisms always find in Professor Eggert a skilful interpreter. The proofreading throughout is admirably done, and the volume presents a most inviting appearance.

CLASSICS.

Dr. W. H. D. Rouse has shown what can be done by the advocates of the oral method in teaching in his elementary Greek reader, entitled, "A Greek Boy at Home" (London: Blackie). This is a story written in Greek, of which the material has been gathered from many sources from Homer down to the novelists. The syntax is normal Attic, while the vocabulary is very mixed—a fact for which the author takes full responsibility. The speaker is a Greek boy, who introduces himself, describes the farm and house where he lives, the garden, the trees, his school, including his studies, as arithmetic, with multiplication and division, his sports, his travels. He visits the acropolis, he takes a small voyage, during which an old sailor relates his experiences in the battle of Salamis, etc. The whole forms a narrative of 134 pages, couched in the simplest style and interesting even to an older student. It is impossible not to admire the skill of the author in preparing such an unusual book. At the outset the student is expected to read without a vocabulary. This is, however, provided in a special book for review purposes. The words are with few exceptions defined in Greek. Thus during all his study the student is using Greek. According to the method suggested at the beginning the teacher reads the text aloud, explaining it at first in English, later in simple Greek, then the boys read it aloud. Their comprehension is tested by questions and answers in Greek, by oral and written retellings of the story, and in various other ways.

"Cæsar's First Campaign, a Beginners' Latin Book," by W. A. Jenner and H. E. Wilson (Appleton), reminds one at first of the Bellum Helveticum, but the resemblance extends to little more than the selection of the campaign against the Helvetians as the reading matter, and its use from the beginning of the book instead of the customary sentences. The chief novelty is what the authors call a "development exercise." At the close of every lesson the substance of the next day's reading lesson is given in the form of simplified detached sentences. In this way the subsequent reading of the original seems almost like a review. This method has been already used in a slightly different form in other books. The vocabulary to be learned consists of 500 words used six times or more in Cæsar, although many other words occur in the selected text. Little attempt is made in the earlier part to stimulate oral teaching except in directions for oral drill in paradigms; but in the latter part numerous questions in Latin call for answers in Latin. English-Latin, as well as Latin-English sentences are given from the beginning as exercises for translation. In ten review lessons students are required to write out the Latin originals of numerous English derivatives, as well as to make other word lists. There is also an appendix of forms and a vocabulary. Compared with other beginners' books, this one shows evidences of practical experience and excellent knowledge.

"A Cæsar Composition Book," by H. F. Scott and C. H. Van Tuyl (Scott, Foresman), is intended to accompany the reading of the first two books of the Gallic War. One exercise of from eight to ten detached sentences illustrating two principles of syntax is attached to every chapter of these books, the vocabulary being that of the chapter itself or its predecessors. The exercises are, accordingly, not "based" in the old sense, but the book shows the same lack of system and improper emphasis which has been objected to so often in the older books. For example, the first five exercises illustrate the following principles: Predicate nominative, ablative of specification, ablative of accompaniment, dative with special verbs, dative of indirect object, accusative of duration of time, ablative of time, ablative of means, ablative with *utor*, etc., enclitic use of *cum*. Thus matters that belong together are treated separately, and common constructions not found in these books of Cæsar are omitted. The construction of *ut* with the perfect indicative is illustrated, but not *postquam*, while the second and third forms of the condition are treated, but not the first form. The rules of syntax are usually well stated at the beginning of every exercise, and the student is relieved of the necessity of using a grammar, a fact for which the authors assume much credit. The proof-reading is in the main good, but more attention should have been paid to vowel quantities. The English sentences are well prepared and really make sense. The teacher who believes in the theory will find the book serviceable.

Volume iii of the excellent Thornton Arabic Series is the "Elementary Arabic Second Reading-Book," edited by Reynold A. Nicholson, lecturer in Persian in the University of Cambridge (New York: G. P. Putnam's Sons). The pieces are mostly taken from texts and manuscripts (not later than the eleventh century A. D.) that, as far as Dr. Nicholson knows, have not hitherto been edited by any European scholar; they are arranged in chronological order so as to illustrate the cultural history of the Arabs, are provided with grammatical and historical notes, and a glossary is added. The printing is good, and the notes, containing references to Wright's Grammar and the author's "Literary History of the Arabs," judicious. The little volume has a greater interest than that of a reading-book.

"Four Plays of Menander," edited by Prof. Edward Capps for Ginn's College Series, has come to us too late to be properly reviewed in this issue, and must be reserved for critical examination.

HISTORY AND SOCIOLOGY.

The distinguishing feature of S. E. Forman's "History of the United States for Schools" (Century Co.) is the relatively large amount of space given to

the development of the West and to industrial and social progress. In both of these respects, the book marks an advance over most secondary school compends now on the market. In the treatment of older and more familiar topics, the author is not so successful, nor does his narrative always show acquaintance with recent studies. A text-book which still tells the Pocahontas story as though it were fact, albeit with a questioning footnote; or implies that Roger Williams left Massachusetts for religious reasons alone; or which goes astray as to the real, and exceedingly interesting, facts regarding the treatment of the tea in Charlestown; or asserts that the Administration of Justice Act, of 1774, provided that "British officers or soldiers accused of murder in Massachusetts should be taken to England for trial"; or confuses Lincoln's constitutional right to abolish slavery with his undoubted right to emancipate slaves as a war measure, must be followed with caution in other matters also. The numerous illustrations, though well chosen, vary much in excellence, but the maps are especially commendable.

Prof. Norman M. Trenholme's "Outline of English History" (Ginn & Co.) differs from the same author's "Syllabus for the History of Western Europe" chiefly in the omission of references to collateral reading, save to the relevant portions of Cheyney's "Short History of England" and "Readings in English History," with which it is primarily intended to be used. As the references in the European syllabus put elementary manuals and elaborate works together indiscriminately, and, in the case of the larger books, were often impossibly long, the omission of similar citations in the present instance is not a loss; but most teachers will regret that Professor Trenholme has not attacked the problem more carefully, or given some bibliographical help beyond the bare list of authors and titles at the beginning. The topical outline itself is, as a whole, well contrived, though many of the review topics and questions are elementary and mechanical. The distribution of space in so large a subject as English history is a difficult question, and in this case the author has very likely not felt himself entirely free. Teachers who desire to emphasize the modern period, as is increasingly demanded in public high schools, may well be appalled at the comprehensiveness of most of the topical groupings since 1689; but it is fair to say that the syllabus conforms to most text-books now in use in this respect.

The growing list of elementary text-books in sociology receives an addition in Prof. James Q. Dealey's "Sociology: Its Simpler Teachings and Applications" (Silver, Burdett & Co.). The theoretical portions of the book are, in the main, a popularized epitome of the views of Lester H. Ward, and need, consequently, no further comment here than to say that the work of selection and presentation, or perhaps we should say, of translation into common speech, has been very well done. The "applications" include such fundamental topics as the development of the state, ideas of government and law, and family and class relations, besides a numerous array of current issues, such as education, labor, pauperism, crime, religion, and sex problems. In his cursory survey of these diverse subjects, Professor Dealey preserves both moderation and practicality, even to the extent of admitting that, on more than one point, sociological speculation must for the present suspend judgment. One cannot help feeling, however, that his emphasis upon the dynamic rather than the static aspects of society often turns the philosopher into a preacher, and makes the latter half of his book read more like a comprehensive plan of social reform than a scientific survey of existing or historical conditions. In the hands of a skilful teacher and a well-informed class, however, the book should prove useful, and the general reader will find it worth while.

The high character of the series of Selections and Documents in Economics (Ginn) is well maintained by G. S. Callender's "Selections from the Economic History of the United States, 1765-1860." The ordinary text-book in this field not infrequently disappoints the college teacher. Even such admirably arranged compends as Day's "History of Commerce" or Bogart's "Economic History of the United States" require constant effort on the instructor's part to diversify the placid flow of the text and to leaven the heaviness of statistical summaries. A selection of well-arranged excerpts from contemporary accounts of various phases of industrial history has a vividness which the systematic text upon economic development rarely attains. Needless to say, the present volume will admirably supplement a systematic course of lectures upon our economic life and progress. The brief expository essay which prefaces each chapter strikes the proper keynote, and attunes the ear for the chord which is struck in the selections following. There is much pregnant suggestion in several of the introductory studies. The previous revival of credit and of returning business health is credited with paving the way for the successful political experiment of Federal government after 1789. The causal relation between prosperity and the new frame of government has hitherto been inverted, or attributed without adequate evidence, to the political factor. Perhaps more dubious is Professor Callender's dismissal of the odium upon free manual labor as a *vera causa* of the retardation of the growth of wealth in our slave-holding States. To attribute the arrest of capital formation south of Mason and Dixon's line mainly to the social conditions which caused the slave-holders "to expend that wealth in maintaining a luxurious and expensive style of living, instead of saving and accumulating capital" (p. 741) is rather a heavy tax upon the scientific imagination. If criticism were to be made upon the choice of selections, a captious reviewer might point out some passages irrelevant on the score of general economic importance. Trollope's experience with our sleeping cars and our brass baggage checks is amusing, but hardly germane. Occasionally there is surplusage, as for example, in the four versions of the Pioneer and His Ways (pp. 597-609). The absence of an index is wholly inexcusable.

SCIENCE.

The University of Chicago Press has issued a text-book in "Second-Year Mathematics for Secondary Schools," by George W. Myers, assisted by others, which is notable as an attempt to alter the tradtional method of teaching mathematics in preparatory schools. For some time, teachers of physics, engineering, and the other experimental sciences, have been objecting to the separation of the geometrical and analytical branches of mathematics. To them, a problem does not come as distinctly of the one type or the other, but as a combination of the two. The problem of a falling body, for example, requires the student to solve analytically the distance moved, and, at the same time, to plot geometrically its path. As usually taught, the student considers algebra and geometry as two distinct subjects, and so there has arisen an anomalous sort of study, called graphical algebra. The question at bottom is whether mathematics should be taught as an aid to experimental science or as a discipline in rigorous logic. The authors of the present series adopt the former idea. Thus their first book in mathematics is algebra, with associated arithmetic and geometry, and this second book may be styled geometry with associated algebra and trigonometry. How well the end has been attained and how practicable the method is, will have to be judged with care. There is no doubt that the clean-cut, logical sequence of the text-books on algebra, geometry, and trigonometry is largely missing; and the present book gives the impression of being somewhat messy. This may be a fault of the scheme itself or only a failure in this particular application. The present tendency to sacrifice purely educational or disciplinary methods to a training for special ends will probably force the teaching of mathematics toward what may be called the composite method. As examinations are now set by colleges, very few preparatory schools, without a concerted action, could adopt this text. Most of the pupils who will use the book, judging from the titles of the authors, are preparing for the University of Chicago, and that institution is probably ready to recognize the plan. Teachers generally should study the book and prepare themselves for the change of method of presenting mathematics which seems likely to be tried in the near future.

The "Introduction to the Study of Biology," by J. W. Kirkaldy and I. M. Drummond (Clarendon Press), presents clearly and pleasantly the general facts needed by the beginner in the subject, mainly according to the syllabus of the Oxford and Cambridge Schools Examinations Board, but with some additions. Noteworthy is the relative neglect of the frog, on the ground of its too marked specialization. On the other hand, there is a more extended account of the dogfish and of the rabbit, the last being used also as the basis of an account of the physiology of the vertebrates, the treatment of which has many gaps and is altogether not quite satisfactory. The book contains no laboratory directions and few indications of the ways by which the facts presented may be demonstrated or verified by personal study or experiment.

As an example of the modern trend in biological text-books, Thomas Walton Galloway's "Elementary Zoölogy" (P. Blakiston's Son & Co.) is unexcelled. The subject is presented from an economic standpoint rather than in a purely scientific manner, actual field observation and experience being held by the author as of far greater value to the ordinary high-school student

than "book interest and laboratory interest." Nearly one-half of the work is devoted to the discussion of the fundamental problems on which the science is based, strong emphasis being laid on the importance of the individual investigation of each student. The various phylla, from protozoa to mammalia, are then briefly taken up, with commendable avoidance of dry technicalities (which may come later), and much stress on such interesting phases as Relations to Man and Economic Value. Several chapters on Evolution, etc., round out the work. The illustrations are in general good, and well reproduced. If all high school text-books were written in as simple and straightforward a manner, the student might find his course at least less irksome.

Of elementary manuals of botany there is no end. The number is so great as to be positively embarrassing to the inexperienced teacher who is called upon to make a selection. Fortunately, the difficulty is lessened by Professor Ganong's book, "The Teaching Botanist" (Macmillan), which has undergone careful revision in its second edition. It may be recommended confidently to teachers as indicating safe lines along which one can proceed at this transitional period in the history of botany. Two of the great divisions of botany are now passing through rapid and radical changes, of which no one can as yet see the end. These departments are plant-physiology, which is being revolutionized by the new ideas in chemistry and physics, and morphology, which is being reinvestigated in the light of fossil botany. But, although these great fields are in a state of constant change, there is enough solid ground to be found in each field, upon which the conservative teacher can safely advise his pupils to build.

That reform of logic which many thinkers here and abroad deem the most urgent of all philosophical duties, is furthered on the psychological side by Prof. W. B. Pillsbury's volume on "The Psychology of Reasoning" (Appleton & Co.). The writer attempts to pass beyond the narrow and, in his opinion, misleading paths of formal logic toward an analysis of the thought processes which shall reckon not only with the mere intentions of the individual thinker, but no less with everything unsuspected that really happens to be involved in the production and directing of his thoughts. Professor Pillsbury is no less opposed to the so-called logic of values which has lately raised its standard in this country, notably in the writings of Baldwin and Urban. His hypothesis centres in a general doctrine as to the nature of consciousness, a doctrine which strongly suggests, though it does not follow out, Woodbridge's in its fundamental point. For Professor Pillsbury, reasoning can be understood only in the light of the fact that to be conscious or in consciousness and to possess meaning are identical conditions. While his development of this interpretation is abstruse and fraught with not a few uncertainties, it is, on the whole, an admirable endeavor to harmonize conflicting masses of fact. Probably his curt dismissal of the formal logician as one who is concerned only with language, not with living thinking, merits the least praise. And his too easy denial of the importance of the ancient issue between idealism and realism ought to bring down trouble upon him.

Since William James's "Principles of Psychology" we have been looking vainly for an introductory treatise which sets forth facts and theories about mental life in the perfect style of an essay, with the first-hand vividness of a human document, and yet true to the scientist's conscience. Any one of these virtues is common enough, and pairs of them are not rare; but we believe that Prof. Mary Whiton Calkins's "A First Book in Psychology," fresh from the Macmillan Press, finds but one peer, and that one, though of perennial interest and worth, already antiquated in parts. Miss Calkins's book marks a long advance beyond her earlier "Introduction to Psychology." In that work she treated psychology "in a two-fold fashion, both as a science of selves and as a science of ideas (or mental processes), discussing all forms of consciousness from both points of view." Indicative of the trend of latter-day psychology is the author's complete abandonment of the second treatment, "I question," she now says, "the significance and the adequacy, and deprecate the abstractness of the science thus conceived." The wholesome effects of this reform are visible in every chapter, and they are heightened by excellent pedagogical sense, and not a little art. Miss Calkins orders her topics admirably. She winnows the abstruse and the problematic out from the mass of simple certainties and settles them, together with physiological excerpts and a rich store of bibliographical notes, in an appendix. The beginner thus encounters only a sketch of the main currents of psychic activity, and he finds it rich with historical allusion, literary glimpses, and personal confessions.

Literature.

JOHN STUART MILL.

The Letters of John Stuart Mill. Edited, with an introduction, by Hugh S. R. Elliot. With a note on Mill's private life, by Mary Taylor. With portraits. New York: Longmans, Green & Co. 2 vols., $6.50 net.

These letters, which fill two stout volumes, have lain so long unpublished that they come to us now like a voice from the distant and half-forgotten past. There seems to have been no reason why they should not have been given to the world sooner—for Mill himself meant some at least to be published—except the caprice of his stepdaughter, Miss Helen Taylor, a lady at one time well known in England, who had strong views on many things. When she died three years ago, her niece, Miss Mary Taylor, to whom they passed, concluded that they ought to be published; so now we have them, nearly forty years after Mill's death. The large majority are printed from the original drafts which Mill himself made, and from which, much corrected by erasures and additions, he copied out in his own hand the letters he sent to his correspondents, a conscientiously careful habit few would imitate to-day. Some, however, being those to Thomas Carlyle and (Lytton) Bulwer, are printed from copies of those sent to these persons, while those to John Sterling, which are among the most interesting, are printed from the originals, which Sterling's family seem to have returned. The correspondence covers a period of forty-four years, from 1829, when Mill was twenty-three years of age, till his death in 1873.

The interest of the letters is threefold. They tell us much about Mill's own character, including a good deal which we had learnt neither from his autobiography, frank and simple as that is, nor from the various sketches and studies of him which have appeared since his death. They throw some light on a few of the other leading literary figures of his time, and especially on those to whom the letters were written. And they give a vivid and direct impression of the public questions that were then occupying the public mind in England, and especially of the views held about those questions by the Philosophical Radicals of that day, of whom Mill was the intellectual head, while Sir William Molesworth and to some extent George Grote (the historian of Greece) and Dr. Bowring were prominent champions in the British Parliament. On each of these topics a few words may be said to indicate the value of the book.

There is little in it to affect substantially the judgment which the world has long since formed of Mill's intellectual power. Everywhere we discover the same vigor of thought, the same anxiety to get down to underlying principles, and the same power of close reasoning, which appear in his "Logic" and his "Political Economy." We are, however, struck, more than in those works, by a certain want of what may be called broad common sense in dealing with current questions. Mill, although an experienced official, writes too much like a man of the study—one can hardly say "of the cloister"—and shows himself inclined to carry out his principles with an insufficient regard to the conditions of time and place under which principles have to be applied. It used to be said of him that he lacked humor, that is, that he took everything too seriously, and did not understand, or at least did not allow for, the weaknesses of the average man. Certainly in these letters one discovers a good deal of that failure to see things as they are which was apparent to some slight extent in his book on Liberty, admirable in many ways as the book was, and much more apparent in his "Subjection of Women," parts of which were almost ludicrous in their inappropriateness to the facts of actual English society. If in this power of perceiving things just as they are Mill did not grow with years, he

certainly did become more tolerant and lenient in his judgments of others. The sternness of youth so evident in the earlier of these letters seldom recurs in the later ones, when experience had brought, as it ought to bring, charity in its train. Of his conscientious candor and uprightness we receive the same clear impression which his books give, and which was no less strongly given by his public life. His motives were always high and pure, his sense of duty almost too scrupulous. The way in which he carried it into small things is shown by the pains he took in answering, often at great length and with great care, letters from people who had no claim upon him. There are, also, evidences of a warmth of heart and capacity for affection which are all the more attractive when found in a man so grave and rigid. These come out most in his letters to John Sterling, who must have possessed—Carlyle's "Life of Sterling" and the foundation of the Sterling Club show it—a power of inspiring affection equalled only by that which belonged to Arthur Hallam. A letter of 1840 (vol. I, p. 116) and those of 1844 (vol. II, pp. 127-127) are especially remarkable, and indeed beautiful and touching in their depth of feeling.

The personal interest is naturally greater in these letters of Mill's earlier years to his friends than in the deliverances on philosophical questions or public affairs which fill the second volume. But there are plenty of remarks scattered over all of them which are worth noting. Among these some of the reflections on religion are not the least interesting. He grew up, as readers of his Autobiography will remember, knowing nothing of Christianity, which his highly dogmatic father, dogmatic in anti-dogmatism, had so completely abandoned as to think not worth giving to the boy even as a matter of history. In 1833 he writes to Thomas Carlyle (vol. I, p. 68) that "I have been reading the New Testament; properly I can never be said to have *read* it before. I am the fitter to read it now; perhaps there is nobody within the four seas so utterly unprejudiced on the subject. I have never believed Christianity as a religion, consequently have no habitual associations of reverence, nor on the other hand any of *contempt*, like so many who have become sceptics after having been taught to believe; nor have I, like so many, been bored or disgusted with it in my youth. As far as I know your impressions about Christ, *mine* from this reading are exactly the same." He then proceeds to reflections upon the four Gospels, and in a later letter upon St. Paul, whom he is far from appreciating, and, we may perhaps say, did not really understand, reflections too long for quotation, but curiously representing the attitude of the less intolerant members of his school eighty years ago. It seems odd to find him and Carlyle in complete agreement on any subject, but this correspondence shows them as very close together, Mill appreciating Carlyle heartily, and being much influenced by him. Whether Carlyle was equally appreciative of Mill may be doubted. In later years he was wont to disparage his old friend, as indeed he had unluckily formed the habit of disparaging most people. Yet some American visitor, describing an interview with Carlyle near the end of his life, relates that after pouring boundless scorn on Herbert Spencer and some little upon Mill, he paused and added in a changed tone: "Aye; but he was a good man, was John Mill."

There is also an interesting letter (Vol. I, pp. 238-242), to an unnamed lady on a book which she had sent for his judgment in which he states that curious form of Manichaeism which had commended itself to him as perhaps on the whole the most probable theory of the government of the universe, a theory set forth in the little volume of essays on religion which appeared after Mill's death. Few have expressed their agreement with him, but not many men in England or America of eminence have dealt with these questions in the same kind of way, and in a spirit at once philosophical and scientific, since Mill's volume of essays appeared. Before leaving the relations of Mill with Carlyle, we must not forget to notice the letter (vol. I, p. 100) in which Mill, with the greatest delicacy and good taste, offers to make pecuniary compensation for the destruction of the manuscripts of the first volume of Carlyle's "French Revolution," which had been accidentally burnt while in Mill's custody, and that in which, when Carlyle (apparently a little to his surprise but much to his delight) had accepted some compensation, he expresses his appreciation of the acceptance. This was in March, 1835, and thereafter there would seem to have been no further correspondence between the two. Anyhow, none is given here.

To some of Mill's other contemporaries, we find references which are not without interest. There are several to Auguste Comte, several to F. D. Maurice, all warmly appreciative. Mill corresponded with Bulwer, and expresses an admiration for some of the latter's works which curiously contrasts with the hits at Bulwer which are frequent in Thackeray's early writings and not absent from Carlyle's. For Macaulay he had no greater liking than Carlyle had, and writes (to Bulwer) as follows:

> I felt your article [one on Sir Thomas Browne in the *Edinburgh Review*] to be far too good for Macaulay. It has much of the same brilliancy, but not his affected and antithetical style and above all, a perception of Truth, which he never seems to have, and a genuine love of the True and the Beautiful, the absence of which in him is the reason why among his thousands of clever things and brilliant things there are so few true things, and hardly one which is the whole truth and nothing but the truth. (Vol. I, p. 103.)

Nevertheless Mill had the candor to admit some merit in Macaulay's "Lays of Ancient Rome," of which he says:

> They are better than I thought Macaulay capable of. He has it not in him to be a great poet. There is no real genius in the thing, no revelation from the depths either of thought or of feeling, but that being allowed for, there is real *verve*, and much more of the simplicity of ballad poetry than one would at all expect. The latter part of the "Battle of the Lake Regillus" and the whole of "Virginia" seem to me admirable. (Vol. I, p. 123.)

The interest of the second volume, which covers the years from 1863 till 1873, the year of Mill's death, is largely political, and not the least interesting letters are those which refer to the war of secession. There is a remarkable one to Mr. E. L. Godkin (vol. II, p. 35), full of warm praise of an article in the *North American Review* in which Mr. Godkin had vindicated American democracy. In this letter Mill frankly admits that he and Tocqueville had erred in their unfavorable judgment of at least one side of American political life.

> You have fully made out that the peculiar character of society in the Western States, the neutral type formed by the position and habits of the pioneers, is, at least in part, accountable for many American phenomena which have been ascribed to democracy. This is a most consoling belief, since it refers the unfavorable side of American social existence, which you set forth with a candor which ought to shame the detractors of American literature and thought, to causes naturally declining, rather than to one which tends to increase. . . . If Tocqueville had lived to know what the New England States have become thirty years after he saw them, he would, I think, have acknowledged that much of the unfavorable parts of his anticipations had not been realized. Democracy has been no leveler there as to intellect and education, in respect for true personal superiority. Nor has it stereotyped a particular cast of thought, as is proved by so many really original writers, yourself being one.

How strongly Mill was with the North in the war every one knows. He wrote to Dr. Whewell, Master of Trinity College, Cambridge, in 1865:

> I have felt strongly drawn to you by what I have heard of your sentiments respecting the American struggle, now drawing to a close between freedom and slavery, and between legal government and rebellion without justification. No question of our time has been such a touchstone of men, has so tested their sterling qualities of mind and heart, as this one, and I shall all my life feel united by a sort of spe-

cial tie with those, whether personally known to me or not, who have been faithful when so many were faithless. (Vol. II, pp. 37, 38.)

There are, of course, many opinions expressed by Mill in these letters which few will now agree with, and some predictions which the progress of events has falsified. Now and then he could throw out dicta which were extravagant even when written, such as the following:

The characteristics of Germany is knowledge without thought; of France, thought without knowledge; of England, neither knowledge nor thought. The Germans indeed attempt thought: but their thought is worse than none. The English, with rare exceptions, never attempt it. The French are so familiar with it that those who cannot think at all throw the results of their not thinking into the forms of thought (From Mill's private Diary, Vol. II, p. 377.)

This is what comes of attempts to generalize epigrammatically! But there is also a wealth of thought diffused through the volumes, both on economics, on philosophy, on education, and on the political issues of the day, and one finds proofs on almost every page of the high and earnest spirit in which Mill devoted himself to all his work, private and literary, as well as public. His short career in the British House of Commons, while it did not enhance his reputation for practical statesmanship, set a brilliant example of public spirit and an absolute devotion to truth and duty. How ready he was to incur unpopularity and misrepresentation for the sake of a good cause comes out very clearly in the letters referring to the case of Gov. Eyre of Jamaica (vol. II, pp. 68, etc.). Mill was perhaps the finest specimen in recent times of what utilitarian ethics can do in the way of forming a noble character, unless we place beside his the character of another philosophical writer, the late Prof. Henry Sidgwick of Cambridge, England.

CURRENT FICTION.

"Now!" By Charles Marriott. New York: John Lane Co.

The gospel of the spontaneous and, save to one's wishful self, irresponsible life is a good deal upon the mind of the clever English novelist of the hour. At first glance, Mr. Marriot would seem to be exhibiting here, in his "Morrisonians," a whole fraternity of Simple Septimuses and John Senhouses, with females after their kind. Not that we impute conscious imitation: it is the season for that sort of crop. Moreover, this patch of Mr. Marriott's has its particular merits. His band of single-hearted philosophers are committed to no set form of individualism or socialism. There are but two things they must not do—vote, and invest money; but their general working rule is a negative one—to refrain from inessentials for the sake of essentials. Each member is to do what he likes, without "ulterior motive"—for the sake of a natural joy in living. "People are always imagining," complains the member in whose name the story is told, "that we are growing turnips, or making boots, or building houses, or cooking dinner, or painting pictures, to 'prove something.' It is the hardest thing in the world to persuade people that you are doing this, or living that way, because you like it." The saving thing about Morrisonism is that it is based upon a profound faith in human nature. "Doing what you like, when you come to consider what you are—I don't mean yesterday, but now—implies considerably more than taking your 'license in the field of time.'" The Morrisonians, in short, seek happiness by being good according to their own lights—or the thing may be put the other way round.

This wholesome and not revolutionary doctrine is enforced with much keenness and humor in connection with the experiences of a group of English people—or rather two groups which impinge but cannot unite, unless as Capulet may unite with Montagu. The story is told by an urbane gentleman who is something in chemistry, and a great deal out of it. At the outset he is connected with neither group, and it is by mere chance that he presently becomes involved with them both—the Kenwyn-Browns and the Morrisonians. The Kenwyn-Browns are, in subtler guise, the British middle-class family without which the current English novel would hardly know where to look for its humorous setting. There is the pompous pater familias, the complacent mater, the smug commercial son, the schoolboy and the schoolgirl. And there is the swan among ducklings, the new-fashioned daughter, just grown up and of independent mind. But the whole picture is mellowed and humanized. Kenwyn-Brown senior is not a fool or a tyrant, but a good soul hiding its uncertainties under the mask of convention and platitude. No such banalities pass between him and Julia as between Ann Veronica (of recent memory) and her absurd parent. It had not occurred to Mr. Marriott to hold a brief against fathers or for daughters: what he is for is freedom of all human beings to live and let live. The Morrison group is sketched with a light but sure hand—an association of the pure in heart if not of the meek in spirit. Conrad Lowe and his Julia are figures altogether delightful.

Happy Island. By Jennette Lee. New York: The Century Co.

Mrs. Lee's Uncle William and the island of his peaceful choice were no doubt too good romantic material to be exhausted in a single sketch. That their reappearance in this book does not seem trumped up is a proof of their genuineness. With the hard and unlovely aspects of Yankee life and character we are all sadly familiar; they are present here in the figures of Andy and his Harriet. But there are other aspects, mellower types. Uncle William's kindly and unforced optimism, the breadth of a nature little hampered by apparently narrow conditions, are not mere figments of Mrs. Lee's imagination. Insularity is comparatively seldom a matter of geography. The travelled and cultivated "Benjy" of this tale has much to learn from the quiet philosophy of his old stay-at-home comrade.

"I've thought about it, Benjy, a good many times—'bout living here on the island. We don't hurry much, but seems to me we get about as much—about as much living as other folks do." He looked at him over his glasses. "We've got enough to eat, and beds—putty *good* beds—and things to wear. I keep a'thinking and a-thinking about it," he went on, "and I don't see just what 't is we o't to scratch around so for."

"There's education," said the other, swinging his long glasses on their slender chain.

"Yes, you've got eddication, Benjy. I can see it—kind o' the way you set in a chair—different from my way." Uncle William regarded his great legs with kindly eye. "But I do' 'no's you're any happier—or your legs any happier?" he said slowly.

The argument is not precisely conclusive—Benjy ought to be happier, because he has more things to enjoy. Uncle William is an old bachelor, and ought at least to regret his childlessness; but he has no room for regrets in his philosophy. "Sometimes," he confesses, "I wake up in the night and think how happy I be—seems kind of shiftless." He is sufficient unto himself—asks for nothing better than his little gray house, his rocky acres, and the neighbors with whom chance or the Lord have supplied him. The charm of the sketch lies in his intermittent bits of monologue—spread rather thick, here and there, with the syrup of sentiment, yet not untrue to a real type.

The Golden Centipede. By Louise Gerard. New York: E. P. Dutton & Co.

It must be a bequest from the troglodyte ancestor who lurks concealed among the roots of every family tree, which makes tales of wild adventure and profuse carnage so acceptable to ostensibly civilized man. There is some element in the human composition that likes to read of a good gory fight, against amazing odds, even when the insidious refinements of modernity have made the reader unable to extract a thorn from a finger without qualms. Rider Haggard played long and dexterously upon that string and is still busy

DURHAM PUBLIC LIB.

at it, though of late his chords have grown somewhat thin; and this promising disciple of his school gives us in "The Golden Centipede" a story that compares not unfavorably in every respect except originality, with "The People of the Mist," and "The Heart of the World." There is a heroine with all the charm of woman and all the daring of man, priestess of a painfully carnivorous god in Darkest Africa; there is a faithful foster-brother, Krua—we had almost said Umslopogaas, the likeness between them is so great; add to these a diabolical witch-doctor, a brace of highly-colored villains, a buried treasure, a hidden pool, a death-haunted temple, and a hero almost supernaturally astute and courageous, who wades through seas of blood to reach and rescue his beloved, and the net result is a very entertaining if somewhat reminiscent tale.

Honesty's Garden. By Paul Creswick. New York: G. P. Putnam's Sons.

The features of this charming little romance of Surrey and London bear a a family likeness to sundry predecessors. "The Professor's Love Story" haunts the memory as one reads, and so does a procession of pleasing ancestral books in whose pages we have known fairy old bachelors, collectors of old books and old china; pretty garden girls all in a row; scheming aunts, gay cousins, flinty publishers, London lodging-house keepers, pig-tailed, ferret-brained little cockney girls, always hanging out the milk-can. A reduced member of the tribe of De Morgan, it has the De Morgan lovable quality, a sweet genuineness which wards off egotism although told in autobiography. And with this pedigree as background, it wears traits of its own, original, but in harmony. Seekers for the "strong" need not apply. Those who can still enjoy the genially, tenderly humorous will do very well with this refreshing little book.

FOR ANTIQUARIANS.

Accidents of an Antiquary's Life. By D. G. Hogarth. New York: The Macmillan Co. $2.50 net.

Mr. Hogarth, who is best known as an investigator of Minoan and Ionian civlization, modestly writes himself down as an antiquary made, not born. He began nearly twenty-five years ago, in Asia Minor, under Ramsay, who taught him not merely the routine procedure of epigraphy and exploration, but also an uncommon thrift. Mr. Hogarth writes: "It is not the least of my many debts to Ramsay that I gained in my first tour of exploration the will and the capacity to go farther at less cost than perhaps any one but my master." Western Asia has remained Mr. Hogarth's favorite field. He has searched in Lydia, Lycia, and Phrygia, and as far as the mounds of the Euphrates. Perhaps his most important charge was the Ephesian excavations made for the British Museum, an engineering work of uncommon difficulty. The secret of thorough and delicate excavation, he repeats on many occasions, is to enlist the enthusiasm and intelligence of the diggers. With dull or discontented hands nothing but harm is done. Tours in Cyprus, Konia, and Cilicia, with desultory work in Egypt under Petrie, completed a prolonged apprenticeship. In the desert of Fayum our author had the fortune to find traces of Greek papyri, a discovery that has since born unexpected fruit.

It was a casual job of war correspondence in Crete that brought our antiquary to the site where his most notable successes were made. He looked at the lettered stones of Cnossus and resisted the temptation to make an unsatisfactory survey. Three years later, in 1900, he was seeking for the Cretan cavern of Dicte, where legend sets the birthplace of Zeus. Near Psychrò was found a splendid stalactite cavern. In its pool and in dried pockets numerous votive objects were discovered. Soon the find seemed exhausted:

> But chance had reserved her crowning grace. A zealous groper, wishful to put both hands to his work, happened to wedge his guttering candle in the fluting of a stalactite column, and by its light espied in the slit the green edge of a bronze blade. I passed the word to leave mudlarking in the pool and search the colonnades. Men and girls dispersed themselves along the dark aisles, and perching above the black waters on natural crockets of the pillars peered into the flutings. They found at once—found blades, pins, tweezers, brooches, and here and there a votive axe, and in some niches as many as ten votive things together. Most were picked out easily enough by the slim fingers of the girls; but to possess ourselves of others which the lights revealed, it was necessary to smash stalactite lips that had almost closed in long ages. For about four hours we discovered at least an object a minute, chiefly on the columns at the head of the pool; but above the stature of a man nothing was anywhere found.

The passage illustrates both the fascination of such a quest and the ease of Mr. Hogarth's literary manner.

A cruise along the Satalian Gulf, with a visit to the magnificent theatre of Aspendius, a description of touring the desolate Nile fens where the oddest fish discovered were cosmopolitan hosts of Tarascon flavor, a hurried survey of Cyrene, a discussion of the joys and sorrows of digging, and a description of the Sajur, in the Euphrates valley, complete the contents of a charming book. Mr. Hogarth writes with zest and discretion; is good reading for anybody. Cuts from photographs are a welcome feature of the work. They help one to visualize the exceptional hazards of archæological research, its objectives, and its routine. Archæologists will read with especial interest the report on Cyrene. The dreaded Senussi sect that control this famous site turn out on acquaintance to be mild and industrious reformers. To the excavation of this city, which has barely felt the spade, there seem to be no unusual obstacles except that of purchasing some agricultural land. In fact, the legend of a forbidden city seems to have had little foundation. It is to be hoped that the certain riches of this site may soon be brought to light.

Colonial Mobile. By Peter J. Hamilton. Illustrated. Revised and enlarged edition. Boston: Houghton Mifflin Co. $3.50 net.

The character of the enlargement which Mr. Hamilton has given to his book may be indicated by quoting the sub-title: "An Historical Study, Largely from Original Sources, of the Alabama-Tombigbee Basin, and the Old Southwest, from the Discovery of the Spiritu Sancto in 1519 until the Demolition of Fort Charlotte in 1821." He has made the volume more of a history and less of an antiquarian monograph. Not, however, that it did not have distinct historical value as it first appeared, thirteen years ago. It did have that value, for it was, on the whole, decidedly the most thorough and scholarly account of the beginnings of the old Southwest to be had in any form. It still remains the best single work on that general theme. Its coming so soon to a second edition is a deserved tribute to exceptional industry in a kind of historical research which certainly does not win, as a rule, any clamorous acceptance.

Of the eleven chapters which are either new or entirely re-written, all deal with the larger aspects of the subject: that is to say, with the Old Southwest, rather than with the town of Mobile. They seem also to indicate a conscious purpose of the author to extend his horizon, to embrace wider areas in his view, and to be more mindful, and keep his readers more mindful, of really epochal movements of population and changes of civilization: in a word, to do for the Southwest something of what Parkman did for the Northwest. Mr. Hamilton has, unfortunately, none of Parkman's literary equipment for such a task. He is unimaginative; his style is pedestrian, even halting; he is not even an easy writer. Yet he measurably succeeds. His devotion to his theme, the evident accuracy and candor of his work, and the intrinsic interest of the theme itself do take fairly strong hold of a reader at all historically minded. One reason why the theme is so interesting is that even educated Americans will find here so much of which they know

nothing. Events which, if they had happened on our Atlantic Coast, or in Canada, would doubtless have been familiar to us all—events stirring in character and important in their results—have somehow, since they happened on the coast of the Gulf of Mexico, remained obscure. The names of men, who, had they lived and fought and founded and builded in New England or New York, or Virginia, or the Carolinas, would probably have been as well known to us as John Winthrop or Peter Stuyvesant or Nathaniel Bacon are somehow, because they belong, instead, to Louisiana or the Bigbee country, or West Florida, hardly known at all. Such, particularly, are the names of the early French explorers, headed by those of Iberville and Bienville—names that stand for careers as heroic and as picturesque as any to be found in all our colonial annals. Mr. Hamilton's later chapters have at least equal interest; for they present carefully and with much illuminating detail the beginnings of that peculiar civilization—the civilization of the Lower South—which one must comprehend if one is to understand the course of our national history up to the civil war and Reconstruction.

Recreations of a Sportsman on the Pacific Coast. By Charles Frederick Holder, author of "Life in the Open," "The Log of a Sea Angler," etc. With 74 illustrations. New York: G. P. Putnam's Sons. $2 net.

Any reader at all interested in the life of the sportsman is sure to find something fresh and interesting in a new book by Mr. Holder, who counts that day of sport lost, apparently, whose setting sun has not seen at least some attempt to do what no one else has even thought possible. In a former volume he defined his personal ideal of sportsmanship as that in which "the human animal divests himself of nearly all the advantages which nature has given him and enters the lists with the chances on the side of the lower animal." And when one finds him on the Florida reefs diving to the bottom and attempting with bare hands to bring a big sea turtle to the surface and hold it there, one must admit that he is willing to submit to the rigorous demands of his ideal. The present volume, however, presents nothing quite so unusual in its strenuosity as that. Of the twenty-five chapters rather an unusual proportion, for Mr. Holder, is given to trout angling, though the streams chosen are of the Rocky Mountain regions, where the trout is in size and strength a very different fish from his representative of the angling territory farther East. Gifford Pinchot plays a prominent part in several chapters, especially in the thirteenth, where we get a vivid description of the ex-Forester's five-hour fight with an enormous yellow-tail, on a six-ounce split bamboo trout-rod, with a six-thread line—an unsuccessful fight, so far as bringing the fish to gaff was concerned, but catching the fish is not always the most important point, when Mr. Holder is on hand with his note book. Mr. Pinchot's presence gives opportunity for an occasional side glance at the conservation question, but it is unnecessary to state here on which side the author's sympathies lie. The mercenary exploiter of our forests, mineral deposits, and water power, on the basis of the greatest immediate profit to the private interests concerned, is only the well-known fish and game hog in another sphere of operations.

A chapter of unique interest describes a journey by motor car through the great cactus forest of the delta of the Rio Yaqui, in Sonora, Mexico, "one of the marvels of the plant world, alluring in its riotous colors, its uncanny beauty, its fascinations of shape, size, and variety"—a marvel destined soon to pass out of existence, however, since the final subjugation of the fierce Yaqui Indians has made it possible to take advantage of the unsurpassed natural fertility of the delta, with its ample facilities for comparatively inexpensive irrigation. As might be expected, a New York syndicate is already in possession, John Hays Hammond and Major Frederick R. Burnham among its members. Mr. Holder's trip, in company with Major Burnham, had for its object the relocation of the famous inscribed stone originally discovered by the Major two years ago.

The illustrations are generally good in themselves, but one wonders whether they were not inserted into the text by a blind man. A chapter devoted to the amusement of revolver shooting at whale-killers is "illustrated" by a photograph of Shadow Lake, near Tahoe in the high Sierras, a view of some stony peaks taken from a Yosemite trail, and a forest scene in the Sierra Nevada. It is not perhaps necessary to hold a book on sport up to academic standards of English expression, but an author who can cast a fly neatly and handle successfully several hundred feet of line with a leaping tuna at the end, ought not to snarl the thread of his narrative so badly as he has done in the sentence with which we close:

> Bill slipped the net beneath him like the artist he was, then, as I unreeled and allowed the resilient whip of the rod to straighten out, Bill lifted the finest, plumpest, biggest—no, not quite the biggest, but one of the biggest, salmon into the Irresistible Arabella, as the boat was named, ever seen, that is, rarely seen, in the waters of Monterey Bay.

A Complete Grammar of Esperanto, the International Language. With graded exercises for reading and translation, together with full vocabularies. By Ivy Kellerman, A.M., Ph.D. Boston: D. C. Heath & Co. $1.25.

In the introduction, the author informs us that as "a stepping-stone to both ancient and modern languages, Esperanto may render invaluable aid, and pave the way for surmounting the many difficulties confronting both student and teacher." We have long been in search of such a linguistic panacea, and our sympathies grew warm for Esperanto, for which an unexpected use had been found—namely, that of aiding in the study of those languages which it is supposed to supplant. But, alas, here are some of the stepping-stones contained in the book. We are told that *o* in "toll" and "for" are identical, or, at least, it makes no difference how you pronounce it; we learn that *uj* is a diphthong like *ui* in "ruin" or *u(e)y* in "gluey"; that *kz* "must not be modified to the *gs* or *ks* represented by *x* in exist," although we had imagined that both *kz* and *gs* were impossible sound combinations; we hear that "*n* and *g* are pronounced separately in the combination *ng*, producing the sound *ng* heard in 'linger,' not that in 'singer.'" Obviously, the author's A.M., Ph.D. were not obtained in old-fashioned phonetics, such as lie at the foundation of the ancient and modern languages.

In his desire to give "clear" definitions, he has twisted the well-established statements in the grammars into expressions that may have some meaning in Esperanto, but that need a commentary in plain English, as, for example, this: "A pronoun which refers to the same person or thing as the subject of the verb in the sentence, but is used in some other relation than subject of that verb, is said to be used reflexively, or to be a reflexive pronoun." This is not true for all languages, and certainly not for English, where the reflexive pronoun refers back to the logical, not the grammatical, subject; hence the usage in Esperanto is left obscure. Again, we are informed (p. 18) that "in Esperanto the preposition does not affect the form of the word governed, which remains in the nominative case," and yet (p. 27) "when the verb in a sentence expresses motion, the word indicating the place, person, or thing toward which the motion is directed is given the accusative ending. This is also true if the word is the complement of any preposition which does not itself sufficiently indicate motion in a certain direction. The prepositions *al*, to, towards, *gis*, as far as, *tra*, through, express motion in the direction of their complements, and could not well be used except in a sentence whose verb expresses motion, consequently the accusative is not used after any of these three." Here we have a contradiction with the first rule, an exception, as it were, and an exception to an exception. It seems to us the Greek and Latin prepositions are somewhat simpler.

Prepositions are pesky things, so we get the delightfully childish information that (p. 205), "since prepositional uses are not exactly alike in any two languages, it is not always possible to translate a preposition of one language by what its equivalent in some senses is in another. In order to insure some means of translating correctly (!) into Esperanto any prepositional phrase of the national languages, the preposition *je* is regarded as of rather indefinite meaning. In addition to its use in dates and allusions to time, it may be employed when no other preposition gives the exact sense required (?), especially in protestations and exclamations, expressions of measure, and of indefinite connection"; and this Procrustean preposition is to be employed in such apparently *definite* connections as "to rely upon, to take interest in, to provide with, to laugh at, to yearn for, to be ashamed of." The vocabulary does not often help us in the matter of construction. How are we to translate "to shoot at," "he is cut out for a teacher," "clever at," "to charge to," and thousands of similar common expressions? Not the slightest hint is given, but, on the contrary, one is puzzled at a mass of synonyms, without having the least idea how to determine the connotations. Apparently, Esperanto is above such trifles as correct construction, right connotation, discrimination of synonyms, and all those points which form the essence and virtue of human speech. Nothing is more calculated to give the death stroke to this new homunculus of a language than the easy-going, slipshod treatment of the grammar, as displayed in this "Complete Grammar of Esperanto."

The Historians and the English Reformation. By the Rev. John Stockton Littell, M.A. Milwaukee: The Young Churchman Co. $2.50 net.

"It is the purpose of the present volume to show, by brief but sufficient quotations, what is the estimate placed by all the most widely read and studied histories" upon the English Reformation. The book is written in the implicit belief that "all history is practical because it unfolds to us the certainty of our faith in God as our Father and in ourselves as His children." It is obviously the result of a vast amount of honest but totally misdirected labor.

We find it difficult to decide whether the Rev. Mr. Littell's list of the names of the authors of "all the most widely read and studied histories" is more remarkable for those it contains or for those it omits. Hume, Macaulay, Froude, J. R. Green, Freeman, and Stubbs receive the most attention, but, *en passant*, Sir Thomas Browne, Izaak Walton, Daniel Defoe, Carl Ploetz (epitome), Theodore Roosevelt, the Rev. Andrew C. Zenos, James Richard Joy, and many score of others are mentioned and quoted. Their names are jumbled together, almost without rhyme or reason, and with no indication of what is really important and what is not. To contemporaries, the author seems to have an ineradicable aversion. The works of John Foxe and Sir Thomas More, which will be "widely read and studied" (thank God!) long after the large majority of modern writers here mentioned are utterly forgotten, do not appear at all. Save for one totally incidental quotation from the preface of Stubbs's "Constitutional History," the reader of the Rev. Mr. Littell's book would not learn that the late Bishop of Oxford ever wrote anything but the "Seventeen Lectures on Mediæval and Modern History." The absence of all reference to the many present-day controversies concerning the precise status of the pre-Reformation Church in England is very extraordinary in a work that has so much to say about "continuity."

Fighting the Slave-Hunters in Central Africa: A record of twenty-six years of travel and adventure round the Great Lakes and of the overthrow of Tippu-Tib, Rumaliza, and other great slave-traders. By Alfred J. Swann. With 45 illustrations and a map. Philadelphia: J. B. Lippincott Co.

This is the interesting story of one whose single aim for more than a quarter of a century was to rescue Central Africa from the deadly clutch of the Arab slave-hunter and to open it to civilization. Though he never concealed from the leading slave-traders, Tippu-Tib and Rumaliza, his determination to put an end to their traffic, he treated them so courteously that they became fast friends. On more than one occasion they saved his life, and to their loyal and disinterested attachment he gives a grateful acknowledgment. He treated them as human beings with habits of life and religious convictions to be respected, and so won their confidence and affection. He made a careful study of the natives, noting every detail of their actions in order to get a glimpse of their real selves. The book contains the best account of the East African within our knowledge.

Though sent out to Africa in 1882 by the London Missionary Society, he was not a missionary in the common use of the term, but a sailor by profession, and first aided in the transportation of a steel life-boat from the coast to Lake Tanganyika. On the way he established stations on the lake and came into communication with the various tribes living on its shores; in other words, he prepared the way for the Christian teacher. After five years of this work and a short furlough he aided Sir Harry, then Consul Johnston, in the making of treaties with the natives. It was at the time when the partition of East Africa into "spheres of influence" was under consideration, and when before claiming their own right the English were seeking to obtain a willing and amicable agreement with the owners of the country. During the latter half of his African career he was Resident Magistrate of the Nyasaland Protectorate, and in his closing chapters gives some very encouraging facts in regard to its industrial development. As an illustration of the changed order of things he tells of "a man, not yet past the prime of life, who has never stepped inside a craft larger than a canoe, who stops to gaze with awe and wonder at a huge steam vessel as it rushes past, nearly upsetting his frail boat; and as he looks he waves his hand to his son on the bridge, who is piloting and steering the steel monster into port." The Nyasa children are described as "just brimful of fun." He characterizes the only two Congo officers with whom he had dealings as "gentlemen in the highest interpretation of the word in their relations with both white and black. Both were fired with at least as much enthusiasm as myself for the suppression of the slave-trade, and determined to extend to the native races committed to their charge the blessings of civilization." And in an extensive territory success has crowned the efforts of both Belgian and Englishman. "Laughter, dance, and song make the evenings welcomed by ten thousands of young Africans, who in the old hideous times were compelled to restrain their youthful desire to burst into merriment as the sun set, and forced to creep away in terror out of the reach of unseen enemies." Another remarkable illustration of the change is shown in the picture of the beautiful cathedral built by men who a few years ago knew only of structures made of reeds and mud.

Notes.

Houghton Mifflin Company have added to their list of books for the autumn, "The Spirit of Democracy," by Dr. Lyman Abbott; "The Essence of Religion," by the late Prof. Borden Parker Bowne; "The Qualities of Men," by Prof. Joseph Jastrow, and "A Man's Man," by Ian Hay.

The appearance of DeMorgan's novel "An Affair of Dishonor," is set by Henry Holt & Company for September 13. Somewhat before that will appear Prof. W. G. Howard's edition of Lessing's "Laokoön."

Walter K. Smart announces a forthcoming essay on the morality play, "Wisdom."

"Molly Make-Believe" is the title of Eleanor Hallowell Abbott's new novel, to be published soon by the Century Company. The same firm will issue "Seven Great Statesmen," a volume of essays by Andrew D. White, and "The Refugee," a story of adventure, by Capt. Charles Gilson.

Among the new books which Cassell &

Company have in hand are Katherine Tynan's novel, "Freda"; "The Light Side of the Law," by George A. Macdonald, and the following numbers of the Pocket Reference Library: "The Pocket Doctor," "English Dictionary," "Proverbs and Maxims," "A Dictionary of Mythology," and "Poetical Quotations."

Mitchell Kennerley will shortly bring out "Lord Alistair's Rebellion," a novel by Allen Upward, and "Songs of the Army of the Night," which are commemorative of the late Francis Adams, and edited by Henry S. Salt.

A treatise on the Arian and Sabellian controversies has been written by Dr. Papaconstantinos and is to be published by the Melville E. Mullen Proprietary of Melbourne.

The report of the World's Missionary Conference recently held in Edinburgh, is to be published in this country in nine volumes by the Revell Company, who also announce a popular story of the conference, in a single volume, entitled "Echoes From Edinburgh."

Some of the writings of Ethel Rolt Wheeler are to be collected in book form by John Lane Company.

Edmund D. Brooks of Minneapolis announces "A Midsummer Memory: An Elegy on the late Arthur Upson," by Dr. Richard Burton.

Little, Brown & Co. have on their list of autumn announcements—Fiction: Mary E. Waller's "Flamsted Quarries"; E. Phillips Oppenheim's "The Lost Ambassador"; the separate publication of Eliza Calvert Hall's masterpiece, "Sally Ann's Experience" from her "Aunt Jane of Kentucky"; "The Man and the Dragon," a political story by Alexander Otis; "The Quests of Paul Beck," by McDonnell Bodkin; and a new edition of two of Anne Warner's books of Susan Clegg stories under the title of "Susan Clegg, Her Friend and Her Neighbors." Travel and Description: "Sicily in Shadow and in Sun," by Maud Howe; "Romantic Days in Old Boston," by Mary Caroline Crawford, illustrated from rare prints and portraits; "The Grand Canyon of Arizona," by George Wharton James; a new edition of Anna Bowman Dodd's "Three Normandy Inns," with twenty-four additional views; new popular illustrated editions of "Untrodden English Ways," by Henry C. Shelley; "Falaise, the Town of the Conqueror," by Anna Bowman Dodd; "Italy the Magic Land," by Lilian Whiting, and "New England Legends," by Samuel Adams Drake. Biography and Memoirs: "Louise Chandler Moulton, Poet and Friend," by Lilian Whiting; "Heroes of California," by George Wharton James; "A Lawyer's Recollections in and out of Court," by George A. Torrey; "The Women Napoleon Loved," by Tighe Hopkins; and "Reminiscences of a K. C.," by Thomas Edward Crispe. Miscellaneous: The first two volumes in the Modern Criminal Science Series; the centenary edition of Charles Dickens's works in thirty volumes; "The Optimist's Good Night," by Florence Hobart Perin; "The Pretty Girl Papers," by Dr. Emma E. Walker; "The Soliloquies of St. Augustine," translated from the Latin by Rose Elizabeth Cleveland; "The Dominion of Canada," by W. L. Griffith in the All Red British Empire Series; "Life Transfigured," by Lilian Whiting; "The Iliad of Homer," translated into hexameter verse by Prentiss Cummings; "The Story of Worcester," by Thomas F. O'Flynn; "The Stronghold of Hope," a new edition of Mary W. Tileston's "Sursum Corda"; a new edition with additional illustrations of "Starting of Life," by Nathaniel C. Fowler, jr.; a new edition of "With a Saucepan Over the Sea," by Adelaide Keen; a new and cheaper edition of "The Rise of the Republic of the United States," by Richard Frothingham; and a book on "Domestic Science," by Ida Hood Clark.

An interesting copy of "An Humble Supplication for Toleration," which was addressed to King James by his deprived ministers, recently came to light in the Archbishop's Library, Lambeth. It is apparently the King's own copy, since it contains private notes in his handwriting; a description of it is found in *Blackwood's Magazine* for September.

The *Geographical Journal* for August has for its leading article Commander Peary's account of the conquest of the Pole, given to the Royal Geographical Society, together with the congratulatory addresses of the veteran Arctic voyagers, Admirals Nares and Beaumont. Referring to the frequent query, what is the good of reaching the Pole, the latter maintained "that no genuine, honest work, which calls for courage, endurance, and self-sacrifice, such as Peary has shown, is ever lost." Dr. Karl Kumm describes a journey from the Niger to the Nile undertaken mainly to determine the line of demarcation between the Mohammedan and pagan countries. In the course of it he stopped at the capital of a Mohammedan kingdom as large as France, "surrounded with a cordon of uninhabited bush some 100 or 200 miles in width," all the villages in it having been destroyed and the people enslaved. As a considerable part of his route was that of the pilgrims from West Africa to Mecca he saw many of their caravans, in which were a considerable number of boys and young women "who are taken as easily transported coinage to Mecca, where they are turned into ready money." Among the other contents are the resolutions, with explanatory sketch-maps and diagram of conventional signs, voted by the committee appointed at a meeting held in London last November to secure the making of an "International Map of the World."

The most hopeful sign of the awakening of Persia is the interest aroused in the education of women. The first and only school for girls in Teheran for many years was that of the American Presbyterian Missionary Society for Armenians. It attracted so much attention, however, that Moslems began to send their daughters, and last year out of 235 students 120 were Mohammedans—the aim being to give an education on the lines of the ordinary high school and to inculcate European ideals of womanhood. The teaching is not free more than a thousand dollars having been paid last year by the patrons of the school for tuition and stationery. A considerable number of the girls are training to be teachers, and a few are already teaching in the Persian schools during a part of the day. Last April a large number of Persian women met in Teheran to discuss problems of education, and there are now more than fifty girls' schools in the city. In this connection it is interesting to note that children are doing an important educational work in non-Christian countries. A traveller in central Africa, Lord Mountmorres, says that a small boy about eight years old "has at last accomplished that which government officials and white missionaries alike have been powerless to achieve," awakened in the natives a desire to improve themselves. "Daily I saw the boy inside one of the enclosures sitting surrounded by its entire inhabitants, while he taught them, children and adults alike, to read and reckon from first primers."

"Maurice Hewlett," being a critical review of his prose and poetry, by Milton Bronner (Boston: John W. Luce & Co.), gives a readable analysis of Mr. Hewlett's experimental career from the minute embroidery of "Earthwork out of Tuscany" to the social criticism of "Open Country." Mr. Bronner displays little variety or eloquence in eulogy, and his style, if adequate, lacks distinction. The little book, which is rather a synoptical review than a criticism, will appeal chiefly to the cult, and to them possibly will be disappointing. Characteristic of Mr. Bronner's attitude is his explanation of a disagreeable subprurient quality in Mr. Hewlett's books. This is met by Mr. Hewlett's declaration that he treats men and women as they are and without prurient intent. Such a defence proves merely that Mr. Hewlett's conscience is clear, leaving the moral and critical issue precisely where it was. Mr. Bronner's account of his hero's early reading and literary admirations may help toward understanding the eclectic quality in Mr. Hewlett. The little book has an excellent portrait as frontispiece.

Norma Bright Carson, the author of "From Irish Castles to French Châteaux" (Boston: Small, Maynard & Co.), expresses with equal facility in prose and verse the more obvious impressions of travel. Her pilgrimage was mainly to literary shrines. The numerous illustrations are the usual half-tone cuts after photographs.

Clifton Johnson, who has made of himself an illustrator general of the highways and byways of the country, has now furnished an excellent series of photographs of places made famous by Thoreau, and these have been added to an edition of "Walden," by Thomas Y. Crowell & Co. The letter-press of the book is excellent.

The last two issues in the series of "Original Narratives of Early American History" (Scribner), are the work of the general editor, Dr. J. Franklin Jameson, which is a certain guarantee of their value, reliability, and unqualified excellence in matters of selection and annotation. In one of them, "Johnson's Wonder-Working Providence of Sion's Saviour in New England," a history of New England from 1628 to 1651, the editor is personally interested, being a descendant of the author, Capt. Edward Johnson of Woburn, Mass., and for many years a student of the career and writing of his ancestor. The account here given of Johnson's life and labors, the circumstances under which the "history" was written and the dates of actual composition, the motives for writing, the characteristics of the work, notably the habit of "dropping into poetry," on the metre of

which Professor Dodge of the University of Wisconsin has contributed an illuminating section, and the information as to editions and states supplied for bibliophiles leaves nothing to be desired in the way of introduction and comment. The notes are ample and always helpful, an important factor, since the history is hard reading, and there are many allusions that need explanation and many word-usages that almost call for a glossary. The work is a model edition, not only on what we may call its apparatus side, but also in the intelligent sympathy, without bias, which the editor displays for the mental view of the Puritan in the ranks. Dr. Jameson had displayed the same acute appreciation many years ago in his little book on "Historical Writing in America," where he summed up Johnson's point of view so well that he could not do better than to quote here what he said in his former writing.

The other volume, preceding the "Wonder-Working Providence" in date of issue, is "Narratives of New Netherland, 1609-1664," a work no less authoritative, though of a different character. It is a collection of pieces instead of a single classic narrative, like those of Bradford, Winthrop, and Johnson. It is specially characterized by accurate retranslations of all the Dutch pieces, some of which are distinctly crabbed and rough in style; by the printing of two maps, one of which, hitherto unknown, was found in the Dutch Archives at The Hague, and the other, hitherto inaccurately reproduced, was obtained from among the "Kings Manuscripts" in the British Museum; and by the inclusion of one entirely new topographical narrative of New Amsterdam, found by Miss Davenport among the papers of the Royal Society in 1906, and which J. H. Innes thinks might have been written by a Dutch burgess in Manhattan, possibly with the design of aiding the English seizure. Thus the New Netherland volume is not only a valuable collection of reprints, but is also an actual contribution of new information to the history of the Dutch in America.

It hardly needed an affectionate dedication to Mark Twain to reveal the inspiration of "The Ship Dwellers," by Albert Bigelow Paine (Harper). In fact, Mr. Paine follows so closely the modulated buffoonery of the "Innocents Abroad" that his book may prove very baffling to some Gradgrind of future time, who recalls that the author was Mark Twain's secretary. A round-the-Mediterranean cruise is the occasion of mirth, the foibles of the company and of native guides the staple of the entertainment. It is not bad reading, but has the disadvantages of all imitative work that the cleverer reader will naturally prefer the original. That we have not exaggerated the relation to the "Innocents" let an extract prove. Mr. Paine, when leaving Constantinople, felt that his dragoman expected a substantial tip, and made ready to do the right thing:

> Unfortunately, I was low in fractional currency. I scraped together all I had—a few piastres—and handed them to him and turned away. There came a sudden explosion as of a bomb. I did not look to see what it was—I knew. It was the bursting of Suleiman's heart.

The book is fully illustrated with photographic cuts and clever sketches by Thomas Fogarty, which have apparently suffered in reproduction.

The vacation courses of Edinburgh University are attracting many foreigners. In attendance are fifty students from France, about one hundred from Germany, and, not to mention those few from the various smaller countries, a hundred and fifty British students.

The death is reported of Dr. Edward Charles Wickham, who is best known for his edition of Horace.

Hector Fabre, C.M.G., Commissioner-General for Canada in France since 1882, died last Friday at Versailles. He was born in 1834, was editor, in early life, of the *Ordre* in Montreal and of the *Canadien* and the *Evénement* in Quebec; in 1894 he was made an officer of the Legion of Honor for services rendered to Canada and France. He was the author of "Chroniques," published in 1877.

From Freiburg comes news of the death of Dr. Julius Neumann, professor of political economy at Tübingen. Among his many works should be mentioned "Grundlagen der Volkswirtschaftslehre" and "Zur Lehre von den Lohngesetzen."

Science.

Ancient Plants. By M. C. Stopes, Lecturer in Fossil Botany, Manchester University. New York: D. Van Nostrand Co. $2 net.

Only a very few years ago, the term fossil botany seemed singularly appropriate to designate the driest and least satisfactory branch of the study of plants. The delicate tracery of fern impressions in the coal, and the sharp outlines of leaves in the strata of ledges, as well as the remains of nuts and other fruits in rocks, all told of life, but all were lifeless and more or less imperfect. Nevertheless, these objects led to serious study. The study was stimulated to a great extent by the discovery of tropical forms in the ledges of the Far North, and by the resulting conjecture to account for the tremendous climatic changes by which the snows had replaced the jungles. Moreover, there were found many forms unlike any which exist at the present time. While it was felt necessary to reconstruct the plant life of the past and bridge over the gaps as well as might be, most of the students of fossil botany worked timidly and did not secure the unreserved confidence of botanists in other fields. Too much credit cannot well be given to the few cautious and yet bold investigators who hazarded guess after guess in regard to the puzzling shapes of the gigantic stems and root-systems in the various deposits, and who dared to place their conjectures on record.

Within the last few years, the character of the study has wholly changed. By the employment of novel methods of research, many of the structures have been subjected to keen analysis, and guesswork has given way largely to positive determinations. Of course, there is not yet complete agreement among investigators concerning the new methods, but the main facts are now in the possession of all, and a trustworthy picture of a great part of the vanished plant life of our planet can be outlined in its essential features. Furthermore, it is now clear that two suggestions ventured long ago and half-heartedly received by the scientific world, prove to have been inspirations. The first of these is that the earlier life on the globe dwelt in the simpler forms of structure; the second, that there has been no break in the line of development, despite the great gaps which exist in the records of the past. Both of these daring conjectures are now accepted as statements of fact. Naturally the greater part of the recent work on plant fossils, since the introduction of the new methods of investigation, has been upon the petrifactions (to use a good old term), in which clear traces of structure can be made out by appropriate treatment.

If the geological age of our earth be divided for convenience into periods separated by definite characters, we are forced to make the very earliest the very longest. The duration of these periods cannot be measured with any degree of accuracy: in fact, their respective lengths can hardly be expressed by ratios; but enough is known to justify us in considering the earliest, and that next following, as relatively longer than all the others put together. The earliest, or oldest, termed the Archæan, yields us practically no plant structures, or even fragments, which can be made out with precision. Nor is this strange. Soft-tissued seaweeds and the like make but poor bases for moulds or casts, and even if the casts had at any time been fairly good, they would, in all likelihood, have been distorted or destroyed by innumerable metamorphoses. Nor is the case much better with the next long stretch of time, called the older or the first half of the great Palæozoic age. This long period is almost as lacking in determinable traces of life as its immediate predecessor, the Archæan, but the latter half is filled with most interesting organisms. For convenience, this latter half, often called the Newer Palæozoic, is subdivided into three portions, known, respectively, as Devonian, Carboniferous, and Permian. The plants of the Carboniferous period have been more carefully studied than those of the periods associated with it, and a great deal is known in regard to their structure and their mode of life. Concerning this period, the author says, there were then, "as there are to-day, oceans and continents, high lands, low lands, rivers, and lakes, in fact all the physical features of the present day world, but they were all in different places from those of to-day."

The author then passes to the transi-

tion period, the Permian, and traces most of the changes with clearness and skill. This skill is especially manifest when the tissue structure of the fossil plants of the later periods are described and compared with that of the present day. Technicalities have been reduced to a vanishing point, so that it is possible for the general reader to see how truly these newer results reached in the botany of fossils light up the whole field of evolution. The stupendous pageant of plant life in the past is described in dignified language with no attempt at sensational effect.

In this pageant, which moves through creation, plants have a place unique and vitally important. Yet so quietly and so slowly do they live and move that we in our hasty motion often forget that they, equally with ourselves, belong to the living and evolving organisms. . . . This glimpse into the past suggests a prophecy for the future. Evolution, having proceeded steadily for such vast periods, is not likely to stop at the stage reached by the plants of to-day. What will be the main line of advance of the plants of the future, and how will they differ from those of the present? It seems possible that an important group, if not the dominant group, of flowering plants in the future will be so organized that the individual flowers will be very simple, with fewer parts than those of to-day, but that they will be combined in communities of highly specialized individuals in each flower-head or cluster. . . . Whether in the epochs to come flowering plants will continue to hold the dominant position which they now do is an interesting theoretical problem. Flowers were evolved in correlation with insect pollination. One can conceive of a future, when all the earth is under the dominion of man, in which fruits will be sterilized for man's use, as the banana now is, and seed formation largely replaced by gardener's cuttings. . . . Why do plants evolve at all? Why did they do so through the geological ages of the past and why should we expect them to do so in the future? Response to environment is undoubtedly a potent factor in the course of evolution, but it is not the cause of it. There seems to be something inherent in life, something apparently apart from observable factors of environment, which causes slight spontaneous changes or mutations; and some individuals of a species will suddenly develop in a new direction in one or other of their parts. If, then, this places them in a superior position as regards their environment or neighbors, it persists, but if not, those individuals die out.

It remains to say that, while this treatise is readable and attractive, it is sound as a scientific guide, and can serve as a handbook to all botanical teachers who wish to widen their outlook and gain a clearer comprehension of the relations of the whole domain of plant life. It is a stimulating book.

At the Académie de Médecine, Paris, Dr. Lancereaux has presented the results of several hundred observations on a point of general interest outside technical medicine. It concerns the "hobnailed" liver of certain hard drinkers, or, scientifically, that affection of the liver known as atrophic and retractile granulated cirrhosis. In Paris, at least, this is not a disease of drinkers of alcohol proper, that is, of distilled alcoholic drinks, whose liver indeed grows large, but does not grow retractile. It is exclusively the disease of persons who drink every day for ten years or so from two to four quarts of wine—and in England of those who similarly drink ale or beer. As this fact seems to show that the affection of the liver is not caused by the alcohol in the wines, and as it is not the coloring matter, since white wine is more injurious than red, observations were begun with the various salts existing in modern wines and beers. It was found that the sulphate and bisulphate of potash, which are used to preserve wines and beers, when dissolved with the food of rabbits and dogs, produce a like affection of the liver after varying spaces of time from six to eighteen months. Embryonic conjunctive elements are formed in the portæ and lobular interstices precisely as in the livers of wine and beer-drinkers. The other salts in wines and beers produced no hepatic lesion at all. These experiments have been reproduced three different times since 1893, and Dr. Lancereaux has no doubt that the peculiar liver affection is to be attributed to their presence in drinks. This has been checked off by the topographical statistics of wine-drinker's cirrhosis. It is rare where wine is drunk on the spot in its natural state; it is common where the preservative has been used for transportation. In English beer from two to three grammes of sulphate of potash has been found per litre, and the same liver cirrhosis is common in England. It kills twelve to sixteen persons a week in Paris.

The object of "Abnormal Psychology," by Isador H. Coriat (Moffat, Yard & Co.), the writer says in the introduction, is to bring within the compass of a single volume all the investigations on psychology that are scattered in technical journals. The object has not been attained. In fact, there is very little evidence, save this statement, that any serious attempt has been made to accomplish it, and the book is in reality an unconvincing presentation of the teachings of Freud, Janet, Jastrow, and Prince. Uncritical, unscientific, unauthoritative, the bulk of the volume is made up of winnowings from these writers, and of reports of "cases." As an example of unscientific and uncritical statement we quote: "We may state in general, however, although this will not bear rigid critical analysis, that the brain probably stores up impressions in the manner that the phonograph cylinder stores sound vibrations and reproduces the sounds." Such a statement will bear no kind of analysis. After outlining five theories of the subconscious, he says: "A more practical theory, and one better supported by the evidence, is that active thinking processes may exist although we may not be aware of them. These subconscious mental states of which we are unaware may have intense emotions, may fabricate, or may even work out complex intellectual problems." The theory may be good; the form of stating it robs it of any verisimilitude. Throughout the book there is a marked duality of thought, as if the writer were perversely illustrating his theory of subconscious, and its consequences, in the domain of logical thinking.

Dr. Charles Anthony Goessmann, one of the most conspicuous figures in agricultural chemistry in this country, died a week ago at Amherst, Mass., at the age of eighty-three years. For nearly forty years he was an active member of the Massachusetts Agricultural College; he retired when he was eighty years old, under a pension from the Carnegie Institution. He was educated at the University of Göttingen, where he received his doctor's degree. In 1857 he reported a new sugar plant, *Sorghum saccharatum*, and in the same year came to America, accepting in 1869 the professorship of chemistry in the Massachusetts Agricultural College. He introduced the laboratory method of instruction in his department, establishing in 1878 an experiment station, illustrating to such an extent its practical value that a few years later the State made definite provision for a station, and appointed him head. Under his direction the station became an efficient aid to the farmer and to the agriculture of the State, and was from the first one of the leading institutions of its kind in the country.

Music and Drama.

Musik-Lexikon. Von Hugo Riemann. Leipzig: Max Hesse.

Of all the books on musical subjects ever printed, the one most indispensable to professionals and amateurs alike is Professor Riemann's "Musik-Lexikon." It was an advance on all previous works of the kind when it first came out, in 1882, and since then it has been steadily improved to a point which makes it difficult to glance at any page without marvelling at the author's erudition combined with a rare art of lucid condensation. It is no wonder that the Lexikon has been translated into several other languages (English in 1893), or that in its original it has reached its seventh edition. The first had 1,036 pages, the fifth 1,284, and the seventh has 1,621. It is to be hoped it may not become necessary to divide it into two volumes. To prevent that, it might be advisable to save space by condensing the lists of forgotten and unimportant works by minor composers of past epochs.

What increases an expert's admiration of Riemann's lexicon is the knowledge that it is by no means, like most other works of the kind, a compilation of data from previous books on the same subject, but brings, on nearly every page, evidence of the author's own painstaking researches. He is Germany's leading musical historian of our time, if not of all time, having thrown floods of light on many obscure mediæval points in particular. His textbooks on harmony, counterpoint, fugue, instrumentation, etc., are unsurpassed and original, like everything he does,

and his knowledge is not merely theoretical, but exemplified in a number of compositions. With all his technical knowledge, he is never pedantic, but always searches for the meaning of things; indeed, the most valuable of the articles in the Lexikon are those concerned with musical interpretation and expression. The two columns on Ausdruck should be learned by heart by all who sing or play any instrument, while those on Phrasierung are equally important; Dr. Riemann has invented new signs for correct phrasing, and many compositions by the great masters have been brought out in editions provided with these. He has invented a word much needed, "Agogik," to express those minute modifications of pace so essential to expression and usually referred to by the misleading words, *tempo rubato*. His brief dissertation, under "Dynamik," on changes in loudness, from pianissimo to fortissimo, is poetic as well as suggestive. If music-students would look up these articles, and others along the same lines, they would learn more than from hundreds of the usual technical lessons. Special attention must also be called to the article on the minor mode (Moll), on which the author has important views of his own.

In the case of the principal composers there is usually a brief estimate of the value of their works which is generally admirable; exception may be made to the remarks on Grieg's self-imposed nationalistic handicap—one of the few points in which the professor has obviously copied current comment instead of investigating the matter for himself. He is most liberal in his estimate of modern composers, but draws the line at the two men who are at present the most prominent in Germany; and he does this notwithstanding that both Richard Strauss and Max Reger were for a time his pupils. Instead of feeling proud of this distinction, he reproaches Reger with having got to a point in harmonic daring and modulatory arbitrariness where it has become impossible to follow him; and concerning Strauss he says: "His last works have more and more estranged his friends. Only too distinctly he reveals his striving for sensation at all cost, which is hostile to serious art. More and more does his fame appear as a colossus on feet of clay."

For reasons unknown, the editor of the otherwise excellent new edition of Grove's "Dictionary of Music and Musicians" omitted the names of writers of books on music unless they had also composed some trifles. Owners of the five huge volumes of Grove are thus obliged to seek elsewhere for information on these slighted authors, and in the articles on the masters they will also often look in vain for bibliographic guidance. Under the head of Massenet, for instance, not one book is referred to. Riemann names three out of four or five that are of some importance; he also gives space to lists of the books written by English and American critics. On the other hand, one misses a reference to Maurice Renaud, the greatest of living singing-actors; and why is the incomparable Emma Calvé left out, after having been in previous editions of this Hall of Fame?
